payable on Oct. 1 next. (Cheers.) We then carry forward the whole of the profits of this month. This cannot fail to be very satisfactory to you—(hear, hear)—and we shall continue to “repeat the dose,” as we may feel from time to time perfectly justified in doing. (Cheers and laughter.) I may also inform you that in addition to the profits, the particulars of which I have given you, there has been expended since the incorporation of our company about \$25,000 on our improvement account. This amount has been expended on new buildings and machinery. I feel, gentlemen, that I have occupied your time to too large an extent, as you have come here principally to meet our esteemed friend, Mr. Graham, and it will give me now great pleasure to ask him to address you. He having come straight from our property, I am sure you will be pleased to hear what he has to say, whilst he will be equally pleased to answer any questions you may feel disposed to put to him concerning the present position and future of the property. (Cheers.)

VIEWS OF MR. GRAHAM.

Mr. GRAHAM, who was heartily received, said: Gentlemen, allow me in the first place to express my pleasure in meeting you here to-day. I gather from what Mr. Dawson has said that there are some companies whose directors are not over desirous of meeting their shareholders, but he is quite right in his statement that we are always glad to meet you and give you every information in our power. My object in desiring to see you was not so much to make an address—for I am not gifted in that way—as to answer questions, as I have just come from the property. I have thought that some shareholders might see fit to ask me questions, and it will be my pleasure to answer them, and if anything suggests itself to my mind not touched upon by questions I will be very glad to supplement the information in that direction to the best of my ability. In his opening remarks Mr. Dawson has referred to the splendid developments at the property, and also to what I think he justly termed the brilliant future of our company. I may tell you at once that, from my intimate knowledge of your affairs, and all that has taken place in Colorado in reference to them, that in his description of the excellent and economical administration of the business, Mr. Dawson has not overstated the facts one iota. Indeed, I think he might have added a little more, but I am happy in the belief that by and by we shall have a pleasant surprise for you. I have nothing more to say, but place myself in your hands to answer any questions you may see fit to ask me.

SHAREHOLDERS ASK, AND ARE SATISFIED.

Mr. STEWART EDWARDS: I should like to ask a question or two. It was mentioned in the prospectus, in the report of Mr. Hooper, of the firm of Messrs. Bewick and Moreing, that further developments were shortly to be expected of the rich sulphide ores. Have these turned out as they were expected to do?

Mr. GRAHAM: Yes, they have. Indeed, they have far exceeded our expectations, so that I think if Mr. Hooper were to make an examination of the property to-day and report on it, he would write a much better report than he did at the time we submitted the mines to his original inspection. The explorations have opened up much larger bodies of sulphide ore than we anticipated. We have not fixed the boundary line, but the ores are increasing in richness as we go down. Altogether, the developments have been most satisfactory.

Mr. STEWART EDWARDS: There is ample room then for further developments.

Mr. GRAHAM: Most certainly.

Mr. STEWART EDWARDS: What is the amount of the ore on the dumps?

Mr. GRAHAM: We do not place much value on the dump piles. Some mines do, but our aim has been to extract the ore and all that comes out of the mine is of sufficient value to send to the smelters, who pay us for it, so that our dump piles are of no account—in fact we do not want them at all.

MR. GRAHAM'S SERVICES ACKNOWLEDGED.

Mr. W. H. PREESE: I do not think we ought to allow this opportunity to pass without expressing the gratification with which we, as shareholders, have listened to what has fallen from the chairman and Mr. Graham, and also without saying how very pleased we are to meet the latter gentleman, who has had the kindness to come so many thousand miles, to place, on this occasion, at our disposal all the information he has. The declaration of another dividend, following so closely upon the last, is enough to take one's breath away, but I trust

WE SHALL GET USED TO IT IN TIME.

(Cheers and laughter.) I seem to have the hope it will be so after what has fallen from you, Mr. Chairman, and Mr. Graham. You have been kind enough to invite us to ask a few questions, and I should like to enquire—have you been over the mines, by which I mean the workings underground?

Mr. GRAHAM: Yes, repeatedly.

Mr. PREESE: Are the lodes pretty well defined?

Mr. GRAHAM: These are what are called contact veins, and they are continuous, extending without either fault or break. They are well-defined, and we know how to locate them, and where to find the ore.

Mr. JAMES EDWARDS: There is only one question I should like to ask, and that is as to the permanency of the lodes.

LODES PERMANENT.

Mr. GRAHAM: I, personally, have not any doubt in regard to that matter. Taking the past records of the property, which are before you and easily accessible, and taking the value of the property as it stands to-day, we have every reason to feel confident that the present state of affairs will continue for a period yet indefinitely remote. Every exploration that we make in regard to underground workings has been beyond our expectations. The general formation and characteristics

of the ore bodies give every indication of permanence and continuance. I have not a particle of doubt myself that the future of the property will be far greater than the past. I am justified in making that statement, because I have at my back the testimony of all the practical and scientific men who have visited Leadville, and all the scientific men who have made a study of the formation of these contact veins. I could produce dozens of certificates to that effect if it were desired. It is universally admitted in Colorado that the future of the mine will be greater than the past.

Mr. JAMES EDWARDS: The present is good enough, and the only anxiety of the shareholders is that such a good thing may continue. Your remarks on that score are very satisfactory.

Mr. GRAHAM: We are not in any doubt about it.

Mr. JAMES EDWARDS: I do not think you could have had a more successful meeting. Everything that has been said has been very gratifying indeed.

Mr. STEWART EDWARDS: I beg to propose a vote of thanks to the board for the careful manner in which they are looking after our interests here, and a special vote of thanks to Mr. Graham for the trouble he has taken in giving us such detailed information.

The motion was carried by acclamation.

The CHAIRMAN: On behalf of myself and colleagues, I am exceedingly obliged to you for your kind words, and am sure you will agree with me if I ask you to include in that vote of thanks the members of our advisory board in America. They are Mr. David H. Moffatt, Mr. Sylvester T. Smith, and our good friend, Mr. Graham. They deserve, I am sure, all the thanks the meeting can give them. I should just like to say that we shall not fail to keep you advised of any important news from the mine. I repeat what I said—we believe in the right of shareholders to know how their property is going on, and as from time to time we receive important news, we shall let you have it. I cannot promise you we shall always call you together, but if there is anything for you to know, we will send out circulars and keep you fully informed as to what is going on.

Mr. EDWARDS, sen.: With this second payment, what is the rate of dividend you are paying up to the present time?

30 PER CENT. DIVIDEND.

The CHAIRMAN: It is at the rate of 30 per cent. since the formation of the company. (Cheers.)

Mr. EDWARDS: I observe that you have not yet reached the extent of your hauling facilities.

Mr. GRAHAM: By no means. We have no fear of a breakdown there. We have magnificent plant of every description, and there is no danger of water. We provide for every contingency a long way ahead. (Hear, hear.)

The meeting then closed.

LATEST TELEGRAM.

"Gross yield for week ending 12th inst., 860 tons; estimated value, \$23,000. There has been expended on additional buildings and machinery, \$25,000."

WHEAL CREBOR.

MINE PAYING ITS WAY — A NEW SPECULATIVE POINT OF CONSIDERABLE PROMISE TO BE TRIED.

A GENERAL MEETING was held at the Office, Gracechurch Buildings, Gracechurch Street, on Wednesday, "to examine and audit the accounts, and to transact the ordinary business of the company."

Mr. John Schofield

(chairman of the company) presided.

Mr. C. B. PARRY (secretary) read the notice of meeting.

COMMITTEE'S REPORT.

The committee have the pleasure to present to the shareholders an account showing that for 16 weeks, ending Aug. 7 last, the receipts from ores sold and the estimated value of ores ready for sale amount, together (including 6l. 19s. 8d. received for discount), to the sum of 1,113l. 12s. 7d., that the expenditure for the same period, including 2l. 12s. 7d. owing for quay dues, amounted to 1,019l. 5s. 3d., which leaves a profit on the 16 weeks' operations of 94l. 7s. 4d., and that the balance of assets over liabilities is 1,392l. 8s. 3d., as against 1,298l. 0s. 11d. at the meeting held on May 20 last. The result of the past 16 weeks' working the committee regret to say, although showing a profit, is not equal to their expectations, principally in consequence of a falling off in the productiveness of the 156-fm. level east, which at the last meeting was being driven in a lode worth, for the part carried, 6 tons of superior mundic and a little copper ore per fm., and shortly afterwards yielded only 4 tons, and has since further fallen off to 3 tons of mundic per fm. for the part of the lode carried in the end. This falling off has occasioned the committee great disappointment, as they not only looked forward to the value of the lode for mundic being maintained, but also to its productiveness for copper ore being increased, which they regret to say has not been the case, although the indications of a good copper deposit being met with have been and continue to be most promising. The sales of copper ore have consequently during the past 16 weeks only realised 308l. 9s. 11d., as against 372l. 14s. 5d. for the previous 16 weeks, but the mundic sold for the past 16 weeks amounts to 798l. 3s., as against 742l. 18s. for the previous 16 weeks. Had the 156 end not become less productive of mundic the sales of that mineral would have shown a larger increase. The number of tributaries working in the upper levels is 12, an increase of two only, although every effort has been made to obtain more, and those employed are earning good wages. The speculative spirit which was the characteristic of Cornish miners in times past and impelled them to speculate in tribute bargains, appears to have almost died out, and tributaries of the old sort are now constantly diminishing in number. Everything that can be possibly done to develop the mine is being carried out that the present

returns will admit of without loss, and no additional work of development can be undertaken unless a considerable increase of expenditure is incurred—a course which the committee hesitate to recommend or adopt, as it is by no means certain that the returns would be increased sufficiently to cover the additional outlay. The mine is in good working order, and the machinery is maintained in its usual state of efficiency, therefore the committee do not anticipate that any outlay will be required during the current 16 weeks beyond the ordinary working cost.

MINE HOLDING ITS OWN.

The CHAIRMAN: Gentlemen, I think there is very little to add to the statement of accounts, or to what is set forth in the committee's report. I believe the accounts to be thoroughly correct, and we have no liabilities whatever. The question is simply this—what will our returns continue to be? As far as I can understand, and from what I can learn from the agent, we shall be able at least to hold our own, and I do not think we shall have any loss during the next 16 weeks.

Mr. BAWDEN (purser): We do not expect any loss, but hope to be able to maintain the output and possibly to increase it.

The CHAIRMAN, continuing, said: I do not think there will be any material alteration in the result as compared with the last 16 weeks. The question arises whether the shareholders wish us to undertake more work, or whether they would prefer us to go on in the present tentative fashion in the hope of making a discovery, with the limited amount of exploration work we are now carrying on. I do not think we should spend more money in exploration, unless strongly advised to do so, because it will be extremely uncertain whether we shall discover sufficient to pay us. With the existing feeling in regard to mines in Devon and Cornwall—if we called upon the shareholders for more money I do not think we should succeed in getting it. Therefore, it is not desirable to run the risk of making a call upon the shareholders, and I hope those present will acquiesce in that view, which is also shared by my brother committeeman, that we should go on for another 16 weeks in the hope that we may turn out something that is more encouraging, and that will induce our shareholders to let us develop the mine on a more extensive scale. There is no doubt this is a mine well worth working. If we had the means, and everybody had the same confidence as the committee and Mr. Bawden, then we might go ahead, but I am sorry to say a great many shareholders would, I feel sure, throw up their holdings immediately if there were even the prospect of a call. I move the adoption of the report and accounts.

Lieut. CRAGG seconded the motion, which was carried unanimously.

VIEWS OF THE PURSER.

Mr. MOSES BAWDEN: Perhaps it would be as well I should say one or two words upon the work that has been done in the mine. As you find stated in the report, the 156-fm. level has been a disappointment, to a certain extent, since the last meeting, but we have proved there the existence of a lode 18 ft. wide, and in the south part there is a leading branch of arsenical mundic worth 3 or 4 tons, and as we are driving east we consider that this leading branch will join the one we are now driving; in other words, it is forming a semi-circle, and will come in and constitute a part of the main driving as we get further east—say, in about 10 fms. We shall complete the contract of 10 fms. we set to the men about the end of this month, and we thought we would put in a cross-cut south to see if it is a fact that the south branch is going away to the north to join the main part of the lode or not. The agent quite agrees with me that as the two branches come together, and the lode concentrates a little, that

WE MAY LOOK FOR GREATER RICHNESS.

We have not the power that some people profess to have of looking through the ground, but, at the same time, from the indications, we think we shall get something as we drive on. The ground is everything that can be desired—can be driven at 6l. a fm., and requires no timber, whilst the rate of progress is about 5 fms. per month. There is one point I should like the shareholders and committee to consider. Unless we do some little speculative work we cannot expect to make discoveries. The discovery which has maintained us for two years was made by tributing, but I would call the attention of the shareholders to

THE 156 WEST.

This has been driven back nearly 100 fms., and is now about 25 fms. from a cross-course in the upper levels, round which the lode has always made deposits of ore. When the cross-cut is touched in the 156 west it is our opinion that we may look for deposits of ore. From the 156 to the 200 the lode did not look so good, but at the 200 it is 4 to 5 ft. wide, with a leading branch of ore that will give a high percentage of metal, and, needless to say, the mine is dry at the bottom. I should put a couple of men to drive this point, though it would be better to have four, and we may make a discovery at any moment. We may remember the great deposit of copper was at the 120 precisely similar to the deposit cut at the 132, and that we are now taking away between that and the 156. We should have to drive 30 fms. in a poor looking lode before we came into it. I believe that a little money judiciously spent there might prolong the existence of Crebor for many years. We have never gone behind, and though we have not made profits lately, at least we have made both ends meet. (Hear, hear.)

The CHAIRMAN: I should like to see the money spent at this point, but with four men instead of two. (Hear, hear.)

Mr. BAWDEN: We are working the 156 east and opening ground that can be taken away at a profit, but understated, that in the 156 west you would be starting a speculation pure and simple.

The CHAIRMAN: We could work this new point with four men at a cost of 80l. in the 16 weeks, but we do not like to incur expense of a speculative character, as it was understood that we should not do so without the authority of the shareholders.

It was decided to leave the matter in the hands of the committee, but it was pretty generally understood before the meeting closed that their decision would be at once to proceed with the driving of the 156 west with four men.

NEW MASHONALAND EXPLORATION CO., LIMITED.

EXPEDITION STARTED UNDER WHAT IS DESCRIBED TO BE EFFICIENT DIRECTION.

A STATUTORY MEETING of this company took place on Wednesday, at the Guildhall Tavern.

Major-Genl. Sir John Campbell

(a director of the company) presided.

Mr. H. RUSSELL (secretary) read the notice of meeting.

EXPEDITION STARTS.

The CHAIRMAN: Gentlemen, I was in hopes that Lord Mayo would have been able to preside to-day, but he has been unavoidably detained in Ireland, and so I have to act as chairman of this meeting. It is only our statutory meeting, so that we have nothing of very great importance to tell you with regard to the expedition, but what we can tell you, I am happy to say, is satisfactory. Lord Headley started on Aug. 22 in command of the first party that went out, and the chief engineer, who has a great reputation for skill as a mining engineer, Mr. Coulson Bunn, went with him. By this time Lord Headley should have arrived at the Cape, and, without delay, he will proceed to the scene of operations, where I hope he will arrive about the end of Nov., before the rains set in. Immediately prospecting for gold will be commenced, and from all accounts I hear, as well as seen in the papers, we have reason to expect he will find a very large amount of gold, without any very great expense. The chief thing will be to get up the machinery. That will be

A MOST EXPENSIVE BUSINESS.

and unless the new route is opened up it will also be a long business. As soon as we hear gold is found we will have to set about sending up the machinery. In the prospectus it was only stated that we had 3,000 acres, but since then we have acquired another 3,000, which, I think, is a matter of great importance. We have now 6,000 acres, part of which is the reef land, and on the other we hope to find alluvial gold, and, of course, in any case, the greater part of it does for farming. I hear now that they are going to build hotels and various stations, so that we ought to be able, if we so wish, to dispose of the land at a very great profit. Altogether, gentlemen, I think I can show that we have very good prospects, and at the next meeting I hope to be able to tell you that these prospects have been realised, and that we will be able to pay very good dividends to the shareholders. The directors will do their utmost to bring "the thing" to a successful issue, and I undertake to say that we will do all we can for the benefit of the shareholders, and for the good of the company in general. I think there is nothing more to-day that I need tell you. This is only our first meeting, and operations have not actually commenced. I trust we shall meet with success. Mr. Cheesewright is going to tell you something about technical matters.

A "PARAGRAPH" CORRECTED.

Mr. CHEESEWRIGHT: Doubtless some of you have seen one of the financial papers this morning, which has a paragraph, to which I wish to direct attention, as I desire to correct its contents. I shall not go into the long article on the subject, in which the writer says that "Lord Headley is to be the company's representative in Mashonaland, thus providing the due infusion of the peerage which seems so necessary to modern enterprise in sub-tropical Africa." It goes on to say, "The New Mashonaland Exploration Co. has been two months in existence." They are quite right, because this is the fourth month of its existence. (Laughter.) "It has done nothing whatever and has no definite prospects." What I want to call attention to particularly is the statement that we have done nothing. The company engaged three of the best mining experts and explorers it was possible to find in this country—three gentlemen of great ability and considerable experience in this class of work. Mr. Bunn has been prospecting for gold in South America with very great success. Mr. Strutt, another member of the party, has also been in South America in connection with an exploration company, and met with very great success too; and he has been complimented all round upon his skill. Mr. Stables, another gentleman, is also very well known in the mining world. The

EQUIPMENT OF THE PARTY IS UNEQUALLED.

I can assure you. Everything that forethought could conceive in the way of preparing it for its work has been done, so that with the staff of good men the directors have sent out, and with these men thoroughly and properly equipped, and going to a country where we have reason to believe there is gold, there is no doubt in my mind that we shall succeed and have a good result to show for the labour and money expended. That is all I have to say, gentlemen.

The CHAIRMAN: I am very much obliged to you for your attendance, and hope to be able to give you a good report next meeting.

Mr. COLLINS proposed a vote of thanks to the chairman, which was carried, and the meeting closed.

BANK OF ENGLAND.

SATISFACTORY PROGRESS OF THE BARING LIQUIDATION.

A GENERAL COURT of the proprietors of the Bank of England was held at the Bank, on Thursday.

The Right Hon. Wm. Lidderdale

(the Governor) presided.

The minutes of the previous court having been read and confirmed,

5L. 5s. PER CENT.

The GOVERNOR said: Gentlemen, I have now to acquaint the court that this is one of the quarterly general courts appointed by the Charter, and that it is also one of the half-yearly courts appointed by the 12th bye-law for the making of dividends. I have, further, to acquaint the court that the nett profits for the half-year ending

Aug. 31 last amounted to 763,238l. 10s., making the amount of the rest on that day 3,776,802l. 5s. 5d., and that after providing a dividend of 5l. 5s. per cent. the rest would be 3,012,770l. 5s. 5d. The court of directors therefore propose that the half-year's dividend of interest and profits be made on Oct. 5 next of 5l. 5s. per cent. without deduction on account of income-tax. Before deciding on the question of a dividend the proprietors will, no doubt, wish to know what progress has been made with the Baring liquidation, and I have therefore to lay before the meeting a statement showing the position of affairs. At the end of Oct., when the Bank first undertook the supervision of the liquidation, the liabilities amounted in round figures to 21,000,000l. To this amount had subsequently to be added about 7,200,000l. for liabilities on business operations entered into previous to Nov. 15 last, making a grand total of 28,200,000l. due to the public, the bulk of it maturing within six months. Of this total of 28,200,000l., there remained unpaid on Aug. 31 about the sum of 280,000l., since then further reduced. I will now give you the figures which specially concern the Bank of England. The cash advanced to Messrs. Baring, plus interest, reached at one time a total of over 7,500,000l. This advance has since been reduced, and now stands under 7,200,000l. Further reductions we shall, no doubt, have to report at each of these meetings, but I am not justified in holding out expectations that the reduction will be rapid. As regards the unsold securities held by the Bank, you are all doubtless aware that the greater part are of a character which renders estimates of value largely a matter of opinion. I can, therefore, only repeat to-day what I have said before, that I do not expect the result of the liquidation to involve the guarantors in any loss. (Hear, hear.) I will now pause to see if any of the proprietors present desire to make any remarks.

THE "CAT" FOR FORGERS.

Mr. BOTLY, in the course of a few complimentary observations, expressed an opinion that the proprietors should be thoroughly satisfied with the dividend declared. During the past year there had not been so many deviations in the Money Market as they had had in previous years, and their Bank Stock was at a very high price, showing the confidence which the public had in this great and noble institution. Some years since he said in that room that some exemplary punishment might with advantage be awarded to forgers, and on the present occasion he felt led to repeat that remark. If the "cat" were introduced, it would have an excellent effect on those scoundrels—the forgers. The charge-sheet at the Central Criminal Court on Monday contained no less than 13 cases of forgery, some being of an infamous character; and again yesterday the newspapers contained information that there had been an immense forgery on the Russian Government. Seeing, therefore, that this crime was on the increase, some exemplary punishment was called for in order to deter the commission of this serious offence. In conclusion, he congratulated the Governor and directors on the action which they had taken to avert a terrific monetary and commercial crisis, which had been appreciated not only by the proprietors, but also by the public generally. (Hear, hear.)

THE MANAGEMENT CRITICISED.

Mr. J. JONES said he did not think the Bank was doing its duty properly in not maintaining a fair proportion between the currency of the country and the trade of the country. From published statistics he found that the addition of bullion or gold into this country during the last 15 years had been 6 per cent. upon the capital which they believed the country possessed—namely, between 90,000,000l. and 100,000,000l. That addition of bullion was insufficient, for the foreign trade of the country alone had increased 12 per cent., while the home trade could not have increased in a less proportion. He suggested that the capital of the Bank should be increased by 3,000,000l., as they would then be enabled to have a better command over the currency and to prevent it from depreciating as it had done.

Mr. S. D. HOPKINSON said that the present Lord Chief Justice had recently delivered an opinion that anyone finding himself in possession of a Bank note alleged to have been stopped could not pay it away in the ordinary way without becoming guilty of dishonesty to the person to whom he paid it. Did the Governor regard that opinion as correct or erroneous?

Mr. ROKEBY-PRICE said that he was the victim of the singular cross-examination of the Lord Chief Justice on the occasion referred to. He did not know whether the Governor could give any further confirmation of the fact that a note to bearer was a note to bearer, or state what had taken place in the Courts of Law previous to the recent case.

The GOVERNOR: Are you speaking of a Bank note to bearer?

Mr. ROKEBY-PRICE replied in the affirmative. His evidence was that a bond to bearer was as good as a Bank note to bearer. On his stating that, the Lord Chief Justice threw doubt on a Bank note to bearer being a note to bearer, and considered that the fact of a Bank note being stopped at the Bank of England would impoverish the position of that note as against any other holder. He would be glad to hear that that finding of the Lord Chief Justice was not the mercantile view or in accordance with the Court of Common Pleas under Lord Chief Justice Abbott, or the House of Lords under Lords Cairns and Selborne.

THE PAYMENT OF BANK NOTES.

The GOVERNOR, in reply, said that as regarded the punishment of forgers, he would remind Mr. Botly that at the present time it was, at all events, severe. There were three men now in goal who committed a forgery on the Bank of England some 16 years ago. Each was undergoing a sentence of 20 years' imprisonment, and he (the Governor) could hardly think that the tendency of public opinion would encourage anyone in the belief that there should be an increase in the severity of the punishment given to forgers. The Bank had always been closely on the watch with a view to protecting itself, and he thought that on the whole they had been fairly fortunate in their efforts to escape from fraud. The remarks of Mr. Jones on the currency question would have been more appropriate if they had been addressed to the Chancellor of the Exchequer rather than to the Governor of the Bank of England. As to the advisability of increasing the capital of the Bank he reminded the proprietors that their capital at the present time stood at 11,500,000l., with undivided profits of 3,000,000l. in addition, and this was much larger than that of any other bank in the world. He did not therefore think it would be desirable to add to that capital. (Hear, hear.) The capital of the

Bank was enormous in proportion to its liabilities, and if Mr. Jones's proposal was carried out it would increase the difficulties which the directors experienced in paying the dividend. The currency depended upon the public demand. The notes increased in times of pressure. They were returned when the demand ceased. The best evidence that the circulation was not insufficient for ordinary commercial purposes was that it had been going down, and not increasing. They would find this matter dealt with in the report of the Commission on Bi-metallism. Two questions had been asked as to the ownership of notes, and whether the bearer of a note was entitled to the proceeds. The remarks of the Lord Chief Justice applied to debentures, and hardly to the question of the relation between the Bank of England and the holder of a note. When a note was presented, the Bank of England was bound to pay. In order, however, to give facilities for tracing out frauds, they did stop, until explanation had been given, the payment of notes which had been notified as having been lost or stolen. But the Bank of England having promised to pay their notes on demand could not legally refuse to do so for a longer time than was required to make the necessary inquiries as to the due ownership of those notes. What claim a man had who might have stolen a note was a question for the Courts. The Bank of England only recognised the claim of the holder of the note. If a bank note were stopped at the Bank of England and that note was presented for payment they made inquiries as to how the person presenting it had obtained it, and desired him to give some explanation. He was informed that in the case of Spillman versus the Bank of England—that was decided about 30 years ago—the principle that underlay the question was settled. He was sorry that he could not assist Mr. Rokeby-Price in the matter of the debenture.

Mr. ROKEBY-PRICE: It was a bond, sir, presented to bearer.

The GOVERNOR said that that was hardly a question as between the person who promised to pay and the holder of an obligation. If a bank note was stopped at the Bank of England and it was presented for payment, they made inquiries as to the presenter being the owner, and asked him where he obtained it, and required some explanation.

Mr. HOPKINSON said he was not in the habit of taking the numbers of notes as they came into his possession. He might present one for payment which proved to have been stolen, and wished to know from the Governor what would be his position if he were unable to say from what source he had obtained it.

The GOVERNOR: If you have got that note, and produce it in good faith, you are entitled to the money. The stoppage of the note is at the risk of the Bank of England, but they take an indemnity from the person on whose account the stoppage is requested. The Governor then formally submitted the resolution declaring the dividend of 5l. 5s. per cent., and announced that the warrants would be paid on October 5.

SPECIAL THANKS TO THE DIRECTORS.

Mr. BOTLY moved a vote of thanks to the Governor and directors of the Bank for their wise, prudent and successful management of its affairs during the past half-year.

Mr. ROKEBY-PRICE said that the directors were entitled to special thanks considering the serious year that had just expired. Nothing could tend more to raise the commercial integrity of this country than the conduct of the Bank of England in the late severe crisis. It showed that there were in England even at this moment persons who were at the head of commercial affairs ready, willing and able to cope with any difficulty, however great it might be. He alluded to the Vagliano case, which had been taken from Court to Court to the House of Lords, with a result that would cause the proprietors to thank God, as most people did, that we had a House of Lords. (Laughter.)

Mr. JONES supported, and complimented the Governor upon having been made a member of the Privy Council.

The motion was unanimously agreed to, and

The GOVERNOR, in acknowledging the compliment, said he thought the figures which he had read to them with regard to the affairs of Messrs. Baring Brothers, showing that an amount of 28,000,000l. had been nearly paid off, as far as the public was concerned, was some evidence that the duties which fell upon the directors was not altogether light or free from responsibility. He was only too glad that the view the proprietors had taken of their services was so favourable. As regarded the honour which Her Majesty had been pleased to confer upon him, that was in part a compliment to the Bank, in which Mr. Jones and all the other proprietors had a right to share. (Applause.)

The proceedings then terminated.

PROPORTION OF GOLD AND SILVER IN MONTANA MINE.

The following table shows the proportion of gold and silver in Bullion bars and concentrates each half-year since 1886:—

For half-year ending	Gold	Silver
Dec., 1886	53%	47%
June, 1887	57%	43%
Dec., 1887	62%	38%
June, 1888	65%	35%
Dec., 1888	69%	31%
June, 1889	57%	43%
Dec., 1889	64%	36%
June, 1890	61%	39%
Dec., 1890	74%	26%
June, 1891	76%	24%

PEARSON AND KNOWLES COAL AND IRON CO., LIMITED.—The nett profits for the year ending June 30 last amount to 58,996l. 9s. 2d., and the balance brought forward from last year is 6,108l. 4s. 9d., together 65,104l. 13s. 11d. The interim dividends paid in Mar. last absorbed 15,310l. 18s. 3d. The directors now recommend that the usual dividend, at the rate of 6 per cent. per annum, be paid on the "A" shares, and a dividend of 35s. per share on the "B" shares, leaving a sum of 22,558l. 12s. 5d., out of which the directors recommend that 12,000l. be written off on account of the expenditure during the year on new sinkings, 5,000l. to the reserve fund, and the balance, 5,558l. 12s. 5d., to be carried forward to next account.

MONTANA AND ITS DIVIDENDS.

The following statement shows the amount of dividends paid since the formation of the company in Jan., 1883:—

Number of Dividend.	Date of Payment.	Amount per Share.	Rate per cent. per annum.	Total Amount Paid.	Remarks.
1	Sept. 1st, 1884	on 2l. sh. 8d. 13	13	9,533 17 4

THE MONTANA CO., LIMITED.

REPORT OF MR. G. H. ROBINSON.

Marysville, Aug. 10.

To the Chairman and Directors,

Gentlemen,—Under the arrangement entered into with your board in March of this year, relative to the management of this company's affairs in America, it now becomes my duty to report to you the condition of your property, and the results of the past half-year's work. While these results are unfavourable as compared with those of the past five years, I will adhere to the form hitherto adopted, and give such comparative statements as will enable you to arrive at a true valuation of your property, and thoroughly understand its condition. In passing judgment upon the work of the management on this side, the fact must not be overlooked that a very substantial reduction in cost has been made, the amount being \$40,001 less than that expended under the same accounts during the corresponding period of 1890, thus partially offsetting the reduction in the output, and that while the expenditure on permanent improvements (Cornish pumping and air compressor plants) has exceeded that for the first half of 1890 by \$20,570, the total expenditure on all accounts shows a saving amounting to \$19,431. I will first deal with the reduction works, and the results of the half-year's operations, this portion heretofore having been reported upon by Mr. Bayliss; and, also as heretofore, these remarks will be subdivided under the following heads:—1st. Reduction works and output for the half-year. 2nd. Expenditure on revenue and on permanent improvements account. 3rd. Comparative statements and remarks. I will then deal with the mines and plant, as heretofore treated in my own reports, under the following heads:—4th. Lineal development. 5th. Cost of mining and ore extraction. 6th. Ore reserves and comparisons. 7th. Production. 8th. General remarks and opinions. 9th. Bluebird and Hickey Mine. I also desire to call your attention to the report of Mr. J. H. Henley, on the mine, more particularly dealing with its present condition and appearance, which I have the pleasure to enclose herewith. Reduction works: Following is a summary of the production of each mill for the year, details of which will be found tabulated in "comparative statement of monthly runs for half-years ending 30th June, 1890 and 1891," attached to this report, and marked "Appendix A." Total output for the half-year ending 30th June, 1891:—

Mills.	Bullion.	Concentrates.	Total.
10-stamp mill ...	\$ 11,342.60	\$ 1,677.60	\$ 13,020.20
50-stamp mill ...	240,366.94	51,131.71	291,498.65
60-stamp mill ...	115,481.20	25,765.23	141,246.43
Total ...	\$367,190.74	\$78,574.54	\$445,765.28

Ten-stamp mill: It will be noticed that the output for this mill is insignificant as compared with its production in previous years. This is due to the fact that on Jan. 31, 1891, the reduction of ore was discontinued in this mill, as portions of it were completely worn out and unfit for further service. The necessary repairs would have cost several thousand dollars, and it was decided to discontinue its use. Expenditure: The total expenditure of the company in the United States was as follows:—On revenue account (see Appendix B), \$318,251.69; on permanent improvements account (see following), \$27,592.33; total expenditure, \$345,844.02. As against a total expenditure under the same accounts during the corresponding half-year of 1890 of \$365,275.43, showing a decrease of \$19,431.41. The expenditure on permanent improvements account, with details, for the half-year ending June 30, 1891, was as follows, viz.:—Shaft No. 2, Cornish pump: Making station for Davey pumping engine and putting the same in place, \$10,491.41. Air compressor No. 2: Balance of cost of this compressor and building addition to the compressor house, \$15,398.24. Machine shop No. 2: Building overhead tramway for handling heavy materials, \$186.75. Tailings, Dam No. 5: Raising

this dam to increase its capacity, \$669.77. Tailings, Dam No. 3: Raising this dam to increase its capacity, \$846.16; total, \$27,592.33. From the above statement, it will be seen that the sum of \$1,516 was expended on tailing dams. This expenditure was absolutely necessary to avoid damaging the agricultural land below. With the exception of the item of \$187 expended on the machine shop, the balance of the expenditure, amounting to \$25,889, was for mine plant. The new compressor engine was not only a necessity, the old one being entirely inadequate to the constantly increasing demands, but will repay its cost in fuel saved. This compressor is completed, and has been in use for the past three months, doing its work easily and economically. It is one of the best plants of which I have any knowledge. The old compressor is now kept for use in case of accident. Davey engine and pumps: These are not yet completed, although the greater portion of the material is on the ground and paid for. The engine station is completed and the engine in position. The bobs and pumps are not yet in place. This plant will insure us against any flow of water likely to be encountered in the deep workings. The details of monthly expenditure on revenue account will be found in Appendix B, in which is included all extraneous expenses, cost of working and general charges. Comparisons—Value of ore treated: The comparative statement (Appendix A), showing the number of tons crushed, average yield per ton and gross yield, for the half-years ending June 30, 1890 and 1891, explains itself. Cost of production: In comparative statement (Appendix B.) is given the monthly and total working expenses for the half-years ending June 30, 1890 and 1891, showing a decrease in total working costs for 1891 of \$40,001.50. This reduction is due to the change made in the process of treatment in the 50-stamp mill, resulting in a general reduction and re-organisation of working force and staff. The full effect of these changes is not apparent here, as they were not made until May 1, and in effect for only two months of the period under consideration. In this connection it should be noted that the cost of mining, milling, and general charges, for the half-years ending June 30, was—

	Working.	Extraneous.	Total.	
For 1890 ...	\$8.59	... \$60	... \$9.19	per ton.
" 1891 ...	7.9329	... 8.22	" "
Decrease663197	" "

I expect the working cost per ton to be materially reduced below these figures during the current half-year. Mining and milling: Appendix C. gives the average actual cost of mining and milling in detail, as calculated on the tonnage crushed in each mill. This statement must not be confounded with the cost as stated in Appendix B. By reference to this statement we find the cost of mining per ton of ore crushed has been \$1.7 greater than that for the corresponding half-year of 1890. This, however, is only apparent, as we have a considerably greater tonnage of ore broken and held in reserve in the mine than before. Exploratory work: The following statement shows the sum devoted to exploratory work during the past half year:—Cost of shafting and prospecting: Shaft No. 1, \$10,768.29; shaft No. 2, \$4,397.40; prospecting, \$40,771.54; Bluebird and Hickey Mine (prospe-cting), \$2,998.79; total, \$58,936.02, equivalent to \$1.52 per ton of ore crushed, as against \$73,452.90, or \$1.85 for the corresponding period of 1890. The foregoing statements and comparisons of cost per ton given under the head of "mines and plant," are calculated on the basis of the tonnage crushed in the mills, and not upon the number of tons actually broken in the mine, the difference between the tons broken and the tons crushed being represented by moisture and by the ore broken and remaining in the mine ready for treatment. Mines and plant.—Lineal development in the Drumlummon Mine, during the half-year ending June 30, 1891.

	Main Drifts.	Cross-cuts.	Shafts and Winzes.	Total.
Total development for half-year ...	1,507	... 990	... 1,118	... 3,615 ft.

The total lineal development for the half-year has fallen short of that for the first half-year of 1890 (after deducting the length of diamond drill holes) by 532 ft., or 12.8 per cent., while the expenditure on this account shows a reduction of \$14,516.88, or 19.8 per cent. during the same period. The development work was delayed by want of compressor-power to run the machine drills, the requirements growing constantly greater, owing to the greater length of pipe through which the compressed air must pass. Comparative cost of development for the half-years ending June 30, 1890 and 1891: The cost of development for the half-year ending June 30, 1891, exclusive of the expenditure on Nos. 1 and 2 shafts, was \$43,770.33, or \$12.66 per lineal foot, an increase over the cost of 1890 of \$.74 per lineal foot. Ore reserves: Owing to the arrears of work forced upon me by my illness last April I have found it impossible to make such a close revision and estimate of the reserves to June 30 as I desired, but the total tonnage available for extraction to that date may be safely taken at not less than 150,000 tons, with a probable addition of 20,000 tons upon a close estimate. Production:—Estimated yield during the half-year ending June 30, 1891:—East Drumlummon lode, 13,200 wet tons, value \$134,030; Drumlummon lode, 29,400 wet tons, value \$311,000; total, 42,600 wet tons, value \$445,000. General remarks and opinions.—As Mr. Henley deals very fully with the mine workings, I will simply say that I fully endorse his report, and will confine my own remarks to one or two places. The No. 1 shaft.—This shaft is being sunk as rapidly as possible, and is now down nearly to the 1,600-ft. level, where a cross-cut will be driven to the lode. While it is not given to me to foretell what we have in front of us, I feel confident we shall ultimately recover a valuable lode in depth, and hope that the 1,600 will disclose a grade of ore suitable for the mills. It is unnecessary for me to reiterate at this time the opinions so often expressed as to the probable result of deep mining in Drumlummon hill; and in the face of the fact that up to the present our efforts have not resulted in valuable discoveries, my opinion is unchanged. Before we can reasonably expect to encounter a favourable lode, we must pass the bottom of the "horse" that has interfered with the deposition of ore. At what depth this will be, actual development only will show. All prospecting work is being prosecuted as vigorously and economically as possible; and arrangements are being made to sink the No. 3 shaft in the southern portion of the mine. The output for the past two or three months has been the lowest for several years. This need not, however, cause any fear in

your minds that the old mine is near the point of collapse. To be sure, the ore is low grade; but it can be made to pay all charges, and something besides. I expect to be able to improve the runs from this time; and while the increase over present output may not be very startling, I hope to make a substantial addition. Generally, I have to report all the machinery and plant in and about the mine and works in prime condition and in the highest state of efficiency. Bluebird and Hickey Mine: During the half-year we encountered a shoot of high-grade ore on the 214-ft. level of this mine, the assays ranging from \$20 to \$100 per ton. The size of the shoot was not determined, the face being in the best of the ore when work was discontinued. The shoot was proved for 50 or 60 ft. in length, and was 2½ ft. thick. I am unable to work this mine now, as there is no rock-drill, hoisting, or pumping appliances; nor am I able to say what the value of the ore body is likely to be when opened up; but I consider it of sufficient importance to warrant further exploration, with the chances favourable for developing into a pay mine. In conclusion, I beg to express my obligations to Mr. Henley, Mr. Burrell, and to the other members of your staff, for the efficient services rendered; and I assure you, on their behalf as well as on my own, that during our term of service with your company, it shall be our earnest endeavour to conduct the enterprise as carefully and economically as possible, and to return the greatest net revenue from the operation of your works.—G. H. ROBINSON.

REPORT OF MR. JAS. H. HENLEY ON THE UNDERGROUND WORKINGS.

Aug. 10.—Mr. Robinson has instructed me to make my half-yearly report on the underground workings of the Drumlummon Mine to yourselves; and I now beg to submit the following for your consideration: As all the details of work done and cost are included in Mr. Robinson's report, I will confine my remarks to the present condition and appearance of the mine. Drumlummon lode, No. 1 shaft and workings: This shaft has attained a depth of 180 ft. below the 1,400-ft. level. In sinking this distance two very hard strata of slate were encountered, which have delayed us at least three weeks in reaching the 1,600-ft. level. As soon as this level is reached, a temporary station will be made, and a cross-cut started to the west to strike the lode. It is also deemed advisable to cross-cut to the east from this level, to test the character of the Castletown lode. The flow of water below the 1,400-ft. level has been small. The 1,400-ft. level: This level advanced to the north 93 ft., and is now 165 ft. long, without, however, striking pay ore in quantity. The lode is strong and well defined, 10 ft. to 14 ft. in width, and has a healthy appearance. Small bunches of ore were encountered, which assayed high. These did not occur in the 1,000 or 1,200-ft. level. It is intended to continue development on the 1,400-ft. level. The 1,200 and 1,000-ft. levels: No work has been done on these levels during the half-year. The use of the diamond drill was discontinued, owing to the lack of compressed air to drive it. The 800-ft. level north: Near the north end of the workings a cross-cut has been driven into the footwall a distance of about 220 ft., without discovering mineral or even indications of a lode. This portion of the mine is now developed by cross-cuts for 425 ft., at right angles to the general direction of the lode. We are now driving along the north-east fissure, which has a favourable appearance; and while we have no data on which to base an opinion of what is ahead of us, it is necessary to follow up all veins whose appearance is encouraging. The work heretofore done, together with that now under progress, will fully prove the character of the north ground, and may demonstrate that the fissure, or fracture, in which these lodes have formed is not bound by vertical ends, in which case the favourable ground on this level would be further south of the Empire shaft. The 700 and 600-ft. levels: A drift has been driven around the caved portion of Pixley No. 1 stope, on the foot-wall side of the lode, making connection with the workings in the north end of this level. No. 3 longitudinal drift, south: This level has been extended south to a connection with the Sampson stope. No. 2 longitudinal drift, north: The cross-cut connecting Pixley No. 4 stope with the Empire shaft has been completed; and a drift was also driven from the south face of Pixley No. 4 stope along the Drumlummon lode, to a connection with the main north drift. This has opened up some fairly good stopping ground. Upon the completion of this work, the old shaft, connecting the Cruse and 400-ft. levels, was turned into a channel for passing quartz from the intermediate drifts to the 400-ft. level. The south end of the Drumlummon lode, No. 2 shaft: No work has been done in this shaft except excavating and timbering the station, and putting in foundation for the Davey pumping engine. 1,200-ft. level: This drift has been driven north to a connection with the No. 1 shaft, thereby giving us a bountiful supply of pure air, and insuring us against danger or delay in case of accident to either shaft, as well as obviating the necessity of maintaining a line of pumps in both shafts. An upraise will be made to under-cut the Sampson ore shoot in the 1,000-ft. level. The 1,000-ft. level: No work has been done on this level during the half-year. The Sampson ore shoot over this drift yields a good low-grade ore. Pump station and ventilation raise: This station is completed and engine in position. An air shaft is now being made to connect the rear of the station with the level above to conduct the hot air to the surface. This work will require about two months for completion, and when the connection is made it will ensure good air currents throughout the entire upper mine. Gold shoot: The ore body at this point maintains its former size and value. A winze is now being sunk under the 400-ft. level, and the ore obtained therefrom is the same in character and value as that above. Castletown lode: The principal development on the Castletown during the half-year has been confined to No. 2 longitudinal drift south and the Cruse level south. On both these levels a large body of good low-grade ore has been opened for extraction. The shoot is about 90 ft. long, and both drifts are still in ore. The shoot will probably extend to the surface. The Empire shoot: This shoot continues to produce well. The ore is spotted, but the average product is a fairly good low-grade ore. A winze is being sunk at the west cross-cut, which has reached a depth of 30 ft., and shows about 2 ft. of high-grade ore. Intermediate drift: This drift is now being advanced north, and shows a large body of low grade ore, about the same in value as heretofore driven through. Surface workings: These workings are yielding large quantities of ore for the mills, and the grade is satisfactory. Stopes: The old stopes are now in good condition, and, I consider, secure against serious caves. During the half-year about 50,000 tons of waste rock have been stowed away in the mine, and all the waste material is now being used for securing

bad ground. Generally: Everything about the mine is in good condition, and the work is being pushed as rapidly and cheaply as possible.—J. H. HENLEY.

THE MOUNT ZEEHAN (TASMANIA) SILVER-LEAD MINES, LIMITED.

PROGRESS REPORT FROM THE MINE, AND TELEGRAM.

THE manager reports under date, Mount Zeehan, July 31, as follows:—Argent section: The 72 ft. cross-cut has been extended 4 ft. on the counter lode, which was struck while driving across No. 4 lode, and is believed to be No. 3 lode thrown from its original position by No. 4. This counter is 4 ft. wide, and carries second-class ore. No. 4 lode: Started north drive on course of this lode and drove 6 ft., making total driven in both places for the week 10 ft. Two timber sets put in. Remarks: No. 4 lode has much improved since opened out; it is 4 ft. wide, 12 ins. of which are solid galena, the balance being good second-class ore; raised 17 cwt. first-class and 4 tons second-class ore. Air shaft: Sunk 2½ ft.; total depth 25 ft.; lode formation 2½ ft. wide, composed of very good second-class ore; 5 tons raised. Queen Extended section—North drive on No. 1 lode at 110-ft. level: Started driving south-east from a point 274 ft. from cross-cut on what I think to be the Balstrup lode, and drove 14 ft. during the week. Two timber sets put in; total 71. Lode formation, siderite, felspar, and fahl ore, with light slate, showing copper and galena in small veins all through. I am, therefore, inclined to think that something better may be met with in about another week. 22 ft. further north-east on the lode a break appeared in the footwall running north-west, and this is the course of the Balstrup lode. Montana section: North level on course of No. 2 lode extended 14 ft., making total from cross-cut 186 ft. Two timber sets put in; total 44. Remarks: Lode 4½ ft. wide, and widening underfoot, but quality not so good as anticipated. Raised 21 cwt. first-class and 3 tons second-class ore.

The following telegram has been received, dated Hobart, Sept. 9: "25 tons of first-class ore have been shipped from Hobart to London per the s.s. Woolloomooloo." The 20 tons of silver-lead ore received per the s.s. Bungaree have realised 27½ ds. per ton.

METROPOLITAN GOLD MINING CO., LIMITED.

MANAGING DIRECTOR'S REPORT TO THE BOARD.

THIS report covers July, 1891:—The driving on the 100-ft. level for the month is 120 ft. 8 ins., as against 120 ft. for June. The cross-cutting is 34 ft. 10 ins., as against 59 ft. 2 ins. for June. The total footage for the month is 224, as against 269 for June, a falling off of 45 ft. The driving and cross-cutting cost more on the average for the month, because all the work was done on the 100-ft. level. In June, one cross-cut and a drive were put in, in soft ground, within 50 ft. of the surface, at a low figure, thus reducing the average cost. These were completed in June. The actual increase in the cost at the 100-ft. level for the month is 4s. 11d. This, the manager explains, is owing mainly to the scarcity of native labour, which has prevented him continuously carrying on all the cross-cuts. In consequence, the white labour, winding, pumping, and general charges have been distributed over a less footage than in June. Sinking the east winze has been discontinued at 75 ft. from surface, the inflow of the water being so heavy as to delay the work and materially add to its cost. The winze will be risen at probably one-half the cost per ft. from the 100-ft. level cross-cut now being put in; the distance to be risen is less than 20 ft. The south middle reef is uniform in width in the east drive on the 100-ft. level, averaging 2 ft. 4 ins. from the main cross-cut to the 400 ft. point. Here the reef is much broken, and intermixed with sandstone. In the west drive the reef is well defined, and free from faults up to the face of the drive. A cistern has been built in the main shaft at the 100-ft. level, and no water from this level now reaches the sump. The sinking of the main shaft can, therefore, be carried on uninterruptedly, the water made in the shaft not exceeding 100 gals. per hour. A better advance should be made in the sinking of the main shaft as depth is gained, as a heavier charge of dynamite can be safely used without risk to pump and cistern. The heightening of the embankment from the main shaft to the mill, by about 12 ft., is making satisfactory progress. The attle from the shaft and drives will probably be sufficient to complete the work. The plans for the proposed alterations to the mill are in progress, and should be completed in a few days. In my next report I hope to be able to advise that the work is in hand.—A MACKIE NIVEN, Managing Director.

The above report is by a resolution of the board of directors ordered to be printed and a copy forwarded to each registered shareholder.—J. S. SHELDRIK, for the South African Trust and Finance Co., Limited, Secretaries.

ELMORE'S PATENT COPPER DEPOSITING CO., LIMITED.

It is with pleasure we have received from the company copies of testimonials the secretary has had from trade users of some of its manufactures. The opinions therein expressed are very emphatic in their appreciation of the excellence of the production made by the Elmore process, and of their superior adaptability for commercial purposes, as compared with ordinary copper goods. These testimonials are valuable, as statements have occasionally appeared raising the question as to whether the process can be relied upon to produce uniformly good articles at a reasonable price. There should no longer be any doubt on this subject after the unimpeachable character of the testimony the writers of these testimonials have borne as the result of the actual use of the company's manufactures.

We may take this opportunity of announcing the completion of extensive additions to the works which were in progress at the time our special representative visited them a few months ago. He wrote as the result of that visit a very full description both of the works and the process. As now completed they will at once quadruple the output, and enable the company to more promptly execute orders. The new plant comprises all the latest improvements suggested by experience gained in working the preliminary appliances. The company is therefore able to produce cylinders of larger sizes to meet the demands of customers.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

KOLAR GOLDFIELDS, AS SEEN BY A RECENT VISITOR.

SIR,—Having just returned from a visit to the "Kolar Goldfields," in the Province of Mysore, Southern India, I have much pleasure in informing your readers, who are interested in the properties, the great amount of satisfaction the appearance and workings of the mines gave me.

I can assure the shareholders in such mines as the "Mysore," "Ooregum," and "Nundydroog" Cos. that their money is well invested, and that there is no speculation about these companies; other properties, such as the "Champion Reef," "Mysore West," &c., are also bound to succeed in the near future.

Everything about the mines appears to be carried on in the most business, substantial, miner-like, and careful manner possible, with a view to a great future.

The only cause for complaint—if complaint it can be called—is that there are not many more shafts sunk, and more machinery erected, on the properties mentioned, to increase the output very considerably. Each one of the properties mentioned has sufficient ground, on the line of the "Champion Reef," for half-a-dozen other companies to work upon, as hard as they may, without being exhausted, for 20 to 50 years to come. If this were being done, the amount of gold that would be obtained would be astonishing.

This letter is not written with a view to puff any of the mines. Time will prove that my remarks are correct.—I am, &c.,

W. HAMILTON.

Aug. 25, 1891.

ST. JOHN DEL REY.

SIR,—It is great satisfaction to me (as a shareholder in the St. John del Rey Mine) to see the splendid progress that is being made in sinking the two shafts.

I consider great praise due to Mr. G. Chalmers (our superintendent), and also to the officers, in the management of their several departments.

The entire depth to which the above shafts have to be sunk is, viz.:—The D, or hauling shaft, 382 fms., of which 320 have been sunk, leaving about 62 fms. more to sink; the C, or pumping shaft, 358 fms., of which about 298 have been sunk up to the end of Aug., leaving about 62 fms. more to sink.

At this rapid rate of sinking they will be at the bottom of the mine by the end of Dec. I hope to see the shares at 20s. by Jan.

Without exception, there is no share in the whole mining market that is such a good look up (and not for long) as St. John del Rey shares. Anyone buying at present market price, viz., 6s.—7s., and locking them up for a short time, will make enormous profits.—I am, &c.,

A GREAT BELIEVER IN ST. JOHN DEL REY.

THE OPHIR CONCESSIONS, LIMITED.

SIR,—I shall feel obliged if you will allow me, through the medium of your valuable journal, to make known to the shareholders of the Ophir Concessions, Limited, that Mr. James B. Woolley, a gentleman strongly recommended to the board, and who has had over 14 years' experience in the Transvaal, left Southampton on the 11th inst. by the steamer German for East Africa, to prospect and locate further claims for the above company.—I am, &c.,

W. H. OLLIFFE,
Secretary.

31, Lombard Street, E.C.
Sept. 16, 1891.

PAHANG CORPORATION, LIMITED.

DIRECTORS, FOR SUFFICIENT REASONS, DECIDE TO POSTPONE THE MEETING.

THE directors had anticipated that they would have been able to hold the annual general meeting at an earlier period than last year, but they were desirous of having a comprehensive and detailed report from the superintendent not only of the operations of the past year, but also to receive from him a scheme for the future development of the mines and properties, so as to ascertain the amount of capital that may be required for the purpose. It would appear that more time than had been anticipated was required for the obtaining of this information, and a telegram was received on Sept. 1 stating that the report is only now being posted. Some of the delay is apparently attributable to Mr. Neild having been compelled to visit the Blat district with a view to take up its management, which had not been satisfactorily carried on up to that date by Mr. Nauta, in whose charge it had been placed, and to arrange for the alluvial tin ground being worked upon tribute instead of by day work as heretofore. It was also necessary for him to go to Singapore to transact some important business with the Governor of the Straits Settlements, which further delayed him. The accounts for the past year are to hand, but it is useless to trouble the shareholders to meet until the full information can be afforded them which will be contained in the annual report of the superintendent. So soon as this is to hand the meeting will be at once convened. I may take the opportunity to say that the output of tin is gradually increasing, the average for the past few months being about double what it was during the corresponding period of last year. It is also gratifying to find that the monthly expenses have been considerably reduced.—A. GIFFARD, Secretary

OTTOS KOPJE.

A GOOD PROGRESS REPORT.

THE local director reports as follows:—There is a large amount of work being done, and I am certain that no company in these fields is hauling ground any cheaper than this company. I am preparing the way for Mr. Lisle's operations, as arranged with him previous to his departure. I intend to have the anchorage lowered another 40 ft. before Lisle's return, and as much unpayable topstuff removed as possible without increasing my pay-sheet, and the sloping wall of well removed to enable the engine to work without a back hauling line, so that all will be plain sailing for him, and he will be, I trust, in payable ground. Indeed, unless he returns sooner than arranged, I expect to have a few thousand loads of good ground through the machine. You may be sure I am working the mine for the best according to my lights, and I feel now that the best washing was through mixing the ground where the pole pits were sunk in the mine with the other top stuff, which is quite inferior and unpayable. If this is correct, I shall commence to sink next week sometime, and will verify this in a very short time thereafter. The hauling and washing is of the usual character. I am in Lisle's hands as to result of my working, and confidently await his report upon it.

THE CHAMPION REEF GOLD MINING CO. OF INDIA, LIMITED.

POSITION OF THE MINE FULLY SET FORTH.

IN a circular to the shareholders inviting subscriptions to an issue of 50,000l. debentures for the purpose of providing further working capital for the company, it is said that:—The prospects of the mine are decidedly good, the last report, dated Aug. 18, being by far the best that has yet been received. In the Mysore section of the company's property four shafts have been sunk to considerable depths, and it is anticipated that before long each of these shafts will become the centre of a productive mine. Already valuable quartz is being laid open at Ribblesdale's and Garland's shafts. In the former, according to the last report, the lode in the 240-ft. level north was 1 ft. 6 ins. wide, and worth 1 oz. 6 dwts. 3 grs. of gold per ton; and the lode in the same level south was 3½ ft. wide, and assayed 1 oz. 4 dwts. 14 grs. of gold per ton. At Garland's shaft the lode in the 240-ft. level south was valued at 2 ozs. 10 dwts. of gold per ton, the quartz being 2½ ft. wide. In regard to Carmichael's shaft a telegram was recently received announcing the intersection of the lode at the 225-ft. level north, the quartz being 2 ft. wide. No particulars as to value have yet been received. The prospects at Dalyell's shaft also are good. In the Coromandel section of the company's property a productive lode has been operated upon for some time past. The mines are equipped with valuable pumping, winding, and rock-drilling machinery, and a 20-head stamp battery has recently been shipped. The engine and boilers to drive the stamps are being constructed, and it is hoped will be ready for shipment in the course of a few weeks. The further amount of working capital is required to pay for the stamping machinery, and to continue the development of the property on a large scale. It is anticipated that by the time the stamps are erected and ready for work, which should be early next year, the mine will be in a position to make regular returns of gold. The situation of the Champion Reef Mine, between the Mysore and Ooregum Mines, is well known, and there is no reason why the former should not turn out as valuable a property as either of the others. The debentures are offered in the first instance to shareholders, and the directors hope that every member will avail himself of the opportunity to subscribe. Should the full amount not be applied for by the 30 inst. the board will hold themselves free to place the balance elsewhere. Enclosed you will find a form of application, which be good enough to fill up for the debentures you wish to take and forward it to me, or the bankers of the company, the Union Bank of Scotland, Limited, 62, Cornhill, London, E.C., on or before Wednesday, the 30th inst.—J. GARLAND, Secretary.

CAPE OF GOOD HOPE AND NATAL MAIL SERVICE.—The Union Steamship Co.'s new twin-screw Royal Mail steamer Scot, which left Cape Town on Wednesday, 2nd inst., with the homeward Cape of Good Hope and Natal mails, arrived at Madeira at 8 a.m. on Monday, 14th inst., and proceeded for Plymouth at noon. The Scot's passage was made in 11 days 13 hours 17 minutes, giving an average speed of 16.9 knots per hour. The fastest passage between Cape Town and Madeira has thus been made by the Scot.

THE MAMMOTH GOLD MINES, LIMITED.

AUGUST RETURN, \$15,300.

THE production of bullion in Aug. amounted to \$15,300 (from 2,060 tons crushed) exclusive of the amalgam left in the mortars. This production, as well as that for the months of June and July, is below the average owing to various causes, but principally to the facts that the mill has been standing for holidays and repairs, and that the ore crushed was taken largely from the upper workings, where the quartz is harder than in the lower levels, resulting in a reduced quantity of ore crushed. Extensive development work has been done and is still proceeding, and the directors have caused elaborate drawings of the underground workings to be made, showing the reserves of ore, and these can now be inspected at the company's offices by any shareholder wishing to form for himself an opinion on the value of the mine. Negotiations for extension of plant and other improvements having been pending for a considerable time, the secretary has been sent to America to accelerate their conclusion by conferring directly with the American shareholders.—A. B. ROBINSON, Acting Secretary.

HOLLOWAY'S PILLS.—Any dyspeptic sufferer aware of the purifying, regulating, and gently aperient powers of these Pills, should permit no one to cloud his judgment or to warp his course. With a box of Holloway's Pills, and attention to its accompanying "Directions," he may feel thoroughly satisfied that he can safely and effectually release himself from his miseries without impairing his appetite or weakening his digestion. This most excellent medicine acts as a nerve and bodily tonic by aiding nutrition, and banishes a thousand annoying forms of nervous complaints. An occasional resort to Holloway's remedy will prove highly salutary to all persons, whether well or ill, whose digestion is slow or imperfect, a condition usually evidenced by weariness, languor, listlessness, and despondency.

CAMBORNE SCHOOL OF MINES.

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for
giving instruction in subjects specially
applicable to mining students, and in a
district where the practice of mining may
be observed at the same time.

The subjects taught include Mining, Ore-
dressing, Vanning, Assaying, Chemistry,
Geology, Mineralogy, Steam, Metallurgy,
Plan Drawing, Engineering, &c.

The managers of the principal mines in
the neighbourhood will afford facilities to
students of the School for studying practical
mining.

Prospectuses, and any further informa-
tion, may be obtained of the PRINCIPAL or
SECRETARY.

The Session commenced on Monday,
21st September.

AGENTS FOR

GATES CORNISH ROLLS PULVERISER.

Simple, Durable, Compact, Dustless.

Giving a finished product direct from the machine.

The best Ore Granulator for leaching and concentrating in the world.

THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,

MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ¼ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only effective and durable hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

No. 2 DRILL.

ROBEY & CO.,

GLOBE WORKS, LINCOLN.

ROBEY & CO. LINCOLN
Class D, Horizontal Fixed Engine, fitted with Patent Automatic Expansion Gear

High Speed Engines—Horizontal and Vertical.

"Robey" Winding Engine.

Vertical Engine and Boiler.

THE "ROBEY" PATENT GAS ENGINE

HAS THE FOLLOWING ADVANTAGES:

1. Improved design, whereby all working parts can be removed and examined without breaking any joints.
2. Patent Governor, giving perfect regularity of speed.
3. It is fitted with automatic Tube Ignition.

4. Improved Safety Combination to prevent starting backwards.
5. Automatic and absolutely uniform lubrication.
6. Highly economical consumption of gas.
7. Especially adapted for Electric Lighting.

"Robey" Winding Engine, with Patent Wrought-iron Tank Foundations.

Improved Compound "Robey" Engine.

Improved Stone Breaker.

Portable Engine.

Improved Hoisting Engine.

Compound "Robey" Fixed Engine.

N.B.—Also makers of all descriptions of Pumps, Wrought Iron Pit Head Gears, Mining Plant, and Gold, Silver, Lead, &c., Reduction Machinery.

ROBEY & CO., GLOBE WORKS, LINCOLN.

STAMP BATTERY.

MAKERS OF ALL KINDS OF
MINING MACHINERY

Send for Catalogue, and enquire for Particulars of

KROM ROLLS

FOR FINE CRUSHING.

They crush more economically than any other system; produce a more even sample; require less power, less attendance, less wear and tear, and fewer renewals, and are moderate in prime cost. Can be seen at work in London.

KROM ROLLS.

OF AMERICA,**

114a, Queen Victoria Street, London, E.C.

Telegraph Address: "ENYAM, LONDON."

Chief Office: 10, Park Place, New York,

Cable Address: "IRONCHAIN, NEW YORK."

INGERSOLL AND SERGEANT ROCK DRILLS, AIR COMPRESSORS, COAL MINING
MACHINES, AND STONE CHANNELLING MACHINES.

Section of Ingersoll-Sergeant Rock Drill.

The Only Drill with Positive Valve Motion and Variable Stroke for Steam or Air in the Market.

Equip your mines with "Sergeant" Rock Drills and Air Compressors. Follow the American method of machine mining, and reduce your cost of mining by from 25 to 50 per cent. below the cost of hand labour. Full information given of the system on application.

Duplicates of Sergeant Drills are kept in stock, and can be shipped at a minute's notice.

On View at the Offices of the Company as above, where Catalogues, Estimates, and all Particulars may be obtained.

GOLD MEDAL AT THE CRYSTAL PALACE MINING EXHIBITION, 1890, and
THE ONLY GOLD MEDAL AWARDED AT THE LEEDS MINING EXHIBITION, 1890
HIGHEST AWARDS:—SILVER MEDAL, SYDNEY, 1879. SILVER MEDAL, PARIS, 1878.

FIRST SILVER MEDAL, MINING INSTITUTE OF CORNWALL, 1881 and 1883.

Awarded the FIRST PRIZE at the ROCK DRILL BORING COMPETITION, at East Pool Mine, Cornwall, Sept., 1883
INVENTIONS EXHIBITION OF 1885; and the GOLD MEDAL AT LIVERPOOL OF 1886 WINNER.

AND ECLIPSING ALL OTHER MACHINES IN THE TRIPOD COMPETITION AT THE MINING EXHIBITION, CRYSTAL PALACE, 1890.

THE PATENT "ECLIPSE" ROCK DRILL and RELIANCE AIR COMPRESSOR

now supplied to the English, Foreign, and Colonial Governments,
and are also in use in a number of the large Mines, Railways,
Quarries, and Harbour Works in Great Britain and Abroad, and
largely used in the United States of America.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

PRICES NOT MAINTAINED—PENNY AND FIVE FARTHING
SHARES — POOR SILATI!—SPECIAL NOTES UPON ST.
JOHN DEL REY, TOLIMA, LISBON AND LOMA.

THE business of the week has been fully up to expectation, but prices have not been, as a rule, maintained. The public have hastened in some cases to take profits, and in others to realise hitherto unrealisable securities. Nor are they to be blamed for their promptitude, though they are open to censure for their imprudence. What between reconstructions on the one side, and calls upon the other, their patience, as well as their cash, has been exhausted. What are brokers to say in reply to those whom they have advised not to sell their shares, but to wait until they "go better," when the answer has been that "needs must?" They could only go on to the market and do the business, and send their clients in far too many cases the skeleton of a once plump investment.

But not always has this been the case. There have been those who bought shares in thousands at pence each (Great powers this is very bad!), and even at prices in which the humble but useful coin, the farthing, has figured, for to such a favour have we come at last, who have sold those thousands at twopence, which after all means 100 per cent—does it not? There are West Indians, for example, that have been sold for five farthings, and other shares which it would be almost profane to name that have been dealt in by the halfpenny! Indeed it has been the practice of not a few investors to buy shares by the thousand in several companies that are on the point of shuffling off this mortal coil with the idea that should only one turn out right they will make a profit on the whole deal, and should all go wrong the loss will not be great. Numerous indeed have been the instances in which the wisdom of this sort of calculation has been justified.

It seems a hint worth making a note of, and resolves itself into a sort of arithmetical problem. If I give a penny each (or more as the market may demand) for the shares of half-a-dozen companies that are on the edge of the tomb, what will be my gain should one only turn out right, or loss if all of them finally succumb? Each reader in this matter must be his own Cocker, in other words his own arithmetician.

Now, what have we to say of the market generally; what of the meetings, and what of the outlook?

In the first place, we note lies and truth in regard to the diamond section—lies as to St. Augustines, for it is untrue that any shares of Col. McMurdo's have been thrown upon the market, and truth in regard to the figures of De Beers, a synopsis of which will be found elsewhere. St. Augustine, we may add, held a meeting of its larger shareholders preparatory to the special gathering called for Wednesday, at which it was decided vigorously to work the mine, and to provide more capital for the purpose. De Beers and North-Eastern Bultfontein are up, but New Jagersfonteins are down. There has again been good buying in Ottos Kopjes, and as the market is believed to have considerably oversold, buyers should have no fellowship with the carrying over system, but demand delivery.

In the Land section there has been a marked rise in Exploring, and London and South African Exploration were firmer on the announcement of the dividend. Sutherland Reefs have lost a portion of their rise, and Goldfields of South Africa are not so lively as they were a week ago.

But what shall we say of Silati—poor Silati. The shareholders thought that the Bewick and Moreing report chastised them with whips, but, lo! Conybeare circular has chastised them with scorpions. A call of 1s. 6d. is hard—very hard—to bear, and comes on the top of other tribulations. The Camborne M.P. has not been deficient in encouraging reports, and the board have been equal to the not unfamiliar task of making a call. The call was 1s. 6d., and the shares fell 2s. By the bye, is the Oliver Pegler, who is now ferreting about the property, the same Oliver Pegler who cried "Amen" to Brough Smyth in the Wynaad. Before attaching too great importance to his opinions, it might be as well for shareholders to look through their old files of the *Mining World* and read his speeches in connection with various Wynaad mines, whose subsequent history has, to say the least, not quite toed the line of his prognostications. Oceanas also fell on a week which has been disastrous for Mr. Conybeare's joint stock progeny. Kaffir Gold shares have moved unevenly, but not to any marked degree.

In the Australian section a good telegram "firmed up" Day Dawn P.C. To this message the directors attach considerable importance. Good news was also received by Day Dawn Block, and there has been an active market at better prices, not only for these shares but also for Kangarilla and Wentworth Proprietary. On the other hand, in several instances shares are down. The position of this section is referred to in our leader columns.

Indian shares have been somewhat inanimate this week. The announcement of the Nundydroog dividend came too late to influence prices. We withdraw not one word as to what we have previously said in regard to this mine, and commend to the perusal of our readers Anglo-Indian's letter in another column, wherein the full facts are set forth with the exception of the dividend declared to-day, of which, of course, he was unaware at the time he wrote (Sept. 22). South East Mysore look a good purchase at present prices, and so also do Mysore West and Mysore-Wynaad. Ooregum Ordinary shares have been largely dealt in.

The Copper section calls for no special remark, but General Foreign shares cannot be so lightly dismissed. In several cases prices are up, notably Tolima A and B, Golden Leaf, New Guston (on the declaration of the 4s. dividend), Pahang Corporation, and St. John del Rey. It is very gratifying to us to see the steady rise in the latter company's shares. We have often taken up our parable in their favour for reasons that appeared to us to be as clear as the sun at noonday, and the profits that can now be obtained by our readers who bought at 3s. and thereabouts are really substantial. We advise all shareholders to hold St. John del Reys still. Of course, the company will want more money, perhaps 50,000l., but that has been known from the beginning. Don Pedro, its neighbour, has been well spoken of and much dealt in.

Talking of Tolima, Mr. Green goes out by the mail next week taking with him a staff of engineers and an electrical plant so as to work the mine day and night.

The shares that have fallen include Amador, American Belle, Callao Bis (of which the market is short), Lisbon-Berlyn, Montana, Fortuna, and a few others. There has been a good deal of Liverpool buying of Yankee Girls.

Loma shares have been firm, and from the last reports from the

property prices should improve as a profit of 300% is shown on the month.

In Lisbon-Berlyn a very large business had been done until the company issued the report with reference to taking up the unissued capital at 2s. 6d., when the price fell from 4s. 3d. to 2s. 6d., closing at 3s. 3d.

Home shares have been uneventful, and happy would they have been if they had had no history during the past few weeks. It will be seen from our leader columns that Cornish shareholders are not satisfied with the manner in which Carn Brea reports have recently been published, or rather, not published, in their entirety to the shareholders as they were to certain persons who are alleged to have "made thousands" out of prior information.

An important meeting was held of Guadaleazar Quicksilver Mines, which are likely, ere long, to cut a good figure on the share market. We recommend to our readers a perusal of our full report of this meeting. Mount Albion appears to have but slender prospects of success, but a considerable amount of hope was infused into shareholders of Oriental and Sheba Valley. A well-managed company appears to be the Drachenfels Banket Reef, which ought to develop into a considerable success. D'Eresby and Gwydyr Mines are to be wound up, and the position of Manica Ophir is fully discussed elsewhere.

The business outlook is hopeful. The American Market is the key to the situation. If that be booming, the Mining Market will be lively also. We have commented before on the singularity of the fact, but there is no setting aside the deductions of experience.

AFRICAN LANDS.

The chief dealings (and they have been many) in this class have been in such shares as Exploring, Goldfields of South Africa, Read's Drift, London and South African, Explorations, Oceana, Silati River and Zoutpansberg. In the case of London and South African and Read's Drift, there has been some very strong buying, but it is strange how several brokers were anxious to get rid of Silatis several days previous to the 1s. 6d. call being made.

Sutherland Reefs are, as we foreshadowed, lower. There is a weak market, and shares are $\frac{1}{8}$ lower on the week.

Business:—A rise is shown in Exploring of 20s.; London and South African, $\frac{1}{4}$; Read's Drift, $\frac{1}{4}$; and Transvaal Estates, 1s.; whilst the falls are as under:—Bechuanaland, $\frac{1}{8}$; British South Africa Chartered, $\frac{1}{16}$; Goldfields of South Africa, $\frac{1}{4}$; Oceana, $\frac{7}{16}$; Silati River, 2s.; Southern Land, 1s.; Sutherland Reef, $\frac{5}{8}$; Transvaal Gold, 6d.; Ditto Lands, 1s. 6d.; and Zoutpansberg, 2s.

KAFFIRS.

A very extensive business has been transacted in this class, but prices do not in any case leave off at best. This is largely accounted for by the slump in Americans, and by the near approach of the settlement, which commences on Monday next. There has been a disposition to purchase low priced shares in any of the "live" companies as they are termed, such as Vogelstruis, Big Golden Quarry, Bankets, Battery Reefs, Forbes Reef, Langlaagte, Block B., Mays and Moss Rose. It is thought that at any moment a prize may turn up and large profits be made.

Business.—A rise is shown in Great Gold Zone of 2s.; Johannesburg Waterworks, $\frac{5}{16}$; Kimberley Roodepoort, $\frac{3}{16}$; and Robinsons, $\frac{1}{8}$.

The following have fallen:—Pigg's Peak, 6d.; Aurora, $\frac{1}{8}$; Bantjes, 2s.; Big Golden Quarry, 3d.; Bothas Reef, 6d.; City and Suburban, $\frac{3}{8}$; Croesus, 4s.; Crown Reef, $\frac{3}{8}$; Durban Roodepoort, $\frac{1}{8}$; Forbes Reef, 2s. 6d.; Geldenhuis, $\frac{1}{8}$; Heriot, $\frac{1}{4}$; Johannesburg Pioneer, $\frac{1}{2}$; Jumpers, $\frac{3}{8}$; Kleinfontein, $\frac{1}{8}$; Langlaagte, $\frac{1}{4}$; Langlaagte, Block B, 1s. 6d.; Luipaard's Vlei, 1s.; Main Reef, 1s. 6d.; May Consolidated, 1s. 3d.; Modderfontein, 2s.; Moss Rose, 1s.; Nabob, 1s.; Randfontein, 1s.; Simmer and Jack, $\frac{1}{8}$; Stanhope, $\frac{3}{8}$; Wemmer, $\frac{1}{8}$; Witwatersrandt (Knight's), 1s.; and Wolhuters, $\frac{1}{4}$.

$\frac{1}{16}$	Wolhuters	$\frac{1}{16}$ — $\frac{1}{16}$

DIAMONDS.

A strong demand set in for De Beers, but although they do not close at best they show a marked improvement. There has also been an inquiry for North Eastern Bultfonteins, which have improved slightly. There is no fall to call for attention.

Business.—A rise is shown in De Beers of $\frac{1}{8}$; Gordon, 6d.; and North Eastern Bultfontein, $\frac{1}{4}$; whilst the only fall is New Jagers fontein of $\frac{1}{8}$.

Making-up Prices, Sept. 14.	DIAMOND SHARES.	To-night's Prices.
19	Bultfontein Consolidated ...	19 — 20
12	De Beers Consolidated ...	$13\frac{1}{16}$ — $13\frac{1}{16}$

$1\frac{1}{16}$	North-Eastern Bultfontein ...	$1\frac{1}{16}$ — $1\frac{1}{16}$
$\frac{1}{16}$	Burma Ruby Mines 15s. paid... ..	$\frac{1}{16}$ — $\frac{1}{16}$

INDIANS.

There has not been much business in Indian shares, and although the market closes fairly firm, prices have not improved to any ex-

tent. Glenrocks have had a small spurt, while Indian Consolidated have lost part of last week's rise. Mysore, Nundydroogs, and Ooregum remain without change.

Business.—A rise is shown in Glenrock of 1s.; Mysore West, and Mysore Wynaad, 3d.; and South-East Mysore Preference, 6d.; whilst a fall is recorded in Balaghat of 6d.; Colar Central, 6d.; Indian Consolidated, $\frac{1}{8}$; Mysore Harnhalli, 2s. 6d.; Mysore Reefs, 3d.; and Nine Reefs, 3d.

AUSTRALIANS.

There has been very little business in this description, and prices have not improved to any extent except Wentworth Proprietary, while on the other hand British Broken Hills have fallen. The market closes weak.

Business.—A rise is shown in Day Dawn Block of 9d.; Kangarilla, 1s.; Mosman, 3d., and Wentworth Proprietary, $\frac{1}{8}$; whilst a fall has taken place in Anstralian Broken Hill of 6d.; British Broken Hill, $\frac{3}{8}$, and Scottish Australian, $\frac{1}{8}$.

COPPER.

There has been some steady selling on Paris account, which has caused a slight fall in Capes and Copiapo, while Tintos are slightly harder; the market does not close at its best, and very little selling would most likely send prices lower.

Business.—A rise is shown in Rio Tinto of $\frac{1}{8}$; whilst a fall is noted in Capes of $\frac{1}{4}$; Copiapo, $\frac{1}{8}$; and Quebrada, $\frac{1}{8}$. Others remain unchanged.

GENERAL FOREIGN SHARES.

This section has moved unevenly, as will be seen below.

Business.—A rise is shown in Colon of 6d.; Esmeralda, 6d.; Garfield, 9d.; Golden Leaf, 1s.; New Guston, $\frac{1}{8}$; Pahang Corporation, 1s.; Pinos Altos, 6d.; St. John del Rey, 1s. 6d.; Tolima "A," $\frac{1}{2}$, and Tolima "B," $\frac{1}{4}$. The falls are in Amador of 1s. 3d.; American Belle, 9d.; Balkis, 1s.; Callao Bis, 1s.; Elkhorn, $\frac{1}{8}$; Fortuna, $\frac{1}{4}$; Kapanga, 3d.; Lisbon Berlyn, 6d.; Loma, 6d.; Montana, 2s. 6d.; New California, 6d.; Ottos Kopje, 3d.; St. Augustine, 6d.; and Yankee Girl, 3d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

INDIAN MINES.

NERBUDDA COAL AND IRON.—The sales for the month of Aug. are 696 tons.

NUNDYDROOG.—The company has declared a dividend (free of income tax) of 1s. 8d. per share on the fully-paid shares, and of 8d. per share on the shares on which 8s. shall have been paid; payable on Oct. 24. The transfer books will be closed on Oct. 3.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—A telegram from the managing director resident at Broken Hill states that some ore of fair grade is always being raised, and that a small quantity of rich ore, yielding 11,000 ozs. of silver to the ton, has quite recently been struck.

EAST BROKEN HILL CONSOLS.—Telegram from the managing director resident at Broken Hill, Sept. 21:—"Main engine shaft, block 98, galena showing at a depth of 120 ft."

BRITISH BROKEN HILL PROPRIETARY.—For the week ending Sept. 24, 515 tons of ore were treated (including 122 tons of iron ore) yielding 67 tons of lead, containing 4,635 ozs. silver.

BROKEN HILL PROPRIETARY.—For the week ending Sept. 24, 4,233 tons of ore were treated, yielding 635 tons of silver lead containing 169,320 ozs. silver. Cable states that surplus silver on hand amounts to 259,576 ozs., and price of shares in Melbourne, 97. 6s.

GYMPIE GOLDEN CROWN.—The following cablegram gives the return of the first 100 tons of quartz from the company's new claim, viz.:—"100 tons 59 ozs.; value, 200l." The directors regard this return as most satisfactory, being naturally mixed stone from the opening of the new reefs. It proves the claim gold-bearing, and at 2l. per ton alone will pay well.

HARRIETVILLE.—Telegram from the superintendent, dated Sept. 23, states:—"Cleaned up Sept. 22, Mons Meg Mine, 640 tons 308 ozs. Tiddledee Mine, 194 tons 42 ozs.; amalgamating pans, 34 tons 63 ozs."

KANGARILLA PROPRIETARY.—Aclare Mine: Telegram from the manager dated Sept. 19:—"Am crushing at the rate of 50 tons per day. Concentrates yield 50 ozs. silver per ton and 60 per cent. lead."

KAPANGA.—The directors have arranged with the liquidator of the Coromandel Gold Co. for an extension of the time for application for shares until the 28th inst. If applications are not received by that time the interest of shareholders in the company will lapse, and the liquidator will proceed to deal with the unapplied for shares in the manner provided for by the resolutions passed at the time when the Coromandel Gold Co. went into liquidation.

MOSMAN.—The directors have received the following cablegram from the general manager at Charters Towers, giving the result of the crushing for the period ending 19th inst.:—"Tons crushed, 600; yield of gold, 850 ozs.; approximate value, 2,930l." The stone was taken from the North Australian lease and from the Wyndham shaft levels.

NEW QUEEN.—A cablegram (Sept. 19) gives result of crushing for the past fortnight: "380 tons (yielding) 460 ozs. (gold)."

TASMANIAN LAND AND EXPLORATION.—The following telegram is from the engineer, dated Tasmania, Sept. 18:—"Have 35 tons of ore ready; the ore contains 60 per cent. of lead and 106 ozs. of silver." This ore is saleable at about 24l. per ton.

TASMANIAN SILVER.—Telegram from the company's mine dated Sept. 23:—"Cross-cut total length, 32 ft.; output of ore is 40 tons to date."

VICTORY (CHARTERS TOWERS).—Cablegram:—"Crushing completed; 1,400 to 1,500 tons giving 2 ozs. of gold to the ton. Dividend declared, 1s. per share."

WENTWORTH GOLDFIELDS PROPRIETARY.—Cablegram from Mr. W. H. Irwin, the permanent manager:—"In the north drift of the Happy-Go-Lucky vein the vein is 20 ins. wide, and assays 12 dwts. per ton. Stringers of rich ore are coming in, in the winze, No. 1 vein, Phoenix shaft. The 240-ft. cross-cut, Shamrock shaft, is in 300 ft., still in the serpentine. The cross-cut through the Chapel Hill quartz reef is composed of quartz and diorite. The re-timbering of the Reform shaft is being pushed on with all possible speed. The new air compressor works well. We shall commence crushing concentrating ore next week."

FOREIGN MINES.

CASTILLON (PYRENEES).—The company has sold 50 tons silver-lead ore, at 97. 5s. 6d. per ton, f.o.b. Bordeaux, to Messrs. Nevill, Druce and Co., of Llanelly.

ELKHORN.—Cable information from the mine:—"Bullion produced for week ending Sept. 19, \$7,950."

OSCAR.—The manager telegraphs under date Sept. 25:—"Quartz 3 ins. wide, has again come in on the footwall at the bottom of the shaft. Pushing sinking. Expect early further improvement."

ROYAL SILVER MINES OF POTOSI.—The company have sold, through Messrs. Pixley and Abell, 9,192 ozs. silver, which realised 1,794l. 15s. 8d. Also the company has received telegraphic advice that the production of silver for Aug. amounted to about 29,600 ozs.

ZARUMA.—Information by telegram from the manager at the mines, re Aug. produce, states:—"Mill working 21 days, crushed 420 tons of quartz, producing 240 ozs. of bullion."

HOME MINES.

D'ERESBY AND GWYDYR.—At an extraordinary general meeting, held on Monday, the following extraordinary resolution was passed :—"That it has been proved, to the satisfaction of the shareholders, that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind-up the same voluntarily, and accordingly that the company be wound-up voluntarily." Mr. Edward Ashmead, of 2, Drapers Gardens, was appointed liquidator.

ROMAN GRAVELS.—An extraordinary general meeting will be held at the registered office of the company on Sept. 30, when the resolutions, which were duly passed on the 9th inst., will be submitted for confirmation as special resolutions; and a liquidator or liquidators will also be appointed.

AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 446 AND 447.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

CROWN REEF.—The company give notice that the annual general meeting will be held on Oct. 26.

NEW PRIMROSE.—Cable : "Share register will be closed from 1st to 7th of Oct. to prepare complete list for payment of second dividend."

VIRGINIA (TRANSVAAL).—The company notifies that the letters of allotment of shares in the re-constructed company have been posted.

LONDON AND SOUTH AFRICAN EXPLORATION.—The directors of this company have declared a dividend of 3s. per share less income tax for the quarter ending the 30 inst., payable on and after that date.

GOLDFIELDS OF SOUTH AFRICA.—The certificates for the new shares, 10s. paid, are now ready, and can be exchanged at the office of the company for the banker's receipts for the amounts due on allotment and first call.

ST. AUGUSTINE.—A meeting of shareholders is to be held at the Cannon Street Hotel, on Wednesday, "to hear the statement of the chairman, and to consider the means to be adopted for the successful development of the mine."

NORTH-EASTERN BULTFOEIN.—This company has received telegraphic advice for last week announcing 17,000 loads, mainly re-washings; yield, 1,200 carats of diamonds. Increase of blue ground on floors, 12,000 loads.

AFRICAN GOLD RECOVERY CO., LIMITED (McArthur-Forrest Process).—The company has received information that the Ferreira and Worcester Companies have adopted the McArthur-Forrest Process for the treatment of their tailings. The following cable is just to hand :—"August Sheba tailing, 2,000 ozs. troy."

REMOVAL.—The London Transfer Offices of the Crown Reef Gold Mining Co., Limited, the Geldenhuis Estate and Gold Mining Co., Limited, the Salisbury Gold Mining Co., Limited, the Stanhope-Geldenhuis Gold Mining Co., Limited, and the United Ivy Reef Gold Mining Co., Limited, have been removed from Warnford Court, E.C., to 23, Austin Friars, E.C.

JUMPERS.—Profit on operations for July, 267*l.* 4s. During the month there was expended : Upon permanent works, 301*l.* 10s. 9d.; upon buildings, machinery, &c., 3,138*l.* 9s. 4d. Driven and sunk during month, 421 ft. Concentrating plant to deal with the pyritous ore has been ordered. The large expenditure on capital account is principally for Frue vanners, and the buildings for the air compressor plant. 50 stamps crushing for Jumpers Co.; 50 stamps crushing for Geldenhuis Co.

EDWIN BRAY.—Manager's report for week ending Aug. 22.—No. 2 quarry : Underhand stoping east and west of winze is proceeded with. The quartz extracted is worth between 10 dwts. and 12 dwts. of free gold. No. 3 level : A large chamber is being opened in this level of a length of about 25 ft. All the quartz mined is good milling stuff, worth about 8 dwts. The ropeway has worked well. Mill : 20 stamps have crushed continually, and the plates are showing a great improvement on the first fortnight of the month.

PAARL CENTRAL.—This company took over the business of the late Central Langlaagte Gold Mining Co., the Paarl-Pretoria Gold Mining and Exploration Co., and the Poortje Estate and Gold Mining Co. on Dec. 1, 1890, when the assets and liabilities of the several companies left only 317*l.* 19s. 5d. as working capital. At the time when the amalgamation was first agreed upon between the Paarl-Pretoria and Central Langlaagte Companies, the position was understood to be that the sum of 30,000*l.* would be forthcoming in cash from the former company, and that the liabilities of the latter would not exceed 17,000*l.* or thereabouts, and that the amalgamation would be carried through without delay. But though this arrangement was come to in April, 1890, through legal difficulties, this company did not take over till December last. In the meantime the amount of cash assets of the Paarl-Pretoria Co. was diminished to the sum before stated, whilst the liabilities of the Central Langlaagte Co. were increasing by reason of accumulating interest and the cost of keeping up the working of the mine in anticipation of a speedy settlement of all matters at issue. In view of the liability of the Paarl-Pretoria Co. to the Poortje Co. of some 8,000*l.*, which amount would have still further reduced the cash assets of the Paarl-Pretoria Co., it was decided to include the Poortje Co. in the amalgamation scheme, whereby the Paarl Central Co. received the sum of 7,780*l.* 12s. 8d. in cash as before stated. The profit and loss account shows a loss during the period of seven months to June 30 of 1,733*l.* 12s. 2d. Of this the sum of 711*l.* 10s. 6d. was incurred in preliminary expenses in taking over the assets and starting this company, and includes transfer dues paid on the various properties acquired. Crashings for last month, 1,000 tons, yielding 364 ozs.

REPORT OF MEETING.

PHOENIX AND WEST PHOENIX MINES.

CALL OF 3s A SHARE.

A MEETING of shareholders in Phoenix and West Phoenix Mines was held at Liskeard on Thursday week.

Mr. William Polkinghorne

(the purser) presided.

The accounts showed a debit balance brought forward from the previous account of 1,393*l.* Labour cost for the past 16 weeks amounted to 5,158*l.*, and merchants' bills, 2,922*l.*; the total liabilities being 9,474*l.* The tin sold realised 6,674*l.*, and this left a balance against the mine of 2,799*l.*

On the recommendation of the committee, a call was made of 1,800*l.*—3s. a share—and the committee of management was re-elected.

On the motion of Mr. COLMER, it was resolved to give notice to defaulting shareholders that the next meeting would be made "special," to declare all shares forfeited on which more than one call then remained due.

The proposed schemes for converting the company into one of limited liability were considered, and after some discussion it was decided that they be further dealt with by the committee, who should prepare a report.

THE GLENROCK CO., LIMITED.

THE WORK OF THE YEAR INDICATES SUCCESS.

THE directors are glad to report that news from the mine continues to be most satisfactory, and being desirous that the shareholders should have the same means of forming an opinion as to the present position and future prospects of the undertaking as they themselves possess, have decided to furnish you with *verbatim* extracts from the letters of the managing director and local secretary to the Premier Consolidated Gold Co., Limited, received in London by the last mail.

Mr. Farrell, writing from Dunedin, Aug. 12, says :—"By this post you will receive very glowing accounts which have appeared in the local press here, as to the very promising features now showing at the mine, and which I have great pleasure to confirm."

The *Insurance Mining and Financial Journal*, of New Zealand, dated Aug. 1, sent by Mr. Farrell, contains the following, which is a summary of the mine manager's report :—"The mine manager writes under date of Saturday, the 25th inst., stating that the No. 1 lode has been struck and driven upon for a distance of some 30 ft., showing gold freely throughout the stone, which is 4 ft. in thickness; as also gold is visible even in the laminations of mullock, which occur occasionally all along the drive. The No. 4 lode has also been met with in a cross-cut from the main top level, disclosing a highly payable reef 2 ft. thick, which seems to improve at every shot that is fired; while in the bottom of our main winze (which has been sunk to the level of the proposed new low level adit) we have got 3 ft. of reef formation, and the rich shoot of stone which was left underfoot in the old workings overhead is expected to be met with when this drive from the bottom of our shaft is extended another 150 ft. I might also add that a second cross-cut has been driven from our top level a distance of 63 ft. south, with the view to intercept the main vertical lode, which should be met with in another 17 ft. At present we have got more stone proved and in sight in various parts of the mine than we can possibly crush during the ensuing season with our small mill now in use, and it is gratifying to learn that the quartz now available will come from the old top tunnel, and is therefore entirely independent of what the new main low level adit is sure to disclose in the near future. This should be good news for the home shareholders, for truly the mine gives promise to realise even beyond our wildest anticipations."

The local office at Dunedin, writing under date Aug. 12, states :—"With the greatly improved prospects of the mine, and with crushings operations commencing in Oct. at latest, it promises that further remittances will not be required subsequent to the Oct. one."

Mr. Farrell continues in his letter :—"I must confess that for some considerable time I have received very encouraging news from the mine manager, but have purposely kept it back until such time as the new find was properly explored, in case your expectations would run too high, and the information prove misleading."

The directors would remind the shareholders that the work that has been done during the past 12 months has been to lay open the mine, so as to insure an ample supply of gold-bearing quartz for the reduction works; this, it would appear, has been accomplished, and the directors now look forward to regular crushings, commencing next month; and, without yielding too much to the sanguine expectations of those on the spot, the directors feel we may reasonably anticipate some very interesting and satisfactory news during the next few months. Present appearances may certainly be taken as indicating well-founded forecasts of future success.—W. P. OWEN, Secretary.

THE NEW GUSTON CO., LIMITED.

A 2s. DIVIDEND, AND A 2s. BONUS.

THE directors have decided to pay an interim dividend for the third quarter of the current year of 2s. per share, and, in addition, a bonus of 2s. per share, both free of income-tax, payable on Oct. 15, thus making the return to the shareholders at the rate of 80 per cent. per annum for the current nine months; leaving a considerable balance to be carried forward to credit of revenue account. The total dividends and bonus declared from Nov. 15, 1888, to date, now amount to 35s. 6d. per share. The transfer books will be closed from Sept. 28 to Sept. 30, both days inclusive.—B. MCNEILL, Secretary.

Sept. 9.—Mr. Harvey reports on the mines :—"No. 3 level : Not being able to deal at present with the waste and ore from this point, we have been obliged for the time to suspend operations. No. 5 level—north drift—No. 1 stope : Operations have also been suspended here, as we are not in immediate want of ore from this stope. No. 6 level—No. 6 ore body stope : Height of stope over back of No. 6

level, 78 ft.; length, 46 ft. Thickness of ore, 11 ft. for length of stope. Value from 100 to 6,000 ozs. of silver per ton. Gold from $\frac{1}{4}$ to 2 ozs. per ton. Copper from 2 per cent. to 8 per cent. South drift—new stope: Height of stope over back of No. 6 level, 40 ft.; length, 28 ft. Width of ore, 10 ft. for 23 ft. in length. Value from 40 to 350 ozs. of silver per ton. Gold from $\frac{1}{4}$ to $1\frac{1}{2}$ ozs. per ton. Copper, 2 per cent. to 4 per cent. South drift: About 90 ft. back or north from new stope we have driven east 21 ft. into the old south drift. At the time of driving the old drift some fair stoping ground was passed through. We propose opening and re-timbering this level in order to stope the ground referred to. 24 ft. of drift has already been securely timbered. North level—Stope south end of winze: Height of stope over back of No. 6 level, 31 ft.; length, 41 ft.; width of ore, 6 ft.; value, from 35 to 1,500 ozs. of silver per ton; gold, $\frac{1}{4}$ to $\frac{3}{4}$ oz. per ton. North level—Stope north end of winze: Length of stope, 37 ft.; height over No. 6 level, 31 ft.; width of ore, 5 ft.; value, from 40 to 150 ozs. of silver per ton; gold, $\frac{1}{4}$ to $\frac{3}{4}$ oz. per ton. North level—South drift: Distance driven, 21 ft.; total distance extended from south end of winze, 55 ft. width of ore in the forebreast, 6 ft.; value, from 40 to 90 ozs. of silver per ton; gold, $\frac{1}{4}$ oz. per ton. North level—Pioneer level: Distance driven, 3 ft.; total distance extended from north end of winze, 46 ft. Cross-drifts: Two cross drifts have been driven (from the north level) east and west 12 ft. 9 ins. and 10 ft. respectively, with the object of finding the ore. The ground in the west cross drift at present looks favourable for mineral. Raise: In the north level, 28 ft. north from winze a raise has also been put up 11 ft., and communicated with the north stope. Ore 3 ft. wide was passed through in raising, worth from 40 to 100 ozs. of silver per ton. gold $\frac{1}{4}$ to $\frac{1}{2}$ oz. per ton. We have at this point already opened out good stoping ground for over 100 ft. in length, with ore 6 ft. in thickness still in the south end of stope and face of drift. The different points in operation here look well throughout; in fact, we are opening up practically a new mine north of the shaft. No. 7 level—No. 7 ore body stope: Length of stope, 43 ft.; height over back of level, 21 ft. Length of ore, 43 ft., average width, 15 ft. Value from 35 to 300 ozs. silver per ton. Gold $\frac{1}{4}$ to 1 oz. per ton. South drift: Drift extended 22 ft.; total distance driven 71 ft. Width of ore at present in forebreast, 2 ft. Value from 40 to 80 ozs. of silver per ton. Gold, $\frac{1}{2}$ oz. per ton. During the past fortnight we have driven through ore for 19 ft. in length, having an average thickness of 5 ft., worth from 40 to 150 ozs. of silver per ton. At this point (when required) we are in a position to open out another stope. Shaft: The shaft has been sunk 120 ft. below the base of No. 7 station. Since the contractors completed their contract, we have put in shaft bearers and commenced to open out for No. 8 station, at a point 100 ft. below the base of No. 7 station. The mine continues to open out remarkably well.—B. MCNEILL, Secretary.

BRITISH MINING INTELLIGENCE.

ATLAS.—The directors have issued the audited statement of accounts made up to June 30. During the past six months there has been spent on capital account 624l. 10s. 2d., and the balance against the adventurers on profit and loss account is 517l. 7s. 9d. The directors regret that owing to the very hard ground unexpectedly met with in the deep adit, the progress made in driving has been much slower than anticipated. Capt. Grose's report shows that the deep adit is now being driven south in softer ground, and is only about 20 fms. short of the tin ground in the shallow adit.

CWMYSTWYTH (Sept. 23).—In the end of the 15 west we are now through the joint referred to in our last report, which carries spar and spots of ore, but nothing of importance, and we are continuing the drive as before. The cross-cut north at this level is making satisfactory progress, and does as yet present no signs. The new lode in the end of the 30 has further improved to $2\frac{1}{2}$ tons of blende per fm. The two stopes in the back of this level, east and west of winze on same lode (new lode), will yield respectively 2 tons of blende per fm. The stulls are now filled with deads after the recent clear out of ore-stuff and stoping recommenced. This work occupied a considerable time, but it was essential to the economical working of the ground. The stope in the back of the 15 east on the new lode will now yield $1\frac{1}{2}$ ton of blende per fm. In the stope in the back of the 15 west on the Comet lode there is no change of importance, the lode maintaining the average $\frac{1}{2}$ ton of lead and $1\frac{1}{2}$ ton of blende per fm. The stope in the back of the 30 on the Comet lode is worth $\frac{1}{2}$ ton of lead and 1 ton of blende per fm. Everything else is going on as usual.

DEVON GREAT CONSOLS (Sept. 17).—Watson's engine shaft: In the 172-fm. level west the lode is 2 ft. wide, yielding a little copper and mundic ores. In the 160-fm. level east the lode is 4 ft. wide, producing 1 ton of mundic and copper ore per fm. In the 160-fm. level west the lode is $3\frac{1}{2}$ ft. wide, yielding 1 ton of mundic and copper ores per fm., and is looking very promising. The stopes throughout the mines continue to turn out the usual quantities of copper and mundic ores.—W. CLEMO.

DEVON UNITED (Sept. 17).—Willesford's shaft: In the 144-fm. level east the lode is $2\frac{1}{2}$ ft. wide, producing a little copper and mundic ores. In the 144-fm. level west the lode is 2 ft. wide, and is more promising, and is yielding a little copper and mundic ores. In the stope, in the bottom of the 132-fm. level east and west of the winze, the lode is improved, and is yielding 3 tons of good copper and mundic ores per fm. In the stope, in the back of the 132-fm. level west, the lode is also looking well, and is producing 3 tons of copper and mundic ores per fm. of good quality.—W. CLEMO.

DRAKEWALLS (Sept. 24).—A further depth of 3 ft. has been attained in the engine shaft during the past week; the ground is a little harder for exploration, and consists of granite, capel, and occasional small veins of tin. No change to notice in driving the 160 west. The lode in the cross-cut north at the 160 east has improved, and is yielding 7 tons mundic per fm. and good saving work for tin. There is no alteration to report in the 147-fm. level driving east since last advised. The lode in the three stopes in the back of the engine shaft are producing respectively 11, 8, and 7 tons of mundic ores per fm. and saving work for tin. The lode in the stope in the bottom of the 147-fm. level, east of the engine shaft, continues to look well, and is yielding 14 tons of mundic per fm. and saving tin work. The lode in the stope in the back of the 132-fm. level west is yielding 2 tons copper ore and 4 tons mundic per fm. The wet weather is rather against our progress in cleaning out the

arsenic soot. We purpose selling about 7 tons tin on Tuesday next.—H. RODDA.

KINGSIDE (Sept. 23).—At the 44-fm. level driving west of cross-cut, north of Taylor's shaft, the portion of lode carried is at present producing saving work. In the same level east of cross-cut the lode is worth from 12 cwt. to 15 cwt. of lead ore per fm. In both these levels we are carrying a portion of the country rock to facilitate the driving thereof, and when they are extended a short distance further we purpose cross-cutting through the lode to ascertain its full value. At the 22-fm. level driving north of rise the branch, or counter lode, is not quite so productive, now yielding 8 cwt. to 10 cwt. of lead ore per fm. The lodes in the different stopes are looking much the same as of late, producing from $\frac{1}{2}$ ton to 14 cwt. of lead ore per fm. Ground has been excavated for turbine and air compressor, and the necessary work in connection therewith is being pushed forward.

NEW MINERA.—Report for week ending Sept. 11.—The 275-yd. level—No. 2 rise and stope: Worth 4 tons of blende and 1 ton of lead ore per fm.; other stopes yielding 2 tons blende and some lead. The 295-yd. level—Driving west: Improved, now worth 2 tons blende per fm. Driving east: In very good lode, valued at 6 tons blende and lead ore per fm. The 315-yd. level: In 22 yds. from winze; still worth 4 tons blende per fm. Dressing: The weather has been dreadful, but is now clearing and surface work is progressing. 160 tons of ore were sent away in Aug. The quantity actually dressed was 130 tons.

PRINCE OF WALES (Sept. 23).—The men who were in the 180-fm. level east have been engaged during this week enlarging the plat, and will complete it in a few days and resume driving eastward. In this level west we commenced taking down the lode in which, so far as can be seen, we think there is an improvement taking place, both in character and value. We are also blasting down the lode in the 166 west, but as yet see no change in it. When last taken down it was 3 ft. wide, and worth 15l. per fm. There is no perceptible change in the cross-cut south since last reported.—S. ROBERTS, J. PROWSE.

SOUTH CONDURROW (Sept. 23).—The new crank and fly-wheel shaft to stamping engine having been duly fixed, the stamps are now in good working order, and are being driven at full speed day and night, but owing to the breakage the next sale of tin will be less than usual. The 40 end east of engine shaft yields low quality tin stone. Three stopes in back of the 40 are worth, in the aggregate, 35l. per fm. The stope in back of the 50 is worth 8l. per fm. The stope in back of the 60 is worth 10l. per fm. The north section of the lode between the 60 and 70-fm. levels is worth 15l. per fm. There is no new feature to notice at Marshall's shaft.—W. RICH, W. THOMAS.

SOUTH DARREN (Sept. 24).—The shaft is $13\frac{1}{2}$ fms. under the 142; it is now deep enough for the 12-fm. lift. The ends are not yet squared out, and a good bit of the lode is still standing; the lode is worth 17 cwt. of silver-lead ore per fm. The stope in the 142 west is worth 17 cwt. of silver-lead ore per fm.; this place is looking better. The lode in the winze in the 130 west is poorer. I cannot put much value on it at present, but there is a nice stone of lead in one end of it, and we think it will soon improve.—J. MITCHELL.

TINDENE (Sept. 22).—I am very pleased to say we are now putting in the dividings for the skip-road, and will be completed tomorrow, when we shall commence driving east in the caunter lode, for, say, about 9 ft. before driving north towards the north lode. In the bottom of the 33-fm. level east of the Tindene shaft we have men on tribute on the north lode, and are breaking good work for tin, which looks well for the 43-fm. level. There is no other change to notice at present.—J. CURTIS.

VAN (Sept. 24).—The cross-cut south from the 150-fm. level is being driven towards the new or south lode as fast as possible, and another small branch of lead ore has been met with to-day. These branches of ore are similar to those passed through at the 135-fm. level before the south vein was intersected. The three stopes over the 150-fm. level are each yielding 15 cwt. of ore per fm. The stope No. 1 over the 135-fm. level on the south lode will produce 25 cwt. of lead ore per fm. The lode in the drift east from No. 2 stope is 4 ft. wide, spotted with ore, but not to value. The stope over the 105-fm. level is worth 20 cwt. of lead ore per fm. At the 150-fm. level going east from Seaham's winze, the part of the lode carried in the driving contains good blende, and is of a very promising character. The driving of the 120-fm. level east of Seaham's shaft is suspended for the present, and the men put to work in No. 1 stope over the 135-fm. level. We expect to sample a parcel of lead ore (50 tons) next week.—J. PAULL.

WEARDALE.—Report for week ending Sept. 19:—Ore raised for week, 34 tons; ore dressed for week, 67 tons; ore, slag, and fume smelted for week, 123 tons, producing 62 tons of pig lead.

WHEAL CREBOR (Sept. 22).—We are still making good progress in driving the 156 east. The part of the lode carried is yielding 3 tons of mundic per fm. There is now more water coming through the lode than we have seen for some time, and it is turning more to the south in its course going east. All other points in the mine are the same as reported last week. We are making arrangements to drive the 156 west of shaft, and hope to let a contract in a few days.—P. D. HOLMAN.

WHEAL UNY (Sept. 23).—The 244 end east still opens out at its usual value. The 244 end west looks well, but not quite equal to last valuation by the last blast. Looking at the size of the lode, and the character of it, we may expect an improvement in a blast or two. The whole drive for over 9 fms. east and west has passed through a good, payable lode. The stope behind this end looks fairly well. We have cross-cutted the lode for 19 ft. The present face of it is still in lode, but not so rich. The 230 east and west, with the 203 east and west unaltered since last week.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ANTIOQUIA.—July advices:—129 tons of ore produced 134 ozs., average 8.2-10 dwts. per ton; 125 tons of ore produced 36 ozs., average 5.7-10 dwts. per ton; total, 170 ozs. gold. Estimated value of the gold, 476l.; cost at the mines, Medellin and London, 546l. 14s. 9d.; estimated loss, 70l. 14s. 9d. During the month sums amounting to 93l. 18s. 3d., included in the above statement of cost, were expended in Colombia on capital account.

BALAGHAT-MYSORE (Sept. 1).—Report on the progress of the mine for the fortnight ending Aug. 30:—The 600 north drive has

advanced 30 ft., or 231 ft. from shaft; quartz about 10 ins. The 500 south drive has been stopping for want of coolies. We again started to work here to-day by hand labour. The 500 south winze has been sunk 4 ft.; total depth, 34 ft. 3 ins.; quartz about 8 ins. The 500 north winze unable to measure, being in bottom. The 410 north winze sunk 3 ft.; total depth, 45 ft. 9 ins.; quartz about 8 ins. wide. Midway drive below 410 driven 7 ft. 9 ins.; total length, 28 ft. 9 ins.; quartz about 3 ins. The 270 south drive driven 10 ft. 3 ins. Haines' shaft: We are proceeding with the skip-road below the 270, and timbering the shaft from the 330 to the 410 levels.

— Office note.—Owing to Mr. Oakley's illness the assays have not been made. They are expected by the next mail.

BRATSBURG.—Report for week ending Sept. 12.—Hoffnung Mine: No. 3 adit level is worth $\frac{3}{4}$ ton per fm. No. 1 rise in the back is producing 1 ton per fm., and No. 2 rise $\frac{3}{4}$ ton per fm. No. 2 adit level contains more ore to-day than last week, but still not enough to value; the rise here has improved, now worth 1 ton per fm. No. 4 level is without change. At Murchison's the lode is small, but very rich for its size, and worth about $\frac{3}{4}$ ton per fm. Johannes Mine: There is no change worthy of note here during the week; the main rise continues to open up most satisfactorily. Surface work and remarks: The crusher rolls having become entirely worn out at the lower jiggling machinery, we renewed these during the week, and owing to those of the new crusher at the higher machinery having become loose, we changed those also, and all is now running smoothly again. The Mary Owens, fully loaded, sailed on the 9th inst.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Sept. 12.—Smelting was again conducted with great success all last week, and 255 anodes were produced. We are as yet unable to compare the results of using roasted ore alone, as a large proportion of the ore smelted was slime ore, but one thing is certain, this operator can produce excellent results by using raw ore only, and this is probably due to our having now an unlimited supply of converter slag at our disposal. As we have now a stock of copper over and above what the electro deposition works require for the time, we shall now stop for some days in order to carry out some experiments as regards the slime ore and flue dust, which has become a serious question. We shall endeavour to burn limestone in the water jacket, and will mix the slime and flue dust into bricks with the slaked lime produced. If this is successful it will be a good thing, as, whilst in any case we must have a lime flux, it can be made to do double duty, viz., by fluxing, and at the same time binding the stuff so as to prevent its being blown over. We shipped to you last week 260 plates conductivity copper of a net weight of 3,955 kilos, and two small casks of silver mud containing 210 kilos, which we hope will reach you safely, and be found satisfactory in quality.—T. F. SMITH.

BRITISH BROKEN HILL PROPRIETARY (Aug. 12).—No. 1 shaft—2nd level: The work on the new section is continuing very satisfactorily. The old south drive has been re-timbered, tram rails have been re-laid, and the drive made all secure and safe to use, clear to the block 14 boundary. This work has only been rendered possible by the cessation of movement in the fallen body of ore during the past few weeks. We shall now be able to attack the crush from southern end, as well as continuing the timbering from the north. A cross-cut has been started westwards from this drive, near the block 14 boundary, to prospect for the western body of ore. No. 2 shaft—2nd level: Another winze has been started of the north section of timber to test the depth of the carbonate ore. It has been sunk 17 ft., and is already in decomposing galena intermixed with carbonates. The stopes continue to yield lead ore as usual. No. 5 shaft—1st level: A tramway has been laid in the north drive on preparations made for cross-cutting westwards to penetrate under the ironstone bluff. The 2nd level: The eastern chamber is completed, and the east cross-cut has been started, 10 ft. being already driven. Surface: The prospecting shaft south of No. 5 has been sunk 7 ft. by four men, and its total depth is now 72 ft.

CALLAO BIS (Aug. 30).—Independiente: Since the 15th inst. the shaft has been continued a further distance of $6\frac{1}{2}$ ft.; total depth from surface, 192 ft., or 52 ft. below the No. 3 level; no change has taken place in the ground. At this point we have commenced to drive the No. 4 cross-cut to intersect the lode. We shall proceed with the shaft, also open out ground to receive the tank, which will have to be fixed at this level, when new main rods will be put down the shaft and two 8-in. plunger lifts fixed at this level so as to enable us to continue the sinking. The No. 3 level west has been driven 3 ft.; the lode for the whole width of the drift produces quartz of fair value. The No. 3 level east has been driven a further distance of 17 ft.; total from cross-cut, 114 ft.; lode 5 ft. wide, of good value. The No. 3 cross-cut north has been driven a further distance of $5\frac{1}{2}$ ft.; total from the side of the No. 3 level east, $37\frac{1}{2}$ ft. This we are driving to facilitate the transportation of quartz, which will be extracted from various points above this level; besides, when completed, we shall be able to resume work in the No. 2 level north-east. The No. 2 level west: About 140 ft. from shaft we have driven south 12 ft., where we have found the lode to exist, showing 6 ft. wide, of rich value. I shall be able to form a better opinion of this by the next mail. Stope west: Average width of lode, 6 ft., of good value. Stope east: Average width of lode, 3 ft., of good value. Surface work: The carpenters have been busily employed about the new main rods for our shaft, which are, I am pleased to say, almost completed.

— (Sept. 3).—The No. 2 level west advanced 20 ft.: lode showing in the face of the drift, 5 ft. wide, of the same rich value. The No. 3 level west: At this point we have driven in the same direction south to prove the continuance of the lode at this point where the lode is met with, showing 4 ft. wide of the same value. Between these levels I have also driven in the same direction to prove its continuance where I find it of the same value. The lode has apparently thrown itself almost at right angles, although a better opinion can be formed of this as we advance in these levels. The prospects of the mine at this point are very promising indeed, as we are able to supply our 10-stamp mill from these points of operation. All other points in the mine are favourable.

CANTABRIAN.—The following is from Capt. Roskilly's last report, dated the 19th inst., which the directors consider the most satisfactory that has been received since he took charge of the property, showing as it does that the mines are now assuming such a shape that the expectations of Mr. Fowler and the directors, as to the property proving remunerative to the shareholders, may be realised

at an early date:—In the 25-metre level which is being explored east of Hastings engine shaft the lode during the week has further improved in ore yield, and it is now worth 1 ton of rich mineral per fm. This end is opening up some good stoping ground. The lode in this level driving west of shaft is at present small, but it is of a most kindly nature composed of quartz, green carbonates, black oxides, and rich copper pyrites, presents all the characteristics desirable for the yield of copper ore in large quantities. I look anxiously forward to an improvement in this end, which, judging from its favourable appearance, may reasonably be anticipated. The lode in the stopes in the roof of this level east of shaft, are without any alteration to remark since my last report, each worth 15 cwt. of ore per fm. An improvement has taken place in the 25 end east, which generally has a more congenial appearance to-day than I have seen it since we began to explore the end. An improvement now in the western forebreast to which I look forward would enable us to augment the present returns, and at the same time open up additional stoping ground.

CASTILLON (Sept. 21).—We have to-day completed a cargo of 290 tons blende, which is now being forwarded to Bordeaux. The parcel of lead has been carted to railway station. Fair progress is being made towards another parcel of lead, which I hope to have by 3rd prox. A communication has been made from No. 5 level to the sink in the bottom of St. Eugenie level, block 2, 13, and in course of next few days we shall commence stoping east and west of said sink. We also hope to make a communication from the present end of the Ezpeteta level to surface during the week, and to be shortly stoping on a profitable lode there as well as at No. 5 level. The different points valued in my last are without any noteworthy change, and dressing department is being kept fully supplied with crude ore.—J. EDWARDS.

CHAMPION REEF (Sept. 1).—Fortnightly report.—Mysore section, Carmichael's shaft: Driving cross-cut east of south level at 225 ft., 12 ft. 6 ins.; total length, 23 ft. On the 25th inst. we cut the lode at this point, and have since driven south on the lode 3 ft. 6 ins. The quartz is 2 ft. wide, but at present of low quality. We have commenced to drive north to-day with another rock-drill. Ribblesdale's shaft: Sinking 9 ins. only; total depth, 245 ft. 9 ins. We cannot get a sufficient number of coolies as yet to work this place in consequence of so much sickness prevailing in the neighbouring villages. Driving north at 240 ft., 20 ft. 9 ins.; total length, 54 ft. 9 ins. The lode here is 1 ft. 6 ins. wide of quartz, which assays 10 dwts. 18 grs. per ton. Driving south at 240 ft., 21 ft.; total, 50 ft. The quartz is 2 ft. wide, and of fairly good quality, assaying 1 oz. 12 dwts. 18 grs. per ton. Garland's shaft: Sinking 9 ins.; total depth 255 ft. 6 ins. We have only been able to work at this point a few shifts for want of coolies. The lode is about 2 ft. wide, which assays 1 oz. 3 dwts. per ton. Driving north at 240 ft., 14 ft. 9 ins.; total length, 97 ft. 11 ins. The lode is small, and carries very little quartz, and the ground is a deal harder than it was in the beginning of the month. Driving south at 240 ft., 12 ft. 6 ins.; total length, 72 ft. 6 ins. The lode here is 2 ft. wide, of quartz, assays 1 oz. 3 dwts. per ton. Dalvell's shaft: Sinking 4 ft.; total depth, 259 ft. The quartz is only 8 ins. wide, and not of much value. We shall be able to make more progress here now as the timber is now completed for covering of the shaft at the 240-ft. level, and the water taken up into a cistern by means of a drain made across the shaft. A small donkey pump has been fixed to pump from this level. Driving north at 240 ft., 9 ft. 6 ins.; total, 109 ft. 10 ins.; the lode is very small. Driving south at 240 ft., 14 ft.; total, 82 ft. 9 ins. The quartz is pinched to a few inches in width. Sinking New Trial shaft 26 ft.; total depth, 106 ft. 6 ins. Still on old workings, which are about 3 ft. wide, and getting more loose and open. Work suspended for the time. We have at present 10 rock-drills at work at this section, six of which are worked by natives and four by Europeans. Coromandel section: Prospect shaft: 380 north drive has been driven 3 ft.; total from shaft, 36 ft. 6 ins.; the lode in this end is 2 ft. 6 ins. wide, carrying 15 ins. of quartz. Cross-cut west from north drive 320 has been driven 1 ft. 3 ins.; total length, 12 ft. 9 ins. No change at this point since last report. Winze below this level has been sunk 3 ft.; total depth, 34 ft.; lode 3 ft. wide, carrying 1 ft. 6 ins. of quartz. The 290 south drive has been driven 4 ft. 3 ins.; total from shaft 190 ft. in this end; the lode at present has almost pinched out. Surface work: Owing to the scarcity of labour very little has been done by the masons towards the buildings. The laying of iron pipes from the plunger lifts to the tanks at Carmichael's and Garland's shafts is finished, and we are now able to pump direct from the shafts to the tanks. Machinery working satisfactorily throughout the mine, and the health of the camp is at present good.—R. C. JONES.

COLAR CENTRAL (Sept. 1).—New shaft: The 200 north has been driven 6 ft. 6 ins., making a total of 43 ft. 6 ins.; the lode is about 15 ins. wide, it has a much better underlie, and the walls are more defined than they were when reported upon last; the assay value is 1 dwt. 7 grs. to the ton. The 200 south has been driven 6 ft. 9 ins., making a total of 28 ft. 6 ins.; the lode has pinched at this point, and there is nothing to value. Winze: Sunk 5 ft.; total depth 20 ft. 9 ins.; the lode is 12 ins. wide, but the quartz does not make across the bottom of the winze, it is still in the north end, worth 5 dwts. 4 grs. to the ton.

COLOMBIAN HYDRAULIC (Aug. 14).—The following are the details of the operations during the month of July:—Run No. 174: This run at the head of the mine on the south side of the channel has been made under great difficulties. The gravel has become exceedingly hard—harder than we have had it for years—and at the same time our water has been falling off rapidly, in consequence of the dryness of the season. Also our pressure is daily decreasing, till towards the end of the run the monitor was hardly doing any work at all. Under these circumstances, we cleaned up on 4th inst. from the main sluice. After a run of 1,061 hours, gold to the value of \$6,184.00, which, added to \$1,273.35 purchased gold, has produced a total of \$7,457.35. The costs for June were \$4,816.50, and those for July \$5,163.60, making a total of \$9,982.10. We have now had to return to Clarke's banks, where the pressure is a little better, and the gravel not so hard as at the head.—A. E. OAKES.

— Note.—The above cost taken at currency would leave a profit on the run of about 2907.

ESMERALDA (Sept. 8).—The superintendent reports as follows:—The south drift is now out 61 ft.; progress, 5 ft. The quartz looks well and is favourable for ore, but there has not been much improvement during the week. There is a 6-in. streak of very good looking

sulphurets, but it does not carry much ore. Have started the drift north on the hanging-wall from the tunnel; the quartz looks favourable, but we have only made a start and not broken into it very much yet. I have had some lumber hauled up to the old Esmeralda, in order to be ready to start work at the shaft. There will be some work to be done on top in getting the windlass, tub, ladders, &c., ready, but before commencing, this will push on the drifts a little further.

FLAGSTAFF (Sept. 7).—I received your letter of Aug. 15 on the 2nd inst. I am glad to hear that Prof. Vincent arrived home in good health. I have now all the ore down to Sandy that Professor ordered me to ship. There is not quite 400 tons of it. I have not yet received the exact weight, but it is between 360 and 400 tons. I have not started yet to sink on the ore in 7th level, as I am putting up a raise close to where we wanted to sink, and this is not completed yet, although I think it is nearly through, as it is up 72 ft. Divis has delivered all the logs. I have them all up and the roof on, the boilers in place, the brickwork is nearly completed, and the engine well under headway. I shall have everything ready to start by the time Professor arrives here, if not sooner. The tank-room is completed, the tank in place, and the water in it. I have not done anything with the oil-room since Professor left, as I needed all the men to work on the water dick and building. I can cut that out any time after everything else is finished. Mine: Main sixth is now in 193 ft., and the rock is still very hard. Raise 69 ft., measured from the same point as last week. I am running a cross-cut from sixth due north to cut this seam of ore, as it is going both upwards and downwards, and it will save handling so much. We are now in 26 ft. The ore above sixth is mostly all first-class, and averages 18 ins. wide. The 7th level is now in 151 ft. Raise 72 ft. I am not taking out but very little ore, as I want to get this connection made as soon as possible. Number of cars, seven, all first-class.—A. L. SWOPE.

—Note.—Prof. Vincent left London for the mine on 15th inst. He expects to arrive there on 29th inst., and at once sell the ore that has been sent to Sandy during his absence.

GRAVEL (Aug. 20).—Works: During July the number of men employed has been 407, 322 of these having been occupied on the Guali section of the ditch for most part of the month. We have now about 140 of these working on the Reposo extension of ditch and syphon. The Aguade Dios section only requires a small bridge and the jointing of the San José syphon, when this water will reach the Reposo syphon. Work on the Guali section has been suspended, as per the board's instructions. Good progress has been made with moving the Reposo syphon, and the new line is a very favourable one and quite straight, and by the end of this week I think we will be able to begin jointing the pipe afresh.—W. S. WELTON.

HARRIETVILLE (Aug. 7).—Fortnightly report.—Mons Meg Mine: Drive south of shaft, 50 ft. below tunnel J, extended 5 ft.; total, 90 ft.; the lode has become small and poor. The auriferous shoot has unexpectedly proved to be much shorter here than at the level of tunnel J. A cross-cut has been driven into the hanging-wall to a distance of 7 ft., but has resulted in no fresh development. A rise has been put up 12 ft. on the main shoot, 45 ft. south of shaft; the lode here is 7 ft. wide, and of good quality throughout. No other exploratory work has been done on this lode, on account of the absence of several men through sickness. Guerdon Mine: Drive north of tunnel J on Guerdon lode advanced 18 ft.; total, 183 ft. There is a decided improvement here, the lode being 3 ft. 6 ins. wide, of which 2 ft. 6 ins. is of payable quality. It is a massive lode, and has the appearance of permanency. The rise 145 ft. north of tunnel J is up 10 ft., the lode here being 4 ft. wide, and payable, although of low grade. The south rise on the same lode has advanced 12 ft.; total, 32 ft. The lode is 2 ft. wide, and is producing some very good stone. Tunnel K has advanced 28 ft. towards the Guerdon lode; total, 44 ft. from Mons Meg. No. 2 lode: This tunnel is being extended in order to promote ventilation, and to tap and facilitate the working out of the auriferous shoots recently developed on the Guerdon lode at the level of tunnel J, at which point we have over 400 ft. of backs—too much to work out without an intermediate drive. The driving of this tunnel will also test the other lodes which were traversed by tunnel J; the ground is not so hard as at the lower level. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has advanced 25 ft.; total, 1,225 ft.; the influx of water has increased considerably, and the lode, which is 2 ft. wide, has a most promising appearance; carries a little gold. Drive south-east of tunnel D, towards Tracy's, extended 12 ft.; total, 143 ft.; lode small and poor. Intermediate drives on new shoot below tunnel D advanced 7 ft. south, and 8 ft. north; totals, 26 ft. and 15 ft. respectively; the lode in each case is not of so good a quality as we anticipated. Drive south of tunnel B, on new shoot, advanced 5 ft.; total, 410 ft.; the lode is small, but carries a little gold. No. 1 rise on new shoot at back of tunnel B advanced 7 ft.; total, 35 ft. The lode is 8 ft. wide, of which 3 ft. is of payable quality. No. 2 rise on same shoot is up 12 ft.; the lode is 18 ins. wide, and is slightly auriferous. Jackass Mine: The old shaft below tunnel A, on the main Jackass lode, has been cleaned out, and sinking on this lode will be resumed forthwith. Machinery: All the machinery at mines and mill is working satisfactorily. Returns: The falling off in last month's returns is due to the unexpectedly low grade of the ore obtained from the drive south of shaft on Mons Meg main shoot. The returns so far for this month show a material improvement; and when the Guerdon lode is more developed, it is reasonable to anticipate that this improvement will continue.—T. G. DAVEY.

INDIAN CONSOLIDATED (Aug. 29).—Phoenix section: Tramway level has been driven 12 ft. in harder ground. With a small seam of quartz we have a band of decomposed stuff, but the bulk of the face is now very hard. No. 1 level: At this point we have extended the drive 16 ft. I mentioned in my last report that we had 2 ft. of quartz at top of drive. This opened out until we had the whole face of the drive; quartz broken up and poor, but very similar to what the lode must have been when first struck in tramway or the other levels. I had great hopes of its settling into payable stone, but in the last day or two it has got more mixed with country rock and does not look so promising. There is very little change in any of the stopes. We have every point at work, so as to crush as much as possible while water lasts. The rise up from No. 2 to drain stope E is finished, and I find that we have some 6 ft. of fair quartz below what was always thought the footwall at this level, which makes a considerable addition to our reserves. We are again, unfortunately, compelled to work only 15 head,

owing to a box getting loose, but this will be put right when we stop for clean-up.—C. A. PATERSON.

Office note.—During the month of Aug. 340 tons of quartz were crushed, which yielded 86 ozs. of gold.

—(Sept. 1).—Colar section: No. 1 new shaft has been sunk for the past fortnight 6 ft. 9 ins., making a total depth from surface of 245 ft. 9 ins. No. 2 new shaft has been sunk 11 ft. 9 ins.; total depth on the underlie, 107 ft. 9 ins.; the rock here is still very hard. The 240 main shaft, west cross-cut: This drive has been extended 21 ft. 9 ins.; total distance from shaft, 502 ft. 6 ins. We have driven through the dyke, and the end is now in hard schist. (Office note.—The trap dyke at this point was about 70 ft. wide.) No. 5 shaft: The 425 cross-cut has been driven 15 ft. 9 ins., making a total distance of 57 ft. 3 ins. The rock here for the last few feet of driving has changed, showing quartz in the joints, which I consider to be a good indication.—M. STEPHENS.

KAPANGA (Aug. 4).—I beg to hand you my report of work done in the mine for the four weeks ending 1st inst. —The level driving south on the hanging-wall branch of the Kapanga reef has been advanced by two men during the month a distance of 24 ft.; the lode has averaged about 6 ins. in width; it is highly mineralised; in fact, is everything that can be desired; therefore, we have hopes of encountering gold in extending the level further south. The level going south on Scotty's reef at the 300-ft. level has been driven by two men 20 ft.; the lode in the face is disordered and broken at present, and chiefly composed of clay and soft sandstone, with occasional boulders of quartz. During the month the course of the reef has been most irregular. The rise north of main rise has been put up during the four weeks 20 ft., which makes it now 86 ft. above the 300-ft. level. The same men carried a stope along for 4 ft. in height and 36 ft. in length. The reef only averaged about 6 ins. wide, and the quartz obtained was of very low grade, but an improvement might occur at any moment. The main rise has been extended above the 300-ft. level on Scotty's lode by four men another length of 36 ft., and is now 110 ft. above the level. The reef in the back of rise is small at this moment, and in all probability will open out larger shortly. I might here mention that this rise is going up in virgin ground exactly above the No. 2 run of gold, or new bunch, so we have every reason to expect gold shortly. Moore's rise north of Coromandel shaft has been worked by four men and put up another 11 ft. The same men also stoped out a piece of ground 14 ft. high and 12 ft. long from the south end of rise; the lode averaged throughout about 18 ins. wide; strong colours of gold have been seen in the stone, and the general dirt for the battery has been fairly good. The intermediate level, driving south of Moore's rise above the 300, has been extended during a part of the month by four men 19 ft.; the reef is 18 ins. wide, composed of good quality quartz, highly mineralised, and a little slag. At intervals a little gold has been seen, but not sufficient to attach any value to. The men engaged in this work also laid tram-road and timbered up the drive, &c. The drive north of Moore's rise has been advanced 4 ft.; the reef being small and poor this place was suspended, and the men removed to stope out quartz in the back of the level south. The stope is 6 ft. high by 10 ft. long; the reef averaged over 1 ft. in width, occasionally showing a few colours of the precious metal. The rise putting up above the intermediate level has been extended by two men a further distance of 12 ft., and a stope carried along for 6 ft. high by 25; the lode is 6 ins. wide, giving fairly good quartz for the battery. We have crushed for the month 107 tons of quartz, and treated 17 lbs. of picked stone, which together yielded 165 ozs. of amalgam, giving 49 ozs. 17 dwts. of retorted gold. The machinery throughout the mine is working fairly well.—W. H. ARGALL.

LA PLATA (Sept. 10).—The manager reports as follows:—White Cloud property (Red Mountain district): The tunnel is completed to the shaft, a station cut, and the water taken up, so that the shaft is now quite dry at a depth of 45 ft. below the tunnel. The shaft is 160 ft. deep, and good progress is being made; with the present ground and favourable conditions, the shaft should reach a depth of 300 ft. by Nov. 1. I am now extending the tunnel into the reef, and hope to cut something during this month—anyhow, the ground is extremely promising. The shaft is also going down in good mineral ground, and is looked upon as the best prospect in the district by those competent of forming an opinion.

LOMA (Aug. 6).—The mine superintendent reports as follows: To-day I have the pleasure to forward you one bar of gold weighing 81 ozs. troy; value about \$1,500. Mine: We are working with only enough water to run a 3-in. nozzle one hour in 48 hours. We have put in 50 ft. of sluice, and have been repairing ditches, flumes, and old sluices. To-morrow I hope to start a new run. Gravel bank is looking well. New ditch: This is going ahead up to now at a very good pace, and is well cut in capital ground. I have furnished Mr. Welton with all tools he has requested up to date from me. It looks as if we will soon be able to get Guarumo running down here. It is not yet definitely settled if we continue live on the Guarino or Guali side. What we want is a certain supply of water, brought on well, and over the safest line, so that our start may be as free of breaks and accidents as possible.—H. J. PRENDER.

MACATE (PERU) (Aug. 15).—The mine manager writes in reference to the recent important discovery in La Escocia, as per cable of 20th ult.: It is well-defined, strong-looking lode of about a foot wide. The sample was taken almost right on surface, and the same high result was got from small washing by hand, and from the larger sample in the stones. The importance of this discovery is very great, and I shall at once put work to extract the quartz in quantity, as it can be taken out cheaply, and adds immensely to the value of La Escocia.

MONTE DEL ORO (Sept. 15).—Fortnightly report.—Taylor's engine shaft: The lode in the 316-ft. level north of this shaft is composed of 3 ins. or 4 ins. of quartz, the two samples taken from it assaying respectively 15 grs. per ton, and no gold. This level is now 108½ ft. long, showing an advance of 16 ft. for the past fortnight. South of the shaft the 316-ft. level is being extended at a satisfactory rate as 22½ ft. were driven in the two weeks, making the present total length 119½ ft. Here the lode is a small flookan, one sample from which yielded no gold, and a second a trace. The total depth of winze No. 12 below the 244-ft. level north is 80½ ft., of which 23½ ft. have been sunk since the last report. The lode of quartz maintained its width of 2½ ft., with more standing in the footwall, the result of the assay of the two samples obtained being in each instance a trace of gold. From the bottom of winze No. 12 the men

have driven 6½ ft. south towards the 316-ft. level north, the lode for this distance carrying 2½ ft. of quartz. Shaft No. 6: With the object of proving the value of the lode an intermediate level is being driven north of winze No. 11; its length is now 23 ft., the lode of quartz averaging 2½ ft. in width, and worth, according to the assay of the sample taken, 2 dwts. 14 grs. of gold per ton. Low's engine shaft: The 120-ft. level north continues to be extended rapidly, its length being 135½ ft., of which 35½ ft. have been driven in the last fortnight. A sample taken from the lode, which is composed of 15 ins. to 18 ins. of slate, flookan, and fine quartz, yielded 15 grs. of gold per ton.—J. ROBERTS.

► **MYSORE** (Sept. 1).—Mining operations for the fortnight ending Aug. 29.—The progress during this time in the different bargains has been very satisfactory. We have driven north a little way on some branches which have been intersected in the 890 cross-cut east of Rowse's shaft; these are composed of quartz and carbonate of lime, and altogether contain lode matter for about 3 ft. wide, but are in a disordered state, as might be expected, being so very near the dyke; we intend to sink a little way on these branches, believing they will get better defined and improve in width. In the 620 driving south of incline shaft the west lode is 3 ft. wide, and assaying 3 dwts. 6 grs. In the 550 driving south of incline shaft the west lode is 3 ft. wide, and assaying 7 dwts. 13 grs. Glen's shaft: The lode in the 250 driving north of shaft is 1½ ft. wide, and estimated to be worth 5 dwts. There is no change to notice in the 250 cross-cut driving east of this shaft; the ground continues of an unproductive character, and spare for driving. Tennant's shaft: The lode in the 360 north of shaft is 2 ft. wide, and yielding quartz of low quality. In the 360 south of shaft the lode is small and unproductive. In the 290 north of shaft the lode is 2½ ft. wide, and assaying 12 dwts. 1 gr., and looking very promising for further improvement. The lode in the 290 south of shaft is 9 ins. wide, and occasionally yielding some good stones of quartz. The lode in the 235 north of shaft and north of winze is 3 ft. wide, and assaying 15 dwts.; this level is just beginning to go under the old men's workings, and the lode has been gradually getting larger, and improving in quality. Schaw's shaft: In the 450 driving north of shaft the lode is 1 ft. wide, and yielding some quartz, but not sufficient to value. In the 450 south of shaft the lode is 2½ ft. wide, and assaying 1 dwt. 7 grs. In the 320 north of shaft the lode is small and poor. In the 320 south of shaft the lode is 15 ins. wide, and assaying 2 dwts. 14 grs. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 2½ ft. wide, and assaying 5 ozs. 6 dwts. 9 grs. The lode in stope in back of the 780 south of shaft on wide lode is 3 ft. wide, and assaying 11 dwts. 1 gr. The lode in stope in back of the 700 north of Rowse's shaft is 2½ ft. wide, and assaying 16 dwts. 23 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 4 ozs. 16 dwts. The lode in the stope in back of this level on the north fold is 2 ft. wide, and assaying 1½ oz. 1 dwt. 13 grs. The lode in stope in back of the 700 south of Rowse's shaft is 1½ ft. wide, and assaying 2 ozs. 9 dwts. 15 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 11 dwts. 1 gr. The lode in stope in back of the 620 north of Rowse's shaft is 2 ft. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in stope in back of the 550 south of incline shaft on west lode is 2 ft. wide, and assaying 5 dwts. 21 grs. The lode in stope in back of the 550 north of Rowse's shaft is 2½ ft. wide, and assaying 2 ozs. 5 dwts. 8 grs. The lode in stope in bottom of the 466 north of Rowse's shaft is 2 ft. wide, and assaying 1 oz. The lode in stope in bottom of the 466 north of Taylor's on the south fold is 3 ft. wide, and assaying 15 grs. The lode in stope in back of the 400 north of Rowse's is 3 ft. wide, and assaying 1 oz. 8 dwts. 17 grs. The lode in stope in bottom of the 400 north of Taylor's is 1½ ft. wide, and assaying 16 dwts. 23 grs. The lode in stope in back of the 400 south of Plummer's is 2 ft. wide, and assaying 16 grs. The lode in stope in back of the 360 south of Plummer's is 3 ft. wide, and assaying 10 dwts. 10 grs. The lode in stope in back of this level north of shaft is 2 ft. wide, and assaying 8 grs. The lode in stope in back of the 296 north of shaft is 2 ft. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 296 north of Rowse's shaft is 2½ ft. wide, and assaying 15 dwts. 7 grs. The lode in stope in back of this level south of shaft is 3 ft. wide, and assaying 5 dwts. 5 grs. The lode in stope in back of the 236 north of shaft is 3 ft. wide, and assaying 16 dwts. 7 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 dwt. 7 grs. The lode in stope in back of the 290 north of Tennant's shaft is 3 ft. wide, and assaying 15 dwts. 15 grs. The lode in No. 2 stope in back of this level is 3½ ft. wide, and assaying 1 oz. 16 dwts. 14 grs. The lode in stope in back of the 180 north of shaft is 3 ft. wide, and assaying 1 oz. 12 dwts. The lode in No. 2 stope in back of this level is 4 ft. wide, and assaying 1 oz. 12 dwts. Sinking: The ground in Rowse's shaft sinking below the 890 is rather slow for progress, but we are making every effort to get it down to the next level as quickly as possible. The lode in the winze sinking below the 780 north of Rowse's shaft is 3½ ft. wide, and assaying 5 ozs. 0 dwts. 9 grs. This winze is down about 45 ft., and from our calculations should have met with the dyke before now, therefore, I think there is a great probability that the quartz has passed through it without any disturbance whatever, and that the bottom of the winze is on the west side of the dyke, but we shall be able to speak more definitely about this in the course of a week or two. The lode in winze in bottom of the 290 south of Tennant's shaft is 1 ft. wide, and assaying 1 oz. 0 dwts. 14 grs. Gilbert's shaft has been communicated to the 180-ft. level, and at this point it has come in contact with the old men's workings, but we expect to meet with the lode by sinking a fathom or two deeper. I am pleased to say the camp is free from sickness and most of the coolies have returned to their work again. Mill samples: New mill, 3 ozs. 8 dwts.; old mill, 1 oz. 17 dwts. 6 grs.—J. GILBERT.

► **NEW CALIFORNIA** (Sept. 8).—Mine report for second half of Aug. :—The 2,000-ft. level, drift west of shaft, in 925 ft.: This drift has been advanced a few feet only since last reporting, and the men from this place were put to drive a cross-cut through the rock that intervened between the mineral discovered in the rise and the vein on which the drift was going forward. The rise is up 70 ft.; the lode met with in the rise is of a very low grade, but a series of assays made of samples taken from this point show a tendency to improvement. Cross-cut north at 793 ft. west of shaft, in 18½ ft.: This distance sufficed to reach the lode discovered in the rise (above referred to), which is from 6 ins. to 1 ft. wide where met with on a level with the main drift, and assaying 1.08 oz. gold per ton and 3.52 ozs. silver per ton. Connection to the intermediate drift has been completed since

last advices. The 1,800-ft. level, west of shaft: There we have a lode 3 ft. in width, of fair grade, and yielding 7½ tons of milling ore per fm. The 1,500-ft. level, cross-cut workings on north spur, west of shaft: These workings keep up a good output, and are without change. Prospecting work west of Hidden Treasure shaft: The vein described when last reporting has pinched.—F. RICKARD.

► **NEW DEVALA-MOYAR**.—Mine manager's report for week ending Aug. 31 :—The 186-ft. level, drive west: Driven 6 ft.; total, 53 ft. The 186-ft. level, drive east: Driven 3 ft.; total, 16 ft.; The 116-ft. level, No. 4 winze: Sunk 3½ ft.; total, 27 ft. In the mine there is nothing fresh to report. The mill and all machinery is running well; as usual, 24 hrs.

► **NEW EBERHARDT**.—The mine manager reports under date Sept. 6 as follows :—Eberhardt: Drift north from No. 2 upraise advanced for the week 3 ft.; total length, 31 ft. There has been no change met with in this drift during the week. The face of drift continues in the same mixture as reported. Drift south from No. 2 upraise advanced for the week 3 ft.; total length, 42 ft. There has been no change met with in this drift. Cross-cut east from north drift: No. 3 upraise advanced for the week 6 ft.; total length, 53 ft. During the week we have met with some very good looking quartz in this drift, the same showing spots of chloride of silver, but not enough at present to make it of any value; the assay value of the ore is \$16 per ton, so that it is as yet too low to be of any good, but our prospects in this direction are, to say the least, very encouraging, and I do sincerely hope that ere long we shall find ore in paying quantities in one of these drivings. No. 3 cross-cut west advanced for the week 11 ft.; total length, 32 ft. The face of this drift is in the same favourable ground as reported in my letter of last week. No. 4 cross-cut west advanced for the week 3 ft.; total length, 11 ft. The ground still continues very hard. Beecher cross-cut east advanced for the week 4 ft.; total length, 41 ft. The face of this drift is getting into very hard lime. Monitor: Total weight of ore extracted and assorted for the two weeks, 3½ tons; assay value of the same as per mine samples, \$34 per ton. During the past few days the mine has looked considerably better, there being an increase in the output of ore, which also assays higher. Mill: The mill has run steadily since Tuesday last, crushing 73 tons of ore. Assay value of same as per battery samples, \$32 per ton.

► **NEW GOLD HILL** (Sept. 5).—Winze: As expected, this working connected with the 300-ft. level on Monday night last. Since then the winze has been squared up down to said level 6 ft., making a total depth of 100 ft. The vein in the north-east end is distributed through 2 ft. of ground, and showing fair copper ore with some gold. Will drive on it towards the Barnhardt shaft next week. The vein seems to be trending under the 160 level, and on same course. The 300-ft. level: This working south-west of winze has made 6 ft., on a vein that carries well in copper and some gold. It is very small, not over 6 ins., but you must remember we are out of the shoot. In 30 ft. of driving we should be at a point where the vein from cross-cut junctions with it, and then we may look for an improvement. By these workings we are continually exposing ore, to be taken out at such time as is necessary. I am only taking out such ore as comes in our way, consequently the production of ore is not worth noticing this week. As there has been no change in the value of the ore I have made no determinations. Martin shaft: Driving on the 200-ft. level south-west with two men. Progress for the week, 4 ft.; vein still small, but shows free gold and only trace of copper. Everything is working well and looking promising, and if we can only succeed in erecting the works for the extraction of the metals we will have a paying mine.—R. EAMES, jun.

► **NEW HOOVER HILL** (Sept. 12).—Briol's shaft: The ore south of shaft at the 230 is very much split up; we are following indications. There is no change to note in the drift going south at the 130. Sinking south of Provost shaft the vein has slightly improved since my last report.

► **NEW RUSSELL** (Sept. 9).—The manager writes as follows :—I succeeded in running the mill with a single day's stoppages until Saturday night last, and obtained 41 ozs. of amalgam, which has not been retorted, but according to my calculation should give 12 ozs. of gold. The tram line has been finished to the south end of the big cut, and some very fine points have been just struck there, so that things are now looking very hopeful indeed. We are taking ore from the north end, which is also good, and the quantity of pyrites has just doubled last week. They will be calcined at once. The furnace was lighted last night, and I hope nothing will prevent us running same until some good results have been obtained. The whole mine is now looking so well and everything promising, that prospects of a turn for the better is certainly looming for the shareholders in the near future.

► **NEW VISO**.—Manager's report.—The winze sinking below the California adit has been rather hard, and the lode only showing spots of tin occasionally, but to-day I am pleased to note indications of a favourable change, the lode at present being softer, and yielding large stones of rich tin ore. In driving the adit north we have just now struck a harder part of the lode, considerably mixed with clay-slate, and consequently poor. I think, however, this change is only temporary, and that soon we shall get into a well-defined lode again, and seeing there is a very kindly piece of ground before this end there is a probability of our finding good tin. Our other operations are going on as usual, and present no change to note.

► **NUNDYDROOG** (Sept. 1).—Report of work done for month of Aug. :—The 600 cross-cut east: Driven 27 ft. 6 ins., making a total of 45 ft. 6 ins., when the lode was cut; we have also driven south 18 ft. on its course; men employed, two Italians with a rock-drill; the lode is very strong and massive, 8 ft. in width, and the latest assay shows it to be worth 2½ ozs. per ton. The 520 north: Driven 41 ft., making a total of 247 ft., by one Italian with a rock-drill; the lode holds on well, being still 2 ft. in width, while the assay value has increased, it being now worth 2 ozs. 2 dwts. 6 grs. per ton. The 520 north—stope in back: Ground stoped, 18 fms., by one Italian with a rock-drill; the lode is rather smaller here, being 1½ ft. wide, and the assay value is 1 oz. 7 dwts. 6 grs. The 520 south—No. 1 winze in bottom: Sunk 3 ft., making a total depth of 69 ft., when it had to be suspended owing to want of labour. We then started a stope in the back of the level and stoped away 16 fms.; men employed in the two places, two Italians with a rock-drill; the lode in the winze when stoped was 7 ft. wide, and worth 3 ozs. per ton. That in the stope is also a very fine one, 4 ft. wide, and assays 3 ozs. 8 dwts. 12 grs. per ton. The 520 south—No. 2 winze in bottom: Sunk 14 ft., making a total depth of 55 ft.,

when this winze also had to be suspended owing to the scarcity of coolies; the lode when we stopped was 6 ft. wide, and worth 2 ozs. 8 dwts. 18 grs. per ton. We then drove an intermediate level between the 450 and 520, 23 ft.; men, one Italian with a rock-drill. The 450 south: Ground stoped, 10 fms.; lode 3 ft., and assay value 2 ozs. 5 dwts. 12 grs.; and the 480 north from Webb's: Winze in bottom sunk 23 ft., by one Italian with a rock-drill; we shall sink this to the 520 as soon as possible. Stopes working by hand labour are as follows:—The 450 north—No. 1 stope north: Ground cut, 6 ft.; lode 2 ft.; assay value, 2 ozs. 5 dwts. 12 grs. The 450 north—No. 1 stope north: Ground cut, 23 ft.; lode 2½ ft.; assay value, 1 oz. 13 dwts. 12 grs. The 450 north—No. 1 stope south: Ground cut 10 ft.; lode 2 ft.; assay value, 1 oz. 7 dwts. 6 grs. The 370 south—Stope in back: Ground cut 20 ft.; lode 1 ft.; assay value, 14 dwts. The 370 south—Stope in bottom: Ground cut 17 ft.; lode 2 ft.; assay value, 3 ozs. The 370 north—Stope in bottom: Ground cut 11 ft.; lode 2½ ft.; assay value, 16 dwts. 6 grs. The 370 north—Stope in back: Ground cut 8 ft.; lode 1½ ft.; assay value, 1 oz. 18 dwts. The 300 north—Stope in back: Ground cut 15 ft.; lode 1½ ft.; assay value, 1 oz. 0 dwts. 18 grs. Taylor's shaft: We have finished the plat here, 2½ fms. having been cut, and have resumed sinking, 7 ft. being sunk; total depth of shaft, 610 ft. We have also cut ground for bob plat at the 300 level 3 fms.; men employed, two Italians with a rock-drill. Kennedy's shaft: Sunk 7 ft. 9 ins., making a total depth of 163 ft., and drove east 4 ft., when we holed to the cross-cut west from north shaft; we have also cut ground for plat 3 fms.; men employed, two Italians with a rock-drill. We shall resume the sinking here as soon as we have finished timbering the shaft and taking up the water. We will put some contractors to work in the winze from north shaft as soon as the cholera is over. Tailings: The tailings machinery is also working well. Health: Cholera seems to have gone from the mines, but it is raging in the village of Ooregum, where a great many of our coolies and nearly all our blacksmiths and carpenters live. Everyone living there has been forbidden to come to work till the epidemic abates. We are, in consequence, greatly hindered with all surface and underground operations. All the Europeans well and at work.—F. W. GREY.

OREGUM.—Mine report for the month ending Aug. 31:—Wallroth's shaft has been sunk 12 ft. 6 ins.; total depth from surface, 420 ft. 6 ins.; lode 3 ft. wide, assaying 3 ozs. 5 dwts. 8 grs. per ton. The 360-ft. level south advanced 7 ft.; total, 89 ft. 6 ins.; lode 2 ft. 6 ins. wide, worth 1 oz. 12 dwts. 16 grs. per ton. The 280-ft. level south driven 33 ft.; total length, 757 ft. 9 ins.; width of lode, 6 ft.; value 2 ozs. 8 dwts. 7 grs. per ton. The 215-ft. level north advanced 1 ft. 10 ins.; total length, 87 ft. 9 ins.; lode 1 ft. 6 ins. wide, worth by assay 3 ozs. 5 dwts. 8 grs. per ton. Low's shaft: The 350-ft. level north driven 4 ft. 1 in.; total, 90 ft. 8 ins. Winze 270-ft. level north has been sunk 6 ft. 8 ins.; total depth, 56 ft. 10 ins.; width of lode, 6 ins., assaying 6 dwts. 12 grs. per ton. Winze 270-ft. level south has been sunk 4 ft. 11 ins.; total depth, 60 ft. 11 ins., and holed to the 350-ft. level. Opening up another stope. The timbermen will proceed to re-timber Low's shaft from the 200-ft. level to surface where necessary, as the ground is heavy and the present timber shows signs of sleepiness, and is crushing. This work is preparatory to putting down a skip-road. Probyn's shaft: No. 1 winze 450-ft. level south has been sunk 4 ft.; total depth, 59 ft. 10 ins.; lode 6 ft. wide, assay value 5 ozs. 1 dwt. 13 grs. per ton. No. 2 winze 450-ft. level south sunk 4 ft. 5 ins.; total depth, 22 ft. 10 ins.; width of lode, 3 ft. 6 ins., assaying 5 ozs. 19 dwts. 18 grs. per ton. No. 2 rise in back 450-ft. level south risen 19 ft. This was risen to hole No. 2 winze from 366-ft. level south. Opening up a rich piece of stoping ground. No. 2 winze 366-ft. level south has been sunk 4 ft. and holed to rise, above mentioned. No. 3 winze 366-ft. level south sunk 5 ft.; total, 15 ft. 7 ins.; lode 2 ft. 6 ins., assaying 4 ozs. 8 dwts. 21 grs. per ton. No. 2 winze 300-ft. level south sunk 5 ft. 8 ins.; total depth, 12 ft. 6 ins.; lode, 1 ft. 6 ins., worth 12 dwts. per ton. During the past month a tip plat has been cut at the 550-ft. level, Probyn's shaft, and completed, and the sinking of the shaft resumed. The pitman is engaged getting his lift, rods, &c., ready, and will fix a lift to this level. Stopes: Wallroth's shaft: No. 2 stope back 280-ft. level south, 1½ fms. have been cut; lode, 3 ft. wide, value 3 ozs. 10 dwts. 8 grs. per ton. No. 2 stope bottom 215-ft. level north, 2½ fms. cut; width of lode, 1 ft. 6 ins., assaying 1 oz. 14 dwts. 20 grs. per ton. No. 2 stope back 215-ft. level north, ½ fm. cut; lode, 1 ft. 6 ins. wide; worth 4 ozs. 18 dwts. per ton. Low's shaft: Stope bottom 270-ft. level south, 5½ fms. have been stoped; lode, 2 ft. wide, assaying 1 oz. 6 dwts. 21 grs. per ton. Probyn's shaft: Stope back 450-ft. level north, stoped 7 fms.; width of lode, 2 ft.; assay value, 3 ozs. 7 dwts. 12 grs. per ton. No. 3 stope back 450-ft. level north, cut 9½ fms.; lode, 3 ft. 6 ins., worth by assay, 4 ozs. 8 dwts. 21 grs. per ton. No. 1 stope in bottom 300-ft. level north, 2 fms. have been stoped; lode, 3 ft. 6 ins. wide, worth 4 ozs. 18 dwts. per ton. Back of 300-ft. level north, 3¼ fms. have been cut; lode, 7 ft. wide, assaying 1 oz. 10 dwts. 21 grs. per ton. Stopes bottom 230-ft. level south, stoped 5 fms.; width of lode averages 2 ft.; average value, 3 ozs. 1 dwt. 17 grs. per ton. No. 3 stope bottom 166-ft. level south, 8½ fms. have been cut; lode 4 ft. wide, worth 1 oz. 1 dwt. 19 grs. per ton. The lode in the bottom of the mine maintains its strength and richness, and is in every way most satisfactory. During this month we have had a very serious check by an outbreak of cholera of a virulent type causing great mortality among the natives. This accounts for the falling back in quantity of work done. Three Englishmen—Thos. Eslick, Wm. Webb, and Thos. Jewell—also absconded soon after the cholera outbreak, thereby causing us much loss by the deprivation of their services when these were urgently required. We are glad to say the epidemic has almost disappeared, and we hope for better progress in the current month.

OSCAR (Sept. 18).—The following report has been received from the manager:—Hodgkinson's lode: On Thursday last week the men met with a new run of quartz in the bottom of the shaft about 8 ins. in width, which continued with them until Wednesday, when it was cut out by a parallel run of greenstone, which had accompanied the quartz. I had almost hoped our difficulties were at an end with the appearance of this quartz in shaft, for, although the run was only 12 ins. wide, it showed itself well worth the finding by assaying for free gold an average value of 3 ozs. 4 dwts. gold per ton. From indications, however, to-day, I am led to think the quartz will again replace the greenstone. I only hope it may pan the same—over 3 ozs. There is no alteration in the 300 north. About the middle of next week this level will be so far advanced as to allow the men to rise to

communicate with the winze gone down from the 200. The distance to rise is about 5 metres. The new winze going down from 200-ft. level north is showing quartz over 2 ft. wide. Assays have varied from 8 dwts. 13 grs. to 4 ozs. 2 dwts., the higher values resultant from contained galena. The cross-cut towards Bluet lode, and the 80-ft. level are being pushed with all speed. The working on Williams' lode shows a run of quartz over 3 ft. in width. Just now it is almost devoid of mineral, and in appearance is identical with the quartz at surface.

OURO PRETO (Aug. 22).—Incline shaft No. 1 was sunk 2.80 metres, chiefly in white glassy quartz with a little pyrites along the floor. The drawing lifts are being replaced by the small plunger from the 315 and sinking will then be continued as fast as possible. Incline shaft No. 2: The end from this shaft has been communicated to the 365 level north-east. It was driven 3.60 metres through schist without ore. The 400 level north-east was advanced 4.60 metres full size in lode, composed of quartz with strings and patches of pyrites of fair quality. A cross-cut has been started near the end to open out the lode for stoping. The 400 level south-west was driven 5.00 metres chiefly in quartzite of no value, but quartz is now appearing in the end, and it is expected will cut the quartzite within a short distance. Here also a cross-cut through the lode has been commenced. The 365 level north-east was advanced 2.30 metres, when it holed to the end from No. 2 shaft, and established good ventilation through all the lower workings. Rise 24 over 365 north-east was extended 3.00 metres. A branch of lode about 1 metre thick continues against the roof, but the lower part of the breast is in schist. Rise 25 over 365 south-west shows little change. Ore the full size of the heading is holding up, and though it carries bars of quartzite, is generally of fair quality. The rise was advanced 2.00 metres. The 315 level north-east was driven 1.20 metres; the end is in schist, showing only strings of quartz. A cross-cut to meet No. 2 shaft ore shoot has been commenced near the end. Cross-cut under 265 north-east was advanced 7.60 metres. The heading has now passed beyond the ore worked in the stope below the shaft, but it will be prolonged a short distance further, to see if any other branches exist. The 235 cross-cut south-west was advanced 3.20 metres and has now passed through the lower lode branches. Communication was made to the floor of a stope under the 215, and a fine branch of tourmaline ore has been opened out for stoping. Rise 2 over 175 north-east was extended 3.30 metres, but as yet nothing of importance has been met with, the heading being in schist, with a branch of quartz ore near the roof. Rise 17 over 175 south-west was advanced 3.00 metres, and continues full size in quartz, spotted with pyrites. It is approaching the old surface workings, and the ground is letting down water. The 120 level north-east was driven 6.30 metres, and shows a very marked improvement. A branch of quartz made in the quartzite and gradually increased in size till it is now standing all over the breast. The quartz carries good patches of pyrites and tourmaline, and there is every probability, judging from the line of dip, &c., that this is the continuation of the Gongo shoot, to reach which this level has been driven such a long distance. Stoping: The chief workings in the north-east section have been under the 120 level, and under the 215 in the side of No. 2 shaft. At both these points the lode has a strong massive appearance, averaging about 4 metres thick, but it carries little pyrites and the quartz is of low yield. In the floor of the 215 stopes the footwall has been broken to a depth of 3 metres and some good stones of pyrites are met with, but usually the branches have been very small and irregular. In the south-west section the 315 stopes still continue to turn out a large amount of ore as the lode just under the 265 is of great width, but the ore produced is of low yield, being chiefly white quartz with scarcely any pyrites. In the 365 stopes the lode has somewhat improved, carrying less quartzite than formerly, and showing strings of pyrites in the quartz. Around rise 22, over the 265, a good deal of ground was excavated last month, and the stopes at this point are still very productive. The lode is about 3 metres thick, and carries good patches of pyrites and tourmaline ore throughout the workings. Good pyritic ore is also found in the floor, and a level cutting is being brought in to try this deeper. At the 175 stopes there is little change, the lode being mixed with bars of schist and quartzite, but carrying a fair amount of pyrites. Construction: The chlorination work has been completed, and the barrels are now being charged from a stock of sand roasted in the new furnace. Carpenters are engaged in extension of dressing floors for collecting pyrites.—H. J. GIFFORD.

PESTARENA (Sept. 15).—No. 1 lode: The 150 end north is being driven on a lode 50 centimetres wide, composed of schist, and producing no ore. Nothing has been met with in the cross-cut at this level since passing the division spoken of in last report. The 90 south is still following a divisionary line in sterile schist. The 70 north carries about 30 centimetres of lode in the roof, widening to 60 centimetres in the bottom, and is estimated to produce about 6 tons of 14 dwts. ore per fm. At the 70 south stoping over the rise has been completed, and driving commenced in a quartzose lode 60 centimetres wide, which produces about 5 tons of ore per fm., at 12 dwts. per ton. Caunter lode: The 55 east shows a lode 50 centimetres wide, but at present it does not carry so much pyrites as formerly, and is estimated at 5 tons per tons, at 10 dwts. per ton. The 55 west carries about 70 centimetres of lodey matter; it has a great incline to the north, but does not produce any ore. Val Rossa: A cross-cut has been commenced to drive north-east, at 170 metres from the entrance to the level to prove the ground in that direction. The stopes produce much the same quantity and quality ore as when last reported on the 3rd inst.—W. ROBERTS, W. H. TRELEASE.

—Val Toppa.—The rise stope over Zero level shows more pyrites than it has for some time past, and is now estimated to produce 8 tons of 1 oz. ore per fm. The stope or old arch under No. 2 level, on west lode, has increased in width, and is now estimated at 15 tons per fm., at 9 dwts. per ton.—W. ROBERTS.

(Continued on page 458.)

YURUARI CO., LIMITED.

MESSRS. JOHN TAYLOR AND SONS notify that they have resigned the position of consulting engineers and managers, which they provisionally held in this company.

COMMERCIAL NOTES.

METALS.

COPPER has been quiet. A moderate business has been done in G.M.B warrants from 52 $\frac{1}{2}$ 10s. to 52 $\frac{1}{2}$ 5s. cash, and 53 $\frac{1}{2}$ 5s. to 52 $\frac{1}{2}$ 17s. 6d. three months. To-day's prices are—52 $\frac{1}{2}$ 6s. 3d. cash, and 52 $\frac{1}{2}$ 17s. 6d. three months. We quote English tough, 54 $\frac{1}{2}$ 10s. to 55 $\frac{1}{2}$ 10s.; best selected, 56 $\frac{1}{2}$ to 57 $\frac{1}{2}$; strong sheets, 65 $\frac{1}{2}$ to 66 $\frac{1}{2}$; India sheets, 60 $\frac{1}{2}$ to 61 $\frac{1}{2}$; yellow metal, 58 $\frac{1}{2}$ to 6d.; ore, 9s. 6d. to 10s. 9d.

TIN after being quiet has somewhat improved. Straits after selling at 91 $\frac{1}{2}$ 5s. to 91 $\frac{1}{2}$ 7s. 6d. cash early in the week has been sold to-day at 91 $\frac{1}{2}$ 10s. to 91 $\frac{1}{2}$ 12s. 6d. cash, and 92 $\frac{1}{2}$ 5s. three months, closing firm. Australian is quoted 92 $\frac{1}{2}$ 15s. for spot. English Ingots, 94 $\frac{1}{2}$ 10s. to 95 $\frac{1}{2}$. The Dutch Market has been quiet. Banca and Billiton quoted f55 $\frac{1}{2}$ for spot, and f55 $\frac{1}{4}$ for forward. The bi-monthly sales of Banca will probably be increased by 5,000 slabs next year.

TINPLATES are quiet, and ordinary coke quoted 13s. 3d. Liverpool.

SPELTER steady. We quote ordinary brands, 23 $\frac{1}{2}$ 15s. ex ship here, and specials, 23 $\frac{1}{2}$ 17s. 6d. to 24 $\frac{1}{2}$.

LEAD quiet. We quote Soft Spanish, 12 $\frac{1}{2}$ 5s.; soft English, 12 $\frac{1}{2}$ 7s. 6d. to 12 $\frac{1}{2}$ 10s.; L.B., 12 $\frac{1}{2}$ 15s.; sheets, 13 $\frac{1}{2}$ 7s. 6d. to 13 $\frac{1}{2}$ 10s.

QUICKSILVER steady at 7 $\frac{1}{2}$ 7s. 6d. for both first and second hands.

ANTIMONY quiet. Hallett's price for America is 41 $\frac{1}{2}$; ordinary brands and delivery, 40 $\frac{1}{2}$.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING SEPT. 26.

Armstrong, Mitchell ...	11 1/4 per cent.
Chicago Breweries ...	10 per share.
China Traders' Insurance ...	33 per cent.
Colorado Mortgage ...	2 1/2 per cent.

Union Steamship... ..	2 1/2 per cent.
Vienna General Omnibus ...	2 1/2 per cent.

GEMMING AND MINING CO. OF CEYLON, LIMITED.

AN UNFAVOURABLE REPORT.

THE accounts (say the directors) to Dec. 31, 1890, embrace a period of 12 months, and although not complete, as explained by the auditors' note, it was thought better to present them as they are, rather than wait for further explanations from Ceylon. The subscriptions, as the accounts show, were very fairly taken up by both French and English subscribers, and the directors went to allotment, reserving an adequate working capital in accordance with the terms of the prospectus. Considerable delay occurred in engaging a suitable mining superintendent and the necessary labour force. Although many hundred tons of gem clay were treated, and we were assured by every mail that we were on the eve of good finds, yet the many rough stones sent over to us showed nothing to encourage our further expenditure, and before making further calls the directors decided to take the opinion of the shareholders as to the best course to be adopted. It is true we have found some very good stones, and one fine sapphire we sold for 189 $\frac{1}{2}$ 11s. 3d., but still the expenditure is so heavy and the results so uncertain as to hold out little encouragement, especially when it is currently reported that Ceylon gems are more plentiful than ever in Colombo, and that although our land is supposed to be the best in the island, it is curious we can only produce poor stones out of it. The company, however, are not alone in placing this state of affairs before the shareholders, as the Great Ruby Mines of Burmah, and many gold and precious stone mines, show similar results. It is in the plumbago branch of mining that the best results are likely to be obtained, but considerable capital is required, and the directors feel there is also here some element of uncertainty. Considerable shipments of good Mica have been made to the company on joint account with the owner of some mines in Ceylon.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

S. Washington.—At present do not advise a purchase.
G. G. G.—Better prices are looked for, and we think you should hold on.
Rayleigh.—Good prospect of the property turning out well. Keep your shares.
City Reader.—Cannot go much higher. Sell.
Hero.—No. 4 is the best of the lot. Do not touch the others.
Leghorn.—Yes. Instruct your broker to have them bought in. You are within your rights.
C. K. W. (Whitstable.)—It would be well for you to take the price offered and so secure a good profit.
Olivia.—Purely speculative. The rise we feel sure will not be maintained.
Sam Weller.—Send all the documents to the company's office. The secretary will, no doubt, put the matter right.
Sadler (Reigate).—Not as a speculation. The price varies but very little, and should only be bought for an investment.
Nationalist.—The returns will not be so good, owing, no doubt, to the necessary work you mention being delayed. Do not sell, however.
Puzzler.—The change you wish to make we do not advise. Hold the shares you have for a little while longer.
Manchester Sub.—Yes. Champion Reefs and Ooregum.
Woodford.—Fairly good specs.
B. A. M. (Torquay).—Now is your opportunity, so take advantage of it and sell.
Stationer.—Clear out your shares before they get unsaleable.
Matador.—It is now in full swing, and everything points to prosperity. You should buy a few more.
Archer (Ipswich).—Yes. The low-priced shares are all more or less good to buy.
Horner.—Sell at once.
Kidderminster.—Mysore West, Almada, Mosman, and Balaghat are the best out of the list you have sent us.
W. Stanhope.—They may possibly re-construct before another six months. In the meantime the shares are a fairly good speculation.
Waiting.—The shares were bought for the 16th September account (Settling Day), therefore your broker can only have them bought in to-day, as he has already stated. Ten days is the allowance.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.
Sir CHARLES METCALFE, Bart. | Major J. W. M. COTTON.
L. BALFOUR BURNS, Esq. | RICHARD SMITH, Esq.
Sir STUART S. HOGG. | EDWARD DICEY, Esq., C.B.

HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, SEPT. 26, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

EQUESTRIAN FEATS IN THE KAFFIR CIRCUS.

LESS than a month ago, as our readers are aware, the Kaffir circus was re-opened for the season, and as the managers have provided an attractive and varied programme from day to day, the entertainment has been patronised by *élite* of Hatton Garden and Throgmorton Street, and even staid and solidly respectable members of the "House," who seldom stray far away from Capel Court, have ventured to look into the circus now and then. Of course, these gentlemen from the "gilt-edged" department have only gone so far afield from motives of curiosity, and their questions, "What price Durbans?" or "What price Jubilees?" have only been put in a Pickwickian sense. They did not intend to deal—of course not. They would as soon think of "having a bit on" for the Cambridgeshire or the Cesarewitch as to dabble in merely speculative Mining shares. And yet it is really curious to observe how much general interest has been awakened in the Kaffir circus, and everything connected with it. On some days, indeed, the audiences have been almost as numerous as, and far more excited than, those who attend the Yankee performances in Shorter's Court. And, what is even more strange, there has been a peculiar exhibition of sympathy between the two places of entertainment. When Americans have been dull, Kaffirs have dropped, and when a reaction has come about in Railroad shares Mining shares, have become sympathetically cheerful. And so the friendly rivals have gone on from day to day. We do not propose to follow the Yankee gyrations; but as samples of what has been going on in the circus we append a table, extending the one we gave last week by a column, showing the declines from the high-water mark of the 17th inst.:

Company.	Lowest this year.	End of Aug.	Sept. 17	Sept. 23
City and Suburban...	2½	3¼	4½	3½
Crown Reef ...	3½	4	5	4½
Durban Roodepoort	1½	2½	3½	2½
Ferreira ...	6½	7½	9½	9¼
Geldenhuis ...	½	1½	2½	1½
Henry Nourse	½	¾	1½	¾
Heriot ...	½	1½	1	1½

Company.	Lowest this year.	End of Aug.	Sept. 17	Sept. 23
Jubilee	2 $\frac{3}{4}$	3 $\frac{1}{2}$	5	4 $\frac{1}{2}$
Jumpers	1 $\frac{7}{8}$	2	2 $\frac{1}{2}$	2 $\frac{5}{8}$
Knight's	$\frac{1}{2}$	$\frac{5}{8}$	9s.	8s.
Langlaagte	2	2 $\frac{3}{8}$	3 $\frac{1}{4}$	2 $\frac{1}{2}$
May Consolidated ...	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{5}{8}$	9s. 3d.
Pioneer	2 $\frac{1}{4}$	2 $\frac{7}{8}$	3 $\frac{3}{4}$	3 $\frac{1}{2}$
Robinson	1 $\frac{1}{8}$	2 $\frac{1}{8}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$
Simmer and Jack ...	2 $\frac{1}{8}$	3 $\frac{1}{2}$	4 $\frac{3}{8}$	4

This table may be left to speak for itself. To the admirers of rapid, graceful movements what could be more enjoyable than to witness the performances of such sprites as City and Suburban, Geldenhuis, Heriot, Durban-Roodepoort, or Langlaagte. People with money to spare have their choice of entertainers. If some go down that they expect to go up, they have the consolation of knowing that others go up that their friends want to go down. For the past couple of days the Kaffir circus has been more cheerful than really active. Randt shares generally have been skittish—dancing up a little at one time and down a little at another; and the equestrian feats of some of the leaders, such as Ferreira, Geldenhuis, Jubilee, Robinson, Langlaagte and City and Suburban have been somewhat remarkable. Of course, there have been none of the displays that visitors to the circus were accustomed to a couple of years ago, though in some quarters it is predicted that before the season comes to an end there will be some marvellous performances, not only on the Randt side of the circus, but also on the De Kaap side. In particular Sheba is in fine training, and we also hear very good accounts of Moodies and Forbes Reef. Oriental has taken a turn for the better; and if only Oceana and its progeny, and the Chartered British Co. would do something tangible, instead of simply making discoveries which seem to lead to nothing in particular, there would be plenty to interest the patrons of the Kaffir circus for many a day. As matters stand, we should advise our readers to exercise great caution; for while there are many very good South African shares knocking about, there are many more that are utterly and hopelessly bad.

AUSTRALASIAN MINES.

COMPARED with Kaffir and American shares, the Mining Market, generally, has been tamely respectable during the past week; but in Australasian shares there has been a good deal of solid business, and there is every reason to believe that the prices of these issues will move upward in the near future. Day Dawn Block and Mosman shares have been the favourites amongst the Queenslanders, and they are well worth the attention that has been bestowed upon them. There have also been inquiries for the other better-class Queensland shares, and for those of Tasmania and South Australia, and if we are not greatly mistaken, the mines of greater Britain beyond the seas will absorb a larger share of attention than they have for the last two or three years. In particular, we hear very good accounts of the Kangarilla Co., which should surely be re-named, now that the Kangarilla property has been given up as a bad job. The company's sheet anchor is the Aclare Mine, for the acquisition of which the shareholders would be warranted in forgiving the original directors a good deal. Some time ago the new board succeeded in obtaining as manager of the Aclare Mine, Mr. Rosewarne, who, for the purpose, gave up the appointment he had held for some years as the chief mining authority of the South Australian Government. With the funds provided in the early part of the year, Mr. Rosewarne set vigorously to work, developing the property and erecting plant and machinery. The mills are now at work crushing 50 tons of ore a day, and when the electric lighting arrangements are completed the quantity of ore now being treated will be doubled. The indications are in every respect favourable, and it is calculated that the company will shortly be earning from 25,000*l.* to 30,000*l.* a year. As the capital is now 100,000*l.* and the shares are quoted at about par, we believe that many of our readers will think Kangarillas, as we do, good enough to purchase.

YURUARI.

WITH the announcement that Messrs. John Taylor and Sons have relinquished their connection with Yuruari Mine, the chief hope of the shareholders has gone. For some weeks past the spirits of the shareholders have, to use a market phrase, been nearer par than at any time since the meeting last Easter, but they have now "slumped" to the fine edge of nothing. A shareholder, whose letter we print in our correspondence columns, asks us—"Why have the Messrs. Taylor resigned?" We are unable fully to state, but it is obvious that if they had been satisfied with the situation, they would not have done so. At the same time, we hasten to correct the double rumour that they do so upon the poverty of the mine, or that they have relinquished a position they had absolutely accepted. In regard to the first, no expert of their choice has seen the mine; and, as to the second, the appointment they accepted was purely provisional. Why no expert of their choosing has seen the mine is a question upon which the directors may reasonably be asked for an explanation; why the Messrs.

Taylor have declined to make their provisional appointment absolute has, with good show of reason, already been indicated. It may be said that the Messrs. Taylor would not pilot Yuruari because the finances were low, but, judging from the tenour of the numerous letters we daily receive about the mine, the shareholders were simply waiting a favourable report from this firm to open their purses with far greater readiness than they have ever done in any of the previous financial throes through which the company has passed. Why a report, favourable or unfavourable, was not obtained from the Messrs. Taylor when (as we have reason to believe) they were perfectly ready to send out their best available expert is, we repeat, a point upon which the directors should give some explanation. Meanwhile we congratulate them on having so far realised the situation as to give up their costly chambers at the West End, and revert to more modest accommodation in the City.

Our correspondent, whose letter—it is a sample of many—we print, is astonished at two points in connection with Yuruari affairs. First, the enormous quantity of gold that has been extracted from the mine without the shareholders getting so much of it as the value of a maravedi; and next, the prolonged intervals between the crushings. He is not alone in his astonishment. Other mines go on crushing continuously, but Yuruari only spasmodically. What is there, we want to know, in the air or the surroundings of Yuruari which seems to render regular crushing impossible? Is it bad management? We think it is. Yuruari goes on for a month or two in a most satisfactory way, and then as Wolsey would say, "there comes a frost—a killing frost," and nothing more is done for months. Then the manager is changed, and out goes a Mr. Aikman, a Mr. Rochefort, or a Mr. Pryor, who at once alters the whole face of things and crushings re-commence, and shareholders gleefully rub their hands, saying "at last we shall have dividends, and Yuruari quotations will not be floating about in the Dead Sea, of the sixpences, but go to a shilling, or eighteen pence," and some sanguine souls who do not know Yuruari, imagine they will be even higher. But there comes a sudden pause; the mill is shut down; the stamps cease working, and the cry of the manager to his workpeople in effect is "To your tents, oh! Israel. We've done enough for honour. Let the shareholders wait." They do wait, and the next communication from him is probably dated "Cornwall," instead of Guicipati, and one fine morning the shareholders learn that he who was once their manager has been dethroned, and that a new one reigns in his stead. In how many more acts is this sorry farce to be played? Either there is a mine or there is not. If there be a mine, why is it not worked like other mines, and if there be no mine, why are not the shareholders told so, and the curtain dropped? Here, for example, is the report of the anonymous manager who has succeeded the redoubtable Mr. Pryor, in which he states that "at an early date he hopes to be in a position practically to demonstrate by remittances the truth of his opinion and reports." Where is the manager who has not said that of Yuruari? but where is the shareholder who has benefited by what he has either said or done? Great is the mystery of Yuruari. It will only be revealed in the day when all secrets are made known.

THE NUNDYDROOG MINE.

BY ANGLO-INDIAN.

ON the 29th ult. the directors of the Nundydroog Gold Mining Co. notified in your columns that the lode which had been cut four days previously in the 600 cross-cut in Taylor's shaft was 6 ft. wide, and assayed 3 ozs. of gold per ton of ore. This week you will publish the superintendent's report of the 1st inst., in which, with characteristic modesty, he states that "at 45 ft. 6 ins. the 'lode was cut'; that he had driven 18 ft. on the course of it; and that it was 8 ft. in width, and was worth 2 $\frac{3}{4}$ ozs. per ton. This 'very strong and massive lode' is found in the bottom of the mine. There is a great deal of good stone above it. This will be seen by a glance at the following tabular statement, which merely gives the superintendent's figures in another form:—

	Width.	Value.
600 ft., 18 ft. on course of lode ...	8 ft. 0 ins. ...	2 ozs. 15 dwts.
520 ,, North, 247 ft. do. ...	2 ,, 0 ,, ...	2 ,, 2 ,,
520 ,, North stope	1 ,, 6 ,, ...	1 ,, 7 ,,
520 ,, South, No. 1 winze, 69 ft. depth	7 ,, 0 ,, ...	3 ,, 0 ,,
520 ,, South stope, in back of winze	4 ,, 0 ,, ...	3 ,, 8 ,,
520 ,, South, No. 2 winze, 55 ft. depth	6 ,, 0 ,, ...	2 ,, 8 ,,
450 ,, South stope	3 ,, 0 ,, ...	2 ,, 5 ,,
450 ,, North, No. 1 stope north ...	2 ,, 0 ,, ...	2 ,, 5 ,,
450 ,, North, No. 2 stope north ...	2 ,, 6 ,, ...	1 ,, 13 ,,
450 ,, North, No. 1 stope north ...	2 ,, 0 ,, ...	1 ,, 7 ,,
370 ,, South stope in back	1 ,, 0 ,, ...	0 ,, 14 ,,
370 ,, South stope in bottom	2 ,, 0 ,, ...	3 ,, 0 ,,
370 ,, North stope in bottom	2 ,, 6 ,, ...	0 ,, 16 ,,
370 ,, North stope in back	1 ,, 6 ,, ...	1 ,, 18 ,,
300 ,, North stope in back	1 ,, 6 ,, ...	1 ,, 0 ,,

But measurements and assay values are apt to be delusive, and it is peculiarly true in gold mining that "the proof of the pudding is in the eating." The following figures tell the tale of the substantial

progress of the Nundydroog Mine in the way that its many friends hoped it would go:—

Month.	Stamped. tons.	Gold. ozs.	Month.	Stamped. tons.	Gold. ozs.
Jan., 1890 ...	670	1,097	Nov., 1890...	925	1,433
Feb. " ...	700	1,276	Dec. " ...	975	1,366
Mar. " ...	650	976	Jan., 1891 ...	830	1,471
Apl. " ...	650	941	Feb. " ...	810	1,449
May " ...	700	1,039	Mar. " ...	800	1,520
June " ...	750	1,353	Apl. " ...	855	1,638
July " ...	800	1,447	May " ...	1,000	1,634
Aug. " ...	900	1,377	June " ...	1,050	1,812
Sept. " ...	875	1,363	July " ...	1,070	2,044
Oct. " ...	900	1,423	Aug. " ...	1,085	2,220

The stamping power will be increased by 50 per cent., with a proportionate increase of air-compressors and rock-drills, by the beginning of next year; and from the current month the tailings (which last month gave 60 ozs.) will contribute an important addition to the yield of gold from the stamps without overtaking the monthly growth of the pile of tailings close to the stamps. As the ore is intrinsically rich, the value of about 1*l.* sterling should be obtained for every half-sovereign expended on the treatment of the tailings.

For last year the company paid a total dividend of 4*s.* per 1*l.* share, or 20 per cent. Last May it paid an interim dividend of 1*s.* 4*d.* per share on account of 1891. It lately increased its capital from 150,000*l.* to 200,000*l.*, and gave 20,000 of its new shares to the Mysore Goldfields Co. for a large block adjoining its western boundary, and realised 37,500*l.* by the issue of 30,000 new shares to its old shareholders, at a premium of 5*s.* per 1*l.* share. A new shaft, between Taylor's and Kennedy's, is being sunk, but very slowly, owing to the want of rock-drills, &c.; 10 more heads of stamps, and rock-drills and air-compressors in proportion have been, or are being despatched; yet a good balance of the 37,500*l.* should remain. The directors should, therefore, feel justified by the present position of the mine in adopting a rather bolder policy than they have yet pursued; and they might advantageously double their rock-drill and air-compressing machinery. So far as their mine is concerned they might thus remove the cause of the just reproach that the rate of development at Kolar has been very slow as compared with the rate obtained, under far less favourable conditions, but with similar appliances, in South Africa.

The following comparison between the figures of the Nundydroog Co. and those of the chief Witwatersrandt Companies, that are given by the *Economist*, is instructive. (Note.—The Nundydroog has paid in the current year 1*s.* balance dividend for 1890, and 1*s.* 4*d.* interim dividend for 1891, or 2*s.* 4*d.*, or 11½ per cent.)

Company.	Capital.	Shares.	Value, Sept. 17.	Dividend 1891.	Milled July.	Yield, Gold.	No. Stamps.	Gold per ton.
	£	£	£	£	Tons.	Ozs.		Dwts.
Nundydroog ...	200000	1	2½	11½	1070	2044	20	38.20
Crown ...	120000	1	5	25	5418	3514	70	12.97
Durban ...	100000	1	3¼	20	4500	2340	70	10.40
Ferreira ...	45000	1	9½	30	4558	3173	40	13.92
Jubilee ...	26000	1	5	35	1043	540	15	10.36
Langlaagte ...	450000	1	3¼	5	6105	4360	60	14.28
Meyer ...	64500	1	3	25	1580	1543	30	19.54
Robinson ...	2718750	5	27	—	4874	5262	40	21.72
Simmer ...	85000	1	4	20	7383	3319	100	8.99
Stanhope ...	35000	1	2½	30	1600	830	20	10.48
Wemmer ...	40000	1	3¾	10	1442	1125	20	15.60

The Nundydroog is by far the oldest of the above companies, and its ore is also by far the richest, yet its stamping power places it low down on the list, and the profits it makes, and the value of its shares suffer accordingly. If the Simmer and Jack has found it worth while to erect 100 stamps to crush ore that yields less than 9 dwts. of gold per ton, and succeeds in paying 20 per cent. on its small capital, why should the directors of the Nundydroog, with their wealth of ore of exceptionally high grade, propose to be content for some time to come with a battery of 30 stamps? A mine as rich as Nundydroog has been proved to be, has yet to be found in Africa. "When found" a cool 100 stamps would be promptly erected to give the present generation of its shareholders the fullest possible benefit of their enterprise; and power would be obtained "to add to their number" as occasion required. The "bide-a-wee" policy of the Nundydroog directors may be virtuous, but it is not long-sighted; and fortified by the remarkable experiences of Ooregum, the board should, I think, exhibit a little more energy and confidence than they have yet cared to do. In mining, as in other matters, "time is money"; and having found a wonderfully good thing, the board should strain every nerve to make the most of it at the earliest possible date.

Sept. 22.

SOUTH-EAST MYSORE GOLD CO., LIMITED.

A BOX of quartz from this company's mine weighing about 56 lbs., has been assayed by Messrs. Johnson, Matthey and Co., and gave 3 ozs. 10 dwts. 12 grs. of gold to the ton. This quartz was broken from the lode in the winze at about 20 ft. below the 520-ft. level. The recent reports from this mine show steady improvement in the underground workings. A winze was commenced sometime ago in the bottom of the 520-ft. level, and the lode is found to improve in value as the winze is being deepened. It is quite within the bounds of probability that the South-East Mysore Mine may yet realise the sanguine expectations that were formerly entertained in regard to it.

THE FAVOURABLE OUTLOOK OF THE GUADALCAZAR QUICKSILVER MINES.

A PERUSAL of the report, dated Sept. 23, which was handed round in the meeting of Wednesday last, justified the shareholders in expecting an extremely satisfactory gathering. They were not disappointed. The exhaustive speeches of the chairman (Mr. John Merrylees) and of Mr. James Mactear, a director and also an expert in quicksilver, were of the most satisfactory kind, dealing as they did, not with surmises and suppositions, but with positive facts and actual realisations. The property of the company is 18 miles from the railway station of Tejon, in the State of San Luis Potosi, Mexico, and the titles to it have been traced to their origin and found perfectly correct. The total capital of the company is 400,000*l.*, of which 350,000*l.* was the purchase consideration for the property. All the shares are fully-paid, and the company, as will be seen from our *verbatim* report of the meeting, is in the full tide of rapid and successful development.

It was understood from the commencement that, though the mines have been working for about half a century, former methods would have to be changed, and the European system of mining introduced. Hitherto the property has been worked from hand to mouth, and though in the year 1875 it is said to have yielded 100,000*l.* "inside of three months"—so large a return did not induce the Mexicans to change their dilatory methods. Their habit was to carry the ore out on their shoulders and to follow the veins, thus acting up to the letter (though forgetting its spirit) of the proverb, "Let to-morrow provide for itself." When Mr. Mackenzie, the manager, took charge, the first thing he had to do was to widen the levels, increase the apertures of the two entrances to the mines, and secure good ventilation. In the course of this preliminary work he arrived at the conclusion that as the *débris* he was removing became richer as depth was attained, there was reserved for this company ore of the same high quality as that by which the Mexicans formerly profited. The ore will, in future, be conveyed out of the mine by a tramway, which will be in operation about Nov. next. He was, however, very soon confronted with a geological problem in the peculiar formation of a part of the vein matter that for a time baffled his experience and skill. Now, however, thanks to the works of reference sent him, to the sketches of similar formations elsewhere, and to the discussion in writing that has been going on between him and Mr. Mactear, sometimes developing into formidable letters of 15 pages long (!), he has solved the problem successfully, by which it is the opinion of Mr. Mactear that the company's future is assured.

According to the chairman, the whole of the properties (3 miles in length and 1 mile in width) appear to be "permeated with cinnabar ore." Sometimes the stringers are not more than the eighth of an inch, and then they widen out to a foot, and then again to 50 and even 60 ft. wide. One ore bonanza, 4 ft. thick, has been found, and another 33 ft. wide by 20 ft. in depth, and still increasing in depth, which has assayed up to 18 per cent., the average being 11 to 12 per cent., and the ordinary ore has given 3 per cent., whilst it is important to remember that 1 per cent. will enable the directors to pay handsome dividends. A specimen from the newly found bonanza was exhibited at the meeting and greatly interested the shareholders. Of course the directors have met with difficulties, but they seem to have simply regarded them as things to be overcome. They have transported the heavy machinery to the mine; they have made a good bargain about the water, and we note that their last sale of 25 flasks of quicksilver in July realised 3*l.* more per ton in Mexico than it would have done here. All the facts mentioned at Wednesday's meeting go to show that Guadalcasar is a property of merit, and we shall watch its progress with considerable interest.

MANICA OPHIR.

ITS DIRECTORS, ITS MANAGER, AND ITS SHAREHOLDERS.

DR. ALEXANDER did not occupy a very enviable position on Thursday when he ensconced himself in his seat as chairman of the Manica Ophir meeting. The shareholders were angry, and Dr. Proctor, their leader, was impetuous besides. He could scarcely restrain himself whilst the chairman was speaking, and his plan of campaign was such that it made the whole of the proceedings almost ridiculous. But (as they say in the novels) we anticipate. Dr. Alexander had to explain why the meeting had not been called earlier. The cause was the (at that time) mysterious silence of Mr. A. Vaughan Williams, the company's manager and explorer in chief. This gentleman was fighting with unheard of difficulties as well as with illnesses, which more than once brought him close to death's door. When he emerged from the African jungle, and could communicate with the directors, he told them in effect that which he told the meeting—that he had secured the properties which were valuable; that they could be easily worked, that the ore would average in bulk ½ an oz. to the ton; that, whether in Portuguese or British territory, he had made the company's titles secure, and that it simply required capital for development purposes. Upon this information the directors appear to have called the larger shareholders to a conference, the result of which was a decision to raise 500*l.* to see if the report of Mr. Williams could in its entirety be confirmed. They were led to this decision probably by

the fact that their relations with their manager were strained, though since they have become "happily re-established." It was to raise this 500%, as well as for the ordinary business of the company, that the meeting was called.

This was the true path in the interests of all concerned along which the shareholders should have proceeded, but the meeting, led away by the impassioned outbursts of Dr. Proctor and the persuasive phrases of his supporters, got upon the wrong line, and, as we shall show, the issue was chaos. Dr. Proctor carried an amendment, which we do not hesitate to say was illegal from beginning to end, for the simple and sufficient reason that no notice of it had been given. It was as follows:—"That the report of the directors and the statement of accounts be not accepted, and that, except Dr. Alexander, all other members of the board and officers of the company be requested to resign, and that a committee of five shareholders be appointed to inquire into the position and past expenditure of the company." In regard to its first clause,—the adoption of the report and accounts was the chairman's motion, and the shareholders were merely required either to vote for or against it. Then the request to the directors to resign (Dr. Alexander excepted) was purely a matter for those gentlemen to consider favourably or the reverse, and as to the committee of shareholders, Dr. Proctor having carried his amendment, it never seems to have occurred to him to appoint his committee before the adjournment of the meeting. As the chairman said he had "negatived his own amendment." This is the effect of listening to eloquence without reason, and fiery indignation without logic. The directors will do this company a service if they proceed at once to strengthen the board and to prepare a comprehensive re-construction scheme, so as to provide that working capital to develop their property, of which Mr. Williams states it is so eminently worthy.

BERTHA CONSOLS MYSTERY.

THE sole difference that we can detect between Bertha Consols under the former management and under that which has supplanted it is this—that whereas every publicity was courted by the former directors, those now in office seek to avoid it by every means in their power. Under the former management the weekly reports regularly appeared in our columns, and the meetings were open to the Press; under the present management those reports are withheld, and from the meetings every pains is taken to exclude the reporters. A meeting of this company was called for last Tuesday, but no reporters were allowed to attend it on the ground that the position of the company was "peculiar." All the more reason why the absent shareholders should know it. A report was to be sent them—that is, a report prepared by the management, the value of which each shareholder will be able to assess. Whatever may have been said of the former management—and a good deal was said of it that was not true—it was not afraid of publicity, and in changing it we fear the shareholders have performed the by no means uncommon feat of jumping out of the frying pan into the fire.

LAUNDRY OPERATIONS IN CORNWALL.

THE good people of Cornwall are just now engaged in publicly washing their soiled linen, and they may be more or less obliged to us if we lend them our "lines" upon which they are welcome to hang it out to dry. We hasten to do this the more readily seeing that the cleansing process was commenced at our instigation, and very worth indeed are Cornishmen that we have put them to so much expense, for the outlay on soap has been considerable. Still, in the interests of sanitation, not to speak of those of mining, the stern necessity for the "tub" has been admitted, and though the laundry is still fully employed, the washing is far from complete. It is, however, scarcely an edifying spectacle to see the washers engaged in throwing the soapsuds at each other. Here, for example, in the *West Briton* of last Thursday is "A Disgusted Shareholder" reading "with astonishment and with very great grief" the statements made in that paper only a week ago.

"It is said that the falling off in the 310 was known to a few only, and the matter was kept very quiet for 10 days or a fortnight." "One or two 'knowing ones'—those who were kept well informed (who by?)—let into the secret (why so secret?) sold the shares right and left, and benefited to the tune of many hundreds, if not thousands of pounds, to the discomfiture of scores of disappointed, because uninformed, shareholders."

The "Disgusted Shareholder" will be inclined in future to attach very little importance to mine captains' reports, as little importance as we are inclined to attach to their opinions when expressed "on behalf of outside adventurers." The disgusted shareholder says that "it will be quite useless for the *West Briton* to rail any longer against the strictures placed upon Cornish mining by the MINING WORLD." We think so too; for if this is the way Cornish adventurers deal with each other, what mercy can the outside capitalist expect from them? Just about as much mercy as the following anecdote will indicate: When Cornish adventurers have a dinner after a mine meeting, and when no stranger is present to listen to their profanities, they usually have a little quiet conversation amongst themselves as to the "outside adventurer,"

who is spoken of with the minimum of respect and the maximum of contempt. At one of these festivals the following anecdote was told. A party of Cornishmen, including a mine captain, had been out for a day's shooting, and had met with more or less success. The mine captain had been signally unfortunate—his gun hitting the mark no more probably than his mining predictions. Returning home in a waggonette the sportsmen observed a rabbit run across the road into a pipe which was closed at the other end. The mining captain, exasperated by his ill-success during the day, got down from the vehicle and approaching the opening of the pipe blazed away at the rabbit, saying "You'll have no more chance now than an outside adventurer."

YANKEE GIRL REPORT.

THE report for the year ending June 30, 1891, does not justify the low price to which the shares have recently fallen, and from which we are glad to observe they are slowly recovering. It will, however, be said that a good deal has happened since that date, and no doubt this is true, but a company that can show a balance on revenue account for the first year of its existence amounting to 104,661%, after charging 10,000% to revenue account, or nearly one half the total expenditure on new works, would not have its shares quoted as we quote them to-night if a discriminating public had properly digested the facts. Eight shillings per share has been paid in dividends during the year—in other words, half as much in the 10 months as the price at which the shares are now quoted. This represents a return of 40 per cent. on the nominal capital of the company (260,000%), of which 2s. 6d. per share, or 21,686%, remains uncalled.

The following summary shows the amount of dividends paid by this company, which at the present time comprises 1,115 shareholders:—

No. of Dividend and Bonus.	Date of Payment.	Amount per £1 share.	Total Amount Paid.	Remarks.
		s. d.	£ s. d.	
1	Oct. 3, 1890	2 0	26,000 0 0	A return of 40 per cent. of the capital of the company.
2	Dec. 30, ,,	2 0	39,000 0 0	
3	Bonus	1 0	26,000 0 0	
4	Apr. 15, 1891	2 0	13,000 0 0	
	July 31, ,,	1 0	13,000 0 0	
			£104,000 0 0	

The fall in the shares has been caused, as we explained in a former issue, by a variety of circumstances, and does not bear any relationship to the depreciation of the mine. The improvements underground and at surface have been important, and of these details are given in the report. One feature of the mine (we do not know that it is peculiar to Yankee Girl) is the extremely variable character of the ore, which consists of sulphide of iron, lead, zinc and silver, carrying an appreciable amount of gold, but its chief value is in silver. During the year 7,569 tons of ore were sold, which realised 153,687%. 9s. 9d., and in addition 2,964%. 2s. 10d. was received by way of royalties and from sales of concentrates, making a total of 161,651%. 12s. 7d.

It is the intention of the directors in future only to issue monthly circulars based upon returns from the mills instead of fortnightly statements, which were more or less simply approximate estimates. The report of Mr. Jas. K. Harvey will reassure those shareholders upon whom every sort of influence has been brought to induce them to sell their shares. He describes the prospects as certainly encouraging, and says there is every reason to believe that good results will be obtained. The past record of the company justifies confidence in the management and also in the mine.

UNITED STATES PLACERS.

WE are only partially able, as the result of inquiry, to raise the curtain which enshrouds United States Gold Placers in mystery. It must be now nearly nine months since Mr. Naidley presided at a meeting, as the result of which a committee was appointed to inquire into the affairs of this unfortunate enterprise. Following upon that, Messrs. Lee and Pemberton, the well-known solicitors of Lincoln's-inn-Fields, acting on behalf of a large number of shareholders, obtained from the Court an order for the appointment of Mr. Naidley as liquidator. Unfortunately, very shortly after this appointment, Mr. Naidley died, and the liquidation was, in a sense, thrown into chaos. An effort was then made, we understand, by Messrs. Lee and Pemberton, to obtain the appointment of the Official Receiver as liquidator, but owing to legal questions into which it is unnecessary to enter, this step has been delayed, though it is quite possible, and even most probable, that it will be taken after the long vacation. The object has been to obtain a liquidator wholly independent of the past management. Owing to the position in which the company's finances were found upon going into liquidation it is not likely that there will be any return to the shareholders. This is a miserable ending to a company, about which many glowing reports were written, and not a few eloquent speeches were delivered.

TASMANIAN LAND AND EXPLORATION CO., LIMITED.

It is the intention of this company, on its enlarged basis, to carry on a land and exploration business in Tasmania and elsewhere for mining, for developing mining properties, for promoting and assisting in the formation of companies, and for kindred objects. The capital is 50,000*l.*, in as many shares of 1*l.* each; only 100 of them are founders' shares, which have already been issued, together with 18,171 of the ordinary shares. The balance is now offered for subscription at a premium of 2*s.* per share. The company is not a new one; in fact, between Mar., 1889, and May, 1890, a cash dividend of 10 per cent. was paid on the ordinary share capital of the company as it then existed, and to May 12, 1891, the dividend was 20 per cent., half in cash and half in shares of the Tasmanian Silver Co. This was done after providing in each year for the dividends on the founders' shares. It is perfectly true, as the prospectus states, that there is just now great activity in locating silver mining properties in Tasmania, and the moment is opportune for enlarging the Exploration Co.'s basis. The company already owns an extensive interest in several mines, and particular mention is made of a block of 80 acres called Lamb's section, which is said to contain a lode carrying high-grade ore. This statement receives confirmation from the very satisfactory assay certificate that is published with the prospectus, signed by Messrs. Johnson, Matthey and Co., Limited. A good working board has been formed, and the company appears to possess fair prospects of success. Our only objection to it is the existence of founders' shares, to which we have an objection that becomes more noted as further experience of this class of security is gained.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

ADVANCE OF THE BANK RATE.

ALTHOUGH so far from an increase in the circulation usual at this season of the year, there continues an actual falling off, the export of gold has at length set in upon a considerable scale, 825,000*l.* having been taken within the *Gazette* week for Germany and America. This caused an advance in rates, and with the allotment of Treasury Bills at 2½ per cent. a demand sprung up at the Bank where customers were charged Bank rate, and the public 2½, 3 per cent. All this clearly indicated a rise in the Bank rate, but opinions differed as to its extent. Some thought it might go to 3½ per cent., but the directors have settled the question by fixing it at 3 per cent. This reassured the market, which steadied at 2½ per cent., and longer dated bills ruled at 3¼, ½ per cent. The exchanges, which had been adverse, have sharply responded to the alteration, and are now more in our favour, while discount abroad is higher. At the corresponding date the Bank rate was raised to 5 per cent., but the circumstances then were urgent, while in the present instance the course of affairs as between Europe and America was foreseen, and with the greater control which the Bank now exercises, and the more considerate attitude of the national institutions at the French and German centres, what might have easily become a danger has been avoided, apparently, so that probably 4 per cent. may cover the autumn's demand. Two millions of gold have left the Bank since June, but the total is still 25½, against only 21 millions last year, and the reserve is 16,300,000*l.*, or 45½ per cent. of the liabilities.

An unmistakable pause in speculative activity has occurred at the Stock Exchange, and the general tendency has been downward owing to realisations in view of dearer money. As yet, though the Bank rate has gone up, financial assistance is still very cheap, and even were it to become dearer, the movement would simply act as a safety valve to excessive inflation, while what sales have occurred are eminently calculated to strengthen the position and foster healthy vigour. Consols, of course, are lower, so are India and other gilt-edged securities. Home Railways have shown marked trepidation, since revenue scarcely exhibits that elasticity proportionate to increased working and capital charges, but a subsequent recovery has militated against the weakness. Foreign bonds are comparatively featureless, but the continental markets have been fairly maintained under a conglomeration of circumstances or considerations. The conciliatory feeling now professed in France towards Germany, because the Emperor has caused the passport regulations to be relaxed, is hopeful for the maintenance of European peace, but on the other hand the reported disturbances in China, and what is likely to soon prove restless energy of Russia in other quarters, are the reverse. Canadian Railways have been active, but without much rise. Argentine Securities of every shade are flatter, but Mexican Railways show a distinct rise. United States descriptions continue to fluctuate incessantly, and speculators seem to get in and out of this market, metaphorically of course, like the proverbial spider, but prices have made far less headway than formerly. Gould appears to be exercising his old tricks, and his latest move is the reported "passing" by the Missouri Pacific of their dividend. American Breweries of the highest class continue in demand; other-wise Miscellaneous shares are generally dull.

Money was in better demand to-day, while in less supply, and the rate for general loans was ¾ to 1 per cent. Discount business was quiet, and the market weak, three months' bills being 2½, and 60 days' 2½. 65,000*l.* in gold was withdrawn from the Bank for Germany. American requirements have ceased, or have been temporarily satisfied. Bar silver this evening is firmer at 45½*d.* on Continental buying.

The markets to-day have been dull and American Securities very heavy in the absence of any support from New York buying, until near the close, when there was reaction on better prices from the other side, and prices closed strong. The fall, however, had a depressing effect upon the markets generally, and Consols were flat, 94½, ½, but after, however, recovered to 94½, ¾, for both money and account. India stocks were steady, but Colonial weak, the scrip of the New South Wales loan being ½ dis. to ¾ *pm.* Foreign were

firm, except again for South American Securities, Argentine falling ½ to 1 per cent., with 1½ in the Funding Loan, and the Cédulas ¼ to ½. Uruguay Bonds were also ½ lower, while Portuguese gave way ¾, and Turkish Defence Bonds, ¼. Other Turkish, however, were ½ to ¼ better, together with Egyptian Unified, Italian, Hungarian, and Mexican. Home Rails were quiet, but showed some recovery, Brighton "A" and Chatham rising ¼; Chatham Preference 1; and the Scotch stocks meeting more demand, although still ½ to ¼ under yesterday's prices. Apart from North-Eastern, the heavy lines were weak. In American the fall in Union Pacific and Missouri shares, the latter coming nearly \$9 lower this morning from New York, caused depression, and, in spite of the rally, prices show a drop of ½ to 1½ all round, with \$2 in Denver Preferred, Wabash Preferred and Union Pacific. Grand Trunks receded ¼ to ¾; Mexican, ¾ to 1; and Argentine Railways from 2 to 5 per cent. Nitrates were weaker, but Peruvian Corporation Investments improved.

Annexed are the final quotations to-day:—Consols Account, 94½, 94½; Egyptian Preference, 91½, 91½; Egyptian Unified, 96½, 97; French Four-and-a-Half per Cents, 104½, 104½; Hungarian, 88½, 89½; Italian, 89½, 89½; Mexican, 87½, 88; Peru Five per Cents, 104½, 104½; Peru Six per Cent., 29, 29½; Russian 1889, 97½, 98½; Portuguese, 37½, 37½; Spanish, 71½, 72; Turkish 1871, 95½, 95½; Turkish Defence, 91, 91½; Caledonian Railway, 116½, 116½; Great Eastern, 88½, 89; Great Western, 159½, 159½; Brighton "A," 149½, 149½; North Western, 171½, 171½; Metropolitan, 84½, 84½; Metropolitan District, 29½, 30; Midland, 159½, 159½; North British, 38, 38½; North Eastern, 155½, 155½; South Eastern "A," 84½, 84½; Mexican 35½, 35½; Grand Trunk, 10½, 11½; Grand Trunk First Preference, 72½, 72½; Grand Trunk Second, 51½, 51½; Grand Trunk Third, 28½, 28½; Canadian Pacific, 91½, 91½; Denver Preference, 51, 51½; Erie, 31½, 31½; Milwaukee 76½, 76½; Lake Shore, 125½, 125½; Louisville, 82½, 82½; Atlantic First, 39½, 39½; Ontario, 20½, 21½; Ohio, 26½, 26½; Norfolk and Western, 57½, 57½; Reading, 20½, 21; Reading Bonds, 83, 84; Union Pacific, 42½, 42½; Wabash Preference, 31½, 32; Ottoman Bank, 12½, 12½; Anglo-Telegraph, 47½, 48½; National Telephone, 4½, 4½; Hudson's Bay, 16½, 17½; Suez Canal, 113½, 114½; Guinness, 315, 317; Allsopp's Ordinary, 22, 24; Bryant and May 13½, 14; Eastmans Ordinary, 4½, 4½; Elmore's Copper, 3½, 4½; Salt Union, 4, 4½.

ISLE OF MAN MINING CO., LIMITED.

THE 38th annual report of directors of this company, just issued, congratulates the shareholders on development of the mines during the past year, which has been more satisfactory than was anticipated. The development of the extreme north lode at the 127 and 140-fm. levels east has been attended with most satisfactory results, and the lode has likewise been intersected at the 155-fm. level, which, where found productive, has shown by assay from 100 ozs. to 300 ozs. of silver per ton. Towards this point a cross-cut is now in course of driving at the 170-fm. level, from which it is argued that the prospects in this direction are remarkably good. The ground opened out in the eastern portion of the mine is very considerable, and the ores being richly charged with silver it marks the development of the new mine, which will be worked from Pott's shaft. The intersection of the main lode at Beckwith's shaft at the 245-fm. level has been attended with results showing it to be more powerful and productive than in the levels above. The driving west has laid open a considerable length of rich ore ground, which not only promises continuance, but foreshadows equally good results, when the intersection is made by the cross-cut driving from the same depth at Bawden's shaft. The raisings for the year have been 4,550 tons of ore, against 4,060 tons in 1890; but the profit, unfortunately, in consequence of a decline in the value of lead and silver, shows an increase of only 521*l.* 5*s.* 6*d.*, leaving 12,958*l.* 5*s.*, compared with 12,437*l.* 11*s.* 3*d.* last year. Despite the increased raisings of ore, the reserves in the mine continue undiminished, and, in fact, are greater than at this time last year. The sum of 1,000*l.* has been carried to the reserve fund for redemption of the bond debt, and 2,250*l.* to the new works account. The directors recommend a dividend of 12 per cent. on the ordinary share capital of the company (12*s.* per share), of which 9*s.* per share has been paid in anticipation, and a similar dividend on the preference capital of the company.

DE BEERS BALANCE-SHEET.

THE secretary of De Beers Consolidated Mines has received cable advices from Kimberley to the effect that at the annual general meeting of shareholders held there on Sept. 24 the accounts for the year ended Mar. 31, 1891, were unanimously approved, and that the following are the principal figures taken from the profit and loss account, as submitted to the meeting:—Receipts: Revenue for the year ending Mar. 31, 1891, proceeds of diamonds, interest on investments, &c., 3,310,178*l.* 17*s.* 3*d.*; profit for year ending Mar. 31, 1891, 1,907,095*l.* 12*s.* 5*d.*; balance from last year's account, 465,416*l.* 1*s.* 3*d.*; total, 2,372,511*l.* 13*s.* 8*d.* Expenditure:—Total expenses including interest on debentures and leases for the year, 1,403,083*l.* 4*s.* 10*d.*; profit for the year, 1,907,095*l.* 12*s.* 5*d.*; dividend paid for the year (20 per cent.), 798,791*l.*; amount written off machinery, shafts blue ground, &c., 534,269*l.* 13*s.* 1*d.*; amount set aside for redemption of first and second debentures and Bultfontein obligations, 292,204*l.* 16*s.* 10*d.*; expenses and discount on debenture issues, 39,417*l.* 3*s.* 6*d.*; balance carried forward next account, 716,829*l.* 0*s.* 3*d.*; total, 2,372,511*l.* 13*s.* 8*d.*

HOLLOWAY'S OINTMENT AND PILLS.—Self Help.—Prior to the discovery of these remedies an easy, ready and reliable remedy for outward disfigurements and inward complications was, practically speaking, unknown. No one need now be at a loss if they should unfortunately suffer from piles, ulcers, sores, tumours, boils, bruises, sprains, &c. Enveloping Holloway's medicines are very intelligible printed directions for using them, which should be attentively read and immediately followed by all who resort to his treatment. Sooner or later the sufferer will assuredly triumph over the worst diseases. This searching Ointment disperses all those malignant humours which aggravate diseases of the skin, prevent the cicatrization of ulcers, and excite inflammatory tendencies in the system.

REPORTS OF MEETINGS.

THE ORIENTAL AND SHEBA VALLEY UNITED GOLD MINING CO., LIMITED.

RESOLUTIONS CARRIED UNANIMOUSLY — SHAREHOLDERS INSPIRED BY IMPROVED POSITION OF RANDT MINES.

AN extraordinary general meeting was held at the Offices of the company, Jamaica Buildings, St. Michael's Alley, Cornhill, on Monday, when the subjoined resolutions, which were passed at the third ordinary general meeting of the company, held on Aug. 28, 1891, were submitted for confirmation as special resolutions under the Companies Act, 1862, namely:—

RESOLUTIONS.

"1. That the capital of the company be increased to 500,000*l.* by the creation of 100,000 new shares of 1*l.* each, to be called 'preference shares,' the holders thereof to have the right to a fixed cumulative preferential dividend at the rate of 20*l.* per cent. per annum on the amount for the time being paid up thereon, and that such preference shares rank both as regards capital and dividend in priority to the other shares of the company." "2. That the following words be added to article 100 of the articles of association of the company, namely:—'A copy of such balance-sheet and report shall be sent to each shareholder seven days previous to the day appointed for the ordinary general meeting.'" "3. That the following words be struck out of article 116 of the articles of association of the company, namely:—'All dividends unclaimed for three years may be forfeited by the board for the benefit of the company.'" Mr. E. PHILLIPS (secretary) read the notice of meeting.

Mr. A. T. Layton, J.P. (chairman of the company), presided.

RESOLUTIONS CRITICISED.

The CHAIRMAN: I should not have considered it necessary to address you at any length this afternoon, because the subject of raising some further capital was fully discussed at the meeting of Aug. 28, but one of the shareholders at that gathering has since written two separate letters, in which he has somewhat adversely criticised the necessity of raising this money, and has threatened to put some impediments in our way to prevent the scheme being carried out. The board, however, believe that the salvation of the mine depends very much on our being able further to develop it, and get large supplies of ore in sufficient quantities to crush so as to make it paying. Mr. Tallerman has been here and perused carefully the report of Mr. Chalmers, and he points out that Mr. Chalmers says "it will only require 6,000*l.* to open up and develop the No. 3 level." Now, I am sorry Mr. Tallerman is not here to see the error into which he has fallen, for Mr. Chalmers says "a considerable amount will be required to develop the other parts of the mine, and especially that below the No. 3 level." It should be explained that this No. 3 level is about on the same level as the floor of the Sheba quarry, and it is a well-known fact that the lower the Sheba goes the richer the mine becomes. If we get the power to raise this money, and do raise it, it will be expended in following up the gold shoots in the quartzite beds and in laying bare others, and in developing reserves for more extensive crushings.

IMPORTANT EXTRACTS FROM LETTERS.

This is justified by reports from Mr. Chalmers, who says:—

"I advise, in the first place, an expenditure of not more than 6,000*l.* in exploratory work at 3rd level. In the second place, that crushing be continued as long as expenses are paid, any profit realised being put into the mine until such exploration as is necessary has been effected. If the result be as I anticipate, sufficient rock of 6 to 8 dwts., if not of greater value, for the 110 stamps will be opened up, to make the carrying on of deeper workings justifiable, and the mine a steady and profitable, if not a brilliant, concern." In the letter which covers Mr. Chalmers' report from Mr. Campbell, general manager of the South African Trust and Finance Co., he certainly justifies the further development recommended. I have taken an extract from his letter, in which he says:—

"It is evident from Mr. Chalmers' detailed report that your reduction works are well equipped—very good of their kind, with slight modifications, capable of treating 250 tons per diem, and at present are far in excess of the mine capabilities. As to the mine, it practically has not been called into existence yet, though abundant reasons exist in the small area prospected to have justified proper development long ago. Apparently the hill upon which your present mine is situated is (above water-level) chiefly composed of bedded quartzites, continuous for some distance east and west of your property, tilted up, dipping south, and of unknown thickness. Your mine is on the face of those quartzite beds, and on the same beds on the immediate east of you on a similar face are situated the Edwin Bray and Sheba Mines. We notice Mr. Chalmers' estimate of expenditure as 6,000*l.*, but we think the board should be prepared to spend up to double this in justice to the indications, and to the issues at stake."

WHAT HAS BEEN DONE AT THE MINE.

Looking at the fact of our having placed splendid machinery in position to crush on a large scale; on our having a tramway to carry the rock at a very small cost, and having formed a water-race to drive the mill at a nominal figure, it appears to the board that it is their duty to the shareholders to press the resolution which is now before the shareholders. (Hear, hear.) This is only the confirmatory meeting, and I may say that, although we have had this adverse criticism from Mr. Tallerman alone, we have, on the other hand, had innumerable letters from shareholders urging us to carry out this work by endeavouring to raise this additional capital, so as to turn the property into one of a dividend paying character. I move the first resolution.

Mr. MARCUS (director): I second it.

SUGGESTED LOWERING OF INTEREST FROM 20 TO 10 PER CENT.

Mr. T. SEABER: I attended the last meeting comparatively ignorant of this company's affairs, but since then have obtained more light, and would make one suggestion. I am only afraid that those who have

the largest stake in this concern are committing an error in one respect. I have heard the opinion of outside people who ought to know, people who have put their money into the company, and would, under altered circumstances, be inclined to go further, and the view is that if you issue the new capital at 20 per cent. you damage those shares very much, and I do not think you benefit yourselves one penny, because I think if you had 10 per cent. preference, and then came in with the other shareholders, your ordinary shares would become very valuable. Although it might not result in such profits as you anticipate, yet in the public mind you would be able to get a large price for those shares, but the 20 per cent. appears to create a feeling that the shares will be worthless. I think that is a mistake. I am only a very small shareholder myself; but if I had 10,000 shares in the company I would prefer taking 10 per cent., and coming in with the other shareholders with the idea of making my 10,000 shares valuable. I have heard this from people on the Stock Exchange, who are thoroughly acquainted with the mine. They say "What a mistake these people are making—their shares will not be saleable." Ten per cent. would be submitted to, and after all those who find the money are the people who hold the shares. You are not going to the public, and consequently, although you would not get it in 20 per cent., you would do so in the value of the ordinary shares. I think if that were done you would carry everyone with you. If it is not done a great many shareholders will not contribute. There were four gentlemen who promised to come here to support these views, but I do not see one of them present. (Laughter.)

BOARD SUPPORTED IN THEIR RESOLUTIONS.

Mr. GEORGE DIBLEY: I hold a moderately large number of shares which I bought at a high price. You, sir (to Mr. Seaber), are dealing with matters of opinion, but when I look at what has been placed before us by the chairman, I hope we shall be inclined to deal with matters of fact. Now

THE FACTS ARE THESE,

that at the present time the mine itself is mortgaged, and in the hands of individuals who could take possession of it and keep it. Those gentlemen outside whom you have consulted are probably not aware of that. (Hear, hear.) The men who have advanced this money are perfectly willing to throw up the lien they have upon the property and take these preference shares; in other words, they are willing to turn their mortgage into shares, which will give them no lien upon the property, and to take part in the adventure pure and simple. That is an important feature in relation to this matter, and I would much rather that you should pay 10 per cent. under all circumstances, though I see the advisability of falling in with the board's proposals. If the mine is going to be a great success, as I think it certainly will be, the difference between 10 and 20 per cent. is 10,000*l.* a year. It is a large sum in a small affair, but it is a small sum in a large affair. The gentleman, therefore, who thinks that ought to be a serious difficulty is mistaken. I have great pleasure in supporting the resolutions of the directors, and all I can say is, in regard to your friends who will not take the shares—I am sorry for them.

THERE ARE ADVANTAGES IN TAKING THE SHARES,

of which I will simply name but two. The first is the saving of the property—(hear, hear)—and then if the property after all should be entirely lost—who loses? Why, the men who subscribed for the 100,000*l.*, and the men who have been willing to take shares for their mortgage. (Cheers.) On the other hand, if the scheme was carried through, and I have not the slightest doubt it will be, those gentlemen who cannot, or will not, subscribe for their shares will share in the profits, or otherwise they will not get anything at all.

Mr. BARROW: I think 20 per cent. is a large rate of interest to pay, but yet the present shareholders are invited to subscribe, and will, therefore, if they do so, participate in what after all is only the division of a large profit amongst ourselves. If there are shareholders who do not take up preference shares, I do not think we have to consider them in the present emergency. Unless they are taken up, the ordinary shares are of very little value, because the property will go out of our possession. If we subscribe, we have 20 per cent., and if we do not, we let others have it. It is like quarrelling over an extra profit that is offered to us. If there are shareholders who will not come in, then it is the duty of the board to offer a good premium to outsiders, and under present circumstances, with the ordinary shares quoted at 4*s.* to 5*s.*, it will tempt money into the concern which would not otherwise come. I think it is a good offer, and I shall support it.

MR. SEABER NOT IN OPPOSITION.

Mr. SEABER: Allow me to explain. This capital is subscribed by the shareholders, and my point is this—not to damage your own property by offering too high a rate of interest. This gentleman says they are entitled to the property, and that the extra 10,000*l.* would not make much difference, but the argument cuts both ways. It has not made much difference to the ordinary or preference shareholders, but if they took 10 per cent., and then came in to dividends afterwards they would have their extra interest in that way. If you adopt the other course, I hold you damage the property. I am not speaking against the scheme. I am only uttering the expressions of other people. I believe you are anxious to do the best you can for yourselves, and also for the concern.

The CHAIRMAN: We have no power to alter the resolutions now. They must either be accepted or rejected, as we are called simply to confirm them. We discussed the question thoroughly at the last meeting, and the resolutions were unanimously passed. All these suggestions were most seriously considered by the board, and the unanimous opinion has been in favour of this being the best course. The resolution was then put, and carried unanimously.

The CHAIRMAN proposed, and Mr. MARCUS seconded, resolution No. 2.

Carried unanimously.

The CHAIRMAN proposed, and Mr. MARCUS seconded, resolution No. 3.

Carried unanimously.

DIVISION OF SURPLUS SHARES.

A SHAREHOLDER: If these shares are not all applied for by

the shareholders, will the privilege be given to those who have subscribed their full quota of having a further allotment?

The CHAIRMAN: Anticipating the result of this meeting in the confirmation of the resolutions, and in order to save time, we have sent out a circular to the African shareholders, a copy of which will go out immediately to those in Europe, making to them an offer of the new shares, for any number of which they will be allowed to apply. The directors have undertaken that each shareholder shall receive his *pro rata* allotment, and should any then be left they will be distributed amongst those who have applied for more than their *pro rata* proportion. The likelihood is that we shall be able to keep all these shares within the present company. (Hear, hear.)

Mr. GEORGE DIBLEY proposed a hearty vote of thanks to the chairman, which was carried by acclamation.

The CHAIRMAN dismissed the shareholders by saying that he hoped on an early occasion it would be his privilege to declare a big dividend.

THE MANICA OPHIR MINING CO., LIMITED.

A COMPANY WITH A PROPERTY, THE VALUE OF WHICH IS ATTESTED BY SEVERAL WITNESSES—AN ANIMATED DISCUSSION AND A LAME CONCLUSION.

The ordinary general meeting was held at Winchester House, on Thursday, to transact the ordinary business of the company.

Dr. Alexander

(the recently appointed chairman of the company) presided.

Mr. LEONARD GREENWELL (secretary) read the notice of meeting.

MR. WILLIAMS' EXPEDITION.

The CHAIRMAN: The report and balance-sheet are in your hands, and you will naturally expect me to make some few observations with regard to them. To begin with, you will possibly ask (as many have already done) why this meeting was not held earlier. Well, a glance at the report of Mr. Vaughan Williams (and I am exceedingly sorry he is not here, though I hope he will come before the meeting is over), and especially a glance at the dates of his reports, will supply the explanation, even if it does not supply a complete justification for the delay. The first serious report we had from him was on Sept. 20, 1890, in which he says, "After 12 months' silence, after the most frightful hardships and illness, I have arrived." He is writing from Mozambique. "It was utterly impossible to communicate with the outer world from where I was, and impossible to retrace my steps." That 12 months' silence meant no doubt for him a great deal of hardship, as it meant for the directors a great deal of anxiety and uncertainty. Had they convened you last year, about the usual statutory period, they would simply have had to say—"Gentlemen, Mr. Williams went out in the spring of last year, and we have not heard anything from him." Whether that be technically insufficient, or not, will be for you to judge, but, at all events, you will see why it is the directors did not call the meeting. That communication of Sept. 20, 1890, was followed in fairly rapid succession by other communications in Dec., 1890, and these, again, were followed by his arrival in England in April. Preparations were made for calling a meeting of shareholders, and I have before me a copy of the report, and the notice of that meeting in July, which was not convened, and for these reasons—there were changes in the directorate, changes in the secretariat, and changes in the office—above all there were other considerations connected with the company's position, which rendered it expedient to have a certain delay, which was filled up not by sitting still, but by

INFORMAL CONFERENCE WITH THE LARGER SHAREHOLDERS,

in which the position was discussed, and measures were canvassed as to the best course to be adopted to place the company in a better position. The result of these conferences is briefly this—it was the general opinion that before anything could be done to raise working capital we should be more satisfied than we were at that moment with the claims located for us, and that a fund of 5000*l.* should be raised for the purpose of getting confirmation as to the value of these 50 claims located at Masse Kesse by Mr. Vaughan Williams. Now, gentlemen, we are approaching a point as to which there ought to be no illusions or inferences drawn other than those deducible from the plain facts. We do not doubt—we have no reason to doubt—anything that Mr. Vaughan Williams has told us. We do not doubt his capacity. I have it from an African traveller, and highly successful explorer, that Mr. Williams is a man of great earnestness and capacity, and that he himself, of his own local knowledge, believed that

WE HAVE VERY VALUABLE CLAIMS.

So we believe also. We have every possible incentive to believe that these claims are good, and if what has been told us be confirmed by independent experts, then our position will be a very enviable one, because our mines will be found situated almost within speaking distance of the British frontier, and the terminus of the railway which the Chartered Company has agreed to make from Beira to its terminus at Masse Kesse. Therefore we have reason to believe, and it is because we have so much at stake that we ask you to assent to what we believe to be the wise and prudent policy of expending 5000*l.* where we have already expended between 5,000*l.* or 6,000*l.* Gentleman, caution is not doubt. We shall go to work to raise our capital, and put this company in a sound position with much better heart and confidence if we find these reports are confirmed. Our position is not too exhilarating, and it is not too discouraging. At the same time my task is not an easy one, but I wish to place everything before you without reservation. As to the raising of a special fund, it is intended for a specific purpose, and for no other, as will be defined in the resolution I shall submit to you. We shall raise the fund by a contribution of three half-pence per share. A large number of shareholders have already assented, and I believe no shareholder will be mean enough to sit on the fence and hold his three half-pence back while his neighbour finds the money. (Cheers.) This policy will entail further delay, but when we have waited about two years, through no fault of our own, and through no fault of Mr. Williams, of whom I wish to

SPEAK IN TERMS OF THE MOST SINCERE RESPECT

—surely we are not asking you to do anything unreasonable, but, on the

contrary, in finding this small amount before we put before you any more elaborate measures for raising working capital—I say, let us be sure that these claims are all that have been described. Should they turn out to be so, it needs no prophet nor the son of a prophet to predicate that this company can be placed, with good and sound management, in a position second to none in London. With regard to these mines, I have information from a gentleman who has been there to the effect that they have been worked alluvially, from time immemorial, and show evidence of extreme wealth now. It came upon me as a surprise to hear that within a relatively recent period they had been worked by the Portuguese.

Dr. PROCTOR: Who is this gentleman?

The Rev. J. H. MOYLE (to Dr. Proctor, who had frequently interrupted the chairman): I think the chairman ought to be allowed to proceed with his remarks. You (to Dr. Proctor) are evidently not acquainted with the conduct of public meetings. (Cheers.)

The CHAIRMAN (proceeding): I have not this gentleman's permission, but do not think he will have any objection to my naming him—Mr. Kergario, who has successfully located the claims of the Sabi Ophir Co. He told me, as a piece of Portuguese history, that until 50 or 60 years ago these properties had been continuously worked by the Portuguese until the natives rose and drove them back. It will occur to the minds of some of the proprietors here that an alternative set of possibilities might arise in which it might happen that the report might be adverse, or not confirmed substantially, so as to justify us in taking steps to raise money to work it, but even then, gentlemen, our rights remain. We have the right to 50 claims, and when we talk of a claim let us realise what it means. Each claim is 11,000 square feet, and we have the right to locate 50 claims. If we find part of these not worth having we can renounce them, or the whole of them, and locate elsewhere. Then, again, while new companies in Manica are subjected to 20 per cent. tax we are under much more favourable conditions. I had intended at this stage to call upon Mr. Williams, but, unfortunately, he is not here. The relations between Mr. Williams and the company since his return

HAVE BEEN A LITTLE STRAINED,

but everything has been happily re-established. Allowance must be made for a man when he finds a company in the position we are in.

Dr. PROCTOR: No allowance should be made for a man when his action is impugned and when he is not here. It is a question between Mr. Williams and the board, and the board ought to have had him here, or they should never have put the statement they did in their report.

The CHAIRMAN: It is not within the physical, corporeal capacity of the board to compel Mr. Williams to be here, but we had his assurance that he would be. I shall have a resolution to submit with reference to an arrangement with him presently, and now I shall be happy to hear what any proprietor may have to say or to ask.

Mr. CASTLE: May I ask for information about the accounts? We have heard a good deal about Mr. Williams and the board, but we should like to know something about the accounts.

The CHAIRMAN: The accounts were prepared before I joined the board. There is only one observation it occurs to me to make upon them, unless I am interrogated as to others. The amount payable to directors under the articles is 1,800*l.*, and I felt envious of my predecessors until I was told that they had something less than 300*l.*

Mr. CASTLE: How much have the promoters been paid?

The CHAIRMAN: The purchase of the property, consisting of 50 gold mining claims, was 85,000*l.*, and I see also that if you add the various amounts together, expenditure in South Africa, cost of oxen, travelling expenses, &c., it has taken something not far short of 6,000*l.*

Mr. MASON: The shareholders have subscribed 9,624*l.* 10*s.*, and the promoters have taken 7,950*l.*, leaving less than 1,700*l.* to send Mr. Vaughan Williams out to South Africa. Are the promoters here?

The CHAIRMAN: I cannot tell you at this moment. The only directors of the company are Mr. Filer and Mr. Jenkins, and I joined at the beginning of last month.

DR. ALEXANDER GIVES INTERESTING INFORMATION.

Dr. PROCTOR: Who are you? We want to know all about you.

The CHAIRMAN: My name is Alexander, and I weigh 13 stone 5 lbs. (Laughter.)

Dr. PROCTOR: This is a serious matter. I asked your name.

Dr. ALEXANDER: You asked for all information about me, and, by an effort of memory, I can tell you where I was born. (Laughter.)

Mr. MASON: The shareholders subscribed 9,620*l.* 10*s.*, and the promoters took in cash, 7,950*l.*; the directors, 260*l.*; the secretary and other salaries, 642*l.* 16*s.*; and sundry incidental expenses took 891*l.*, which absorbs every penny of money subscribed by the shareholders. Mr. Williams appears to have borrowed money from the Matabeleland Co., 2,141*l.*, which is charged to his expenses. Was any security given?

The CHAIRMAN: None. Mr. Williams had a power of attorney from the board, and used Matabeleland money for this company's purposes, and we are liable.

Dr. PROCTOR: I want information about Matabeleland Concessions, and who gave Mr. Williams authority to borrow money from that company. I demand a straight answer.

The CHAIRMAN: You shall have one. As to Matabeleland Concessions, I know as much or as little as my questioner, but they are our creditors for 2,141*l.* I have no connection whatever with that company.

Mr. MASON: Is there an entry in the minute book about this loan?

The CHAIRMAN: I believe there is. Mr. Williams, I understand, had a

POWER OF ATTORNEY FROM THIS COMPANY,

and in exercise of that power he incurred this liability, and used the money for the purposes of this company, which is liable under the act of its attorney.

Dr. PROCTOR: I know, sir, you have no desire to evade the question, but I understand that Mr. Williams from his own bat borrowed this money on a power of attorney from the Matabeleland Co., and that the board had nothing whatever to do with it.

Mr. CHAVE (solicitor): The explanation is simple. The Matabeleland Co. sent Mr. Williams out for the purpose of opening a road into Manica from Matabeleland and furnished him with 2,000*l.* Mr.

Williams traded in Matabeleland, and made a profit of 2417. 7s. 6d. He had to fly from the country, and was forced to use oxen, waggons and the rest of the cash, including the amount mentioned, for the purposes of the Manica Co. He has rendered a statement which the auditor has gone through.

Mr. LEMON (auditor): Mr. Williams furnished me with a cash account and vouched for all his payments. The papers have been returned to the company, but the item is pretty fully explained under the head of "expenditure in South Africa." All the expenses charged were incurred on behalf of this company, and not for the Matabeleland Co.

Mr. CHAVE here read out a list of 35 items, making up the total payments as certified by the auditor. He stated that Mr. Williams got back to Matabeleland in Oct., 1889, and used the money between Oct., 1889, and when he came home in Apl. last.

DÉBUT OF MR. VAUGHAN WILLIAMS

Mr. Williams here entered the room.

The CHAIRMAN: Mr. Williams is now present, and it would be much more satisfactory to hear his views with respect to these locations, and then he can answer any collateral points afterwards.

Dr. PROCTOR: Will Mr. Williams tell the meeting what he did out there from the time he began to work for Manica Ophir, and whether he went out on a joint mission for other companies connected with Manica Ophir, and I hope he will differentiate between his work.

MR. WILLIAMS ON HIS TRAVELS.

Mr. A. VAUGHAN WILLIAMS: I went out from London on a joint account for the Manica Ophir and the Matabele Syndicate. I started in Mar., 1889, arrived at Kimberley, and equipped waggons for both. I was delayed as no funds were sent to me by the Manica Ophir Co., though I received a certain amount from the Matabele Concessions. After difficulties I arrived at Matabeleland, where I found the state of things unsettled. The king refused to let me have my way, and go to Manica, and said I should have to return to Kimberley. I got my brother out of the country, and then took French leave, and went on to Manica. The rains came on when I was between the Luudi and Tuli rivers which became flooded, and the whole country was swamped. Everyone of our party was down with fever, myself included. One poor fellow died, but the others lived, like myself, still suffering from fever, and will continue to do so, I suppose. After about eight months of this, we crossed through into the next territory, but could get no guides. We had no compasses, and but for our knowledge of Kaffir we never should have got there. On arriving, the

PORTUGUESE WERE EXCEEDINGLY KIND TO US,

and gave us everything they had. When I left Matabeleland, finding there was absolutely nothing to be done for that syndicate, I took over all its effects for the Manica Ophir, and when I got to Gungunwano country I left the waggons and all the effects in charge of two of the men, with instructions to meet me at a certain point on the River Busi. Our provisions were exhausted, but there were still trading goods, which would enable us all to live, but after our sickness we wanted nourishment. (Hear, hear.)

A STIFF PROMENADE.

When I got to the coast, after walking about 200 miles through a most fearful forest, I became ill again with fever and influenza, which was perfectly new to me then. At that time I weighed 125 lbs., and it was touch and go whether I should live or not. However, I got all right, and received a letter telling me that the men left in charge had stolen the cattle, deserted the expedition, and that there was no use my going back. I then proceeded to Beira, and made arrangements with the Mozambique Co. I made full enquiries as to getting up to Masse Kesse, and found I could not by the usual road. I determined to try a new road and went up from there to what is known as the "natural bridge," which is 80 miles further west than is indicated on the maps. I tried to find out what had become of the people I left there. I waited there a fortnight and got another attack of fever and then proceeded overland. I was taken ill again, and while in that state was discovered by Mr. Doyle, of the British South Africa Co., and Mr. Moodie (who I believe was working for Mr. Kergario) and three mounted policemen and a number of natives. They were starving. I gave them all I had, which was about three months provisions for myself. They cleared out everything I had, and lent me a horse, which took me to Masse Kesse, where I found the British South Africa Co. in possession of the whole of the country, and feared I should be unable to locate my claims. It was absolutely impossible to locate them with the Mozambique Co. as it had no representatives. I made arrangements with the Chartered Co. that I should locate my claims under a provisional protection from them. If the Mozambique Co. came back my claims were to be recognised, and if not the Chartered Co. was to do so. I could not do more. (Cheers.) I discovered the property which I considered to be exceedingly valuable. I will not say it is a rich property, but it is of immense width and depth. There are 60 or 100 workings or shafts along the line of reef, which extends through blocks Nos. 2 and 3, according to my plans. The reef can be traced through the entire length and width of the claims on the surface, and is over 20 ft. wide. At the depth of about 100 ft. to 150 ft. the reef is about 6½ ft. wide. The whole casing is slate, but it is decomposed, and the quartz

AVERAGES ABOUT ½ OZ. TO THE TON.

The water supply can be had from a little stream called the Maze River, with a fall of 1,500 ft. There is another river of enormous power, I should think about 8 ft. deep, summer and winter, which has a big fall, and is called the Revue. That water runs within 400 yds. of this property at the base. Should you want wood for timber there is plenty, and behind the property is a mountain above 5,000 ft. high, the whole of which is covered with timber. The property is in a particularly favourable position, and very easy to work. More I cannot say. (Cheers.)

Mr. MASON: How far is the mine from any navigable river?

Mr. WILLIAMS: About 150 miles or less—that is from the highest point of the Pungwe. There is one objection to the Pungwe Road to Masse Kesse, namely, its innumerable swamps. For waggons in the summer it is impracticable. From the Busi River there is a rising ground running between two chains of mountains, and to the present time I believe I am the only man who has been down it. It is per-

fectly dry, and not over-wooded. A road can be easily made, and no doubt the railway can go that way.

Dr. PROCTOR: I thank you for giving us this clear explanation. Your name has been bandied about before you entered in a manner one would not care to have done it if you had been here. I want to

ASK YOU ONE OR TWO QUESTIONS

in the same spirit in which you made your statement. You state you went out representing two companies, but is it not also true that you were left stranded by the Manica Ophir Co., and that you had to do what you could with the aid of Matabele resources in order to carry out your work?

Mr. WILLIAMS: Undoubtedly. I had a verbal arrangement that I was to claim whatever I considered fit when I returned. I wrote letters to say that I had used the stores, &c., of Matabele Concessions for this company, and did so under the power of attorney given to me.

Dr. PROCTOR: And that was to save your life, and carry out the objects of your mission?

The CHAIRMAN: Yes; and for the Manica Co. also, because it had not sufficient funds. I had no funds of theirs, but I had their power of attorney to do what I thought fit—I did not have one farthing from them for my outfit.

Dr. PROCTOR: When you first arrived at Masse Kesse, how did you know where the claims were?

Mr. WILLIAMS: Mr. Chave handed me all the papers of the Manica Co.—from the original decree that was granted onwards. It was a Portuguese title under the Ophir Concessions. The whole of Manica and the Kittive district is governed by small chieftains, who recognise nobody and pay tribute to nobody. The district is now distinctly under the Portuguese, where our claims are.

Dr. PROCTOR: What is the chieftain's name who holds the territory on which our mine is located?

Mr. WILLIAMS: Umtasi is paramount chief, but I am not certain whether Vunda has not part of it. All the boundaries are known to the native chiefs.

In reply to further questions.

Mr. WILLIAMS stated that the paramount authorities in these districts now were the Chartered Co. and the Portuguese. Some of the assays he made gave 2 to 3 ozs. of gold, but the average would probably be about ½ oz. It was a rough assay without appliances. There was no question that the valley of the Revue was Mozambique territory. Without hesitation, he could say that the country was Mozambique.

Mr. CHAVE: The property is within 600 metres to the north-west of the fort at Masse Kesse.

A SHAREHOLDER: Have we any documents establishing our claim from the Portuguese Government?

Mr. CHAVE: You can see the certificate of location here—they are all under decrees of the Portuguese Government.

Mr. WILLIAMS: This document which I have—provisional right to these claims—is written upon Mozambique Co.'s paper at Masse Kesse.

Dr. PROCTOR: Since the event of Fort Salisbury a treaty has been signed between our Foreign Office and the Portuguese Government, and there has been the delimitation.

THE DIRECTORS.

Mr. CASTLE: What are the qualification of the directors?

The CHAIRMAN: I have been a director since Aug., and hold 500 shares.

Mr. JENKINS: I hold 150.

Mr. FILER: I hold 150.

Mr. CASTLE, reverting to the prospectus, asked who was the vendor?

Mr. CHAVE: Mr. Marshall. And he received the purchase money, a portion of which fell to the questioner, Mr. Castle.

Mr. CASTLE: I had 20%. (Oh! Oh!)

Dr. PROCTOR: The general public subscribed 9,000% odd, and after the vendor had taken his part, there remained 1,500%. He wanted to know whether anyone outside an asylum would have called this company by any other name than a fraud. They started out with

A HOLE IN SOUTH AFRICA,

and did not know it was a mine. It was only found to be so by Mr. Williams, who was left to starve. He had no words to characterise the conduct of the men who sent Mr. Williams out under such circumstances. The accounts were a simple disgrace, though he meant to cast no reflection on the auditor, and he was surprised that the chairman should have joined such a concern. Whatever Mr. Williams might have done, there was no doubt he had suffered in this matter, and that he had been imposed upon by persons who ought to be ashamed of themselves.

After various amendments had been suggested,

Dr. PROCTOR proposed the following: "That the report of the directors and the statement of accounts be not accepted, and that, except Dr. Alexander, all other members of the board and officers of the company be requested to resign, and that a committee of five shareholders be appointed to inquire into the position and past expenditure of the company."

A SUGGESTION AND AN OFFER.

Mr. WILLIAMS: I am going out to South Africa on Oct. 3, and in my letter to the board I made a suggestion that the properties should be developed at my own cost. I do not want to be paid.

Mr. RICH: I second the amendment.

The CHAIRMAN: I move the adoption of the report and accounts. In the resolution contemplating the raising of 500%, it was provided that two trustees be appointed at this meeting in whose names this 500% should be placed, and that they should have the spending of it.

The Rev. J. H. MOYLE: I second the chairman's motion.

The CHAIRMAN: In lieu of the amendment, would it not be better to do this—that this meeting stand adjourned for a reasonable time. We, in our report, distinctly invite shareholders to confer with us as members to join the direction. If such members are nominated, we shall be happy to elect them, or, if you prefer to nominate a few large shareholders to confer with us—so be it; and there are good reasons why that middle course should be adopted. Mr. Williams is on the point of leaving for South Africa, and there is the matter of

his claim, as regards which he has met us handsomely, and has agreed to accept 500*l.*, when we can pay it to him, and the remainder in shares.

Mr. WILLIAMS: But what about the money I advanced to the company?

Dr. PROCTOR: We want a committee.

STRANGE REMARKS.

Mr. WILLIAMS: There is a mistake somewhere. The company has a property—a provisional registration from the Lisbon Government. If I do not get paid, what is to prevent me from going back and getting the registration made out in my own name?

Dr. PROCTOR: Do not threaten us.

Mr. WILLIAMS: I want to see this company furthered, but I should like to see something done before I leave this room.

The amendment was carried, and a further amendment adjourned the meeting for a month.

A LAME AND IMPOTENT CONCLUSION.

The CHAIRMAN: You have negatived your own resolution, inasmuch as you have not appointed your committee. (Hear, hear, and laughter.)

The meeting then dispersed.

WHEEL METAL AND FLOW.

INCREASED RETURNS—BETTER PROSPECTS—A CALL OF 6*d.* A SHARE.

A GENERAL MEETING of the shareholders in this mine was held at the Office of the company, Gracechurch Buildings, Gracechurch Street, E.C., to examine and audit the accounts, and transact the ordinary business of the company.

The accounts showed the labour costs from May 30 to Sept. 5 to have amounted to 600*l.* 8*s.* 3*d.*, and the merchants' bills for the same period to 211*l.* 8*s.* 1*d.*, which, together with sundry other small items, brought the total costs up to 912*l.* 4*s.* 3*d.* Against this, the sales of tin ore realised 658*l.* 3*s.* 11*d.*, leaving a balance of 254*l.* 0*s.* 4*d.*

Mr. J. H. Collins, F.G.S.,

presided.

The SECRETARY read the notice convening the meeting, and the minutes of the previous meeting were read and confirmed.

AGENT'S REPORT.

The agent's report was as follows:—I beg to hand you my report of the above mine. Since the last meeting of adventurers we have driven the 27-fm. level east of Watson's engine shaft on the course of Metal lode about 10 fms. in a lode about 3 ft. wide, composed of tin, peach, and a quantity of white prian. In this drirage the lode has varied in size from 2 to 4 ft. wide, and produced more tin than usual, and is embedded in a very congenial looking killas for the production of mineral, reasoning analogy and the district cross-courses which run through our sett, the chances are a profitable lode may be met with any day. We have purchased three pulverisers, and fixed two to the engine and one at Blue Bridge water-wheel, and they are giving every satisfaction. We made a large reservoir for the storage of water for dressing purposes, &c., which has enabled us to reduce our 10½-in. plunger lift about 24 ft., which has considerably eased the consumption of coals, &c., also made a reservoir at Blue Bridge to store the waste water at night time, that we may work the machine in that department as much as possible during the day time. We made air machines, pipes, &c., and fixed them to work for ventilation underground. Repaired engine and boiler, and provided a new air pump bucket. Repaired 40 rag frames with new timber. In the carrying out of this work it necessitated the stopping of the machinery, which made against our returns for this account; still, we have sold 15 tons 0 cwt. 3 qrs. 22 lbs. for 658*l.* 3*s.* 11*d.* Our costs underground and in providing pulverisers and the making of the new reservoirs and other deadwork for the past four months have been quite 350*l.*, so you can plainly see that the Flow is being worked at a good profit. You will see from the foregoing report that we have been renovating our machinery and making new reservoirs for the more economical working, and in all probability our returns in the future will be in excess of anything ever yet shown.—S. P. CURTIS.

IMPROVED POSITION OF THE COMPANY.

The CHAIRMAN said: Gentlemen, you have the accounts before you, and you will see that there is a balance of liabilities over assets amounting to 438*l.* 7*s.* 8*d.* Now, if we are to carry out the cost-book system in its integrity we must make a call to-day of 8*d.* or 9*d.* per share at least, and if any shareholder will propose this, I, for my part, shall not be disposed to raise any objection. At the same time, I cannot say that I think a call is absolutely necessary—there is something to be said *per contra*—for, in my opinion, our prospects are decidedly improving. Let me briefly give my reasons for saying this. First, our monthly loss, which for the eight months ending May 26, 1891, averaged 116*l.*, has now fallen to 63*l.* 10*s.* Second, our tin sales, which during the same eight months averaged 147*l.*, have increased to 163*l.* Third, we have had to incur considerable expense in restoring the displaced pulverisers, as well as in enlarging our storage reservoirs and slime pits, an expenditure which will not recur, and the effects of which have only now begun to be realised as the new pulverisers have only been at work a few days. Our manager assures us, and I think we may fairly expect, that there will be a considerable increase in the returns, and a decided lessening of cost in the next four months. Saying nothing further, therefore, either one way or the other on the call question, I beg to move "That the accounts, as presented, be allowed and passed, and be printed and circulated among the shareholders, with the agent's report, and an account of the proceedings of this meeting." I now leave the meeting open for remarks from the shareholders.

Mr. WAGSTAFF seconded the motion.

THE STATE OF THE LODGE.

Mr. HODGKINSON asked how the lode looked below?

The CHAIRMAN: I did not go down, because there were some little repairs going on to the engine, but the men told me there was

no change. I do not value the lode at anything at all at present, although it looks encouraging.

Mr. SIMMONS: Is the lode looking any better?

The CHAIRMAN: It is tinny, but it is not valuable. I think there is no doubt but that it is the lode, because the stones I have seen are precisely like those that were taken from the old Metal when it was being worked. It is a lode which either makes very rich or very poor, and not like the big Camborne lodes, which seem to contain a fair amount of tin everywhere.

Mr. SIMMONS: Is it the opinion of most of the experts in the district that 35 fms. is deep enough?

The CHAIRMAN: Seeing that a good deal of the old riches were shallow, a good many men think so. I would rather we were deeper I must say.

Mr. WAGSTAFF: How are you off for air?

The CHAIRMAN: There is an air machine put in there now which acts very well.

Mr. SIMMONS called attention to the large amount standing at arrears of calls, and thought some steps should be taken to get them in.

The motion was then put to the meeting, and carried unanimously.

UNPAID CALLS.

Mr. SIMMONS proposed the following resolution:—"That the secretary be instructed to take legal proceedings if necessary to enforce payment of all arrears of call."

Mr. WHITE seconded the motion, which was carried unanimously.

Mr. HODGKINSON then proposed a call of 6*d.* per share, payable on or before Oct. 24.

Mr. WAGSTAFF seconded the motion, which was carried.

The proceedings then terminated.

MAY CONSOLIDATED GOLD MINING CO., LIMITED.

THE JOHANNESBURG MEETING.

The fourth ordinary general meeting was held in the board room, City Chambers, Johannesburg, on Aug. 18.

Mr. E. A. Lippert

presided.

The notice convening the meeting was read by the SECRETARY.

The CHAIRMAN said that the report closed the second year of the company's existence. The salient points of it were that they had made a nett profit of over 10,000*l.*, which had been entirely devoted, first, to the development of the mine, and then to completing the company's plant and buildings, notably in installing eight rock-drills for facilitating development in the hard rock; these had been paid for out of the profits. They had now

A 70-STAMP MILL ALWAYS WORKING,

averaging 2½ tons per stamp per day, a regular and ample water supply, and a mine thoroughly opened from end to end, covering as much ground as any other on the Randt. The ore in sight amounted to 120,000 tons, or more than enough for two years' supply, but, notwithstanding this, they were endeavouring to go down to a greater depth, where, as proved by other mines, the richest reefs lay. That would take both time and money, and, although their profits must be devoted to paying off the loan on the property, some portion would have next year to be expended in further development in depth. This was the first year they had worked with a 70-stamp mill. They had gone from 20 stamps, and going from a smaller to a larger mill was the crucial test of what a mine was capable, for it was one thing to supply a 20 stamp, and quite another to supply 70 stamps. The result, as shown in the report, was that the stuff ran 9½ dwts. to the ton, which was a good return, and a high return for a 70-stamp mill, but he thought they would be able to improve this a little. They would also reduce the cost of working the more they opened up. There would have been no difficulty for the manager to have made a brilliant return, as there were some exceedingly rich patches, but they would see that he had made

A STEADY, HONEST RETURN,

upon which an improvement might be expected, although they must not look forward to anything startling. As he had said, they could anticipate a decrease in the working expenses, which even now compared favourably with those of any other company, for they were as follows: 21*s.* 1*d.* for the actual working expense, 4*s.* for redemption, and 2*s.* 4*d.* for depreciation, which made a total of 27*s.* 5*d.* The falling off in the return, as compared with the return from the 20-stamp mill, was only what had happened to every other mine, the richest included, and if shareholders looked back they would see that the falling off lasted for a short while after the change was made. On the whole he thought that the report was a good and favourable one, notwithstanding the directors had been attacked systematically in the home papers. This was due, not to people in Johannesburg, but to those at a distance, who had given currency to all sort of rumours. It had been stated that the bond was about to be foreclosed, and that the mine was to be shut down, whilst at other times report had it that it was

NECESSARY FOR THE MAY TO ACQUIRE THE MAY DEEP LEVEL,

and that re-construction was on the *tapis* on the basis of one share for five. He could only warn those at a distance not to believe these rumours, which were no doubt started for a sinister purpose. The directors sent reports from time to time, in fact monthly, and these reports were conscientious and truthful; so that people need not believe anything outside of them. The bond had been renewed on most favourable terms, and the mill had not been shut down, and had two years' running in front of it. The May Deep level claims were still unbought by the May, and were likely to continue unbought. The question of re-construction had not even been thought of by the board, which was doing its best to keep shareholders at a distance informed, and Mr. Farrar, who was now in England, was devising means to keep them still better informed. Their shares were unduly depressed, but there was no reason why it should be so. Over 130,000*l.* had been spent on the property, and in the second year they had the mine thoroughly opened, a 70-stamp mill, and everything appertaining to mining, and an efficient manager and staff. It was true that they were not paying dividends, but they were drawing nearer every month

to that end. He hoped, therefore, that shareholders would gather renewed confidence in the property. Since the report was written, an extension of ground had been acquired at a nominal price, giving an extensive area for depositing tailings, also a water right. In their accumulated tailings they had a very valuable asset which had not been mentioned in the report.

THEY HAD 50,000 OR 60,000 TONS,

which, at a low estimate, were worth 3s. 6d. or 4s. a ton, and there were persons anxious to acquire them. He hoped that the report to be laid before them at the next meeting would speak in the same prosperous strain as that now placed before them, and concluded by formally moving the adoption of the balance-sheet, profit and loss account, and directors' report for the half-year, which was seconded by Mr. F. MOSENTHAL and carried unanimously.

Proposed by the CHAIRMAN, and seconded by Mr. L. EHRlich, that Mr. A. Goerz be elected a director of the company, in the place of Mr. Lionell Phillips, resigned.

Carried.

Proposed by Mr. H. C. TRULL, and seconded by Mr. S. MORRIS, that the retiring directors, Messrs. E. A. Lippert and J. G. Currey, be re-elected.

Carried.

Proposed by the CHAIRMAN, and seconded by Mr. J. G. Currey, that a remuneration of 25 guineas each be voted to the auditors for the past half-year.

Carried.

Proposed by the CHAIRMAN, and seconded by Mr. R. G. FRICKER, that the retiring auditors, Messrs. T. F. Allen and H. Schneider, be re-elected.

Carried.

A vote of thanks to the chairman for presiding closed the meeting.

NORTH'S NAVIGATION COLLIERIES (1889), LIMITED.

A SUCCESSFUL HALF-YEAR—10 PER CENT. DIVIDENDS ON THE ORDINARY AND PREFERENCE SHARES.

AN extraordinary general meeting of this company was held at Winchester House, on Tuesday, "to receive a report of the directors and balance-sheet of the company made up to June 27, 1891."

Col. J. T. North

(chairman of the company), presided.

Mr. WILLIAM BRIGGS (secretary) read the notice of meeting.

The CHAIRMAN: Well, gentlemen, you have the report and the audited statement of accounts. I suppose you will take them as read. (Hear, hear.) The accountant is here to give the necessary explanations, and meanwhile I propose—"That the audited statement of accounts for the half-year ending June 27, 1891, now submitted, be and they are hereby approved and adopted."

Mr. JOHN WAITE (director) seconded the motion, which was carried unanimously.

The CHAIRMAN: This is not our annual meeting, and as far as we are concerned, I do not know that we shall again care to trouble you with coming to a half-yearly meeting, as, after all, it is only a question of receiving an interim dividend. We put the accounts before you, which the board could do, with the aid of the auditors, without having to go to the expense of taking stock. Of course, it takes a lot of labour and time, and costs us a considerable amount of money. By this we get nothing, and, moreover,

YOU WILL HAVE YOUR INTERIM DIVIDEND

as well as the annual report and statement of accounts. We held half-yearly meetings at first, because we thought it better to have two meetings than one, but have since found it to cost more money than we expected. The next half-year we shall hold our annual meeting, and do not think we shall be put to the trouble of taking stocks twice a year. As long as you get your dividend I think you will be perfectly satisfied. You have, however, only to express your wish on the subject, but I think it an unnecessary expense myself. Mr. Rees, of the firm of Messrs. Foster, Brown and Rees, our mining engineer, can tell you more about the mines than any member of the board, myself included. Now if anyone would like to ask Mr. Rees a question, he is ready to answer it, and has come

ALL THE WAY FROM SWANSEA TO EXPLAIN MATTERS FULLY.

I move "That a dividend at the rate of 10 per cent. per annum on the amount called up from time to time on the preference shares, and at the rate of 10 per cent. per annum on the ordinary shares, be and is hereby declared out of the profits for the half-year ending June 27, 1891." We are going to pay the dividend, less income tax, because if we were to pay the income tax on the preference shares it would have to come out of the pockets of the ordinary shareholders, and would in reality be more than the 10 per cent. for which we bargained.

Mr. LOVERIDGE: That only refers to the preference shares?

The CHAIRMAN: To the shares all round, for if we give it to the one class we must give it to the other, and if we give it to the preference shares, you, if a large ordinary shareholder, will naturally say that we are giving more than the 10 per cent. The date on which the payment of the dividend will probably be made will be Sept. 30.

Mr. SMITH seconded the motion, which was carried.

Mr. LOVERIDGE: May we take it henceforth that the dividend will be payable not free of income tax, but that from this time the shareholders will have to pay that tax?

The CHAIRMAN: We have legal advisers as well as mining engineers to keep us right, and we are acting as the former tell us in this matter. We are giving 10 per cent., which is a very fair dividend on the preference shares, but if we give it free of income tax we are paying more.

A SHAREHOLDER: In reference to having a half-yearly meeting—did you put that forth as a proposal?

The CHAIRMAN: No. We only thought that the expense of taking stock was unnecessary.

Mr. LOVERIDGE: If the auditors can assure the directors that there is enough to pay an interim dividend, then there is no occasion for a half-yearly meeting.

The CHAIRMAN: I am glad to hear you say so. We have taken legal opinion on the subject, and looked at the articles of association,

and found it was unnecessary. When we think of declaring an interim dividend, we shall take the opinion of our accountant. We have taken Mr. Chadwick's advice, and will do so again. That is all we have to do or say, and I am very much obliged to you for your attendance.

THANKS ALL ROUND.

Mr. BROWN: I propose a vote of thanks to the chairman.

Mr. LOVERIDGE: I second that, and also to the board of directors for the attention they have given to the interests of the shareholders, and, as usual, I should like the managers of the colliery to be associated with the motion, because we are all dependent upon those who work for us, and it is pleasant for them to find that they have not been forgotten at the meetings.

The motion was carried by acclamation, and the meeting closed with the brief response of Col. NORTH.

BENTONG STRAITS TIN CO., LIMITED.

WINDING-UP AND RE-CONSTRUCTION CONFIRMED.

AN extraordinary general meeting of this company was held at Winchester House, Old Broad Street, on Tuesday, Sept. 22.

Mr. A. R. James

presided.

The object of the meeting being to consider and, if approved, confirm the resolutions which were passed at the last meeting for the winding-up of the company voluntarily, and the transfer of its property and assets to a new company to be formed, and to be called the New Bentong Tin Co., Limited.

The SECRETARY having read the notice calling the meeting and the resolutions to be confirmed,

The CHAIRMAN stated that nothing had transpired since the last meeting, when the resolutions were originally passed, to alter the opinion of the directors that the present course proposed was the wise one to adopt under all the circumstances. He had to announce that the gentleman who took a prominent part in the discussion at the last meeting,

MR. DIAMOND, HAD JOINED THE BOARD,

and the prospects of the new company seemed better than those of the old one. He concluded by formally moving the confirmation of the resolutions as special resolutions.

The motion was seconded by Mr. STANNARD, and carried.

The proceedings closed with a vote of thanks to the chairman for presiding.

THE MOUNT ALBION SILVER MINING AND SMELTING CO., LIMITED.

A RE-CONSTRUCTION SCHEME—MINE PAYING EXPENSES—CONCENTRATING MACHINERY TO BE SENT OUT.

AN extraordinary general meeting of the shareholders in the Mount Albion Silver Mining and Smelting Co. was held at Winchester House, Old Broad Street, London, E.C., for the purpose of considering, and if thought fit, of passing certain resolutions for the re-construction of the company. The scheme of re-construction was as follows:—That the present company be wound up voluntarily, and that a new company be formed, with a capital of 200,000l. in 200,000 shares of 1l. each, credited with 16s. 6d. as paid-up, thereby leaving a liability of 3s. 6d. per share, and that every shareholder in the old company be entitled to apply for the same number of shares in the new company.

Mr. John J. Wright

presided.

Mr. T. E. SMITH (secretary) read the notice convening the meeting.

The CHAIRMAN, after apologising for the absence of Mr. Sichel, through illness, said: You will probably remember that at our last meeting, on June 27, our chairman called attention to the fact that our liabilities to the National Bank of Queensland were 5,500l., and our total liabilities about 10,000l. Since then we have received a certificate from that bank showing that they are now but 2,877l. We have also since that date received the account of the company made up to July, which shows a total indebtedness in Queensland, including the overdraft at bank, of 4,763l., against assets, consisting of stock, tools, bullion, and matte, amounting to 15,744l., and cash in London, 564l.; if we deduct from these amounts the loss in working up to June 30, 5,522l., and the liabilities unpaid in Queensland, amounting to 4,763l., we have a surplus of 6,023l., independent of all fixed plant, smelters, &c. I might also state here that of the 2,448l. which had been so kindly advanced by Mr. Moffat for the payment of wages, &c., we have remitted him the sum of 2,000l., leaving only a balance to our debit of 448l. on his account. You will thus see that our position, notwithstanding current expenses, has materially improved since our last meeting in June. At present

ALL OUR MINES ARE CLOSED,

with the exception of West Albion, from which we are obtaining sufficient black ore to pay colonial expenses. The mining reports of this ore speak of considerable quantities in sight, and there seems to be but little doubt that enough will be raised to clear expenses until such time as we may resume active working. The last mine shut down was the Cuzco, from which is produced only smelting ore, and here Capt. Rogers reports there are 500 tons in sight, assaying 50 ozs. to the ton. There can be no doubt that the loss of 5,522l. incurred during the five months dating from Nov. 1 was through the smelting of too low-grade ore, and it would be foolish on our part to blink that fact. We think that the foregoing figures are sufficient to prove that concentrating plant is an absolute necessity. When furnished with concentrating plant we think that should further inquiry lead to the conclusion that it would be best at once to send out a small concentrating plant to treat some of the higher grade ores, such a course should be permitted, as much valuable time would be saved and early profits secured; of course the outlay of a large sum on concen-

trating plant would be avoided until such time as the report above mentioned had been received. Our co-director, Mr. Charles Jacobs, having accepted a professional engagement at New York, the directors have appointed Mr. Robert Marshall (an owner of 2,000 shares) in his place, and trust his appointment will meet with your approval.

POSITION OF DISSENTIENT SHAREHOLDERS.

Mr. A. LOWE asked what would be the probable cost of putting up proper concentrating plant, and, if it was purchased, when it would be likely to get to work.

Mr. BAIN (Glasgow) enquired as to the legal position of those shareholders who would not wish to join the new company.

The SOLICITOR said the dissentient shareholders could require the liquidator to purchase their shares, and the price, if they did not agree, would be settled by arbitration.

Mr. HASLUP asked what would be the amount to be divided *pro rata* amongst the old shareholders, supposing they declined to take the new shares.

The CHAIRMAN: That would be determined by the value of the shares on the market.

Mr. HASLUP: They are not worth anything.

The CHAIRMAN: Then it would be determined by the Court.

Mr. HASLUP: Then I am afraid our proportion would be very small.

A SHAREHOLDER called attention to the fact that 10 per cent. had been paid in dividends, and asked whether it was necessary that 10 per cent. should be paid before the vendors had the privilege of selling their shares.

The CHAIRMAN: I say distinctly no, and the vendors have never parted with their shares.

The SHAREHOLDER: Then I am very sorry for them. (Laughter.)

Mr. ADAMS asked whether the board of the new company would be the same as that of the old?

The CHAIRMAN said it was not the intention of the old directors to remain, but that on the formation of the new company the shareholders would have an opportunity of selecting their own directors. At the same time, he did not think it would be in the interests of the company to part with all the old directors.

Mr. ADAMS asked if the present directors were taking their fees?

The CHAIRMAN said they had only taken their fees to Mar. last. They might take them up to June, but for the past three months he thought he could say, on behalf of his co-directors and himself, they would sacrifice their fees.

THE APPOINTMENT OF LIQUIDATOR.

Mr. ADAMS did not think it was in the interests of the shareholders that the secretary should be appointed liquidator.

The CHAIRMAN said as this was a voluntary liquidation it would be far better to have someone who understood something about the business, and he was sure the interests of the shareholders would be thoroughly looked after by Mr. Smith.

Mr. ADAMS said he did not throw any reflection whatever on Mr. Smith, but professional men could be found who were bound to give an unbiased opinion.

A SHAREHOLDER said a professional liquidator would take all their assets, and they would get nothing whatever. (Hear, hear.)

Mr. RAPHAEL: If we are going to re-construct, I certainly do not agree with the last speaker. I think Mr. Smith knows exactly what has been done. He has been in the company since its formation, and would be far more useful and inexpensive than an official liquidator, but I do think we ought to have

AN INDEPENDENT OPINION.

I do not ask for anyone to look into the books of the company. I have nothing to say about the management here, but we have had the most wretched management on the other side. Now you want to re-construct, but why? In the first place to pay off our liabilities, and, secondly, to get out some concentrators. On what do you base the necessity of going to that extra expense? Is that on the report from our manager out there, who has been mismanaging our affairs until now, or is it on an independent report? If so, I say it is better not to re-construct.

The CHAIRMAN said he thought Mr. Raphael had taken an incorrect view of Capt. Rogers. It appeared from his letters that when he got over there he found a good deal of confusion. They had been driving the galleries pretty close to the surface, and had picked out that portion of the mine which produced the best results, and when he got over there he found the smelting furnaces and roasting pans entirely out of order, and he said it would be absolutely necessary to sink shafts to endeavour to get better ore. The directors gave him permission to do so. He sunk them, and he found better ore. But all that had meant money, and in addition, he had had a flood to contend with, and the floors had given way, which damage had cost from 1,200*l.* to 1,400*l.* to repair. This must be reckoned in favour of Capt. Rogers, but there was no doubt he had been over-sanguine, and had smelted a large quantity of ore which could not pay and which resulted in the loss of the greater part of that 5,000*l.* With regard to Mr. Lowe's question, the cost of the concentrating plant to treat all the company's produce would be about 10,000*l.*; but as regards the time it would take to get it to work, he could not give any definite idea. They would, first of all, have to be satisfied as to the best mode of treating the ore.

Mr. CARLILE, in the course of a long speech, said the directors were asking the shareholders to subscribe

35,000*l.* FOR THE PURPOSE OF TRYING AN EXPERIMENT.

They were going to see whether they could by concentrating plant make a profit out of the mines. He did not want to say a single word against the directors or the manager, but he would suggest that an experienced engineer be first sent out to ascertain whether the ores were capable of being treated to advantage in the way suggested. The speaker concluded by moving "That the meeting be adjourned, and the directors' proposals to re-construct the company be postponed, and that a committee of shareholders be appointed with the object of obtaining a reliable report as to the best means of treating the ore, and whether it was desirable to re-construct the company or go into liquidation."

Mr. HASLUP seconded the motion.

The CHAIRMAN said he would leave the matter to the decision of

the shareholders. The directors were asking the shareholders to re-construct, so that they might save their own property.

Mr. BAIN said he had heard what had been said, and had come to the conclusion it was better to wind the company up and sell the property. (Hear, hear.) He proposed, "That it is desirable to wind-up this company voluntarily, and that Mr. Thomas E. Smith be appointed liquidator." (Hear, hear.) The concern had been going on for four years, and he would give the directors credit for having done their best. The mine was

TOO FAR FROM THE SHORE.

The directors had not been able to give one bright piece of news to-day, and under all the circumstances he thought it was better the thing should end now. (Cheers.)

Mr. ADAMS seconded the motion.

Mr. CARLILE said as the meeting was evidently in favour of the motion proposed by Mr. Bain, he would withdraw his resolution.

After some further discussion, the motion was withdrawn, and the original resolutions for the re-construction of the company were put to the meeting, and carried.

The proceedings closed with a vote of thanks to the chairman.

FOREIGN MINING INTELLIGENCE.

(Continued from page 445.)

PINOS ALTOS.—Under date, 26th ult., this company's manager writes:—Mine: The 13th east drift was driven 7½ ft. There is no perceptible difference in the appearance of the face since last week. The Saturday's sample assayed gold, \$4.77; silver, \$3.14. The 13th west stope still gives good ore. Here we have reached the hanging-wall and are now driving west, in behind the pillar of waste. The last sample assayed, gold, \$2.50; silver, \$29.85. The 14th west drift advanced 3½ ft. The ore has improved considerably, assaying for week, \$32.41, and is much more regular and steady. The 14th west stope, both over and underhand, are looking well, giving as an average of the samples taken last week, \$44.97. The 17th cross-cut was run towards the footwall 6 ft. As yet no ore of any value has been cut. The 17½ winze: The work of sinking commenced last Tuesday, and by Saturday they had made 5 ft. We are sinking on the same body of ore that we have in the tunnel, and it is equally fine. Average assay for the week, \$53.01. Shaft: I have been compelled to stop work in the shaft for a short time until we can remove the broken waste at the foot, and re-open communication with the tunnel. At present the air is so bad that men cannot work. I have stopped all stoping on the eastern side, as the streak of pay ore is very narrow, and I wish to see if we cannot raise the average of our battery sample. Mill: The mill started yesterday afternoon, and is now running at its full capacity, and I trust that we shall make a little better showing than we did during the past few months. Wood: Some few freighters have started in, and I think that in a week or two we will have all the wood that we need.

PORT PHILLIP (Aug. 17).—Advices from Clunes state:—Mine: North shaft. This is now 26 ft. below the No. 18 level or 1726 ft. from the surface; the ground at the bottom of the shaft is full of small veins of quartz, varying in size from 1 in. to 8 ins. wide, this fully confirms the opinion expressed in letter No. 61, that sinking should be continued another 100 ft. at any rate instead of driving the No. 18 level; had this been carried out after sinking the usual 15 ft. for a well, these quartz veins would not have been met with. No. 17 level: The cross-cut west is now 364 ft. from the shaft, in hard slate intermixed with quartz veins, more favourable for working than that passed through last month.

RUBY.—Report upon the mines for the week ending Sept. 5.—Dunderberg: We have five tributaries at work here. We have made connection with, and are now cleaning out the main workings from the 700 level; this is where the largest body of ore was followed down. We have already cut through three pipes of ore, which connected with the old works, and we will follow these, in addition to doing the other work mentioned. Lord Byron: We have nine tributaries at work here. The ground above the ore, though all bolders, is cemented, so that we can work under it without so much timber as we have had to use, and better progress can be made. Bullwhacker: We have five men at work. The mine looks about the same as in my last report.—A. FRASER.

—Telegram received Sept. 22, from Eureka.—"22 tons tribute ore shipped and smelted, producing to company \$166. 33 tons ore on company's account shipped and smelted, realising \$1,561."

SILVER MINES OF LA LUZ.—The directors state, since the receipt of the last cable from Mr. Hilton announcing the strike of the San Miguel lode, they have cabled him for further particulars, and the following cable message has been received in reply:—"San Miguel drift now in ore about 3 ft. 6 ins. wide; assays have given from 30 to over 200 ozs. silver to the ton, besides gold; ore body is increasing in width; impossible to estimate the amount of ore; report follows."

TOLIMA.—The company have received advices by the mail of Sept. 24 from their mines, of which the following is an abstract:—Frias July returns, 9,428*l.* 16s. 10d.; Frias July cost, 3,272*l.* 16s. 1d.; Frias July profit, 6,156*l.* 0s. 9d. The underground agent reports 51 fms. 3 ft. 7 ins. of ground expended, of which 33 fms. 2 ft. 7 ins. were productive, leaving 18 fms. 1 ft. of unproductive ground.

—The acting superintendent writes, under date of Aug. 18, as follows:—The shaft at date of writing is 119 ft. below the 100-fm. level on the line of lode, but we have 5 ft. to sink vertically, so as to get to the 120-fm. level. The lode has split in two branches, and for convenience, and as it is more in line with the shaft, we are sinking on the hanging-wall branch, which is worth about 15 cwt. of mineral per fm. The branch on the footwall will yield more mineral, but this we are leaving behind us for the present. The 110 west of Sankey's has improved since last report, and yields at present 6 tons of mineral per fm. The ground at this point is getting harder. The 110 east of Sankey's contains a fine lode, but will only yield the same quantity of mineral as stated in last month's report, viz., 15 cwt. per fm. The lode in the 90 east end has slightly improved, and is yielding more mineral. The shallow adit has also improved slightly, and contains spots of mineral.

YURUARI.—The secretary advises receipt of mid-monthly mail from the mines, dated Chile, Sept. 4, in which the manager reports that the water is rapidly being withdrawn from the Cenicero shaft, as, in terms of his previous report, the quartz in this portion of the mine, the most readily available, is richer than that at present found

in the Water shaft, where, owing to a deviation having taken place from the lode, No. 5 level is not available for winning or raising quartz. The manager repeats his statement in the previous letter, and refers to plan sent, in proof of the fact that there is still any amount of paying quartz in the mines, and that he is convinced that as operations are continued towards the dip of the property, reserves of paying quartz for many years to come will be opened up. This is confirmed by the assays obtained from the Eureka property, nearly a mile to the dip, some of the stopes and levels of which indicate large bodies of ore averaging more than 1 oz. per ton. The manager reports that little or nothing seems to have been done in the rich levels, Nos. 10, 11, and 12 Cenicerio, which will be available as soon as pumping operations are concluded. The secretary advises that a valuable report has also come to hand from the company's legal attorney at Guacipati, an ex-member of the National Congress, the salient points of which are as follows:—"I have just returned from Chile, and after an exhaustive investigation have much pleasure in being able to send you so favourable a report with regard to your property. Your manager showed me some very rich samples of quartz obtained from the 8 and 9 level Cenicerio, of which he estimates there will shortly be about 5,000 tons available (expected to yield 7,000 to 8,000 ozs.) The surface machinery and mines, which were in a bad condition when the manager took charge, are now in good order and condition. The manager assured me that provided you sent him the financial assistance he desired, 1,000*l.* (which has been cabled), he could make the enterprise a great success, and spoke with the utmost confidence, that in his opinion the future of the company was assured, in which I entirely agree." In proof of the richness of the Caratal district, the manager states that a large amount of nuggets and alluvial gold has recently been found in close proximity to our workings, one of our former employes having just shown me a nugget weighing nearly 32 ozs. The manager concludes by stating that at an early date he hopes to be in a position practically to demonstrate, by remittances, the truth of his opinion and reports.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

ST. AUGUSTINE, LIMITED.

SIR,—With reference to the statement made by a writer in the *Daily Oracle*, signed, "Not Blue, but Green," that a broker had told him that some 70,000 shares of the estate of the late Col. E. McMurdo had been put upon the market, I have to inform you that the statement is absolutely false.

The estate has not sold a single share.—I am, &c.,

G. H. NEWMAN,
Secretary.

30 and 31, St. Swithin's Lane, London.
Sept. 25.

EMMA MINE.

SIR,—What has come to the Emma Mine? Formerly we used to have regular reports, and occasional telegrams; now the reports are fitful, and the telegrams few and far between. What is Manager Wallace about? What is Judge Bennett doing? Above all, what are the directors doing? Do they know the exact position of affairs? Are they taking steps to remedy what is wrong, and to establish what is right? These are pertinent questions, with the shares at 1*s.* 6*d.*, and the winter coming on!—I am, &c.,

A HOLDER OF 600 SHARES.

Sept. 24.

YURUARI.

SIR,—Can you, in an early issue, give your many readers who are interested in the mine some idea of the present position and prospects of Yuruari? I see that Messrs. Taylor have very promptly cut their connection with this unhappy venture; and I should like to know if this means that the reins of management will again revert to

Mr. Hugh Watt, in which case the unfortunate shareholders must accept their sad fate with what resignation they may; and "Yuruari" will continue the laughing stock of the mining market. I would not trouble you with these queries but that I have always found the information obtainable direct from the office to be both vague and misleading.—I am, &c.,
Sept. 23.

SANS ESPOIR.

YURUARI.

SIR,—I should very much like to know why it is that Messrs. John Taylor and Sons have decided not to continue their connection with the Yuruari Co. The bare statement of the fact is scarcely sufficient for those shareholders who, like myself, were looking to them for that prosperity in this concern which has been denied to them through the very indifferent management of those who have had the control of the company in the past. I have always been struck with two things about this concern from the time I bought the shares at 1*l.* each to the present time when I see they are hawked about at 6*d.*—first, with the large quantity of gold that has been obtained from the mines, and next, with the terribly long interval that usually takes place between the returns. The future of Yuruari is very dubious under the present management, and if it were re-constituted I believe the first step that would be taken would be to get rid of the palatial offices at Westminster, and to take others on the third or fourth floor of some building in the City. The latter would be more in harmony with a company whose shares are quoted at 6*d.* I hope you will be able to give us some information in your next issue.—I am, &c.,

IN THE DOLEFULS.

[We have received many letters on the subject of Yuruari affairs, and have endeavoured in our leader columns as far as possible to supply information to date.—ED. M. W.]

THE HYDERABAD (DECCAN) CO., LIMITED.

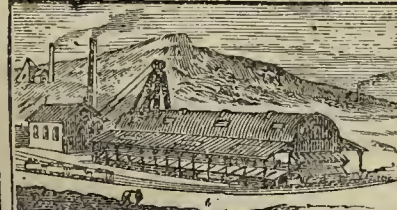

SIR,—At last this great company appears to be emerging from the Slough of Despond, in which it has been plunged ever since its conception by the unfortunate dishonesty of some connected with it. This brought about such serious opposition to the company that at one time it appeared not unlikely that the concession from the Nizam to the company would be cancelled. Some people worked hard, and used their utmost influence, to this end, but, happily, could not succeed, the concession having been submitted both to the Viceroy in Council and to the India Office, and approved by both.

That this concession is an immensely valuable one there cannot be a shade of doubt. The coalfields are being worked at a good profit, and are supplying the Nizam's and other Indian railroads with coal; then the concession includes the working of the iron and limestone, mica, gold mines, and last, but not least, the working of the Great Golconda Diamond Mines is included in the concession. I am told that a professional diamond miner from Kimberley, now at Hyderabad, pronounces the Golconda Diamond Mines richer than any yet found in South Africa, and these Golconda Mines have produced the finest diamonds in the world, much purer in colour than the South African stones. At present the company have been only working the tailings left by the ancient miners, who, working without pumps or machinery, got stopped by water at a certain depth. When the company, armed with pumps and machinery, get to the ground untouched by the ancient miners, most valuable results are expected. Quite a number of diamonds have been obtained from the tailings already. The proximity of iron ore, limestone and coal, suggest the erection of rolling mills, for the manufacture of steel and iron rails. Labour is plentiful and cheap. The signing of the leases by the Nizam's Government has hung fire terribly, owing to latent opposition, produced by the lamentable incidents before mentioned, which did the company so much harm; these leases, together with the royalties, to be paid to the Nizam, are about to be submitted to arbitration, Lord Herschell acting for the company. Thus, after many years weary waiting, this great company's dawn appears to be breaking at last, and if honestly managed, with the enormous and varied wealth that the concession covers, there can be no doubt that this company will gradually emerge from the outer darkness, in which it has so long been plunged, into glorious day. The 10*l.* shares are quoted higher, having risen considerably during the week.—I am, &c.,
G. W.

REPORTS OF MEETINGS.

THE GUADALCAZAR QUICKSILVER MINES, LIMITED.

PROMISING POSITION OF THE COMPANY — A SERIES OF VALUABLE MINES UNUSUALLY RICH IN QUICKSILVER — SPEECHES BY MR. MERRYLEES AND MR. MACTEAR.

A MEETING of this company was held on Wednesday, at No. 7, Poultry.

Mr. John Merrylees

(chairman of the company) presided.

Mr. PERCY N. FURBER (secretary) read the notice of meeting.

AN EXHAUSTIVE SPEECH.

The CHAIRMAN: Gentlemen, I hope you have all read carefully the report we have sent out, so that it need not be read again. (Hear, hear.) At the same time I shall be happy to answer all questions with respect to it. Naturally, in a report of this kind of a first year's working, where so much technical business has had to be done, and so much new work undertaken, not to speak of the difficulties, which are unavoidable in new mining enterprises, which have had to be overcome, the statement made must represent a period of considerable anxiety to the management. You will see by the very first sentence of the report that we have had to substitute modern methods for an old system. That was why the company, in taking the property over, looked forward to a bright future, because, if a property did well (and this one has done exceedingly well in previous years) under the old Mexican method of management, what would it not do when we brought to bear upon it modern mining science and machinery. There is a plan on the wall that shows you the previous state of the property, and in addition the work we have gone through during the past year. You will see the tortuous passages represented on that plan. The reason of that system of working by the Mexicans was this—that a Mexican will never do anything to-day that he can possibly put off till to-morrow, and if he has a horn spoon, and can take out a few handfuls of ore, he will spend the proceeds, and it will never occur to him to save money to buy a pick. The consequence is that, though the modern system has been well known for a long series of years (the property has been worked for nearly 50 or 60 years), they have simply gone on from hand to mouth, following the veins—some days getting \$5 profit and other days \$50. But

IN 1875 THEY EARNED 100,000%. INSIDE OF THREE MONTHS,

and the only way they did it was by following the rich veins all through their ramifications, which accounts for the tortuous workings to which I have directed your attention. In going through these tunnels they would not take the trouble of widening them out, or making them level, in order that the next week's work might be done easily and cheaply; all they did was to make a hole sufficient to creep through, and bring the ore out on their backs in parcels of certainly not more than 25 lbs. or 30 lbs. weight. But, even in spite of that, as I have said, they earned considerable sums in some years. When Mr. Mackenzie, our engineer, took over the property, on behalf of the company, he had to find out, first, what use we make of these old passages, and, secondly, what the formation of the country was, in order to direct his energies in opening up the new ore bodies in sight. We found that there were two entrances to the mines. Mr. Mackenzie first made explorations by these entrances through the tunnels to see what the old miners had done, and in going through them, accompanied by Mr. Mactear (who will have something to say to you afterwards), he found out that a very large quantity of ore had been taken out from various chambers that had been made in this way. They had taken out ore both from the small veins and the large chambers. Mr. Mackenzie could not find out in examining them how much ore had been taken out, because the *débris* had been allowed to fall into the bottom of the chambers, and until he got through that he could not see how much was below, but there is very little doubt that as the chambers seem to increase in richness with depth, that the moment we get below the *débris* we shall probably come upon the same quality of ore as these old miners extracted. That is a matter which is at present a subject of exploration. Mr. Mackenzie then started to increase the apertures of these tunnels, for the Mexicans were willing to creep through places which would never have done for us, and he has straightened out all the places which are now sufficiently wide to enable us to bring out a good load, and we have shipped pretty nearly three quarters of a mile of tram rails which we are going to lay down, and by the beginning of Nov., we shall be bringing the ore out by tram lines instead of on men's backs. Then Mr. Mackenzie found the ventilation deficient,

there being no current of air through the tunnels. He therefore made two openings so as to allow a current of air. This established ventilation, which enabled him to commence his new workings. Now came the question how these workings are going to be undertaken. We met with

A FORMATION, WHICH WAS VERY PUZZLING

indeed to Mr. Mackenzie and Mr. Mactear, who are both experts in mining and especially in quicksilver mining. They had the data to go on of various mines in Spain, and elsewhere, including the Almaden, New Almaden, Idria, and Avala, and yet the formations of these mines were in no way similar to ours. They were all more or less in single veins or deposits that could be traced. Now the whole of our property seems to be absolutely permeated with veins. You cannot go a yard in the whole of it (it is 3 miles in length and about 1 mile in width) without meeting more or less cinnabar ore. Sometimes the stringers are not one-eighth of an inch, then they widen out to a foot, and often at other times they come upon

DEPOSITS 50 OR 60 FT. WIDE.

Mr. Mactear found one excavated 150 yds. deep by 100 yds. wide. The question was to solve the original formation of these deposits, because unless they could get at what was the original formation (which may have taken place 50,000, or as many million, years ago) they could not find the key to the situation. Mr. Mactear struck it very nearly the first time he considered it. He came back, as the shareholders will remember, and wrote in the report we issued last Oct. that the whole of deposits of quicksilver had, in his opinion, originally been formed by geysers, or springs of hot water, with gypsum, or other solutions, in the water, and that the hot water bubbling up in this sort of way—the geysers overflowed first with a layer of gypsum, and then the quicksilver, being the heaviest component part contained in the water, would overflow last, and come underneath the layers of gypsum, and then the volcanic action afterwards had broken up and twined about these layers, but that when near gypsum we were sure to be near mercury. The proof of this was that every now and then Mr. Mactear found what were apparently the matrixes of these geysers. They are sometimes 10 or 15 ft. wide, and sometimes 100 ft. Wherever stringers lead us to one of these pioneer chambers we are sure to have large bodies of extremely rich ore.

THE ONLY ACTUAL INDICATIONS OF NEWLY FOUND BONANZAS

that we have so far come to have been two—one about 3½ ft. wide of very rich ore, which we are keeping for reserve of ore, and the other a large find also of rich ore, which was made last July. This body of ore is away from the main ventilation, and was found in sinking a winze. When they got to this large body of ore and began to go into it in depth, the ventilation was so bad that it was necessary to drive an upraise in order to secure good air. Since our report was issued we have advices from the mine that the upraise has been completed, and that the ventilation is good; and that the development of the ore body is going on, and its size is increasing. What it may amount to it is impossible to tell until we receive further advices from the mine. However, our last advices were it measured 33 ft. one way, and 20 ft. the other. The deeper it goes the richer in all probability it will become. The width can only be proved when they get the cross-cut driven right through it, and that is being proceeded with. Mr. Mackenzie advised us there was

ORE ENOUGH IN SIGHT,

when he had only been working a fortnight or three weeks on it, to supply at least one new furnace. This is important, because Mr. Mactear has pointed out in his report that apart from these bonanza formations, and getting absolutely to the matrix of the mercury itself, the ordinary ore coming from the old workings, and such new ground as we may develop, will run about 3 per cent., while this large bonanza body has assayed from 10 to 18 per cent., and the average is about 11 or 12 per cent. When we get on such ore as that we know we must be very successful, and it seems to be a very fortunate thing that we struck it at the time we did—that is at the moment we got our furnaces nearly ready to start—I say it is fortunate that we should be able to commence with a big body of ore like that, and not have to content ourselves with the ordinary ore of the mine, although that would be quite good enough in itself. Mr. Mactear tells you the average of the ordinary ore would run about 3 per cent. As a matter of fact, all the ore we have treated has run about 3 per cent., but it has been only taken accidentally from the various levels and tunnels we have driven. The main ore bodies have all been kept waiting for the furnaces—the reason being that there is no place so good to store ore as in the mine itself. Our accountants thought that if we could bring up a few thousand tons they would give us credit for it in the profit and loss account, but we said “No, because the best storage place for it is in the mine.” They then said, “We are very sorry, as we cannot give you credit for it till it is raised.” (Laughter.) Still it is there, but if you bring mercury ore to surface it soon disintegrates by contact with the atmosphere. We have not tried last year how much

ore we could treat, so much as how little, for the reason that our furnaces have been so miserably bad—I mean the furnaces left us by the Mexicans. Of these you will see pictures on the wall taken from the *Illustrated London News*, which kindly interested itself in our company. We, therefore, do not want to use mercury in furnaces, where of every 100% worth we should probably lose 50% worth. It is satisfactory to know that in treating this ore we have earned something with which to help to pay expenses. The return up to date has been over 1,300% worth of quicksilver, and these returns have always been a help and an encouragement. As far as regards the two furnaces, your directors regret that there has been much delay in their erection. We gave the contract to some gentlemen in Glasgow, with whom I do not find any fault, and I say that because we are going to forgive them. (Laughter.) They are rather peculiar to make, and there was a delay of four or five months before we obtained delivery. When we had them shipped, there was some extra tariff on tin plates in the United States, and in order to make a profit on these tin plates the steamer kept our stuff on board till it sailed back. When it got to the frontier, the Customs gentlemen

"WANTED A LITTLE SOMETHING,"

which they could not get because we have an arrangement that all mining materials going through into Mexico shall be duty free. However, they delayed us three or four weeks, and when we got the machinery through the customs, it was without paying a single penny. (Cheers.) When we got it to the railway station, which is 20 miles from the mine, we thought we would have to contract for a number of mules, and calculated that the time occupied in taking them to the mine itself would be three months. A good deal to the credit of Mr. Charles Furber was it that he went down personally to Silos Station to superintend it, and while there Mr. Mackenzie had been preparing the roads, so that instead of the 217 tons of iron and brick taking three months, we got it up in little more than 14 days. That was about three or four weeks ago. (Cheers.) Now the furnaces are in course of erection, and Mr. Mactear is going out to start them on Oct. 7, and by the time he gets there we hope they will be erected, and that he can see whether our condensers are working properly or not, and by that time also I hope he will be able to send us home a favourable report. There is

NO QUESTION AS TO OUR TITLES.

When a company is unsuccessful, this point does not much matter, but when it is beginning to be profitable we have to look about us. When the property was first transferred we had our titles perfectly clear from the men who owned it at that date. We got possession, and there was no trouble. It, however, struck the directors that it would be better to quite satisfy themselves that the titles were right from the very commencement. We, therefore, employed the very best conveyancing barrister we could get in Mexico, who has been over the whole of the titles. They have by him been traced through every successive holder to our time, and he assures us that they are without a flaw in any particular, which I think is both satisfactory and reassuring. Then there is another question:—It was desirable to have a good supply of water as we want 60,000 gals. a day for the purposes of the mines. Mr. Mackenzie found we could get an ample supply within 3 miles, and that he would simply have to bring it on by means of a conduit, which will cost from 300% to 500%. The difficulty was that this water was on a claim of a silver mine, which, up to the time the water overtook them, had proved itself good, and I have no doubt it may yet turn out a valuable property. The difficulty with Mr. Mackenzie was that if we went to buy the water, they, knowing how essential it was for us to have it, might raise the price, and we, by taking it from them, might practically turn for them a useless property into one of value at our expense.

A GOOD BARGAIN.

Mr. Mackenzie saw the owners of the mine, and said, "What will you give me if I unwater your mine?" Well, the arrangement we have come to with them is (the *pro forma* arrangement, for the deeds have not yet been signed), that in consideration of our unwatering their mine they would give us half interest in the mine, so that we get all our water for nothing, and a half interest in the mine too. (Laughter and cheers.) All the expense of taking the water out are to be deducted from the profits of the mine before the other people receive anything. It is a very important matter to them, because they will make money also. We have put in a strong sentence in the report, when we say, "We look confidently forward to large profits being earned when we have next the pleasure of meeting you." I think Mr. Mactear and all my fellow directors will join me in saying that that is not an unwarrantable statement. We hope to have our new furnaces in blast at the end of Nov., and the moment they start there is no reason in the world why we should not go on from small to larger profits, and why the first dividend we pay should not be greatly exceeded by the second, and so on. Instead of the company having to spend all its revenue on capital account the tide will be turned and dividends will be coming in, though to what extent I cannot say. They will be at least, I am positively convinced, up to Mr. Mactear's report, and how much beyond we cannot say, until we see what is the total extent and richness of our new find. At the same time the directors, whilst earning dividends, do not intend to pay in this way all the profits that come in. Supposing we earn 12½ per cent., which is Mr. Mactear's calculation, on the two first furnaces alone we are not going to pay you the whole of it, but will put aside some portion of it to the erection of a fresh furnace, and so we will take every measure to make this

A PERMANENT DIVIDEND-PAYING CONCERN.

It is much better to have dividends going on from 5 to 6 and 7 per cent. than to go bull-headed into the reserves of ore, and pay 50 per cent. the first year and never anything else afterwards. The whole enterprise is much more in the nature of a manufacturing concern than it is in that of a gold or silver mine. We know we have unlimited reserves of ore, and it is a mere question how much ore when we raise, and at what cost. As far as price of quicksilver is concerned, I can assure you at the last sale we made in Mexico—26 flasks in July—we got nearly 3% per flask more than the same commodity is selling for to-day in London. Considering that Mexico alone consumes over 300,000% of mercury a year we shall hope to be paying big dividends before even we overtake the Mexican

supply. When we have to ship surplus stocks to Europe, I do not think we need trouble ourselves very much about what the profits will be. (Cheers.) Mr. Mactear has received a letter which finally solves question of the geological formation, and with it, to a large extent, the question of the way in which we ought to work. I have great pleasure in proposing the adoption of the report. (Loud cheers.)

VIEWS OF MR. MACTEAR.

Mr. JAMES MACTEAR, F.R.S.E., F.I.C.: I would like to begin by telling you what the chairman forgot—namely, that what we are doing here has only been on one corner of the property. We have a number of so called Mexican mines, probably six, which really consist of tunnels driven into the hill, each of which is called a mine, and in addition to these six mines, we have 3 miles of country over which quicksilver deposits are found. We have confined our work to the mine of which the chairman has spoken because the village is there, and also the native furnaces. The chairman told you that the work done in the native furnaces had been with ore obtained, as it were accidentally, in the workings. That means that in cutting the tunnel and passages certain quantities of ore had to be taken out, and it is that ore which has been put through the furnaces. It is worth calling attention to the profit and loss account to show that even such working has resulted in rather more than 1,000% worth of mercury being obtained up to June 30. There is a nominal loss of 933%, at profit and loss account, but if we had had furnaces which would have given us even a reasonable return, there would have been practically no loss of that kind whatever. The Mexican furnaces did not give us 50 per cent. of the yield, and if we had a furnace which would have given us 90 per cent. the result would have been a profit on that account. That in itself is an exceedingly satisfactory feature. The question discussed between Mr. Mackenzie and myself was a very abstruse one. The deposit of quicksilver in Guadalcázar are in gypsum, whereas nearly all the other quicksilver deposits are more or less in quartzite—some of them associated with dolomite or limestone. It became rather a trouble to find out why there was this difference, and what caused the difference in the deposit of strata—the difference upon the formation itself. In every way the formation seems to be quite unlike those of California, Servia, and Austria, as in all our mines quicksilver deposits are really shoots, and seem to have been deposited in a more or less funnel-shaped cavity in the rock from hot springs. I took the opportunity of sending out Mr. Mackenzie a long series of extracts and books dealing with these other mines, and also the monographs of the United States Government dealing with the Californian deposits. After discussing them with him by letter, he writes to me that he thinks now

HE HAS ENTIRELY GRASPED THE CONDITION OF MATTERS

which obtains in the Guadalcázar deposits. It would be too long to go over the explanation, because I have here a letter of 15 pages which scarcely exhausts the subject. (Laughter.) But I almost entirely agree with his conclusions, and think the result of the discussion will be that having a theoretic knowledge of how these formations run and the general line of the shoots of ore, there will be very little doubt that an enormous saving in the working will be made. Instead of having to work more or less at random, driving tunnels in search of the ore, we know now that unless we drive in certain definite directions and strata we are almost sure to have barren ground. The result of our argument has been really to lead to these new shoots of ore. We have a series of chambers, and if we draw a line through all the known shoots of ore we find, it absolutely cuts through the ore which we have now found—the inference being that in that direction we have a chain of these chamber deposits, which I feel confident will come in from time to time, and which contain exceedingly rich ore. The samples we have sent home from the last shoot of ore will average over 10 per cent., which is exceptionally rich ore for a quicksilver mine. People have quite an erroneous idea of quicksilver ore as a rule. They imagine that it is a piece of pure cinnabar. Now, when I tell you that ore containing 1 per cent. of mercury is amply sufficient to pay a handsome profit, you can understand what it will be for us when we have ore running 3 per cent. I look forward most confidently to the future of the mine. (Cheers.)

INCIDENTAL INFORMATION.

The CHAIRMAN: I should add that the climate is excellent. We have a rainy season, it is true, but this simply adds to the water supply and does not interfere with our operations.

Mr. CORNFORTH: Have you the percentage of this ore?

Mr. MACTEAR: I tested four samples, which gave an average of 11 per cent., and the red ore of the kind exhibited in the specimen, handed round, is considerably richer, the assay being up to 18 per cent., whilst we actually have veins that run as high as 45 per cent.

Mr. WILLIAM FURBER seconded the motion, which was carried unanimously.

THE MANAGER THANKED.

The CHAIRMAN said that he had very great pleasure in proposing the next resolution, which was that the shareholders should authorise the directors to convey to their manager, Mr. Mackenzie, a very cordial vote of thanks. He was a most excellent manager, and they had the greatest confidence in him. (Applause.) He was a thorough man of business, and had had great experience. His letters were models, and their accountant, Mr. Littlejohn, would also be able to assure the shareholders that

MR. MACKENZIE'S ACCOUNTS WERE MODELS.

They were satisfied that they could not have a better man. They were confident that the mine would have a very great future before it—(hear, hear)—and for this reason, Mr. Mackenzie was a pessimist, and they could be quite confident that if he said he had got two, that he had really got four. (Cheers.) It was always better to have a man of that class. He was a "canny Scotsman." He (the chairman) did not know that he was any the worse for that. (Hear, hear.)

Mr. GOODWIN seconded the motion, which was carried.

The CHAIRMAN said that the next resolution was for the re-appointment of their auditor, Mr. E. Littlejohn, F.C.A., who was the original auditor of the company, and he did not think that they could do better than re-elect him at the same remuneration as before.

Mr. C. PERCH seconded the resolution.

The resolution was carried.

The CHAIRMAN: That is all we have to do to-day.

THANKS.

Mr. RUSSELL: I take great pleasure in proposing a vote of thanks to our chairman. (Cheers.)

Col. GORDON seconded the motion, and said that the directors took a very great deal of interest in looking after the interests of the shareholders, and he only hoped that they would meet with the success they deserved, and that they would bring about such results as had been promised them in the prospectus, in the reports that they had received from time to time, and also in the statements which had been laid before them that day. (Hear, hear.) Personally, he had

VERY GREAT CONFIDENCE IN MR. MACTEAR,

and from what that gentleman had stated as to the value of the property, he, the speaker, had taken a very large holding in it. He held a considerable amount, and he had every confidence that the shareholders would get back all that they had put into the company and a great deal more.

FAVOURS TO COME.

The resolution was unanimously carried.

The CHAIRMAN, in reply, said that the directors were very much obliged to the shareholders for their kind vote, and he trusted that when he next had the pleasure of addressing them he would be in the position of laying before them a statement much more deserving of a vote of thanks than that which they had placed before them that day.

The proceedings then terminated.

DRACHENFELS BANKET GOLD MINING SYNDICATE, LIMITED.

DIRECTORS REPORT A PRELIMINARY YEAR OF SUCCESSFUL AND ECONOMICAL WORK—PROSPECTS OF THE COMPANY DESCRIBED AS OF THE BRIGHTEST KIND.

THE first annual meeting was held at Winchester House, on Wednesday.

Mr. J. A. Alsop, F.R.G.S.

(chairman of the company), presided.

MR. WILLIAM TUKE (secretary) read the notice of meeting.

SHAREHOLDERS STAY AWAY BECAUSE SATISFIED.

The CHAIRMAN: I am pleased to see you here at this, our first annual meeting. My pleasure would have been enhanced had the attendance been larger, but many of those absent have expressed themselves perfectly satisfied with what is going on, and did not deem it worth while attending here to-day. But, still, we should have liked their presence, for it would have seemed to indicate greater sympathy and satisfaction with what we have done, and with what we propose to do. The first thing we had to contend with was to get the title of the property registered in the name of the syndicate in the Transvaal records, and that necessitated a very great deal of work and, as you may imagine, a great deal of red tapeism.

IT IS TRUE.

We have to pass through a deal of red tapeism here if there is anything to be done, but if anything in the shape of law proceedings or registration has to be accomplished in the Transvaal there is very much more. The next thing to do, to which we had to devote our attention, was to get a good manager, and I am very happy to inform you that we have found a very able gentleman in the person of Mr. Frank Hughes, a son of one of our directors. Indeed I believe it was Mr. Frank Hughes, and one or two others, who first discovered this (as we believe it to be) very valuable property. After the appointment of the manager, there was a great deal of correspondence in reference to what machinery would be required, and the best kind suitable for this particular reef. You are aware that the claims number altogether 96, and are in the nature of a horizontal formation—the precipice being something like 2,000 ft. After receiving various communications we went to Colchester and ordered a 5-ft. Huntington mill, with a working capacity equal to 10 stamps. That was obtained with all the usual accessories, and has been sent out to the property, and we hope by this time is erected. In addition to the usual plant and machinery that would be requisite for such working, there has been secured a patent amalgamator, which was strongly recommended to us by gentlemen of great experience, and this amalgamator, it is considered, would cause the saving of a vast quantity of gold in the working. I may tell you active operations have been going on for some time—in fact, from the time of the commencement of the appointment of Mr. Hughes. He has selected various points of the property for the purpose of making cuttings and drifts and various other proceedings, and he has justified what we considered our opinion of him by the energy he has displayed. He has sent over plans of a suitable and proper place for the erection of the machinery, and he also has got the water-race in a most advantageous position. I do not know whether shareholders can see on the wall the rough sketch he has made, but if they can they will come to the conclusion that all that can be has been done by the manager out there to make this company a success that can possibly be done. As regards development, he has removed 18,000 cubic feet of debris. The stock of ore on the dump ready for milling is 300 tons, and the manager who was on the spot, and who can be thoroughly relied upon, expresses himself perfectly satisfied, and expects that when the drive is extended from the cuttings a further large quantity of good paying ore will be laid open. You will be pleased to hear that the manager also reports the ore to be perfectly free milling and some of the best on the property and that it has far exceeded his most sanguine expectations. I think if you carefully consider it you will judge that for the sum actually expended the shareholders have to congratulate themselves on the development work done, and will be inclined to say that it augurs well for the careful expenditure of their money in the future. The

board feel justified in expecting crushings of a very favourable nature, as the ore that is being worked

GIVES AN AVERAGE IN PANNING OF 1 OZ. TO THE TON.

Now, if we halve that we shall do remarkably well because $\frac{1}{2}$ oz. would leave us a handsome profit—the expense of working being only at the rate of 10s. 6d. per ton. (Hear, hear.) It is also a very fortunate circumstance for us that the Delagoa Bay and Pretoria Railway is being pushed forward so rapidly, and will soon be up to Kantor, which is important to us when further machinery is required, and also for transport generally. Taking the situation altogether, the shareholders may congratulate themselves on what has been done in this first year. We believe that at or about the present time the machinery has been erected, and we expect a cable every day to report to us what the crushings are. We anticipate that long before this time next year there will be something very favourable indeed to report to the shareholders, and if requisite we shall not hesitate to call a special meeting so as to inform them of what is going on, because it is most important that

DIRECTORS SHOULD KEEP THEMSELVES THOROUGHLY IN TOUCH WITH THE SHAREHOLDERS,

and not put matters off for a whole year, leaving them in ignorance of what is being done. (Hear, hear.) I have to report to you that Mr. Pothonier, one of the directors, some time since resigned, having more business to attend to than he possibly could manage. He was not able to attend our board meetings, and, therefore, it was necessary for him to resign, and in his place Mr. Wheeler has been chosen, a gentleman of considerable eminence in the commercial world, and very well able to look after your interests, and it is for the shareholders to-day to confirm that appointment. I should also tell you that two of the directors, Capt. Gordon Hughes and Mr. Moffat, retire under the articles of association, but are eligible for re-election and offer themselves accordingly. It will be also for the shareholders to confirm the appointment of Messrs. Moore and Sons as auditors, and their fee, which is 10 guineas. I have the pleasure of moving "That the report of the directors and balance sheet, as submitted to the meeting, be and they are hereby adopted." (Cheers.)

VIEWS OF THE MANAGER'S FATHER.

Capt. HUGHES: I second the motion, and wish to say a few words as to our prospects. I am glad to be able to say that those prospects are of the very brightest. The property is turning out very well on development, and a very favourable feature of the mine is that from the first it has improved and gone on improving until, as you see by the report, the seam has widened out into a gulch of ore from 12 to 15 ft. in height, and this ore is, by ordinary panning test (not first assay), averaging from 1 to 2 ozs. to the ton. This is all free milling ore, not impregnated with iron pyrites or refractory matter of any kind, so that you will see we have a payable mine. (Hear, hear.) We have ore in large quantities easily workable, and the facilities for working are of an exceptional kind. We have ample water power on the spot to work a very large plant and machinery, and we have also plenty of timber. Labour is cheap, and the reef being horizontal no deadwork is required for shaft sinking or exploration, whilst haulage is reduced to a minimum. (Hear, hear.) We have the advantage of quick communication. There is a telegraph station within 3 miles. We can send a telegram this afternoon, and it will arrive at the mine to-morrow morning. You have already heard about the railway. With the small plant we have been able to erect,

WE EXPECT TO PAY THE SHAREHOLDERS A HANDSOME DIVIDEND,

and can do this with nearly $\frac{1}{2}$ oz. to the ton. Our capital is very small compared with that of most other gold mining companies, and that is why we shall be able to do this. With regard to sending out another mill, we think it desirable to send an ore-crusher of sufficient capacity to supply three of these mills, one of which has been, I believe, now erected on our mill site, and the railway will enable us to send out a second mill at a small cost, which can be erected by the side of the one we have already dispatched. All the machinery has been paid for—in fact we have no debts at all. We have had great difficulties to contend with in getting the machinery lowered over the edge of the precipice, but that has been overcome without an accident. I think you will agree that this was very creditable to the manager of the mine. It was originally estimated that we should require 7,000l. cash capital in order to develop our property and start crushing. We have, unfortunately, been unable to get the whole amount subscribed, but now feel confident that there will be no difficulty in obtaining the balance. We have adopted the policy of activity. We have worked hard, and think we shall be successful. I congratulate you on your prospects. (Cheers.)

DISCUSSION.

Mr. INGRAM: In the face of such a pleasant report it is unthankful to get up and criticise anything in it, but I notice in the revenue account you have the amount of 600l. down for directors' fees. Now, Mr. Chairman, that is a very large item. I have no doubt it is one fixed by the articles of association, and that you are entitled to it, but, seeing that the property has yet to become a paying one—until it does so it would be an act of generosity on the part of the directors if they were to reduce that amount. It is usual in non-dividend concerns for the directors to share in the non-success until the success is achieved, when the shareholders are liberal in rewarding them. I see you have only taken 300l., but you bring the other 300l. forward in the item of sundry creditors. I presume that is because you have not the money to pay it with. I merely ask you to consider this on behalf of the shareholders.

Mr. LANGTON THOMAS: I rather agree with what my friend Mr. Ingram has said. This report is in all respects satisfactory, and I cannot help thinking that the fact that the capital of this company has been fixed at such a small figure (25,000l.), whereas other companies invite you to subscribe for 10 times the amount—I say, I cannot help thinking that with the very small amount at your disposal, the only extravagant item in the balance-sheet is the directors' fees. Of course, we know in many of these companies the only people who profit by them are the directors, secretary and manager. The com-

pany goes on until its money is exhausted in this way, so that the proper name for many of them would be

"A DIRECTORS' BENEFIT COMPANY."

(Laughter.) In many cases the directors have absolutely no stake whatever. I have no doubt the chairman will consider what has fallen from us. I notice in the original prospectus—"negotiations have been concluded for the purchase of 96 claims for 18,000 $\frac{1}{2}$ %, payable 15,000% in fully-paid shares and 3,000% in cash." Was that 3,000% paid in cash or shares? I notice in the report, also, that the directors express their entire satisfaction with the scientific and systematic development of the property. How are they qualified to express satisfaction? Have any of you had mining experience? I know you are good men of business, but should like to know on what grounds you make that statement. What are you going to do with the claims you do not work? Taking it altogether

THE REPORT APPEARS TO ME TO BE MOST SATISFACTORY

in every respect, and the work of the company appears to have been well and economically done with the exception I have named.

Mr. CUFF: Is it really the case that there is plenty of suitable labour at cheap rates, and will you give us an idea of what are the monthly expenses of the mine?

The CHAIRMAN: They average about 150 $\frac{1}{2}$ %, and when we actually commence crushing, that will be increased because we shall want more labour, when the more we turn out the more profit we shall have. I understand that there is plenty of Kaffir labour at about 30s. a month. With regard to how we came to the conclusion that the property has been well managed—first of all, we have perfect confidence in Mr. Frank Hughes, the manager, who has had 10 years' mining experience, and is spoken very highly of by those who ought to be able to judge. Personally, I have had considerable experience with other companies, and notably with Notre Dame des Victoires, on the direction of which I was put, because the original directors were ornamental persons, and for the last 9 or 10 months we have been daily, and almost hourly, considering mining questions. Mr. Moffat has had very considerable experience with mining in different parts of the country, and you may take it that every word in the report is absolutely true. I shall be pleased to see Mr. Thomas here next year to remind me of what I have said to-day, and I hope (and believe) to congratulate the management on its successful and economical working. All the shareholders have congratulated us on the report, but they have taken exception to the 300% that has been divided amongst us for a year's work. Well, I fancy Mr. Ingram who started the question looks as if he would not care to do a year's work for anything like such a sum.

Mr. INGRAM: I do not object to the 300% you have received, but to the 300% you have carried forward as a debt against the company.

The CHAIRMAN: We have been asked if we would re-consider the matter, and I tell you

WE WILL DO SO IN A VERY LIBERAL SPIRIT.

I must say that if directors are not properly recompensed they will not do their duty. They will not attend the various meetings, or undertake journeys at their own cost on behalf of shareholders, and so the small saving would turn out to be a big loss in the end. When directors get up in a public meeting and say they will not take fees—take my word for it, it is time to sell out your shares, for you may be quite sure that such directors do not feel any great confidence in the undertakings themselves. We meet every Wednesday, and there is hardly ever an absentee. I have been very happy to hear the criticism, and assure you there is no intention to draw the amount put down in the balance-sheet.

Mr. KELIHER: I think we are indebted to Mr. Ingram for having raised this discussion, for it has elucidated the fact that in the chairman we have a hard working director. (Hear, hear.) We are also in accord with him that a fair day's work should receive a fair day's pay, but I think the chairman might gracefully make a concession in the way indicated by Mr. Ingram.

Mr. INGRAM: I am disappointed that the directors do not say they will wipe off that 300% at once, and I should like to know what are the views of the other directors.

Mr. MOFFAT: I will not take my fees unless the company is a success. It is wrong to say we would have taken the fees if we had had the money. As a matter of fact the money was there, and we did not. (Cheers.) The amount the directors now receive does not compensate them for the trouble they are put to.

Capt. HUGHES: I am so confident of success that I am willing to fall in with the proposal and give up the 300% until the property is proved to be a success.

Mr. WHEELER: I am of the same opinion as Capt. Hughes. I have never had any fees at all, having only been appointed last December.

The CHAIRMAN: I omitted to say that 48 claims out of the 96 had been developed, and we have already one or two offers to buy a portion of the property. It only remains for the cable to come over that there has been a good crushing for us to have to call you together and ask your wishes in respect to a sale of a portion of the property, for which we have been offered so much in cash and so much in shares. We should be content with a few thousand pounds in cash and the rest in shares. The amount paid for the property was all in shares.

Mr. THOMAS: That is very satisfactory.

DISCUSSION RESUMED AS TO FEES.

The discussion as to the directors' fees was then resumed, but on the assurance of the chairman that the 300% carried forward would be waived, the report was unanimously adopted, although the shareholders declined to pass it previously until this statement had been made.

Mr. THOMAS proposed the confirmation of the appointment of Mr. Wheeler, whom he extolled as a first-rate man of business.

Mr. KELIHER seconded the motion, and it was carried unanimously.

Mr. JOHN SUTCLIFFE proposed the re-election of Capt. Gordon Hughes and Mr. Moffat as directors, and said that from the private letters he had received, the prospects of the company were exceedingly good.

The motion was seconded and carried unanimously.

Mr. CUFF proposed, and Mr. INGRAM seconded, the re-election of

the auditors, Messrs. Moore and Son, at a remuneration of 10 guineas, and the motion was carried unanimously.

Mr. INGRAM proposed a vote of thanks to the chairman for his able and courteous manner in which he had presided. They had had a bit of a tussle, but it had been in a friendly spirit, and would turn out for the good of the company. He also wished to include the directors.

Mr. THOMAS seconded the motion, which was carried by acclamation, and, with Mr. Alsop's brief acknowledgment, the meeting ended.

THE LEADHILLS SILVER-LEAD MINING AND SMELTING CO., LIMITED.

INCREASED DIVIDEND.

THE directors have submitted a balance-sheet and profit and loss account for the year ending June 30. The profit for the year amounts to 4,11 $\frac{1}{2}$ l. 10s. 11d., out of which the directors have declared a dividend of 4s. per share, free of income tax, payable on Oct. 2 next, which will amount to 4,000 $\frac{1}{2}$ l., after which there will remain a balance to be carried forward, 2,342 $\frac{1}{2}$ l. 11s., being an increase of 111 $\frac{1}{2}$ l. 10s. 11d. on the previous year's account. The returns of lead ores from the mines, for the 12 months, were about the same as in the previous year, but rather more ore was dressed and smelted. The actual figures were as follows:—Ore broken, 1,917 tons 4 cwt.; ore dressed, 2,066 tons; ore smelted, 2,060 tons 16 cwt.; pig lead made, 30,765 bars, or say, 1,538 tons 5 cwt. The resident manager's report fully explains the various underground developments of the mines, and the future prospects. At the smelting works about 1,100 $\frac{1}{2}$ l. have been spent in connection with the new large double condenser, and other works of a permanent character, 20 per cent. of which has been charged to this year's revenue. During the next twelve months further improvements will be made at the smelting works and on the dressing floors. The directors have under consideration as to the desirability of renting the farm or farms near to the smelting works as may be agreed on, and as to sub-letting any portion of the same with a view of obviating any future annoyance of claims for land damage, &c. The directors hope to have shortly the new lease duly completed.—F. F. WILSON, Secretary.

Mr. Thomas Newbigging concludes his report thus: "It is my candid opinion that your property remains in a very satisfactory and encouraging condition."

ISSUE OF 31,729 ORDINARY SHARES AT A PREMIUM OF 2s. PER SHARE.

For the period from March, 1889, to May 12th, 1890, a dividend of 10 per cent. in cash was paid on the then Ordinary Share capital of the Company, and for the year ended May 12th, 1891, a dividend of 20 per cent. was paid (i.e., 10 per cent. in cash and 10 per cent. in Shares of the Tasmanian Silver Mining Company, Limited (after providing in each year for the dividends on the Founders' Shares)).

THE TASMANIAN LAND AND EXPLORATION COMPANY, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1885.

CAPITAL, £50,000, in 49,900 Ordinary and 100 Founders' Shares of £1 each, Of which 18,171 Ordinary and 100 Founders' Shares have been already issued. 31,729 Ordinary Shares of £1 each are now offered for public subscription at £1 2s. 0d. per Share. These Shares will rank *pari passu* with the 18,171 already issued. Payable, 2s. 6d. per Share on Application (being the premium of 2s. and a deposit of 6d. per Share); 2s. 6d. on Allotment; and the balance in instalments not exceeding 5s. at intervals of not less than two months.

SECRETARY.—Mr. F. A. ABRAHAM.
OFFICES.—80, COLEMAN STREET, LONDON, E.C.

PROSPECTUS.

This Company was incorporated on March 14th, 1889, with a capital of £10,000 divided into 9,900 ordinary and 100 founders' shares of £1 each, and by a resolution of the Company passed May 27th, 1890, the nominal capital of the Company was increased to £50,000 by the addition thereto of 40,000 new ordinary shares of £1 each. Of these new ordinary shares 8,271 have been issued, making a total of 18,171 ordinary and 100 founders' shares subscribed to date. 14,135 of the ordinary shares were subscribed and allotted at a premium.

The objects of the Company are to carry on the business of a Land and Exploration Company in Tasmania and elsewhere, for mining and developing mining properties, for promoting and assisting in the formation of companies for the purpose of purchasing and developing interests in properties of all kinds, and generally for the objects set out in the Company's memorandum of association.

The founders' shares are entitled, according to the terms of the memorandum and articles of the Company, to one-fifth of the net profits, and, subject to the establishment and formation of a reserve fund, the ordinary shares are entitled to the balance of profits available.

For the period from March 14th, 1889, to May 12th, 1890, a dividend of 10 per cent. in cash was declared on the ordinary shares then issued (after providing for the dividends of the founders'), and £258 13s. in cash and 12,557 fully-paid shares of £1 each in the Tasmanian Silver Mining Company, Limited, were carried forward. Of these 1,392 were subsequently placed to capital account, to which they now stand.

For the year ended May 12th, 1891, a dividend of £10 per cent. was paid on the ordinary shares of the Company in cash, and a further dividend of £10 per cent. in fully paid-up shares of the Tasmanian Silver Mining Company, Limited. After providing for the dividends of the founders, a balance of £561 2s. 10d., and 7,386 fully paid-up shares of the Tasmanian Silver Mining Company, Limited, were carried forward.

Since the formation of this Company great activity has prevailed in the newly-discovered mining districts. Capitalists from the neighbouring Australian Colonies have invested largely in the local silver mining properties. This district and Tasmania generally offers a splendid field for the operations of this Company.

The subscriptions for the shares now offered are required to extend the development of the Company's properties and its business.

The Company owns extensive interests in various silver-lead properties in Tasmania, and has recently commenced opening up and extracting ore from the property known as Lamb's section, a block of 80 acres, in which the Company holds a two-thirds interest in the mining lease. This property contains a lode carrying high grade ore. Two packages of first-class ore from this mine were sent to Messrs. Johnson, Matthey and Co., Limited, whose certificate of assay is as follows:—

Hatton Garden, London, E.C. 11th September, 1891.

CERTIFICATE OF ASSAY.

For The Tasmanian Land and Exploration Company, Limited.
We have assayed the samples of lead ore, marked as under, and find the following to be the result:—

Mark of sample.....from Lamb's section:							
		Cwt. grs. lbs.				ozs. dwts. grs.	
No. 1	...	0	2	9	Produce of silver	...	101 5 0
No. 2	...	1	0	8	Produce of silver	...	92 5 0
Per ton of 2,240 lbs. of ore.							
(Signed)				Johnson, Matthey and Company, Limited.			

A telegram from the Company's manager in reference to this property, dated September 18th, 1891, states:—

"Have 35 tons of ore ready. The ore contains 60 per cent. lead, and 106 ozs. of silver per ton. Shipment in a fortnight."

Samples of first-class ore from this property sent to a German firm assayed 79 per cent. lead and 110 ozs. silver per ton. On this basis this firm offers £24 15s. 10d. per ton for the ore.

The Company's prospecting party having made various discoveries of extensive mineral lodes on behalf of the Company has pegged out, and applied to the Government for mining leases of large areas of lands containing these lodes.

The following letter from Sir E. Braddon, K.C.M.G., the Agent-General of Tasmania, explains the practice of the Government in issuing mining leases:—

Office of the Agent-General for Tasmania,
Westminster Chambers, 5, Victoria Street, London.
12th September, 1891.

Sir,—In reply to your letter of yesterday's date, I have the honour to state that where discoveries of minerals are made upon Crown Lands of Tasmania, not specially exempted, it is the practice of the Mines Department to issue leases to the discoverers upon application, and in certain circumstances to grant reward claims or leases at a peppercorn rent.

I have the honour to be, Sir,
Your obedient servant,
E. BRADDON, Agent-General.

To the Secretary

The Tasmanian Land and Exploration Company.

Reports and particulars of these properties may be seen at the Company's office.

The new ordinary shares now offered for subscription will rank for dividend under the same conditions as the ordinary shares already allotted as from the 12th May last, and will, therefore, subject to the rights of the founders, benefit by the present assets of the Company.

On the formation of the Company an agreement, dated March 18th, 1889, made between the Company, on the one part, and E. J. Walford, on the other part, was entered into. A contract, dated 26th June, 1891, between the Company and the West Australian Exploration Company, Limited, and several other contracts incidental to the Company's business have also been entered into, none of which, however, relate to the present issue of shares, but of which particulars will be furnished by the secretary to applicants if required. All subscribers for the shares now offered for subscription shall be deemed to have had notice of all contracts entered into by this Company, and to have waived their right to all further particulars or compliance with Sec. 38 of the Companies' Act, 1867. The expenses of the present issue, including brokerage, will be borne by the Company.

The above-mentioned contracts and copies of the memorandum and articles of association can be seen by applicants for shares at the offices of the Company.

Prospectuses and forms of application for shares can be obtained from the bankers, and brokers, or at the offices of the Company.

Applications for shares must be made upon the form enclosed with the prospectus, and sent to the bankers of the Company with a deposit of 2s. 6d. per share.

Where the number of shares allotted is less than applied for, the surplus will be credited to the amount due on allotment.

If no allotment be made the deposit will be returned in full.

AGENTS FOR

GATES CORNISH ROLLS PULVERISER.

Simple, Durable, Compact, Dustless.

Giving a finished product direct from the machine.

The best Ore Granulator for leaching and concentrating in the world.

**THE INGERSOLL DUPLEX HAND-POWER
ROCK DRILL.**
A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,
MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

No. 2 DRILL.

TONITE

IS RECOMMENDED TO CONTRACTORS, MINERS, PIT SINKERS, QUARRYMEN, AND OTHERS, AS BEING THE SAFEST OF ALL EXPLOSIVES.

TONITE is a most efficient and economical blasting agent, and is largely in demand. It does not contain any Nitro-glycerine, and, is, therefore, exempt from the dangers of exudation, or of freezing and its attendant process of thawing.

THE COMPANY MANUFACTURE

PATENT DETONATORS FOR USE WITH TONITE.

Also supply Safety Fuse and Electric Firing Appliances of best description.

Address: THE COTTON POWDER COMPANY (Limited),
116, QUEEN VICTORIA STREET, E.C.

WORKS: FAVERSHAM, KENT.

REMINGTON STANDARD TYPEWRITER.

A WORD TO BUSINESS MEN.

You cannot afford to do your writing in the old way. The work of our machines is plain and business-like, obviating all mistakes in reading. Several copies can be made at one writing by the use of carbon paper. Excellent letterpress copies can be taken.

Our New Model Machine has been adopted in all the Departments of the Government service, and is being very generally introduced by all leading business houses. Does not this argue that the Typewriter should be worth something to you? The machine can be furnished with special keyboards to suit any purchaser's line of business. Write for full information.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BUSINESS SLACKENS—ATTEMPTS TO ACCOUNT FOR IT—
A BROKER GIVES HIS VIEW OF THE SITUATION AND
“WINKS THE OTHER EYE”—GENERAL COURSE OF THE
MARKETS—EFFECT OF THE MEETINGS.

WE are free to confess that the market this week has not toed the line of our expectation. There has not been so much business as the tone of things a week ago quite led us to expect. Brokers have stood too much with their backs against the wall, and their “pose” has been rather of the “got no work to do” order. The sharpening of their lead pencils has not gone on so fast as usual, and there have been fewer entries in their bargain books. The processes of mental calculation have been less brisk, and that of internal consumption in the way of eating and drinking has been more regular—possibly more frequent. Ever and anon (as they say in the novels) they have been observed to cast sundry looks towards the sky that portend a little further instalment of the holiday which was interrupted by the sudden activity of the market.

Of course all sorts of attempts have been made to account for the ebb in the tide of market affairs. Some have charged it to the weather—that hoary-headed sinner who never has a word to say in self-defence—others have attributed it to the American market, and a few have assigned it to mere “cussedness” on the part of a neglectful public, but our own more or less feeble explanation is that the settlement somewhat interfered with the ordinary course of business. Dismissing the weather, and putting on one side our own modest explanation, there can be no doubt that the American markets are associated in a striking manner with the rise or fall of mining prices. “How do you account for it?” we asked a broker this week, whose brow has become furrowed and whose hair has turned grey with the financial shocks he has received during 40 years wandering in that vanity fair called the Stock Markets. “Well you see it happens in this way. The Yankees go into their own Railways, and when they come out with a profit they do not know what to do with it, and so they say they will have a few mining shares of the low-priced order for a bit of a spec.” This probably is the explanation, for it is well known that when the Americans make a pile they never sit on it. They must

employ it in something else. They would rather lose it than not employ it at all. “And now,” we said to our broker friend; “What do you think will be the effect of the harvest?” “Oh, the harvest has been a partial failure here, a more than partial failure in Russia, but a big success in America. Money will go there in heaps, and it will be a good time for the diamond mines.” “Why the diamond mines?” “Because the American women want diamonds, and they know their husbands have the money to pay for them. Mark me, there will be a booming time in America, and there will be a booming time for diamonds.” “Then, I suppose, you intend to buy diamond shares?” He “winked the other eye” and glided silently away. Anyhow, the general opinion is that better prices will presently be seen for mining shares, possibly diamond shares not excluded.

The meetings of the week have been important, and ought to have helped prices more than they did.

We note the successful re-construction of Cumberland Gold Co. All the shares were taken, and there is a balance of 22,000l., working capital, a fully equipped mine and excellent underground prospects.

The Montana meeting was most satisfactory, and the shares hardened upon it. Not so did those of Yankee Girl, which fell, and close decidedly lower on the week.

When it became known that St. Augustine re-construction would be a success there were active dealings in the shares. All the capital the shareholders may not provide has been underwritten, so that this highly promising concern will not fail for the want of the wherewithal. Leadhills and Roman Gravels meetings were satisfactory, and the shares of the former were firmer upon it. Orita, it is clear, will shortly re-commence hydraulicling at four points instead of one as formerly, when the monthly profits were between 1,200l. and 1,300l. The positions of these various concerns are discussed fully in our leader columns.

Incidentally Mr. Kirkpatrick at Orita meeting furnished some interesting information with regard to Loma. Many shareholders have of late taken a somewhat despondent view of this concern, owing to the quoted prices of the shares on the market, but those who know what is going on at the property do not share it. The manager has the advantage of the friendly counsel of Mr. Prender, Orita's superintendent. This gentleman has managed to “rig up a little dam,” and with water about as much as would be used in a garden squirt of ordinary size, is getting out 300l. a month. Loma, in fact, is working one hour in 48, and is making 20l. per hour at the cost of a sovereign. The barometer seems to point “fair” for Loma. Gravel Gold, we also note, is on the way to prosperity, and has surmounted its many unexpected and vexatious delays. We also hear Colon well spoken of by those who ought to know.

In the Indian section great satisfaction was expressed on the announcement of the Ooregum dividend of 3s. on the preference shares and 1s. on the ordinary shares, both classes showing a rise on the week. Have our readers observed that within the last fortnight the dividend paying mines of India have distributed amongst their shareholders over 80,000l.? This is a fact worth noting. Nundydroogs have been in strong demand. People competent to speak say there is not a mine on the field that is opening up better than this. The lower priced shares have not maintained last week's quotations. Goldfields are said to be falling on the idea that pretty nearly all the proved portions of its property have been sold—Balaghat being the latest purchaser. The full particulars will shortly be announced. Mysore Harnhallis fell on the issue of Mr. Lewis Evans' report. The position of Nine Reefs is fully discussed in our leader columns. Shareholders in this company ought to peruse carefully what is there said. The crushings from the mines may be expected in the early days of next week.

In the Copper section, the movement has been wholly downward, but only fractionally so.

Kaffir shares have been less active than a week ago. The Hatton Garden fraternity seem to be a little disappointed that the public have not come into the circus more freely. With the exception of the shares we named a week since the public do well to watch

the game, but not to play at it. Generally speaking this class has lost a portion of the rise indicated last week, but the movements have been, for the most part, unimportant.

A similar observation applies to Australian shares, which have merely changed fractionally. Yes, there has been one exception—Australian Broken Hills, the market for which has not been supported, at all events, by those who sent the shares to 3l. some time ago.

But if the other markets have been dull, not so has been the General Foreign section. Here the transactions have been very large. For example, Glenrocks from 1s. rose to 4s., but close fractionally weaker. Glenrock has been in search of a property very much as Japhet was in search of a father. We are glad to see a move at last in the shares, and the market reads the outlook favourably. There has been a good deal of business in Ottos Kopjes, which are slightly firmer, and Colombian and kindred shares have by no means been inactive. Tolimas on the declaration of the dividends firmed up. Don Pedros are steadily rising, and bid fair to continue doing so. St. John del Rey shares are lower. There have been dealings in Maid of Erin shares, which, judging from the statements made at the two recent meetings, seem worthy of attention. The American trio—Yankee Girl, New Guston, and American Belle are all down, and so also are Elkhorn and Pahang Corporation.

Golden Feather and Golden Gate have been the sport of the hour, and on the publication of the report, which will be found in another column from Col. McLaughlin, coupled with the malignant rumour that the mines had actually shut down for the season, the shares were steadily offered to-day at 13s. 9d., but buyers approaching late in the afternoon, quotations went up, and close as reported in another column. We asked one who ought to know yesterday what he thought of these concerns, and whether Oroville's only Colonel could bring to fruition his many reports, and his telegrams, whose name is positively legion. He declined to express an opinion, but naively said, "I have laid a wager that he will." In regard to Flagstaff, we observe our friend the Professor is once more at New York on his way to the mine and sales of Flagstaff ore may be expected to re-commence. Our estimate is that there will be at least 300 tons ready for sampling when he arrives at the mine. We expect to see Flagstaffs standing at a much better price than we quote them to-night. There have been many transactions in New Russell shares.

But what shall we say when we come to Home shares? It is true that Leadhills, Killifreth, Wheal Grenville, Wheal Uny, and Prince of Wales (owing to a discovery reported to-day) are firmer, but "what a fall was there, my countrymen," in other Home descriptions! It is very sad to see Cornwall allowing shares steadily to drop which they are never tired of holding up as models of all that shares should be to the outside adventurer. Why do not the Cornish people come to the front and support their market? Perhaps the reason is that they know better: in any case we cannot but view with regret this continued decline in their shares. A little healthy buying would frighten the "bears," and keep up prices till some of the mines re-establish themselves. If Cornish people would only act up to their motto "one and all" instead of standing apart from each other like hairs on the back of an electrified cat, the position would soon improve. At present the "bears" seem to have it all their own way, none daring to make them afraid.

From the report we publish in another column it will be seen that a most important discovery has been made in the 180-fm. level west or bottom of Prince of Wales Mine. The patience, not to speak of the finances of the shareholders, have been sorely tried by this mine, and we should greatly rejoice if it were now to prove successful.

The outlook for next week is fairly good. The market barometer seemingly is rising. At the same time our readers have Moses and the Prophets before them in the foregoing facts, and upon them they can construct their own fabric of a business vision.

AFRICAN LANDS.

This class of shares, although not closing at anything like their best, show an improvement on the week in several instances. London and South African and Sutherland Reefs have been especially strong, while most other descriptions are a shade lower.

Business.—A rise is shown in London and South African of $\frac{3}{8}$, and Sutherland Reef, $\frac{1}{8}$; whilst the following have fallen: Bechuanaland, $\frac{1}{16}$; British South Africa Chartered, $\frac{1}{16}$; Exploring, $\frac{1}{8}$; Gold Fields of South Africa, $\frac{3}{8}$; Johannesburg Estate, $\frac{1}{16}$; New Grahamstown, 1s.; Oceana, $\frac{1}{8}$; Ophir, 6d.; and Read's Drift, $\frac{1}{8}$.

DIAMONDS.

A large business has been transacted in De Beers at varying prices, but at the close they are lower. The market, generally, is weak, the only exception being Gordon Diamonds, which have been in considerable demand, and are spoken of as going much higher.

Business.—A rise is shown in Gordon of 2s.; whilst a fall is noted in De Beers, Griqualand West, and North-Eastern Bultfontein of $\frac{3}{8}$ each.

Making-up Prices, Sept. 28.	DIAMOND SHARES.	To-night's Prices.
19/	Bultfontein Consolidated ...	19/ — 20/
13 $\frac{3}{8}$	De Beers Consolidated ...	13 $\frac{1}{2}$ — 13 $\frac{5}{8}$
8/	Gordon ...	7/ — 8/
5	Griqualand West ...	4 $\frac{7}{8}$ — 5
5 $\frac{1}{2}$	New Jagersfontein ...	5 $\frac{3}{8}$ — 5 $\frac{5}{8}$
2	North-Eastern Bultfontein ...	1 $\frac{1}{2}$ — 1 $\frac{3}{4}$
1 $\frac{1}{16}$	Burma Ruby Mines 15s. paid ..	1 $\frac{1}{16}$ — 1 $\frac{3}{16}$

INDIANS.

These shares have been dull, but towards the close some quiet buying took place, which caused a rise in Nundydroog and Ooregum Preference and Mysore Goldfields, but Mysore Harnhalli and Balaghat are all lower.

Business.—A rise is shown in Glenrock of 1s.; Nundydroog, $\frac{1}{8}$; Ooregum "Pref.", $\frac{1}{8}$; and South East Mysore "Pref.", 3d.; whilst a fall is noted in Balaghat of 9d.; Goldfields of Mysore, 6d.; Mysore Gold, $\frac{1}{4}$; Mysore Harnhalli, 1s.; Mysore Reefs, 3d.; Mysore West, 3d.; Mysore Wynaad, 3d.; and Nine Reefs, 3d.

AUSTRALIANS.

A brisk business has been done in the shares of several of the companies comprising this market. Australian Broken Hill, Day Dawn P.C., and Gympie Great Eastern have been the most prominent, but prices have not been maintained.

Business.—A rise is shown in Day Dawn Block of 3d.; Gympie Golden Crown, 6d.; and New Queen, 3d.; whilst a fall has taken place in Australian Broken Hill of 4s.; Bonnie Dundee, 6d.; Day Dawn P.C., 6d.; Gympie Great Eastern, 6d.; and Wentworth Proprietary, $\frac{1}{8}$.

COPPER.

These shares have been dull, and prices generally have receded. The greatest sufferer, as usual, has been Rio Tinto, the shares of which have fallen 12s. 6d., and others have followed in a smaller degree.

Business.—There is no rise to record, but the following have fallen:—Capes, $\frac{1}{8}$; Libiola, $\frac{1}{8}$; Mason and Barry, $\frac{3}{8}$; Namaqua, $\frac{1}{8}$; Panulcillo, $\frac{1}{8}$; and Rio Tinto, $\frac{5}{8}$.

GENERAL FOREIGN SHARES.

A fair amount of business has taken place, but as usual the settlement has tended to limit transactions. Don Pedro, Tolima, and Colombian Hydraulic shares have been in special favour, and prices have hardened, while American Belle, Elkhorn, Golden Gate and Feather, New Guston, and Yankee Girl have been offered. The market closes firmer.

Business.—A rise is shown in Amador of 3d.; Barrett's, 3d.; Colombian Hydraulic, 1s. 6d.; Don Pedro, $\frac{1}{16}$; Montana, 6d.; New Viola, 3d.; Orita, 6d.; and Tolima "A" and "B," $\frac{1}{4}$. The falls are in American Belle, 2s.; Balkis, 6d.; Edwin Bray, 3s.; Elkhorn, $\frac{1}{8}$; Frontino, 1s.; Garfield, 6d.; Golden Feather, 3s.; Golden Gate, $\frac{3}{8}$; Kohinoor, 3d.; Lisbon-Berlyn, 3d.; Monte del Oro, 6d.; New California, 3d.; New Guston, $\frac{1}{8}$; Pahang Corporation, 2s.; Spitzkop, 3d.; St. Augustine, 3d.; St. John del Rey, 1s.; and Yankee Girl, 1s. 6d.

The following list shows the principal changes which have taken place:—

	Last Week.	This Week.
Amador ...	4/ 4/6	4/3 4/9
American Belle ...	9/6 10/	7/6 8/

LATEST FROM THE MINES.

INDIAN MINES.

INDIAN GOLD MINES (GLASGOW).—The following information has been received to-day from the mines, viz:—September, total amount crushed is 890 tons, yielding 68 ozs. Tunnels 6 and 11 north looking well. Assays satisfactory.

OOREGUM.—At a meeting of the directors of this company held on Tuesday it was resolved—"That an interim dividend (free of income-tax) of 3s. per share on the preference shares, and 1s. per share on the ordinary shares, be, and is hereby declared, payable on Oct. 27, 1891, to the shareholders on the books of the company on Oct. 6, 1891, and that the transfer books be closed during the said Oct. 6."

COLONIAL MINES.

BLUE SPUR AND GABRIEL'S GULLY.—The manager cables the result of the working for the four weeks ending Sept. 26, as "315 ozs."

BRILLIANT.—The company crushed during the fortnight ending Sept. 26, 1,212 tons for 2,135 ozs. gold, value 7,500*l.* A dividend (the 26th) of 2s. per share is declared for the fortnight.

BROKEN HILL PROPRIETARY.—The usual monthly dividend of 2s. per share, amounting to 96,000*l.*, on the 960,000 shares, has been declared, and will be paid in London and Melbourne on Oct. 21.

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending the 26th inst.:—"Tons crushed, 720; yield of gold, 1,050 ozs.; approximate value, 3,620*l.*; fortnight's expenses, 1,200*l.*" The company has declared an interim dividend of 6d. per share, free of income-tax, payable on Oct. 21.

DAY DAWN P.C.—A cablegram received from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Sept. 26, viz.:—"990 tons, 983 ozs." (Estimated value, 3,440*l.*) "Lost one day holiday."

KAPANGA.—Telegram from Capt. W. H. Argall:—"Have crushed 70 tons, yield 17 ozs. of gold."

MIDAS.—Yield for week ending Sept. 26, 32 ozs.

MOUNT LEYSHON.—A cablegram from the manager at Charters Towers gives the fortnightly crushing:—"1,400 tons crushed, 375 ozs. gold; 40 stamps mill ran 288 hours."

MOUNT MORGAN.—Messrs. Laughland, Mackay and Baker have received the following telegram from the Mount Morgan Gold Mining Co., Limited, Queensland:—"We pay 25,000% on Thursday, being dividend of 6d. per share (free of dividend tax) for the month of Sept."

NEW CONSORT.—Letters of allotment for the capital of this company have been duly posted.

WENTWORTH GOLDFIELDS PROPRIETARY.—A cable from Mr. W. H. Irwin, the company's manager, states:—"In the north drift of Phoenix Mine, 200-ft. level, we have cut a vein of calcite 10 ins. wide, assaying 2 ozs. to the ton, and looking very favourable. In the winze of this mine the ore has improved from stringers to bunches. The cross-cut in the Shamrock shaft, 200-ft. level, has made a further progress of 35 ft., still in serpentine; the south drive, 240-ft. level, shows stringers of ore. The cross-cut from the trial shaft, Chapel Hill Quartz reef, has reached the footwall. Will at once start cross-cutting from Reform shaft, 400-ft. level, and pumping to drain the old workings. All the workings are being driven by rock-drills. The mill is now working on concentrating ore."

FOREIGN MINES.

ALAMILLOS.—The profit for the six months to June 30 last amounted to 2,927l. 13s. 11d., out of which a dividend of 1s. 8d. a share has just been paid.

BRATSBURG.—The first drawing of debenture bonds of the above company has been made in accordance with the debenture prospectus, and the bonds drawn are now payable at the office of the company on presentation.

CALLAO BIS.—The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained during the month of Aug., viz., 1,041½ ozs.; the sum of 4,081l. 16s. 7d. has been realised for same.

ELKHORN.—Cable information from the mine:—"Bullion produced for week ending Sept. 26, \$9,120."

FORTUNA.—The accounts show a profit of 2,760l. 13s. 1d. for the six months ended June 30 last. A dividend of 2s. a share has been paid.

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Work on head-dam progressing finely. Delay in sluicing is due to the breaking down and repair of elevators, a leak in foot-dam, and break in pipe-line. All this has been repaired. I am doing all possible to commence sluicing, also sinking to reach pay near head-dam. Positive of reaching pay this season and completing dam."

GOLDEN GATE ALLUVIAL SYNDICATE.—Cable from Col. Frank McLaughlin, at Oroville:—"The nature of the work prevents rapid progress, all sinking being in *débris*. Am sinking at Turner pit, the indications are very good, also at other workings. I am doing all possible to reach pay. Weather very fine."

GUADALCAZAR QUICKSILVER MINES.—The following cable is from Mr. Robert Mackenzie, the resident engineer at the mines:—"Please send me another surveyor immediately. In winze cross-cut No. 2, three faces of ore, one with 43 square ft. already exposed, still extending and improving rapidly in depth. Reserves increasing daily, largely in tribute works."

GUADALUPE (HONDURAS).—This company is prepared to pay, upon presentation, the coupons for the half-year's 8 per cent. interest upon the debenture issue.

LINARES.—The accounts for the six months ended June 30 last show a profit of 5,836l. 15s. 11d., out of which the directors have declared a dividend of 8s. a share. The decreased profit is accounted for by a decrease in the quantity of ore raised and lower prices obtained for the company's produce.

MAID OF ERIN.—Yield for week ending 26th inst., 1,050 tons estimated value, \$25,000. We are accumulating our carbonate ores pending the completion of new contract. The warrants for the second interim dividend (at the rate of 30 per cent. per annum) have been posted.

NEW RUSSELL.—It is announced that new certificates are now ready in exchange for the old shares, and the certificates for the new issue also ready in exchange for receipts.

OURO PRETO GOLD MINES OF BRAZIL.—The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of July, which realised 3,895l. 9s. 9d.

TOLIMA.—The directors of this company will pay, on Oct. 15, the following dividend on the "A" shares as they stand on the register on the 7th inst., viz.:—10s. per share on the "A" shares, being a dividend at the rate of 10 per cent. for the year 1887.

HOME MINES.

ATLAS.—The second annual meeting took place at Camborne, on Tuesday, Capt. Josiah Thomas presiding. The chairman stated that they had sold 10 tons of tin, which left a loss on the six months' working of about 51%, and they had still an available balance of uncalled capital of over 1,000%. It was pointed out that there were unpaid calls amounting to 573%, and it was urged that these should be collected. A further call of half a crown per share will be made.

GREAT LAXEY.—The directors will declare a 10s. dividend at the meeting on Oct. 14.

NORTH LAXEY AND GLENCHERRY.—Only 3,462 shares remain unallotted, and these are now offered to the shareholders.

WEST BASSET.—A call of 1,500l.—5s. per share—was made. No improvement appears to have taken place in the mine.

MESSRS. MORRISON, KEKEWICH AND CO., metal brokers and agents, write, "By mutual consent, our partnership has been dissolved, so far as concerns Mr. Thomas Morrison, and we have taken into partnership Mr. Hugh Haughton Kekewich."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

JUMPERS.—Obtained 1,269 ozs. gold during Sept.

GLENCAIRN MAIN REEF.—Crushing for Sept., 609 ozs. from 1,501 tons; 20 stamps running 29 days.

SHEBA.—Telegram for the month of Sept.: "2,860 tons crushed; yield, 3,400 ozs. of gold; ore in No. 15 winze is improving."

GELDENHUIS ESTATE.—Crushed during 26 days last month 2,205 tons, which yielded 2,203 ozs. of gold. The profit for the month was 7,000l.

GRASKOP MILL.—The consignment of gold from the July crushing of 205 ozs., has been sold through Messrs. Johnson, Matthey and Co., Limited, for 789l. 1s. 9d., or 3l. 16s. 8½d. per oz.

NEW CHIMES.—Extract from a letter received from the secretary in Johannesburg by to-day's mail:—"684 tons, milled 435 ozs. 7 dwts. of smelted gold won. 25 stamps running 13 days."

COETZEESTROOM ESTATE.—A telegram to-day from the manager states:—"Have crushed since last message 370 tons, averaging 4½ dwts." Advices report water short and labour scarce, but more water was expected in Oct."

CRÆSUS.—Official intimation states that the long-standing dispute between the Langlaagte and Cræsus Co.'s has at last been satisfactorily settled, and the latter company is now in possession of a clear and undisputed title to its property.

TRANSVAAL MORTGAGE, LOAN, AND FINANCE.—The company has this day received the following cablegram from the Simmer and Jack Gold Mining Co.:—"Quartz crushed during month, 7,395 tons; obtained, 3,373 ozs. gold during month."

NORTH-EASTERN BULTFOUNTEIN.—Summary of telegraphic advice for the five weeks ending 26th inst.:—"Blueground on floors not yet ripe. Work done, mainly re-washings, 75,000 loads, producing 5,750 carats of diamonds. Increase of blueground on floors, 49,000 loads."

FORBES' REEF.—The manager reports progress for Aug.:—"Main reef: West winze sunk for month 5 ft.; total depth of winze, 68 ft. Cross-cut north-west: Ground driven for the month, 29 ft.; total length of cross-cut, 63 ft. Cross-cut south-east: Ground driven for the month, 23 ft.; total length of cross-cut, 23 ft."

NEW PRIMROSE.—August report: Thirty stamps, No. 1 battery, ran for 29 days, crushing 2,810 tons ore, giving 1,564 ozs. melted gold. 20 stamps, No. 2 battery, ran 27 days, crushing 1,750 tons ore, giving 911 ozs. melted gold. Development during the month in cross-cuts, drives, and rises was 764 ft., developing 9,250 tons ore. The cost of working for the month, including 980l. 10s. 3d. spent in development and sinking Milne shaft, has been 4,589l. 15s. 2d., leaving a profit of 4,320l. 4s. 10d.

MAY CONSOLIDATED.—Report for Aug.:—"Quartz milled, July, 4,805 tons; Aug., 6,185 tons. Quartz at grass, July, 6,912 tons; Aug., 6,784 tons. Smelted gold, July, 2,167 ozs. 17 dwts.; Aug., 2,378 ozs. 1 dwt. Value of gold—say, July, 7,858l. 8s. 6d.; Aug., 8,620l. 8s. 9d. Average per ton, July, 7 dwts. 11.27 grs.; Aug., 7 dwts. 16.55 grs. Number of stamps, July, 70; Aug., 70. Cablegram dated Johannesburg, Oct. 1:—"The yield of gold during the past month (Sept.) was 2,400 ozs. from 6,100 tons; mill running 29 days."

PRESIDENT LAND AND EXPLORATION.—Mr. Scott (general manager) reports having lately visited the farm Switzerland, Friburg district, where he found indications sufficiently promising to warrant prospecting operations being initiated. Gold has been found in the neighbourhood of the company's farm Wergalageria, Waterberg district, and Mr. Scott was leaving immediate for the spot with prospectors. At Davia Dalias, New Scotland district, the live stock are doing well, and good progress is being made with tree planting. It is anticipated that 2,000 young trees will be planted out before the end of the year.

PIGG'S PEAK ESTATE.—Mine report for week ending Aug. 29:—"Devil's reef—Drive 200-ft. level, south end: Drove for the week, 29 ft.; total, 260 ft.; ground much the same as last week. North end: Drove for the week, 13 ft.; total, 186 ft.; good boring ground, but does not break well. Remaining boys cutting wood and getting away dump. McGready's works: Cross-cut 30 ft. from surface; drove for the week, 28 ft.; total, 57 ft. No sign of reef, and have suspended work for the present. Durning's new reef—Low level drive: Drove for the week, 17 ft.; total, 157 ft. England's reef—Low level drive: Drove for the week, 21 ft.; total, 100 ft. from entrance. Battery nearly finished; filling in tailings round mortar blocks. All heavy battery gear delivered. Engine and boiler arrived and off-loaded. Dam—Excavating: Blasting away boulders above dam to give more water space; also blasting away boulders to put down light tramway to carry clay to dam. One white man and 10 boys cutting and hauling poles for dam and ore shoot."

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from the general manager's advices, dated Aug. 31:—"Mining: Ophir Hill, Theta vein, ore extracted, 120 tons; assay value 1 oz. 16 dwts. per ton; and 10 tons assay value, 3 ozs. 14 dwts. per ton; all from the quartzite formation overlying Theta proper. A prospecting party was at work in the vicinity. Brown's Hill, Nu vein: Ore extracted at No. 1,209, 25 tons; assay value, 6 ozs. 7 dwts. per ton; and at Nos. 1,211, 1,220, and 1,270, 39 tons; assay value, 2 ozs. 4 dwts. per ton. At No. 1,209 the ore deposit looks very well. Edin Hill, Rho vein: Ore extracted, 17 tons; assay value, 2 ozs. 16 dwts. per ton. Glinisters, Sigma vein: Ore extracted, 25 tons; assay value, 1 oz. 16 dwts. per ton. Mill: The battery and pans had worked as usual, and the monthly clean-up was in progress. A small parcel of very rich ore from the Nu vein had been passed through the pans during week. Bullion: Two bars melted gold, weighing 233 oz. (part of Aug. produce), valued at 875l., were forwarded on Aug. 25."

CERRO DE PASCO (Aug. 31).—Results of pannings from 10 ft. reef: Week ending Aug. 8, quartz 17 tons, average 8 dwts.; week ending Aug. 15, quartz 8 tons, average 8 dwts.; week ending Aug. 22, quartz 24 tons, average 9 dwts.; week ending Aug. 29, quartz 26 tons, average 13 dwts. From this you will see that the reef is steadily

improving in quality as we drive south, and although the reef is fully 11 ft. wide now, it carries gold all through and never gives a blank in the pan. The above figures are the average of the whole width of the reef, but we have had pannings in some cases, showing $1\frac{1}{2}$ and 2 ozs. to the ton of ore. The following advices have been received from the mine, dated Barberton, Aug. 29:—Block F extension: South-east cross-cut has been driven 10 ft., making total distance 347 ft. This cross-cut is still in hard slate. Drive south on 10 ft. reef has been driven 13 ft., making total distance 84 ft. Quartz extracted 26 tons, making total 181 tons; the lode is improving as we drive south; pannings are very satisfactory. We have two European miners and 26 natives engaged on this work. Main shaft: We have six natives continually employed drawing water. Block 12: North-east cross-cut has been driven 11 ft., making total distance 198 ft. This cross-cut still continues in mica schist. We have one European miner and 10 natives engaged on this work. East end drive: Cross-cut east has been driven 5 ft., making total distance 24 ft. This cross-cut is in hard rock. Cross-cut west has been driven 3 ft., making total distance 20 ft. This cross-cut still continues in quartzite bar. Working daytime only. We have one European miner and 10 natives employed on this work.—HOWSE.

RANDT COAL MINING AND LAND (Aug. 17).—Extracts from the mine manager's report:—Coal: I am still carrying on the quarry adjoining Maggie's Mine. During the fortnight a new incline has been made for hauling the coal from the bottom of the quarry to the surface or loading level. The haulage is still done by two oxen with side tipping truck and wire rope; about 150 tons have been hauled during the fortnight. The whole of the sand, as far as it is payable to do so, has been removed, and over 1,000 tons of coal are now ready for lifting. The section of the coal in this quarry gives an average of 11 ft. of clean coal, there being no shale partings whatever. Where we opened the north end of the quarry the coal (10 ft. 6 ins. in thickness) was all bright bituminous coal, the bottom, 18 ins. only, being highly pregated with iron pyrites. New Mine: The vertical shaft is now sunk to a depth of 41 ft.; at 38 ft. we passed through two small seams of bright bituminous coal (about a foot in thickness altogether) with a few inches of black shale parting; we are now in a very hard, close-grained micaceous sandstone. The incline is now 82 ft. from the surface, measured on the slope, and yesterday we struck the same two seams as we got in the vertical shaft. Fire-clay: The bed of clay from which I previously made a few bricks (of which I sent you a sample), and burnt them in one of the coke ovens, has turned out as well as I anticipated. The bricks sent you were exposed to too sudden a heat, as well as to a sudden chill, in being taken out of the ovens. I have since had 20,000 made from the same clay; there are some which, owing to the clay not having been crushed or pugged are inferior, but the bulk of the bricks have come out splendidly, and prove that we have a valuable bed of fireclay on the property, and will quite warrant you in getting out proper machinery for the crushing and pugging of the clay, and the bricks, if properly moulded and pressed and burnt in kilns after being gradually dried, either by the sun or in proper drying flats, will turn out equal to the average fire brick made in England. It is a matter of great pleasure to me to report the success of this clay, as it enhances very considerably the value of the company's property, as well as giving me immediately a decent brick for our new coke ovens. Prospecting: The diamond drill having now arrived, I will shortly have it set to work, and I trust I will before long be able to report further discoveries of a valuable nature. So far nothing has been proved below the bed of the Oliphant's River, nor has the higher ground been prospected in any way up to the present.

REPORTS OF MEETINGS.

WEST BASSET.

CALL OF 5s. PER SHARE—IMPROVED PROSPECTS.

A SIXTEEN-WEEKLY meeting of the adventurers in West Wheal Basset was held on the mine on Thursday.

Mr. J. C. Daubuz

presided.

The accounts showed:—Debits—Labour costs, 4,144l.; carriage of coal, &c., 162l.; merchants' bills, 1,461l.; stannary assessment, rates, and bankers' charges, 114l.; total, 5,883l. Credits—86 tons 6 cwt. of tin realised 4,412l.; extra carriage of tin ore, 12l.; discount, 39l.; old iron and stone, sold, &c., 14l.; total, 4,403l., showing a loss on the 16 weeks' working of 1,403. This brings the balance against the mine up to 1,747l.

A LARGE LODE.

Capt. RICH, in making remarks supplementary to the report, said he was sorry they had to meet a loss, but he did not see how it could have been avoided. They were cast down certainly, but not despairing, as their prospects were cheering, especially in the eastern and western parts of the mine. In the 124-fm. cross-cut they had been rather disappointed, as the lode was poor. He was anxious to stop the making of calls. They must push on the western part of the mine and Thomas's shaft, and he hoped that in the course of a month or two they would be in a better position.

Capt. ROGERS said he went underground just after the previous meeting for his own information, and he was agreeably surprised. The south part of the lode in the western portion of the mine was large, but being quite a new end it took some time before it was sufficiently opened out to admit of stopping with convenience and speed. In his opinion there was a great future before that part of the mine. The rise in the back of the 130 had considerably improved. He did not see that anything could be stopped, as they were only working two points in the mine, and both, looked at from a prospective point of view, were very encouraging. (Applause.)

The CHAIRMAN, in moving that the accounts be adopted, and that a call of 5s. per share be made, said he thought they would be unwise in the face of the encouraging report presented by the agents, to take steps to cease operations. Four months was a long time ahead, however, and he suggested that the shareholders might hold a special meeting after the lapse of two months in order to reconsider their position.

Mr. WILLIAMS seconded the motion, which was carried, and it was

eventually agreed that the Chairman and Capt. Rich be empowered to call a special meeting should they deem it necessary.

On the motion of the CHAIRMAN, Mr. M. H. Williams was elected a member of the committee.

AITCHEE'S LUCK GOLD MINING CO., LIMITED.

STATUTORY MEETING.

THE statutory general meeting of the Aitchee's Luck Gold Mining Co., Limited, was held yesterday at Winchester House, Old Broad St. Mr. Howard Hodges

presided.

FOUR GOLD-BEARING REEFS.

The CHAIRMAN, in the course of some remarks respecting the proceedings of the company since its formation in June last, said that, immediately after the allotment, Mr. Etherington, the vendor, handed over to the board, on behalf of the company, the Government leases which constituted the title of their property in Australia, and these documents were at once sent to their Colonial agents, as it was necessary to have them registered in the colony. On Aug. 29, the directors had the pleasure of receiving from the Colonial agents a cablegram announcing that the documents were in order, and that the registration had been completed, and the property handed over to the company. Mr. Etherington, who was not only the vendor, but the managing director, left for Australia towards the end of July. There had not been sufficient time to receive any communication from him, but his first advices would be due in about 10 days, when anything of interest would be published in the newspapers and circulated amongst the shareholders. His instructions were to at once proceed actively with the development of the property, and to send a weekly or fortnightly report to the directors, and he (the chairman) felt sure he would do all he could to make the thing a success. Mr. Etherington's opinion of the mine, as well as that of the board, was a very high one indeed. The property, which was a large one for that part of the world, comprised 39 acres. All the mines to the north of theirs had proved highly auriferous and payable, and to the south the whole country had been taken up. This company's property, which was some 1,100 yds. to 1,200 yds. in length had four distinct gold-bearing reefs running through the whole length of it. He was pleased to say that Mr. Etherington had shown his confidence in the property by taking the whole of the purchase-money in shares. Under all the circumstances he thought their prospects were highly satisfactory, and when next they had the pleasure of meeting he hoped those prospects would have become actual facts, and that they would have something very good to report.

No questions were asked, and the proceedings terminated in the customary manner.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Oct. 1).—Watson's engine shaft: In the 172-fm. level east the lode is 3 ft. wide, producing a little copper and mundic ores. In the 160-fm. level west the lode is 4 ft. wide, and will yield 1 ton of copper and mundic ore per fm. We have two stopes working in the bottom of the 160-fm. level west, and one stope in the back of the 148-fm. level west the lode in each stope yielding 5 tons of copper and mundic ore per fm. There is no change in any of the other points of operation throughout the mines since the date of the last report.—W. CLEMO.

DRAKEWALLS (Sept. 30).—The engine shaft is now down 13 fms. 2 ft. below the 160-fm. level; the ground at the bottom is composed chiefly of a very fine granite, with a little capel and occasional veins of tin. Last evening we had a very serious breakage, viz., two of the main pumping rods broke about 20 fms. from surface; fortunately, the engine (to all appearances) is not damaged. We are getting on as fast as possible with putting in the new rods, &c. The cross-cut north at the 160 east of the engine shaft is put out 3 fms. 3 ft., and can see no north wall; so far as seen it will yield 7 tons mundic per fm., and saving work for tin. The 160-fm. level has been driven west of the engine shaft during the past month 3 fms.; the lode is producing a little mundic and tin ores. The 147-fm. level has been driven east 2 fms. 4 ft. 3 ins. in the past month. The part of the lode carried $4\frac{1}{2}$ ft. is yielding a little saving work both for mundic and tin ores. The lode in the three stopes in the back of the 160-fm. level west are producing respectively 10, 8, and 7 tons mundic ores per fm., and saving tin work. The lode in the stope in the bottom of the 147-fm. level east is yielding 15 tons of mundic per fm., and saving work for tin, and the stope in the back of the 132 west of the cross-course is producing 2 tons copper ore and 3 tons mundic per fm. We sold yesterday 7 tons 5 cwt. 1 qr. 11 lbs. of tin at 50l. 5s. per ton. We finished cleaning out the arsenic chambers to-day, and shall commence carting to the barge to-morrow. We are getting on as fast as possible with preparing and burning a parcel of copper ore for the next sampling; we expect to sample about 60 tons.—H. RODDA.

ROMAN GRAVELS (Sept. 24).—The 155 north is driven 22 fms. 1 ft., the division of the vein in the forebreast being $2\frac{1}{2}$ ft. to 3 ft. wide, producing about $1\frac{1}{2}$ tons of lead ore and blende to the fm. A division of the lode was left several fathoms behind present end going off into the hanging-wall side of the drive, and we think that the forebreast will shortly reach the junction of these portions of the vein, where a great improvement in productiveness should be found. The said forebreast is rapidly approaching a corresponding point to that where in the level above the lode was worth fully $1\frac{1}{2}$ tons per fm., and more productive along the sole of the drive than elsewhere. The 155 on caunter vein is driven 23 $\frac{1}{2}$ fms., the lode in present forebreast 6 ft. and very wet, and producing about 1 ton of blende and stones of lead ore per fm. The bunch of ore in the level above is undoubtedly dipping east, as is the rule in this vein, so that the said 155 is not yet driven far enough to reach it. The 140 on said vein is driven 21 fms. 4 ft. from the junction with Roman lode, and the forebreast continues to go forward in a lode 5 to 6 ft. wide, producing $2\frac{1}{2}$ tons of lead ore and saving stuff for blende to the fathom. We have now two stopes in back of this level which are worth 3 tons and $2\frac{1}{2}$ tons per fm. respectively. The winze in the 140 north on Roman vein is 3 fms. 2 ft. deep, and going down in a strong and wide lode, worth $1\frac{1}{2}$ to 2 tons of lead ore to the fm. It is to be regretted that we cannot extend the forebreast in this level in which, as we have stated in our reports, there is a vein 7 to 3 ft. wide, worth $1\frac{1}{2}$ tons per fm. Indeed, this is not the only

forebreast that should be going forward by means of rock-drills, but also the 125 and 140 on the causter, and the 125 on Roman. The last named is driven 94 fms. 4 ft. from the new south shaft, or a total distance south from main shaft of 355 fms. 4 ft., and the forebreast is still in a vein producing about $1\frac{1}{2}$ tons of lead ore and blende to the fm. The new winze in this level is 3 fms. 2 ft. 6 ins. deep, but has not yet reached the main lode. We have to-day sold 50 tons of lead ore for 415¢.—A. WATERS.

SOUTH CONDURROW (Sept. 30).—The ground continues favourable for driving the 138 cross-cut north of Marshall's shaft. In a few days we hope the shaft will be deep enough to commence cutting trip flat below the 133-fm. level. The stope in the bottom of the 123, on the flat lode east of cross-course, is worth 15¢ per fm. The stope in the back is worth 12¢ per fm. There is no new feature to notice in the eastern part of the mine. We are driving the stamps as fast as possible, as we have a great deal of tinestone accumulated on the floors to stamp.—W. RICH, W. THOMAS.

SOUTH DARREN (Oct. 1).—Since last week about 8 ft. of the lode has been broken down in the shaft; it turned out well, and is now standing in the bottom, worth $1\frac{1}{2}$ ton of silver-lead ore per fm. We have fixed collar 6 ft. above the bottom, and are now cutting ground for lode, and intend soon to commence driving east and west, and will commence both ends in ore, the east end being worth 12 cwt. to 15 cwt., and the west fully 1 ton of silver-lead ore per fm. The stope in the 142 west has further improved, being now worth 1 ton of silver-lead ore per fm. The winze in the 130 west is without change, being still without much ore.—J. MITCHELL.

VAN (Oct. 1).—In the cross-cut going south at the 150-fm. level we continue to meet with strings of lead ore crossing the end, and the level is progressing favourably by six men with rock-drills. The stopes Nos. 1, 2, and 3 on the old lode in the back of the 150-fm. level still yield on an average 15 cwt. of lead ore per fm. Stope No. 1 over the 135-fm. level on the south lode is producing 25 cwt. per fm. The drift east from the end of No. 2 stope is in a promising vein, worth for lead 5 cwt. per fm. The stope over the 105-fm. level west of Seaham's shaft is turning out 1 ton of lead ore per fm. The 150-fm. level going east from Seaham's winze is still in a strong lode, containing a good mixture of blende. This end is being pushed forward by rock-drill and six men. To-morrow we shall sample 50 tons of lead ore for sale on the 9th inst.—J. PAULL.

WEARDALE LEAD.—Report for week ending Sept. 26.—Ore raised for week, 36 tons; ore dressed for week, 79 tons; ore, slag, and fume smelted for week, 121 tons, producing 62 tons of pig lead.

WHEAL CREBOR (Sept. 28).—The part of the lode carried in the 156 east is worth 3 tons of mundic per fm. Good progress has been made in driving the end during the past week, and the appearance of the lode has improved. We hope in one week from now to be in a position to cross-cut the lode to ascertain its full size and value. We have let the 156 west to drive at 7¢ per fm. The contractors have commenced work to-day. The lode in the end driving west at the 132 is worth 3 tons of mundic per fm. The lode in the stope in the bottom of the 144 east of winze is worth 2 tons of copper and 3 tons of mundic per fm. The lode in the stope in the back of the 144 west of cross-cut will yield 3 tons of copper ore and 4 tons of mundic per fm. Our tributaries are now busy cleaning their ore and getting it ready for the next sampling.—P. D. HOLMAN.

WHEAL UNY (Sept. 30).—We have re-fixed the drawing lift which conveyed the water from 244 to the 230, and have now placed it in bottom of shaft, which is 4 fms. below the 244. By so doing we have thrown away the sinking lift, and taken off one piece of main rod and the bucket rods, &c., and left the shaft clear for cutting down the south side of shaft to get ready for sinking on main part of the lode. In doing this and sundry other work to the pitwork we have done but little in 244 since last week. The shaftmen are now cutting down the shaft, this we shall carry on with all possible speed. No other change since last reported.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALASKA TREADWELL.—The official statement of the company for the month of Aug. is at hand, showing:—Receipts: Free gold from 20,000 tons crushed, \$2.84 per ton of ore, \$56,849.66; chlorination; Treating 543 tons concentrates \$1.06 per ton of ore, \$21,214.25; chlorination filterings sold \$0.20 per ton of ore, \$4,027.08; interest received, \$0.02 per ton of ore, \$285.75; total, \$4.12—\$82,376.74. Expenditures: Mining: 20,00 tons ore, \$0.59 per ton of ore, \$11,690.62; Milling: Crushing 20,000 tons (510 tons concentrates saved), \$0.24 per ton of ore, \$6,830.69; Chlorination: 543 tons concentrates treated, \$0.22 per ton of ore; \$1,423.87; general expenses at mine, \$0.07 per ton of ore, \$1,438.89; general expenses at San Francisco, \$0.02 per ton of ore, \$394.75; bullion charges, freights, and refining, \$0.06 per ton of ore, \$1,218.87; total, \$1.30 per ton of ore, \$25,997.69; mining profit for month, \$2.82 per ton of ore, \$56,379.05; less construction, new machinery, &c., \$0.34 per ton of ore, \$6,713.68; net profit for month, \$2.48 per ton of ore, \$49,665.37. The gross yield per ton was hence 4 dwts., while the costs (exclusive of construction works) were $1\frac{1}{2}$ dwts. per ton.

ANDALUSIAN.—Report for Aug.—Ore raised, 1,119 quintals, equal to 50 tons. The 4th level east: Driven 12.15 metres; this level continues showing ore, but the vein is irregular; stoped 11.64 metres on tutwork. The 3rd level east: Driven 16.80 metres; also carries a varying lode; in the back of this level near the end we have stoped 24.55 metres on tutwork; further west we have a good stope on tribute. The 4th level west: Driven 9.15 metres; this has carried and carries a good lode, varying from $\frac{1}{2}$ ton to 1 ton; it is now worth 1 ton per fm.; both the stopes in this have been worked on tribute, and have turned out very good ore. The 1st level cross-cut north is now 9.40 metres in length.—W. A. HAZELDEN.

ANTIQUITA.—The directors have received advices from Mr. J. H. White, dated Aug. 6, and from Messrs. Restrepo, dated Aug. 13. The statement for the month of July is as follows:—454 tons produced 170½ ozs.; average, 7½ dwts. Estimated value of the gold, 476¢; cost at the mines, Medellin, and in London, 546¢. 14s. 9d.; estimated loss, 70¢. 14s. 9d. During the month sums amounting to 93¢. 18s. 3d., included in the above statement of cost, were expended in Colombia on capital account.

BRATSBERG.—Report for week ending Sept. 19: Hoffnung Mine: There is but little change at any of the points of operation at No. 2 adit level since last report. No. 3 adit level does not improve as rapidly as we could wish, but, nevertheless, is looking very well

indeed, and the prospect for the near future is very good. The rise here is still worth 1 ton per fm. The lode at No. 4 level is now about $1\frac{1}{2}$ ft. wide, and is yielding good saving stuff; in fact, more ore than it has produced for some considerable time past. The trial drift at Murchison's is yielding $\frac{3}{4}$ ton per fm. Johannes Mine. The western level on Howard lode is worth $\frac{1}{2}$ ton per fm., the eastern level $\frac{3}{4}$ ton, and the eastern rise $\frac{3}{4}$ ton per fm. The main rise is worth fully 1 ton per fm. Surface work and remarks: No change under this head; all going on very well.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING.—Report for week ending Sept. 19:—There was no smelting last week, we having been engaged in burning lime in the water jacket, and mixing same with buddle ore and flux dust; we have also been extending the floor, and doing sundry odd jobs. Electro depositing is going on satisfactorily, and we are shipping copper steadily. We have a stock of copper here over and above what is now in the tanks, so that there shall be no stoppage here.—T. F. SMITH.

COLORADO (Sept. 15).—The manager reports that the mines are being worked at 17 different points, and states that the new ground working is very favourable. The Rubado drift on the Coin lode appears to be getting into a good strong ore body. The Babcock drift on the Brown lode, Mammoth tunnel level, after being driven several hundred feet, is now getting into a good ore body. The mineral vein is about 4 ins. wide, and the ore milled 119 ozs. silver per ton and 12 per cent. lead, and 67 ozs. silver per ton and 26 per cent. lead, in two classes. In a short time a great increase is expected in the output from the Fonia stope on the Brown lode, Silver-ore tunnel level. A raise is being put up and mill holes made for the more convenient working of this stope, and when completed the working force will be increased. Terrible mine, 1st level: Mineral vein, 2 ins. to 3 ins. wide. Ore milled, 363½ ozs. silver per ton and 134½ ozs. silver per ton. 2nd level: vein, 1 in. to 3 ins.; ore milled, 82 ozs. silver per ton. Coin lode, Rockwell adit level: There is some improvement in this drift; the walls of the lode are now better defined, and the lode matter is composed of good mineral-bearing rock. Brown lode, Rockwell adit level: Two stopes working at this point. Ore milled: 263½ ozs. silver per ton, 11 per cent. lead; 130 ozs. silver per ton; in two classes; 179½ ozs. silver per ton; 103 ozs. silver per ton; 109 ozs. silver per ton, in three classes. 25 tons of clean ore have been sold since last return.

CORTEZ (Sept. 12).—Report from the superintendent.—Work at the mines for the week ending this date has been as follows:—North-east raised stoped 33 tons of ore; north-west raise stoped 100 tons of ore; run into ore house, 125 tons of ore; trammed to the mill, 30 tons of ore; worked at mill, 129 tons of ore; average assay for the week, 62½ ozs. silver per ton.

CUMBERLAND (Aug. 8).—I beg to submit my progress report up to date:—No. 2 shaft: As stated in my last report, we commenced carrying down this shaft a further 100 ft. on July 6; since then, 22 ft. have been sunk. After sinking some 12 ft., the ore, as mentioned in my report of Feb. 7 last, made into a solid reef on the footwall of the lode, averaging across the shaft from 6 ins. to 10 ins. in width, being fairly mineralised and showing a little free gold. There is also a 2 ft. reef on the hanging-wall side, but up to the present I cannot say it appears payable. It is, however, slightly painted with mineral, and may improve any day. Owing to the size of the formation, we have not been able to properly prove this stone, and it will be inconvenient to do so until we open out for No. 8 level. The contractors are getting along so slowly that I fear the shaft will not be completed until the end of November. No. 1 winze—No. 7 level: This was commenced on the 3rd inst., at a point 60 ft. north of No. 2 shaft in No. 7 level. I have every reason to believe we shall also be on stone in this portion of the mine before my next report.—A. GALLAGHER.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending Aug. 1:—No. 2 underlie shaft: This shaft has been sunk a further depth of 7 ft., making total depth from the surface, 1,481 ft. The 902-ft. level west: This level has been driven a further distance of 22 ft., making total distance from the shaft 112 ft. The reef is now about $4\frac{1}{2}$ ft. in thickness. It is of a little better quality than it was when last reported on. The stone carries good minerals. In the leading stope above this level the reef will average 5 ft. in thickness of payable quality. More men will be employed here as soon as the winze is intersected. The 805-ft. level west: The reef in the stopes will average 4 ft. in thickness, of fair quality. No. 1 winze has been sunk a further depth of 19 ft., making total depth, 95 ft. This is the estimated depth to break through into the 902-ft. level, when the latter has been driven far enough. No. 2 winze has been commenced, and sunk a depth of 16 ft. to date. The reef here is 5 ft. in thickness of good quality. A rise will be commenced during the coming fortnight to meet the winze now being sunk from the 630-ft. level. The 630-ft. level west: The reef in the stopes above this level varies from a few inches up to 2 ft. in thickness of payable stone. The winze has been sunk a further depth of 22 ft., making total depth of same 82 ft. There are about 60 ft. more to sink to break through to the stopes below. The 500-ft. level west: The cross-cut from the end of this level has been driven a further distance of 9 ft., making total distance driven 33 ft. The present end appears to be in the footwall country. The last 10 ft. driven have been in disordered country, consisting of a mixture of diorite and soft formation.

DAY DAWN P.C.—Report for fortnight ending Aug. 15:—The output of quartz is 1,006 trucks. Sent to the Excelsior mill, 1,062 tons. No. 13 level has been extended a further distance of 10 ft., making a total distance of 89 ft. The formation is 17 ft. wide, carrying 3 ft. of stone on the footwall and 4 ft. on the hanging-wall, of good quality. The leading stope over the back of this level is carrying 3 ft. of stone, of fair quality. No. 12 level has been extended a further distance of 14 ft., making a total distance of 409 ft. The formation here is about 12 ft. wide, carrying 6 ft. of stone, of good quality. The leading stope over this level is carrying 6 ft. of heavy mineral stoue. The No. 2 stope is carrying 5 ft. of stone, and in the No. 1 stope we have 3 ft. of stone, all of which is of good quality. In the No. 1 stope going west from the No. 2 winze we have 6 ft. of stone, of good quality. No. 11 level hanging-wall drive: The leading stope over this level is carrying 3 ft. of very good stone, and in the No. 1 stope we have 2 ft. of fair stone. The leading stope over the footwall drive is carrying 1 ft. 6 ins. of stone, of medium quality. In the No. 6 stope there are 6 ft. of stone; in the Nos. 4 and 5 stopes we have 3 ft. of stoue, and in the No. 3 stope going west from the No. 3 winze we have 8 ft. of stone. In the No. 2

stope we have 6 ft. of stone, and in the No. 1 there are 4 ft. of stone, all of which is of good quality. The No. 5 winze on this level has been sunk a further depth of 14 ft. and holed through to No. 12 level, making a total depth of 80 ft. No. 10 level hanging-wall drive: The stope going west from the winze is carrying 2 ft. of stone of fair quality, and in the stope going east we have about 9 ins. of stone of good quality. 240-ft. level: The cross-cut at the end of this level has been driven 14 ft.; we have passed through several small leaders of inferior quality, but have no signs of a footwall yet. I have had six men in each shift underhand stoping on both sides of the shaft at No. 11 plat this past week, for the purpose of building shaft styes and putting in extra caps, as the ground here has become very heavy, breaking down several sets in the shaft, and opening out sets in the level, some of which are 20 ins. in diameter. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 97 trucks; No. 12 level, 341 trucks; Nos. 10 and 11 levels, 533 trucks; No. 2 shaft: Stopes under No. 5 west level, 35 trucks; total 1,006 trucks. No. 2 underlie shaft.—No. 5 level west: The stope under this level has been carrying 2 ft. of stone of fair quality, as we are now drawing towards the end of this shoot of stone; the reef shows signs of pinching. No. 4 level east: I have started the cross-cut at the end of this level, but was obliged to take the men out to cut down the side of No. 1 winze to connect with No. 1 pass for the purpose of getting the mullock away, which I use for filling up the stopes at the main shaft. I have also had the No. 2 winze cut down and connected with No. 3 pass; this will be for quartz. No. 3 winze on the west side has been sunk 16 ft. on a reef varying in thickness from 1 ft. to 3 ft., the present thickness, which is of fair quality. No. 3 straight shaft.—The brace and poppet heads are now finished; there still remains a few little odd jobs to be done, such as laying rails making a mullock track. To do this work I have kept on one carpenter. The well hole has been sunk a further depth of 5 ft., making a total depth of 74 ft. from the surface. We have also timbered up 18 ft. of shaft. I have opened out at 74 ft., and driving 5 ft. towards the main shaft. Lease No. 1,280: Since last report we have fixed the plat, timbered the mouth of the western drive, and widened it to its proper size for a distance of 18 ft. from the underlie; there is a big formation here carrying a small leader of poorish quality stone. The eastern drive has been widened about 6 ft. from the shaft, leaving about 9 ft. more to strip to the end; will also have to timber the mouth of this drive, as the ground is a bit shaky. The formation and leader here are similar to those in the western drive. If all goes well we shall be able to make a fair start next week.—T. LESTER.

DON PEDRO (Aug. 31).—Maquine Mine monthly report: Operations have again been carried on very satisfactorily throughout the month in sinking the shaft under the 40 horizon, also in driving towards same from the 50-fm. level. The 50-fm. cross-cut has been operated upon with good results. The Canoa shoot of lode has been penetrated, as previously reported, and all other work throughout the mine has been carried on very successfully. Gordon's shaft: This has been sunk in very hard sandstone for the distance of 10 ft.; total distance sunk under the 40, 6 fms. 2 ft. 5 ins. The drive from the 50 towards this has been driven the distance required, and the rise towards shaft has been started and risen 4 ft. This is now letting down the water very considerably. The ground still remains hard, which causes progress to be a little slow; nevertheless, the nature of the ground is better than being soft, as we are under the old P. P. incline, and great care has to be taken. The 50-fm. level cross-cut: We are pleased to state that we have reached the Canoa shoot of lode, and from same very rich samples of gold are obtained; distance driven for the month, 13 ft. 3 ins.; total distance driven through rich mineral since lode first cut is 95 ft. 3 ins. This cross-cut will have to be continued through the Canoa shoot of lode and into the underlie lode, but for the present it is not expedient to carry on this work, as we consider the shaft is more important to be accomplished to the 50 horizon. As you are aware, our appliances for hoisting for the present are very slow, and as better progress is being made in excavating the shaft, the whim is required all the time in removing the stuff from the said shaft and new drive. You may judge that we have a very large quantity of reserve ground already laid open as soon as our new hoisting power is ready. Gordon's shaft repairs: Several sets of timber have been fixed, chiefly under the horizon of the adit level; also back laths placed where required. This shaft now is in a fair working order, although there are still some more old sets to be taken out, and others put in their place. This will be continued as required. New lobby: Very good progress has been made here through hard sandstone, which up to date will stand without timber. Driven for the month, 72 ft.; total driven, 155 ft. New adit: Since the 1st of the month 27 ft. of open cut has been excavated. Since then, and up to date, seven sets of timber have been fixed with back and side laths, making a total drive for the month of 65 ft.; the ground is very favourable, composed of soft sandstone. In this nature of ground good progress will be made, and we hope to cross the flookan before the wet season sets in. We have now put three shifts of men to work to carry on this work with all possible speed. Running work: We have fixed a very powerful winch at the entrance of Gordon's shaft for changing of buckets or any other work in connection with pitwork. We are also preparing to remove the old capstan to another position to enable us to commence excavating ground for new gear. One new stand has been made and fixed to support the wire transmission from Dawson's wheel. The old adit has been kept in repair with two natives. A small force is employed repairing dwellings which we are very much in need of. Explorations: For the last two weeks little has been done in consequence of the force employed about other work, work which must be attended to before the rain sets in; therefore, we have taken the force from the exploratory works to carry on the new work at surface.

EMMA.—Several reports are now to hand from this company. The latest is the following:—Sept. 14.—In handing you my report for the past week, I am unable to note any new feature. On the Emma tunnel level we worked the usual force of nine men stoping and timbering, also three carmen running low grade ore and waste rock to surface. We mined some 75 tons low grade ore, which has been put through concentrating mill, producing about 7 tons concentrates; assay value of about 80.06 per ton. In the footwall drift we worked but two men sinking; sunk 8 ft.; total, 18 ft.; the fissure we are sinking on continues narrow, carrying oxidised iron and decomposed vein matter. On the Cincinnati or Illinois level we worked four men

stoping and drifting; the outlook here is certainly encouraging. We have now drifted from raise 50 ft., following a vein of iron from 3 to 6 ft. wide the entire distance, besides have done considerable stoping. This iron carries from 2 to 5 ozs. silver, and about 3 p.c. lead and 45 p.c. iron to the ton. We occasionally find small pockets of galena ore in the iron varying in size from a few pounds up to 40 or 50 lbs., which certainly gives great hopes of this vein leading to first grade ore in quantity; the vein runs south-east, and into virgin ground, so that we have every reason for expecting ore in this vicinity. No. 3 south-east: We worked one man; advanced 5 ft.; total 11 ft. The rock is improving, is becoming more seamy and broken with iron and decomposed matter in seams. Drift south-east started from Bay City tunnel on the No. 3 fissure, as mentioned in my last report; advanced 11 ft.; working two men; total, 23 ft. I am unable to note any material change in the ground, the fissure still close, but the rock broken. We have also started a drift on this fissure to north-west, but as yet not advanced but a small distance, the fissure showing same as in drift to south-east. We put through the mill 75 tons low grade ore, producing about 7 tons concentrates. Ore now on hand 14 tons concentrates, and about 100 tons iron. Will ship this week. In the matter of cabling you result of each ore sale; this is attended to by Mr. Beunett, as you wrote him early in the spring requesting him to do; and as to the quantity of ore not coming up to expectation, we are certainly very much disappointed. The outlook in the early spring led us to believe that the output of ore this summer would be much greater, but upon developing the seams of ore, as mentioned in my letters in Feb. and Mar., either pinched out after producing a few tons, or ran into iron as in the north-west ground. I am still in hopes of yet shipping considerable ore before the season closes. In writing you I have tried to give you the appearances of the mine on the day of writing, and believe I have done so. That the ore pinched is discouraging, as well as disappointing. However, I yet believe we will find it.—H. C. WALLACE.

FLAGSTAFF (Sept. 19).—I did not send in my report last week as I was ill with pneumonia, and yesterday was the first time I could get in the mine for over two weeks. Everything, however, went on all right whilst I was away. The machinery is all in place, and all that there is now to do is to make the pipe connections between the boilers and the engine. I will have everything ready to start no later than Oct. 1. The mine is looking fine. The ore above 6th is still holding out nicely. Two mentook out 20 tons the last two weeks and all first-class. This is the only place that we are taking out any ore to speak of. There is ore in the raise between 6th and 7th levels, but we take as little out as possible as we want to make the connection as soon as we can. Main 6th is now in 208 ft.; cross-cut, 42 ft. Main 7th level is in 164 ft.; raise, 97 ft. Number of tons taken out 24, being 20 tons of first-class and 4 of second-class.—A. L. SWOPE.

—Cablegram received from Prof. Vincent on Oct. 1 from Salt Lake City, reading "Arrived well."

GARFIELD (Sept. 12).—Western mine, 180-ft. level: No. 15 winze has been sunk 14 ft., making in depth, 63 ft. The water still accumulates a little, but does not interfere with our sinking. The favourable looking ground we had last week gave out as we sank on it, and at present the ground we have is much broken up, without any signs of quartz.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Aug. 13.—I have to report that all work was stopped on the 3rd inst.; total exemption having been granted for six months. The men have all been paid off, except those required for the mill, as we are crushing 12 hours per day with 10-head of stamps for the Crown and Phoenix Co. We are also crushing with five head for ourselves, on a heap of stone that has been lying at the old whim shaft for some years. There is a little gold in it, and it costs but little to crush it at present. Stone from the Great New Zealand will be coming in about the end of next week. The old shed at the river has been sold for 6%, and the money has been paid to the secretary. Lease 777, 2 mile: At the 210-ft. level (main shaft) the north drive on the Peter and Paul reef has been carried in a total distance of 158 ft. from top of rise. The reef has been broken down, and shows a little gold, but is not payable; all workings at this level have been stopped for the present, and work is now confined to the eastern shaft at the 130-ft. level, where stripping the reef has been commenced on the slate break. Another six or eight weeks should give this break a good trial. The North Phoenix Co. have cut good slate at a depth of 420 ft. in their main shaft. The same bed should be met in our main shaft by sinking a further depth of 100 ft.—T. RAMAGE.

HARRIETVILLE (Aug. 21).—Fortnightly report.—Mons Meg Mine: Rise at back of 50-ft. level, below tunnel J, advanced 15 ft.; total, 27 ft.; the lode is 8 ft. wide, and payable throughout. The walls, however, are very much disturbed. The north drive, 100 ft. above tunnel J, has advanced 10 ft.; total, 200 ft.; the lode is 4 ft. wide, and carries a little gold. The stopes between tunnels J and K continue to produce stone of average quality. Guerdon Mine: Drive north of tunnel J on Guerdon lode extended 13 ft.; total, 201 ft.; the lode is 5 ft. wide, and averages about 6 dwts. of gold per ton. The rise at the back of this level has advanced 12 ft.; total, 22 ft. The payable portion of lode is 3 ft. 6 ins. wide, the total width being 6 ft. South rise on same lode advanced 11 ft.; total, 43 ft.; lode, 3 ft. wide and payable. Tunnel K has advanced 31 ft. towards the Guerdon lode; total, 75 ft. from the Mons Meg No. 2 lode. The ground is favourable for driving. At 37 ft. a small vein of quartz, 3 ins. wide, was traversed, which averages $\frac{1}{2}$ oz. of gold per ton. This we shall drive on when convenient, as there is reason to believe that it will open up favourably. Tiddledee Mine: The main drive south of tunnel D towards Mons Meg has been extended 25 ft.; total, 1,250 ft. For the past 60 ft. the lode in this drive has been more or less auriferous, and well-defined, and last week free visible gold was discovered in the stone; this has continued so to the present, the lode being now 2 ft. wide, and of payable quality. It is encouraging to have found gold here, as the main Mons Meg shoot, for which we are driving, will not be reached for some time yet. The drive south-east of tunnel D towards Tracy's has advanced 6 ft.; total, 149 ft. The lode here is small and poor. Drives north and south of shaft on new shoot 50 ft. below tunnel D advanced 12 ft. and 6 ft.; totals, 27 ft. and 31 ft. respectively; the lode in each end is poor, and driving has been suspended. The stopes at this point carry about 18 ins. of payable stone. The cross-cut on western vein in the drive south of tunnel C has been extended 18 ft. only, the vein having become poor. No. 1 rise on new shoot at tunnel B advanced 5 ft.; total, 40 ft.; lode 8 ft. wide, of which 4 ft.

is payable, occasionally showing fair gold. We have also driven 16 ft. south from the rise on this shoot, at which distance it has become poor. No. 2 rise on same shoot extended 7 ft.; total, 19 ft.; the lode here is small and poor. The stopes on this shoot are not turning out so well as was anticipated, as a reference to the past month's returns will show. Prospects: With the recent developments in the Guerdon lode at tunnel K, in the Mons Meg lode at tunnel D, it is reasonable to hope that the company's prospects are now on a far sounder footing than they have hitherto been; but as some time must elapse ere these points can be blocked out in such a manner as to admit of their being speedily and economically stoped, we shall not yet expect any material increase in our returns therefrom. Returns: The following are the returns of gold from the past four weeks' crushing: Mons Meg, 410 tons ore and 101 tons sand, together, with 390 tons of ore from the Guerdon, produced 1444 ozs. 2 dwts. of gold; Tiddledee, 195 tons ore, yielding 31 ozs., and 53½ tons pyrites, blanketings, &c., yielding 93 ozs. 18 dwts. gold; total returns, 572 ozs. melted gold. Deep sinking: We are now cutting out a plat at tunnel A, and shall commence to sink on the Tiddledee lode next week at a point near the end of the tunnel where a little gold was traversed by the latter, and from whence a trial crushing was formerly taken.—T. G. DAVEY.

IDAHO.—Advices from the mines:—Crown Point lode: We are still pushing ahead in driving upon this ledge, and at the same time gradually working across towards the hanging-wall, which we have not yet reached; by this you will perceive that the ledge is a very strong one, and as the quartz of which it is composed is of a very favourable character, we may reasonably hope to find it profitably productive when depth is attained, and the ledge assumes its proper dip. The rock is hard, and progress in consequence slow.

MAMMOTH.—Capt. Johnston cables that the last clean up of the mortars amounted to \$5,750, in addition to the bullion return for Aug. of \$15,350 already reported. The repairs to the mill are nearly completed. In the meantime development work is being vigorously proceeded with. During the month of Aug. 278 ft. were driven, and 83 ft. sunk, making a total development work of 361 ft. for the month. The face of the north drift: The 400-ft. level is 315 ft. from the shaft. A cross-cut at the present face through the bar, or horse, shows 11 ft. of ore next the footwall, and 2 ft. on the hanging-wall, and the horse 6 ft. thick, making width from wall to wall of 19 ft. The character of the ore is the same as when last reported, namely, \$14 per ton.

MOUNT ZEEHAN (Aug. 7).—Manager's report.—Argent section, No. 2: The 72-ft. level, north drive, on No. 4 lode, extended 10 ft.; total distance from cross-cut 16 ft. The lode itself has widened to 6 ft., but the solid galena has narrowed into 6 ins., the balance continues to be good second-class ore. Raised 3 tons 11 cwt. first-class and 10 tons second-class ore. South drive, same level, same lode, 5 ft. has been driven from the cross-cut. The formation here is only 18 ins. wide, composed of siderite, graphitic slate and galena, it is somewhat pinched on account of the counter, but looks like widening. Raised 1 ton second-class ore. Air shaft sunk 7 ft.; total depth, 32 ft.; lode formation 2½ ft. wide, quality improving, iron pyrites and siderite dying out. 7 tons very good second-class ore raised. Queen Extended section, No. 5: South-east drive on the supposed Balstrup lode extended 12 ft.; total from No. 1 lode 26 ft.; formation is 5 ft. wide, composed of siderite, felspar, graphitic slate and a very little galena, slightly better than previous week, but nothing worth saving; the lode seems to dip very fast towards us; north-west, it looks better in the bottom of the drive, and I expect that if anything very good be met will be underfoot. Montana section, No. 9: North level on course of No. 2 lode extended 12 ft.; total distance from cross-cut 198 ft.; three timber sets put in; total, 47; lode 2 ft. wide, 6 ins. of which is solid galena. Though the lode is not so wide as previous week, the solid galena is wider and looks like improving. Raised 2 tons first-class and 1 ton second-class ores.

MOUNT ZEEHAN (Aug. 14).—The manager reports as follows:—Argent section No. 2: The 72-ft. level north: Drive on No. 4 lode extended 14 ft.; total distance from cross-cut, 30 ft.; the lode continues 6 ft. wide, with two splendid walls; raised 3 tons 17 cwt. first-class and 14 tons second-class ore. Same level south: Drive on same lode extended 7 ft.; total distance from cross-cut, 12 ft.; lode 2 ft. wide, and quality improving; raised 7 tons second-class ore. Air shaft on same lode sunk 7 ft.; total depth, 39 ft.; lode formation 18 ins. wide, composed of good second-class ore, mixed with siderite; raised 3 tons second-class ore. Queen extended section No. 5—110-ft. level: South-east drive extended 9 ft.; total from No. 1 lode, 35 ft.; formation 6 ft., composed of siderite, felspar, iron pyrites, and a little galena. I am making preparations to sink the main shaft, as I do not propose continuing this drive. Montana section No. 9: North level on course of No. 2 lode extended 16 ft.; total distance from cross-cut, 214 ft.; four timber sets put in; total, 51; lode continues 2 ft. wide, quality improving; raised 2 tons first-class and 1 ton second-class ores.

MYSORE.—Mining operations for the month ending Aug. 31:—The rock-drills continue to do excellent work, and the progress generally throughout the mine has been very satisfactory. The 890 cross-cut east of Rowse's shaft has been driven 56 ft. 10 ins., at which point it intersected the dyke. These men have driven about 5 ft. north on some branches discovered in this level, and referred to in last week's report. These branches contain quartz and carbonate of lime in a disordered state, probably in consequence of being so near the dyke. We have just commenced to sink a winze on these branches, to see if they unite and improve in going down. The 620 south of incline shaft (on the west lode) has been driven 52 ft.; total distance, 148 ft.; the lode is 3 ft. wide, and assaying 3 dwts. 6 grs. The 550 south of incline shaft has been driven 48 ft.; total distance, 190 ft.; the lode is 3 ft. wide, and assaying 7 dwts. 13 grs. Glen shaft: The 250 north of shaft has been driven 66 ft. 6 ins.; total distance, 410 ft. 10 ins.; the lode is 1½ ft. wide, and estimated to be worth 5 dwts. The 250 cross-cut east of shaft has been driven 52 ft. 6 ins.; total distance, 192 ft.; there is no change to notice in the appearance of the rock. Tennant's shaft: The 360 north of shaft has been driven 64 ft. 7 ins.; total distance, 656 ft.; the lode is 2 ft. wide, containing traces of gold, but not sufficient to value. The 360 south of shaft has been driven 53 ft.; total distance, 141 ft. 6 ins.; the lode is small and unproductive, but we expect an improvement soon, as we passed through some good quartz a little way south of this place in the level above. The 290 cross-cut north of the shaft has been driven east 24 ft. 6 ins., where it intersected the main part of the lode. These

men have also driven north on the course of it 29 ft. 6 ins., in a lode 3 ft. wide, of a most promising character, and assaying 12 dwts. 1 gr. This level is now 918 ft. north of Tennant's, or about 20 ft. north of the point at which Gilbert's shaft will come down. The 290 south of shaft has been driven 26 ft.; total distance, 541 ft.; the lode is small, and occasionally yielding stones of good quartz. These men have also been stripping down some branches standing on the west side of the level, a little behind the end, to see if any part of the lode has gone off in that direction. The 235 north of this shaft and north of winze has been driven 56 ft. 6 ins.; total distance, 75 ft. 6 ins.; the lode has been 4 ft. wide, and assaying 15 dwts., but this morning we holed to old men's workings. I shall be able to give you more particulars about them next week. This is the same run of old workings we recently met with in the 180. Schaw's shaft: The 450 north of shaft has been driven 13 ft.; total distance, 482 ft.; the lode is 1 ft. wide, but nothing to value. This level has also been driven on the east part of the lode 40 ft., which at times was 2 ft. wide, and yielding saving work, but the present end is poor, and from the bearing of it will soon come out again to the west part of the lode. The 450 south of shaft has been driven 11 ft. 6 ins.; total distance, 119 ft.; the lode is 2 ft. wide, and estimated to be worth 5 dwts. The 320 north of shaft has been driven 7 ft.; total distance, 189 ft. 6 ins.; the lode is 1 ft. wide, and yielding some quartz, but not sufficient to value. The 320 south of shaft has been driven 12 ft. 6 ins.; total distance, 254 ft.; the lode is 1 ft. 6 ins. wide, and assaying 2 dwts. 14 grs. Stopes: The stopes in the different levels throughout the mine appear to be quite as good as when reported on last week. There have been no samples taken from them since then, as our assayer has been busily engaged about the monthly clean-up of gold at the mills and tailings works. Sinking: Rowse's shaft has been sunk 20 ft.; total distance, 26 ft. below the 890 level; the ground is hard, but we are endeavouring to make as much speed as possible. The winze in bottom of the 780 north of Rowse's shaft has been sunk 31 ft. 10 ins.; total distance, 50 ft. 10 ins.; the lode is still 3½ ft. wide, and worth 5 ozs. The winze in bottom of the 290 south of Tennant's shaft has been sunk 6 ft. in a lode 1½ ft. wide, and estimated to be worth 1½ ozs. Gilbert's shaft has been sunk 19 ft.; total distance from surface, 170 ft., where it came in contact with the old men's workings, which the men are now engaged in clearing and securing. I am pleased to say the health of the camp is again very good, but we are still suffering some inconvenience at the tailings works for the want of a sufficient supply of water for dressing purposes. Mill samples: New mill quartz, 2 ozs. 3 dwts. 14 grs.; old mill quartz, 1 oz. 12 dwts. 16 grs.; tailings, 7 dwts. 19 grs.—J. GILBERT.

MYSORE REEFS (Sept. 8).—Harvey's shaft: The 520-ft. level north has been advanced in one week 11 ft. 6 ins.; now 119 ft. from shaft. The present end is in a mass of quartz, which, unfortunately, is of low grade, assaying 3 dwts. 6 grs. of gold per ton. A week since I put these men to cross-cut the lode east, just behind the end, to ascertain if the lode was of more value. We have driven 10 ft. 3 ins. in this direction; the last 6 ft. cut through the lode has been mixed with black rock and arsenical pyrites of low grade. I shall continue this for one week more, when I expect we shall be through the lode, and, if nothing better is found, resume the driving of the present end. The 520-ft. level south has been advanced 17 ft.; now 53 ft. 6 ins. from cross-cut; the lode is 4 ft. wide, and fairly regular, composed chiefly of quartz and arsenical pyrites, assaying 2 dwts. of gold per ton. Winze below the 460-ft. level has been sunk 3 ft.; now 32 ft. below the level. We are going down in a mass of low-grade quartz, assaying 7 dwts. of gold per ton. The 400-ft. level south has been extended 14 ft. 9 ins.; now 192 ft. from shaft; the lode is 1 ft. 6 ins. wide, composed chiefly of quartz, assaying 1 dwt. 7 grs. of gold to the ton. The 400-ft. level north has been advanced 13 ft. 6 ins.; now 249 ft. 1 in. from shaft. I am in hopes that the rock will soon become easier, as little water is issuing from the breast of the end. My intention is to drive this end 300 ft. from shaft, and then cross-cut east. Our machinery through the mine is working well.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—Report for the fortnight ending Sept. 8:—Tank mine—North shaft: This shaft has been sunk 3 ft. 3 ins., making a total depth of 191 ft. 6 ins. from surface. A plat has also been cut to take the cistern and bearers, which will be fixed when we are down far enough for it to be safe to blast under them. The Coolies did not work full time in the beginning of the fortnight, and two days were taken up timbering. The men are now working regularly, and I expect to do better work from now on. In the 173 level since the 10th ult. the driving south has been advanced 6 ins., making a total distance from cross-cut of 12 ft.; and the drive north has been advanced 2 ft. 6 ins., making a total distance of 11 ft. 6 ins. from the cross-cut. This was only two days' work, and since that nothing has been done in this level. I hope to get Coolies and continue this soon. South shaft: The pumping engine was started on Saturday, the 5th inst., and we have now resumed sinking. The engine and pumps are working very satisfactorily. We are still short of carpenters and blacksmiths. The majority of these live in Oregun Village, and as cholera still continues there, we are unable to allow them to come out. I expect to start the new air compressor this week. I shall then push forward the sinking of the two shafts with all the drills I can work.

NEW DEVALA-MOYAR.—Mine manager's report for the week ending Sept. 3:—The 186-ft. level, drive west, driven 6½ ft.; total, 59½ ft. The 186-ft. level, drive east, driven 2 ft.; total, 18 ft. The 116-ft. level, No. 4 winze, sunk 4 ft.; total, 31 ft. In the mine there is nothing fresh to report. All machinery running well.

NEW EBERHARDT (Sept. 13).—The mine manager reports as follows:—Eberhardt: Drift north from No. 2 upraise advanced for the week 4 ft.; total length, 35 ft.; face of drift in quartz and spar. Drift south from No. 2 upraise advanced for the week 4 ft.; total length, 46 ft. The face of this drift is, I believe, a little softer than has been for some time past, with a little more lime coming in. Cross-cut east from north drift No. 3 upraise advanced for the week, 6 ft.; total length, 59 ft. The face of drift still shows considerable quartz, but as yet of a low grade. I am still hoping that our prospects in this drift will yet open out into something better. No. 3 cross-cut west advanced for the week, 9 ft.; total length, 41 ft.; face of this driving still in favourable-looking ledge matter, with bunches of low-grade ore mixed through it. Nothing of any great value as yet has been met with. No. 4 cross-cut west advanced for the week, 3 ft.; total length, 14 ft.; face of drift in hard lime. Beecher cross-cut

east advanced for the week, 6 ft.; total length, 47 ft. The face of drift is at present in nearly all spar.

NEW RUSSELL (Sept. 16).—Remarks from manager's report:—Amalgam: The result of last week's crushing, with not fully four days' run, was 40 ozs., so that I now hold for this month 81 ozs. in all. We are having several small stoppages, which prevents a clean run, but now that cordwood has been secured I am in hopes that we shall have no anxiety from that quarter. The furnace is now working, and Mr. Bailey will no doubt report fully upon same. The ore is very good, and my hopes have not been lowered as regards a successful result for this company. So far you will be able to gather the outward progress by the amalgam gradually increasing. The plates, as you know, are new and not the proper ones suited for the batteries, but I have been obliged to make the best of things at hand. They are daily improving, and as a confirmation of this you have only to look at the amount of amalgam obtained. One dam is now full, and another is being filled; when the first dam tailings are dry they will be treated by the furnace, and so on. Buddles: Arrangements are in progress now for the erection of four, which are to treat the tailings before being sent to the furnace, and this will diminish the calcination considerably.

OSCAR (Sept. 25).—Report from the mine:—Hodgkinson's lode: In bottom of shaft we have met with a small vein of quartz about 3 ins. wide; we are pushing the sinking as fast as possible and expect an early improvement. In the 390-ft. level there is a run of mixed quartz having a width of about 18 ins., and assaying $3\frac{1}{2}$ dwts. gold per ton. We have commenced to rise from this level to the winze from 200 north. The new winze in 200 north has a good lode in bottom nearly 3 ft. in width; the quartz is carrying both galena and copper, and during the week has assayed an average value of $2\frac{1}{2}$ ozs. to the ton. Each sample taken has shown gold by panning. The winze sinking on Williams' lode shows quartz 3 ft. wide, containing a little copper and iron pyrites. Samples assayed have shown value from 2 dwts. to 3 dwts. 6 grs. gold per ton. All other workings are being pushed ahead as fast as possible.

RUBY.—Report upon the mines for the week ending Sept. 12.—Dunderberg: We have four tributaries at work here. Above the 800 level we are cleaning out some old stopes, and following some low grade ore. Below the 800 level we are sinking on the middle pipe, which has a little ore in the bottom. Lord Byron: We have nine tributaries at work here. No change to note in the face, as we have been working out some ore which we passed in sinking, as we desire to make a shipment on account of the furnaces closing down. We will ship, early in next week, about 20 tons of apparently the same grade ore as last, which assayed \$96. Bullwhacker: We have five men at work here. We shipped about 30 tons from this mine on 11th inst. The mine looks about the same.

—Telegram: "30 tons tribute ore shipped and smelted, producing to company \$126."

SILVERTON (BROKEN HILL).—Advices from the mine:—The development work on the mine is proceeding apace, and four shafts have been sunk, and the levels driven from the existence of a strong silver and lead lode running throughout the property a few degrees east of north and west of south, the strike being somewhat regular, and corresponding with the majority of lodes in the district of Broken Hill. No. 1 shaft, near the south boundary, is over 100 ft. deep, and follows the lode in the underlie, proving the hanging-wall to be regular and continuous, and showing all the way down a lode of galena and grey silver ore from 1 to 3 ft. wide. Two levels, one at 30 ft. and one at 70 ft., are driven from this shaft on the course of the lode, and ore is exposed in both. No. 2 shaft, about 120 ft. away from No. 1, is 50 ft. deep, showing the same character of ore, and proves the uniformity and regular ore-bearing character of the lode. No. 3 shaft, to the north of No. 1 shaft, is about 50 ft. deep, showing solid blocks of galena and grey silver ore, improving with depth. No. 4 shaft, also to the north of No. 1 shaft, is over 100 ft. deep. Galena and grey silver ore carried on the lode all the way down. There has been considerable costeaning done, proving the lode throughout the property, and from within a few feet of the surface excellent ore has been obtained in mere open trenches.

SOUTH-EAST MYSORE (Sept. 8).—Fortnightly report.—Good progress for the past two weeks has been made in sinking the winze below the 500-ft. level north; 14 ft. 9 ins. has been sunk, which now makes a depth of 67 ft. 6 ins. below the level. The lode at present is a little pinched, and the quartz intermixed with black rock, which has reduced its value, the assay this week being 7 dwts. of gold to the ton. In sinking the winze we must expect this, as everything dips to the north. When the winze has reached a depth of 100 ft., and a level extended north on the course of the lode, we shall then test the value of the lode in length.—M. SCANTLEBURY.

WESTERN ANDES (Aug. 14).—I am glad at last to obtain an opportunity of not having to announce a loss, the working of last month (July) having left a profit of \$624 (124%). It must be also taken into account that July month was a five weeks one, and that the costs were very heavy on that account, especially as regards timber; the most satisfactory point in the past month's working is that it was the first in which Agnas Claras (the silver mines) left a profit, the first for many years. For August we may look for better returns. Marmato gold mines continue about the same.—C. W. BRANDON.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

SYMPTOMS of approaching stringency in the Money Market to which we referred last week have proved true. The close of the quarter, the withdrawal of loans for dividend and redemption purposes, combined with the settlement, which produced a heavy demand in connection with the American Market, have, if only temporarily, overtaken the abundant supply of capital, and driven applicants to the Bank. Money at call advanced to $2\frac{1}{2}$, 3, and as much as 4 and even 5 per cent. was paid on Stock Exchange account to avoid taking loans for a week of the Bank at $3\frac{1}{2}$ per cent. Discount under the influence of the continued export of gold for America, Germany and Egypt has moved up to $2\frac{1}{2}$, 3 per cent. for the usual three months' bills, and the Bank, in consequence, has done some business at its

minimum. The Bank return shows at length that the reflux of notes and coin for circulation in the provinces is taking place, so that with the prospect of a large export to New York, opinions now tend towards preparing for an advance in the rate to 4 per cent. at an earlier date, while some are disposed to think that this will not stop the drain, and that a 5 per cent. rate will be necessary to attract gold before the year is out. The return shows a decrease of about a million and a half in the reserve, making it 15,312,000£, against 11,120,000£, at this period last year. The liabilities, however, under deposits, have increased three-quarters of a million, so that the proportion is $4\frac{1}{2}$ worse, at about 41 per cent. The demand for accommodation has increased the private securities by 2,121,000£.

At the Stock Exchange, owing to adverse conditions and the settlement of a heavy account, business has been much less active, and the course of values has taken a downward tendency. Nevertheless, although rates of continuation showed more of a "bull" account, and as much as 5 and 6 per cent. was paid in the American market, the reaction has not been very severe, which says a great deal for the stability of the "boom" in that market. From all that can be gathered, Jay Gould appears to have been checkmated in his manoeuvres. He was a "bear" at the time of the rise in prices, and hoped to force the Union Pacific into the Receiver's hands, and when he found the recovery was persistent he tried to break the market by passing the dividend due on Missouri Pacific. This, however, failed to materially affect the market beyond that and Union Pacific Stock, and he has since succumbed to the conditions of Mr. Pierpont Morgan, so that the position of the Union Pacific Co. is now relieved of its burthen, and full of promise. Although, therefore, the market has been dull, the fall on the week has been limited, and Central Pacific, Northern Pacific, and Lake Shore exhibit, indeed, an advance of $1\frac{1}{2}$ to $3\frac{1}{2}$. Foreign Securities were firmer in sympathy with the Continent, but afterwards weakened as the adhesion of the Berlin houses to the issue of the new Russian Loan was withdrawn. Portuguese and Greek Bonds have been heavy at a fall of $\frac{3}{4}$ to 1 per cent., but the chief feature has been the fluctuation in Argentine Stocks, the 1886 and Funding Loans falling to 59 and 47½ on the telegram that the Government had decreed a forced paper currency fixing the premium at 150 per cent. authorising the suspension of payments in gold for two years. When, however, this was denied, there was a recovery of 2 per cent. from the worst. Uruguay Bonds have been steadier with a rise in the Unified since the opposition to the proposed scheme intensified. The premium on gold at Buenos Ayres after rising to 325 per cent., is now easier. Monetary and atmospheric influences have controlled the Home Railway Market, and depressed prices by 1 to $1\frac{1}{2}$ per cent. in the principal Southern and heavy Stocks, Metropolitan, Sheffield and Caledonian, however were exceptionally firmer. Grand Trunk Stocks although under their best, have been also exceptionally good in view of good and increasing traffics, but Mexican have been flatter. Consols have been dull at a decline of $\frac{1}{8}$ and the rate of continuation to the new account was $2\frac{1}{2}$, 3 per cent.

The bullion operations at the Bank of England to-day were important and comprised 50,000£ in sovereigns received from Australia, and 13,000£ from Portugal, with 275,000£ in eagles and sovereigns withdrawn for America. It was expected that a larger sum would have been taken for export: consequently, discount quotations further advanced, and three months' bills were 3 or $3\frac{1}{2}$ per cent., but money ruled easier, and day loans fell to $1\frac{1}{4}$, $\frac{1}{2}$, and advances for a week to $1\frac{3}{4}$, 2 per cent. Bar silver remained at 45d., and the supply on offer has been absorbed.

A fairly good tone existed in public securities, but no sensible or general recovery occurred until this afternoon, for during the earlier part of the day Transatlantic Railways were very flat. Much lower quotations came to hand from New York, and, furthermore, there can be no question that speculators on both sides are apprehensive of Gould. Final prices in the American department are $\frac{1}{2}$ or $\frac{3}{4}$ above the worst and Louisville Shares, after being 80½, developed special energy and strength, but, all the same, there is a universal fall of $\frac{1}{2}$ to $1\frac{1}{2}$. Consols remain depressed, but close steady. The gold premium at Buenos Ayres has further advanced to 331 per cent. Among International Government Securities, Portuguese has been freely bought on Continental account, because the Jan. coupons are assured and rose 1 per cent., and Spanish have also advanced. Argentine 1886's and Funding Loan lost $\frac{1}{2}$, and Cédulas mark a decline of about $\frac{1}{4}$. Exceptional weakness has been shown in Turkish Groups, the firsts and seconds being respectively $\frac{1}{2}$ and 1 per cent. lower. Grand Trunk Stocks are fairly maintained, and are but fractionally lower. Mexican Railways have relaxed, particularly in the case of the First and Second Preferences, the Inter-Oceanic Co. being expected shortly to compete for traffic. There has been a fairly active business in Miscellaneous Banks, Breweries, and Electrical Lighting Shares.

Annexed are the final quotations to-day:—Consols Account, 94½, 94½; Egyptian Preference, 91½, 91½; Egyptian Unified, 96½, 97; French Four-and-a-Half per Cents., 104½, 105½; Hungarian, 89½, 89½; Italian, 89½, 89½; Mexican, 86, 86½; Peru Five per Cents., 10, 10½; Peru Six per Cent., 28½, 28½; Russian 1889, 96½, 97½; Portuguese, 37½, 37½; Spanish, 70½, 70½; Turkish 1871, 95½, 95½; Turkish Defence, 91½, 91½; Caledonian Railway, 116½, 117½; Great Eastern, 87½, 87½; Great Western, 158, 158½; Brighton "A," 147½, 148½; North Western, 170½, 170½; Metropolitan, 84½, 85; Metropolitan District, 29½, 30; Midland, 158½, 159; North British, 39½, 40; North Eastern, 154½, 155½; South Eastern "A," 83½, 83½; Mexican Ordinary, 31½, 34½; Nitrate Railways, 16½, 16½; Grand Trunk, 10½, 11; Grand Trunk First Preference, 72½, 72½; Grand Trunk Second, 51½, 52; Grand Trunk Third, 28½, 28½; Canadian Pacific, 91½, 91½; Denver Preference, 50, 50½; Erie, 29½, 29½; Milwaukee, 75½, 75½; Lake Shore, 126½, 127; Louisville, 80½, 81½; Atlantic First, 39, 39½; Ontario, 20½, 21½; Ohio, 25½, 26½; Norfolk and Western, 56½, 57½; Reading, 19½, 20½; Reading Bonds, 83, 84; Union Pacific, 41½, 42; Wabash Preference, 30½, 30½; Ottoman Bank, 12½, 12½; Anglo-Telegraph, 48½, 48½; National Telephone, 4½, 4½; Hudson's Bay, 16½, 17½; Suez Canal, 114½, 114½; Guinness, 315, 317; Allsopp's Ordinary, 22, 24; Bryant and May 13½, 14½; Eastmans Ordinary, 4½, 4½; Elmore's Copper, 4, 4½.

REPORTS OF MEETINGS

NEW VIOLA CO., LIMITED.

AN ENCOURAGING REPORT FROM THE MANAGER DECIDES THE SHAREHOLDERS TO CALL UP 6d. PER SHARE.

AN extraordinary general meeting of this company was held at the City Terminus Hotel, on Monday, Sept. 23, 1891.

Col. G. B. Malleson, C.S.I.

(chairman of the company), presided.

Mr. H. M. BENTLEY (secretary) read the notice of meeting.

SIX NEW CLAIMS.

The CHAIRMAN: Gentlemen, this meeting has been called in pursuance of a promise which I made to you on the occasion of the last gathering held on Feb. 16, to the effect that before submitting to you another call of 6d. per share I would ask you to meet and consider the state of the company. At the meeting of Feb. 16 it will be in your recollection I informed you that Mr. Kennon, our manager at the mine, had been instructed to purchase two claims, called the Daisy and New Year claims. Mr. Kennon duly purchased these on behalf of the company, paying for them 80*l.* and the deeds are now being recorded. We expect to hear by every mail that these deeds have been registered, but meanwhile Mr. Kennon has been working on the property. The six new claims which Mr. Kennon has obtained are the New Year, the Pickwick, the Joe, the Micawber, the Barkis, and the Veller. They cover the ground originally claimed by the Daisy and New Year owners as well as the vacant spaces between. The manager commenced operations on the new property early in May, but on account of the heavy storms, coupled with the want of good miners, he was not at first able to make much headway. He was also troubled somewhat with bad air in the older workings. The manager has recently been concentrating all his forces on the newly acquired claims, and under the date of Aug. 3 writes as follows:—

"In shaft B, on the Barkis claim, we have been working on a 'pot' of the nicest looking iron talc and decomposed lime I have seen on the hill outside of the old ore-bodies. So far we have not been able to find where it goes down, but I am still working at this point and hope it will prove up to something. Prospecting will be done on the Joe, the Barkis, and Veller claims, and if there is any ore in the mountain we ought to find it either in one or both of these claims. I feel more encouraged now than at any time during the past six months, and I hope some of the new indications will lead to something worth proving."

Again on Aug. 21 last the manager writes:—

"We are still prospecting on the Joe and Veller claims, but so far have not found any ore. When I wrote on the 3rd we had several promising looking bodies of clay and decomposed lime, which encouraged me greatly. In one hole a small piece of galena was found but nothing large or defined enough which would give us a clue to lead to the ore-body. I am still drifting from the bottom of the 70-ft. shaft towards borehole No. 2 on the Joe claim, and in this drift the lime is getting harder and has nice-looking 'pots' of iron scattered through it. Besides this, streaks of talc are cut, so on the whole I think this particular point is looking more encouraging." The latest advices are of a more recent date than the reports circulated amongst the shareholders.

LATEST NEWS IS GOOD.

The manager's letter is under date Sept. 5, and runs as follows:—

"It is difficult to believe that the Viola pocket was the only deposit left on this belt where for more than a mile the geological and surface indications are almost identical. Besides, the small pieces of galena found at different points prove the presence of rich mineral. Some 'peacock' iron—I daresay you all know that peacock iron contains carbonate and lead—was met with in sinking the shaft X on the Micawber claim. The drift from the bottom of shaft L in the Joe claim is in a horse (a mass) of hard lime, which, coupled with the air at times being bad, makes progress slow. I hope to cut the lime found in the upper part of this shaft at an early date when progress will be more rapid. I am basing all my hopes of finding ore in this ledge, which has all the characteristics of the silicious limestone surrounding the ore, in the old stopes."

That is the latest report we have received from the mine. I will mention that the average expenditure for the last 10 months has been 383*l.* per month. The total forces at the mine consist of 15 men, of whom 12 are miners. This is exclusive of the manager and his assistants. I may add that

WE PURCHASED A DIAMOND-DRILL

at the suggestion of our manager, at the cost of 403*l.*, and that that diamond-drill has also been at work. We have still 1*s.* per share uncalled, and I think that in view of the encouraging report I have just read you will not object to our calling up half that sum, which will produce 3,750*l.*, and at the rate at which we have been working it will last us for another eight or 10 months, and by that time I shall be very much disappointed if we do not get into pay ore such as we had before.

WHAT THE MINE HAS PAID IN DIVIDENDS.

Already two pockets of ore have been found on this property. The working of the first enabled us to pay to the shareholders at the rate of 21 per cent. per annum, and the working of the second (which was smaller) enabled us to pay them at the rate of 11 per cent. per annum, and if we were to find another, and apparently Mr. Kennon is on the verge of finding one, the returns would be immediate. It is for you to decide. We are large shareholders like yourselves, and are willing to pay up our 6d., but it is for you to say whether you will or not. I promised the shareholders that I would confer with them and ask their consent. Their interests are our interests, and there is absolutely no difference between those who sit on that side of the table and those who sit on the other side. I am speaking with the voice of my colleagues when I say we are in favour of calling up 6d., because we believe it to be the only chance of recovering our money. If you do

not pay this 6d. the company will necessarily cease to go on. I should like to hear the frank opinion of the shareholders.

Mr. HORN: The report of Mr. George Kennon, dated Sept. 1, I think very discouraging.

The CHAIRMAN: Yes, it is; but the report I have read to you is of a later date. I shall be glad to hear an expression of opinion from the shareholders.

Mr. WHITE: I notice in the report that one of the claims lately acquired is called the Micawber, and it seems to me that we are in the same position as that unfortunate gentleman—waiting for something to turn up. The reports, time after time, have been similar in tone to those of the present—that we are just upon the verge of finding something, but unfortunately we do not seem to have found anything for a considerable time.

REASONS GIVEN FOR SHAREHOLDERS TO CONSIDER.

The CHAIRMAN: I should like to remind the shareholders that this is what is called a pockety mine, and that we work from pocket to pocket. The shareholders have not done so badly, for at the end of the first year we paid 21 per cent. from the first pocket, and immediately afterwards we found another pocket which paid them 11 per cent. per annum. (Cheers.) I admit there has been an interval of two or three years between finding the second pocket and our present position, but I would ask you in your own interests to dwell upon the report which I have read, which is from an honest man. He is a gentleman unknown to any of us personally, but was selected by our solicitor, Mr. Thomas, in America, simply because he was both honest and capable, and he tells us that he thinks we are on the verge of success. I only ask you to act as your interests prompt you. One of my colleagues holds 1,200 shares, and I hold 600, and we have friends (larger shareholders still, in fact some of the largest we have) who are most anxious that we should go on, but I do not like to act against the wishes of the shareholders. If you decide not to spend one-half of the money that remains to be called, that is a point for you to consider, but having gone so far, and the mine having shown that it contains every evidence of success, I really think you would be very foolish if you were to relinquish it now.

At the request of a shareholder the latest report (already given above) was read, for the benefit of a number of shareholders who had entered the room too late to hear it previously.

The CHAIRMAN, having read the report, said: I think, in the face of that letter it would be advisable to call up 6d. per share. (Hear, hear.)

Mr. COOKE: My object in speaking is this, that if there be any prospect of finding ore, it would be better we should do so rather than part with the property, and allow it to fall into the hands of other people, who would no doubt float it as another company.

The CHAIRMAN: I quite agree with the last speaker that it would be far better we should have the advantage of our expenditure, when, according to the manager, we are

APPARENTLY ON THE EVE OF FINDING THIS THIRD POCKET.

All we propose to call up is 6d. per share. The large owners of shares who would have to pay the most are in favour of this course.

Mr. WHITE: In the last 10 months we have spent 4,260*l.*, and the call would produce 3,750*l.*, which would be exhausted in another 10 months, making between 7,000*l.* and 8,000*l.* spent upon this mine. I think it injudicious for anyone to vote that this call should be made. My own interest, however, is a very trivial one.

The CHAIRMAN: Most of us really have a substantial interest in this mine. We shall, therefore, call up the 6d. a share. (Cheers.) This is only an informal meeting, at which no resolutions can be proposed, but, as I said before, I am very anxious to take the opinion of those who really have an interest in the company, and if they do not very strongly object to pay 6d. per share, I shall propose to call it up. We wish to act in consort with the shareholders. Sixpence a share means a considerable amount to those who hold between 3,000 and 4,000 shares, and it is they who are willing to pay this amount. (Cheers.)

Mr. HORN: I shall certainly not oppose the call being made, though the outlook seems dubious.

A SHAREHOLDER: I shall certainly not oppose it, as I think it ought to be made.

The CHAIRMAN: There is not a mine that exists that is not a lottery, but in the presence of the report I have read I do not think we should be justified in giving the mine away rather than pay up 6d. per share, and so I think, gentlemen, we will decide to make the call of 6d. per share.

A SHAREHOLDER: Can they carry on work during the winter?

The CHAIRMAN: The spring months are worse than those of the winter. It depends entirely upon the snowfall. If the snowfall is not very heavy they can work. That concludes the proceedings of the meeting.

ISLE OF MAN MINING CO., LIMITED.

ANNUAL MEETING—A DIVIDEND OF 12 PER CENT.

THE 38th annual meeting of this company was held at the Grosvenor Hotel, Chester, on Tuesday afternoon.

Mr. John Beckwith

(chairman of directors) presided, and the attendance included Messrs. F. Potts, T. H. Dixon, Henry Churton, Frederick North and J. Mackee (directors); J. Johnson, Bryan Johnson, Robert Roberts, Cudworth H. Poole, F. B. Roberts, G. R. Griffith, S. J. R. Dickson, Bradshaw Smith, J. M. Darbishire, R. B. Smith, H. Moss, and Capt. Williams (shareholders); Mr. R. L. Barker (secretary), and Capt. Kitto (captain of the mine).

SATISFACTORY DEVELOPMENT.

The CHAIRMAN, in moving the adoption of the directors' report, which recommended a dividend of 12 per cent., said that although the managers of the company had always been averse to speculate much upon the future, he felt very happy to be able at the present time to say that so far as those who were competent to judge knew, the present position of the company was better and stronger than ever. The great sacrifices and exertions made by the shareholders in finding the means to overcome the effects of the unprecedented fall in

the value of metal some few years ago had at last begun to bear fruit. The intersection of the main lode at Beckwith's shaft at the 245-fm. level had been eminently satisfactory, and they had been driving west on a splendid lode, and the level driving east, in which there had been formerly comparatively little ore, had gradually improved, until at the present time it was yielding 2 tons of lead ore per fm. Bawden's shaft had been completed to the 245-fm. level, and the cross-cuts had been driven towards the lodes. The north lode had already been cut through, and, so far as could be seen, it was decidedly stronger, and better than it was in the level above, and was charged with more ore heavily charged with silver. The north part of the main lode they hoped to intersect in the next few weeks, and should it prove as good as in the level above, they would soon be opening up very productive ground. Turning to the great east, that part of the mine designated as Potts' shaft, the 147 and 127-fm. levels had proved satisfactory. So far as opened up, the 170-fm. level promised to yield the same as they were now driving cross-cut from, and he was happy to say the 185-fm. level was not very far behind that same point.

POTTS' SHAFT.

Everything possible had been done towards preparing Potts' shaft, and the machinery had been completed and paid for. The necessary expenditure, at a rough calculation, would not exceed 1,000*l*. It was very unfortunate that the decline in the value of silver and lead should have deprived them of the additional profit which the increased raisings would have led them to fairly anticipate. The directors had thereby to forego the pleasure of recommending the payment of bonuses. He ventured to hope, however, that if these metals did not react, and if they maintained their present relative values, the company would be so fortunate in their developments that a little further increased raisings would make them perfectly independent of the prices. There had been a heavy expenditure on the new works account due to payments for machinery for Potts' Mine, but they would be recouped for that so soon as the shaft was completed. They had carried 1,000*l*. to the reserve fund, and 2,250*l*. to the new works account; and there was a balance of 3,251*l*. 0*s*. 11*d*. which they had to deal with.

ACCOUNTS.

They had drawn 1,600*l*. renewal of fresh bonds, which had gone to the credit of the new works account, and on the new works account they had to pay 5,357*l*. 7*s*. 7*d*. during the year, which was a heavy tax on the company; but a large portion of that, being practically a loan, would come back to the company. There was a balance to the debit of 1,100*l*., which they had money enough to pay off at any time. Summing up the whole year's work, he might say that while disappointed in their profits on the increased raisings they had against that a splendid mine below from one end to the other, and not only had their position most materially improved during the past year, but they had every reason to look forward to the coming year proving equally good, if not better. Their resources, by developing the levels in several points of the mine at the same time had so increased that he had little doubt that they were now on the high road to reap the benefit of the unparalleled efforts made during the last 10 years. (Applause.)

DISCUSSION.

Mr. ROBERT ROBERTS, in seconding, said he had visited and inspected the mine during the past fortnight, and the conclusions he arrived at were that they had a magnificent property; that the directors had managed the property with very great foresight and judgment, in which connection praise was due to Capt. Kitto for his skill; and that there was no present shareholder who would live to see the end of the dividends, but when they were called away, they would leave the mine in a better state than it was to-day. Bearing in mind that the question had been raised as to whether their plant was up to the present day standard, he made a careful examination, and found the work done in a most painstaking manner. It was very difficult to secure the full amount of silver from running away, and to that point Capt. Kitto's attention had been specially called, and he had taken the utmost care on the point.

Capt. WILLIAMS asked whether the directors had, according to promise, taken into consideration a suggestion of Mr. Johnson's at last annual meeting respecting the debentures.

The CHAIRMAN replied that they had taken it into consideration, but they found it would be a very foolish proceeding for the company, when they could get money at 5 per cent., to pay 12 per cent. for it.

Capt. WILLIAMS: I do not think it would be foolish at all, because it was going to be distributed among the shareholders.

The CHAIRMAN: Well, the directors thought they would be severely criticised by the shareholders themselves if they paid 12 per cent. for what they could get at 5 per cent.

Mr. BRADSHAW SMITH said that the prices obtained for the ores were very small, and seeing the ore contained such an enormous amount of silver, it was not a fair and proper way to sell it by mere assay. He had often thought that with a mine like that, having a great future before it, they might have smelting works of their own. The outlay would not be very much, and they would have more satisfaction in knowing what they had to sell by selling lead for so much and silver for so much, instead of as at present "selling a pig in a poke."

MR. SMITH'S CRITICISMS.

The CHAIRMAN said he feared Mr. Smith did not quite understand the nature of the mines or the quality of the ores obtained. Some of the silver ore was very rich, and others very poor. This, of course, reduced the average. Their ores were not only good smelting ores, but the smelters bought them because there was flux in them, and the smelters gave far more than lead and silver were worth. The question of establishing smelting works there had been discussed repeatedly, but at the present time there was a very poor profit in smelting lead, and by the time they brought over 3 tons of coal they would lose by it. It was better for them to sell their ores as they did at present.

Mr. SMITH would not admit it required 3 tons of coal for smelting. The CHAIRMAN did not bind himself to 3 tons, but it would cost 1*l*. per ton, and it would take at least 2 tons of coal to do it with.

Mr. CHURTON thought the question was one that ought not to be brought before that meeting. They had nothing to do with smelting.

The resolution was then put and carried.

THE DIVIDEND.

On the motion of the CHAIRMAN, seconded by Mr. DIXON, a dividend at the rate of 12 per cent. per annum was declared.

Mr. HENRY MOSS proposed the re-election of the retiring directors—Messrs. T. H. Dixon, Frederick Potts, and James Mackee.

Mr. G. R. GRIFFITH seconded.

Capt. WILLIAMS proposed Mr. Robert Roberts as a director, but there being no seconder, the original motion was carried.

Mr. Charles Coppack was unanimously re-appointed auditor.

Capt. WILLIAMS then proposed the following motion—"That no shareholder in the Isle of Man Mining Co., who is a director of any other mine in the Isle of Man, should be eligible to be elected as a director of this, the Isle of Man Mining Co." His reason for making the proposal was that in his long experience of life he found no man could serve two masters.

Mr. MOSS rose to a point of order, as no notice had been given of the resolution.

Capt. WILLIAMS hoped the shareholders would take it into consideration at the next annual meeting, and adopt his view.

The CHAIRMAN gave an opportunity for discussion on the matter, but the motion, finding no seconder, fell to the ground.

12 PER CENT. NOT GOOD ENOUGH.

Mr. CHURTON, in proposing a vote of thanks to the officers of the company, paid a compliment to the skill and judgment of Capt. Kitto and expressed his great satisfaction with the splendid condition in which he found the mine on a recent visit. As for Capt. Williams, he seemed 12 months ago to be exceedingly dissatisfied with a dividend of 12 per cent. (Laughter.)

Capt. WILLIAMS: So I am when your neighbouring mine is getting 27½ per cent.

Mr. CHURTON: He was grumbling here 12 months ago.

Capt. WILLIAMS: I deny it. I never grumbled.

Mr. CHURTON: He was so disgusted that he wanted to sell his shares, and I offered to buy them, but he has not sold out. (Laughter.)

Capt. WILLIAMS: You offered to buy at your own price.

Mr. CHURTON: He is the last man I should expect to see here.

Capt. WILLIAMS: Well, you will see me again.

IS IT SO, CAPT. WILLIAMS?

Mr. CHURTON, continuing, said Capt. Williams was an everlasting grumbler, and came there to interrupt their proceedings. (Laughter.) In conclusion, he eulogised their faithful and energetic secretary (Mr. Barker), and although he regretted the fall in the price of lead, which he attributed to free trade, he looked hopefully to the future of the mines, and to, perhaps, a 15 per cent. dividend instead of 12 per cent. (Applause.)

Capt. WILLIAMS denied having interrupted last year's proceedings. The fact was Mr. Churton wanted to have all the talking to himself, and could not get it. Last year Mr. Churton, in returning thanks for his re-election to the directorate, instead of returning thanks began a long speech about the handsome dividend, and expressed the opinion that 6 per cent. was enough for anybody, because he was getting only 3 per cent. for some railway investment. (Laughter.) He (Capt. Williams) said "Bosh," and he would say "Bosh" again—(laughter)—and he would add that a man who told the shareholders that 6 or even 12 per cent. was sufficient to satisfy anybody simply because he got only 3 per cent. from a railway company, when a neighbouring mine paid 27½ per cent., was not fit to be a director of the company. (Great laughter.) He begged to second the vote of thanks.

Mr. BARKER, in acknowledging the compliment, said the number of shareholders had increased to 140, and during the last year they had had 2,443 shares transferred. The company was altering in its character, and he hoped it would be for the benefit of the concern. (Hear, hear.)

Capt. KITTO, who also responded, said they had a great quantity of rich silver ore in the last lode, where they were putting up machinery, and they would have it at work as soon as possible.

The customary vote of thanks to the chairman concluded the meeting.

EL CALLAO MINING CO.

REPORT SHOWS THAT THE MINE DOES NOT IMPROVE.

THE report of the company's operations at El Callao for the six months ending June 30 shows the total receipts were as follows:—Crushing 29,247 tons ore, 16,831.92 ozs.; milling 409 tons sands from old mill and calciner foundation, 213 ozs.; total, 17,044.92 ozs. A falling off of 0.36 oz. per ton in the grade of the ore worked attributed to the continued impoverishment of the vein. The 60-stamp mill has rendered good service in the past half-year, as the record of ore crushed—29,247 tons—shows. The summary of mine operations and expense statements shows how impoverished the mine has become, and the close margin existing between the costs and receipts. This unfortunate condition has prevented much prospecting in the past half-year, and the mine therefore has had to depend largely on what the routine stoping developed. Regarding future operations, the main hope is now centred in the large extent of ground lying in the north-west part of the mine, where there is every reason to believe the vein sheet continues, although so far as known, in a very thin and poor condition.

MOUNT MORGAN EXTENDED GOLD MINING CO., LIMITED.

DIRECTORS ISSUE A REPORT WHICH FORESHADOWS A SATISFACTORY MEETING.

MR. BALLARD's report shows that the local management have been called upon to deal with various difficulties, most of which difficulties have been already surmounted, with the exception of the question of being able to profitably treat the low-grade ore, an attempt which has been abandoned, the policy now being pursued being the development of the mine at depth at various points. The statement which will be in the power of the chairman to make at the meeting will, the directors believe, be such as to satisfy the shareholders that there is every reasonable prospect of good results accruing at no distant period.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Regular Subscriber (Nottingham).—By all means join St. Augustine re-con-
struction. In our full report of the meeting you will find much to encourage you
to do so.

T. S. Taylor.—The investment we think is sound.

Coupon.—Should go better very soon. Hold.

Myrtle.—A good speculative purchase. Advise you to take a quick even if small
profit.

Wales (B. B.).—Do not sell. The prospects are more encouraging, and we feel
sure it is only a question of a few months.

Beaton.—You must simply await events.

Redwood.—Better prices will rule shortly we feel sure. Hold all your shares.

J. G. Harris.—Sell them for what they will fetch.

Glenstone.—The shares are worth more than the quoted price, and we fully
believe they will rise in value before long.

E. K. Willis (Brussels).—There is expected to be a revival in these. Hold.

Lake.—Purchase A B D and J, but leave others for a time.

R. W. Prospect.—Very unsatisfactory. The shares will go lower.

Harshull.—Have nothing to do with it. Not for your good but his.

Silver.—Take a profit on them, although everything is promising for a better
price.

Shares (M. M. A.).—Strengthen your market by taking them up at the next
settlement. You also save contango charges.

Ringer.—Both are fairly good to buy, but for preference we think Mysore West
the better of the two.

R. J. Manley.—Very few dealings in either. You may possibly find a seller.
Write to your broker.

G. D. C..—A very respectable and trustworthy broker.

Huntingdonshire.—Very poor prospects indeed, and before long the shares are
likely to be worthless.

Loan.—Buy Nos. 3, 5, and 8.

Annual Sub. (J. J.).—The concern is well managed, but we are afraid there is
very little capital left.

Cosmopolitan.—We cannot recommend them at the present high figure.

Highlander.—Yes. It would be to your advantage to do as suggested.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir CHARLES METCALFE, Bart.

L. BALFOUR BURNS, Esq.

Sir STUART S. HOGG.

Major J. W. M. COTTON.

RICHARD SMITH, Esq.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING-
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, OCT. 3, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

MONTANA MEETING.

EVEN should Montana make no discoveries for the next two years,
it has 150,000 tons of ore in reserve which will last that period, which
will pay all the enormous development work that is now taking place,
and also leave a small profit. That is one part of the admirable
address of Mr. Rawlinson T. Bayliss, upon which we wish to fasten
the attention of shareholders—particularly of those who may be
thinking of parting with their holdings at present absurd prices;
and another is that the prospects of important discoveries are
not merely promising, but we might almost say immediate.
Mr. Bayliss spent four months at the mine—that is, from
Apl. to the middle of Aug., and came back primed with
the latest information, which he imparted to the shareholders
without reserve on Tuesday. He occupied on that occasion the (to
him) novel position of speaking to his hearers for the first time for
seven years without the substantial background of a dividend. The
last half-year has been indeed characterised by "abnormally bad
luck," for even the ore body which he expected at the previous meet-
ing to go on yielding about \$70,000 per month pending further dis-
coveries, did nothing of the kind. Since the early part of July the
mine has improved so that Mr. Robinson expects substantially to in-
crease the monthly returns followed by a considerable balance of profit
at the end of the present half-year. The workings have been mainly
directed to the discovery of a continuation of the Empire ore body
below the 400-ft. level, and to the further development of the Drum-
lummon lode upon the 1,400 and 1,600-ft. levels, to both of which
points considerable importance is attached. Two winzes have proved
that 60 ft. below the 400-ft. level, the Empire ore body is of the same
size and thickness as it was on that level. At the 800, great efforts
have been made to discover a continuation of the Empire ore body,
and Mr. Bayliss is as confident as ever that it will be found. We
note what he said about the discovery to the south end of the
Empire Mine, and also that though much cannot be said so far of the
developments on the Drumlummon Mine at the 1,400, they are
distinctly more valuable than those made at the 1,200 and 1,000-ft.
levels above. The presence of sulphide of copper and iron (so promi-
nent a feature in the high-grade ore of this mine in the past) must not
be overlooked in considering the prospects of the Montana Mine.

Before the next meeting a powerful light will be thrown upon these and other developments. It would require but a slight discovery in either the Empire or Drumlummon lower levels to enable the directors to resume the payment of those dividends of which Mr. Stewart Pixley, the esteemed chairman, reminded the meeting that the shareholders had already received over half a million sterling. That these discoveries will be made was the strong opinion of the late Prof. Clayton, to whom English shareholders in American mines could always turn in their anxiety for a faithful and thoroughly scientific opinion upon their properties. The faith of Mr. Bayliss and Mr. Robinson in the future of Montana is as firm to-day as it has ever been, and they stand by all the opinions they have expressed in the past. As Mr. Bayliss said, their professional reputation is largely concerned in once more achieving success for Montana. All things considered, it seems to us that those who are buying Montana shares at present prices are wiser than those who are selling them. Considering the prospects of the mine, and the unimpeachable character of the management at home and abroad, we can only express our astonishment that Montana shares are so low, and at the same time our moral conviction that much higher quotations will shortly be seen.

THE DE BEERS MEETING.

IN our last issue we published the telegraphic particulars of the De Beers balance-sheet presented at the meeting in Kimberley last Friday, showing a net profit for the year of 1,907,095*l.*, after paying the fixed charges and debenture interest, and stating that after the payment of a 10 per cent. dividend on the ordinary shares, making 20 per cent. for the year, the undivided balance would amount to 716,829*l.*, against 465,416*l.* a year previously. Since then Reuter's News Agency has favoured European holders with a report of the proceedings at the meeting, including the statements that "the shareholders were numerously represented from all parts of the world, and there was also a large attendance of local shareholders," and that "the shares are advancing on the chairman's statements." On this side, however, the shares have not improved to any appreciable extent, for one very good reason, that at each fractional improvement, sales are pressed by holders, who evidently take some of the figures quoted at the meeting *cum grano salis*. Mr. Cecil Rhodes, the President of the Cape Parliament and of the De Beers Co., was away in Mashonaland; but his henchman, Mr. Barnett Barnato, who took the chair, was quite up to the occasion. Indeed, Mr. Barnato adopted a much more jubilant tone than his chief has ever done. He spoke of the friendliness to the diamond industry of all parties in the Cape Parliament; of diamonds in sight, valued at more than 8,000,000*l.* sterling, and of the near prospect of 30 or 40 per cent. dividends. What wonder, then, that the shareholders were delighted with all they heard. Unfortunately we are not in the same position as those who attended the meeting. We have not the detailed accounts to show us how the profits have been arrived at, and upon what basis the "blue ground" in sight or on the floors have been valued at a round eight millions sterling; nor have we any shares that we are anxious to dispose of. When the complete accounts arrive we shall have something to say about them. In the meantime, while we fully admit that 20 per cent. is a handsome distribution for any company to make, we cannot but think that the current price of the shares is, as the Yankees say, "too steep." They stand to yield the investor less than 7 per cent. on his capital, and there are many mining shares which do much better than that.

TOLIMA SAVED BY BULLOCKS.

ROME was saved by geese—Tolima by bullocks. The company is earning profits at the rate of 6,000*l.* per month. This will be no news to the shareholders, but it will certainly come as a surprise to some of them to learn that the salvation of their mine came by the way of bullocks. When Tolima was suffering from an acute attack of impecuniosity, and when the directors, who are now congratulating each other on their "business acumen" and their "wise conduct of the company's affairs," were deeply solicitous to sell off the whole concern, stick, stock, and barrel (*vide* Mr. Kirkpatrick, at Orita meeting) the company was saved, not by the prescience of its board, but by the kindness of a herd of bullocks. Everyone had fallen into the depths of despair about Tolima, except Mr. Powles, who was "faithful among the faithless found." This gentleman had a fine herd of bullocks, which he sold and put the proceeds into Tolima. The lode was found, and Tolima was saved. How the happy shareholders, who received last year in dividends the nice round sum of 60,000*l.*, must bless those bullocks. We fear it is too late to pass to them "the customary vote of thanks."

NINE REEFS.

IT may be in the recollection of our readers that the annual meeting of Nine Reefs Co. was held on Apl. 22, and that on that occasion a proposal was submitted by the directors, and carried with unanimity by the shareholders, to reduce the capital from 150,000*l.*, in as many shares of 1*l.* each, to 150,000 shares of 10*s.* each. Although a considerable period has elapsed between the passing and confirming of this resolution and the present time it must not be supposed that the directors have been idle. The work was not so simple as that of an ordinary re-construction, for ere the directors could move a step it

was requisite for them to obtain the sanction of the Court to the proposed reduction of capital, and this consent was not obtained until about the end of Aug. The next step taken has been the calling of the shareholders to a meeting fixed for next Tuesday, for the purpose of considering, and passing if approved, a resolution to increase the capital of the company by the issue of 100,000 new preference shares of 10*s.* each, which will be first offered *pro rata* to the shareholders. These preference shares will be entitled to receive the whole of the profits of the company until the amount of 10*s.* shall have been paid out of such profits in respect of each preference share. As soon as this amount of 10*s.* shall have been paid, the preference shares will then rank as ordinary shares, and cease to be preference, and all future profits will be divided equally. They will also be entitled, in the event of the winding-up of the company, to be re-paid the full 10*s.* out of the assets of the company before the ordinary shares receive anything.

As we have said, an appeal on these lines is to be made to the shareholders, and the question arises—is it worthy of a favourable response? Most distinctly, in our judgment, it is. Our appeal is to the facts. These are mainly to be found in the speech which Mr. W. H. Rowse, the secretary, delivered at the Apl. meeting just after his visit to the mine. We pass over the general opinion he then expressed, with which we were much struck at the time, that the value of the mines on the Champion Reef was in proportion to the extent of the development to which each property had been subjected, with the simple remark that the experience of the five months that have since elapsed has only emphasised the accuracy of the statement he then made. The situation of Nine Reefs Mine in relation to other successful properties on the same field has been made clear to our readers by the map we published on June 27. Nine Reefs lies to the north of Mysore, Champion Reef, Ooregum, Nundydroog, Tank Block and Balaghat. When Nine Reefs first found a haven of refuge in the offices of Messrs. John Taylor and Sons it was in the severest throes of impecuniosity, and there has really been no time in which they could carry out their plans, not to mention the palpable deficiency of cash. The workings under the previous management had been carried out with great persistency upon three shafts, named, respectively, Malleson (called after the esteemed chairman of the company), Vyvyan, and what we must term the Eastern lode. Mr. Rowse was strongly of opinion that upon Vyvyan shaft the energies of the company should for some time to come, at least, be concentrated, although he by no means has a poor opinion of the other two. He, however, fully believes that the Champion lode will be best developed by sinking Vyvyan shaft. The character of the quartz, as he saw it in the bottom of this shaft, gave excellent promise, and assayed from 1 up to 8 ozs. to the ton. He found the lode to be exceptionally well defined, and recommended that the shaft should be deepened 300 or 350 ft., and that a level should be driven south in the direction of Mysore and the other proved mines we have named. There is no question in this case of acquiring additional land, as a glance at the map will show, for Nine Reefs has all it wants. There is also no need of further machinery, for Nine Reefs is fully equipped in every respect, and the money now to be raised can be used almost exclusively for underground developments.

These are the facts in regard to Nine Reefs, and if they do not justify the raising of capital, as proposed by the directors, then we fail to comprehend what would. There are other collateral ones, as, for example, that within the last fortnight dividends have been declared by three contiguous companies to the aggregate of over 80,000*l.*, whilst those mines that have not yet entered the dividend list, notably Balaghat and Champion Reef, are opening up in the most satisfactory manner. There is no reason that can be found in either geology or common sense why Nine Reefs should not be equally successful. We are continually being asked by correspondents to recommend "a good mining speculation with something of the nature of a certainty in it." Well, here is one—only the shareholders will act very unwisely if they put it in the power of outside persons to take from them any part of that which they should regard as their natural heritage. Should they miss their opportunity, of this they may be sure that there are other persons who will be only too pleased to profit by their neglect.

THE RIGHTS OF SMALL SHAREHOLDERS.

WHEN New Viola shareholders met last Feb., Col. Malleson (the chairman) gave them an understanding that no further call would be made without their consent given in public meeting. In redemption of this pledge, the gallant colonel met the shareholders on Monday, unfolded the full position of the mine as disclosed by the reports, and recommended that of the 1*s.* liability remaining on the shares, 6*d.* should be called up. He said he felt justified in doing so, because the manager has written thus:—"I feel more encouraged now than at any time during the past six months, and I do hope that some of the new indications will lead to something worth proving." No one denies that Viola is what is called a "pocket mine." You find one pocket of ore, and baulk the proceeds, and then proceed on your way rejoicing, looking for another. If you find it soon your position is as enviable as that of the shareholders when out of two such pockets they drew dividends equal to 32 per cent. On the other hand, if you do not find a pocket you re-construct, and

do penance by way of sixpenny calls. The latter has come (let us hope, but temporarily) to be the position of Viola shareholders.

As we have said, the question on Monday was whether the shareholders would make a call of 6d., or, for the lack of doing so, allow their property, with all its potentialities, to go by the board. Now, no journal in existence has ever contested more stoutly for the rights of small shareholders than the MINING WORLD; but even to such rights there must be some limit, or they may stretch to the point of interfering with the larger rights of other people. The chief orator, from the shareholders' side of the table, on Monday was Mr. Wellington White, who cannot say he has an alarming amount at stake in Viola Co. He has five shares, and his contribution to the call would be 2s. 6d., so that no one can think his financial position would be seriously embarrassed if he were mulcted to this extent. One would, however, have thought that a gentleman with the modest holding of five shares would have left the suggestion of a policy to some of the shareholders who were sitting in front of him, and who held shares by thousands. It was scarcely the thing for Mr. Wellington White, with a holding of five shares, to throw himself into the front. Whatever may be the rights of small shareholders they should stop at the point where a property like Viola is to be sacrificed at the sole invocation of a gentleman with a holding like this, and when, according to all indications, it is on the eve of finding its third pocket of ore. The common sense of shareholders can always be relied upon to deal with such logic as that which fell from the holder of five shares on this occasion, and with all but perfect unanimity they wisely decided not to sacrifice Viola for the sake of avoiding a sixpenny call.

DAY DAWN BLOCK AND WYNDHAM.

WHEN, in July last, the Day Dawn Block and Wyndham Co. re-entered the dividend list, we ventured to predict that better times were in store for the shareholders. Since the company was introduced in 1886, we have always felt that the property acquired was a very valuable one, and that important permanent results would be obtained from it. It is perfectly true that the undertaking has had its full share of vexations, delays and disappointments, and it is also highly probable that if the management locally and in London had been less able and less energetic than, as a matter of fact, it has been, the company would have been wiped out, so far as the original subscribers were concerned. But the shareholders have always had confidence in those who have directed their affairs, and the recent history of the concern has proved conclusively that the confidence was not misplaced. The mine is now being thoroughly and systematically developed; it is admirably equipped, the new mill is working very satisfactorily, and the returns, as will be seen from the figures we give below, are steadily improving. There is, indeed, every reason why those who hold Day Dawn Block shares should rest and be thankful, for it is difficult to see how they could lay their money out to better advantage with anything like equal safety. This week an interim dividend of 6d. per share has been declared by the board, making 1s. per share for the half-year. This distribution is at the rate of 10 per cent. upon the nominal capital of the company, which, in itself, would justify a quotation of par for the shares. Recently, however, the market price has fluctuated round about 10s., and it needs no abstruse calculation to arrive at the fact that a share paying 10 per cent. on its nominal value, and quoted at half that value, really yields 20 per cent. to the fortunate purchaser at the figure lately quoted. And yet some people talk about the difficulty of investing satisfactorily in mining shares. For the year ended March 31st last the Day Dawn Block Co. crushed 9,318 tons of quartz, yielding 7,191 ozs. 5 dwts. of gold, producing 25,996*l.* 4s. 1d., and showing an average yield of about 15 dwts. of gold to the ton of quartz. In the following we give particulars of the fortnightly crushings during the six months of the company's current financial year:—

	Quartz crushed.	Yield of gold.	Average yield per ton.	Approximate value.	Expenses.
1891.	Tons.	Ozs.	Ozs. dwts. grs.	£	£
April 11	420	800	1 18 2	2,760	760
" 25	362	750	2 0 8	2,570	790
May 9	410	781	1 18 14	2,675	900
" 23	480	700	1 9 4	2,415	800
June 6	480	658	1 7 10	2,270	850
" 20	650	673	1 0 17	2,320	1,000
July 4	700	870	1 4 20	3,000	1,100
" 18	700	723	1 0 16	2,495	1,100
Aug. 1	730	902	1 4 17	3,110	1,200
" 15	625	718	1 3 0	2,475	1,150
" 29	710	802	1 2 14	2,765	1,230
Sept. 12	745	913	1 4 12	3,150	1,230
" 26	720	1,050	1 9 4	3,620	1,200
Totals ...	7,732	10,310	1 6 18	£35,625	£13,310

We have pointed out above that the average yield of quartz for the year ended Mar. 31 last was about 15 dwts., whereas for the past six months it has been nearly 1 oz. 7 dwts. The table also shows that the approximate value of the gold obtained in the past half-year has exceeded, by nearly 10,000*l.*, the total production of

the preceding 12 months, and that instead of a net revenue for the year of 10,790*l.*, the profit in the past half-year has reached the handsome total of 22,315*l.*, the last fortnightly crushing having considerably exceeded that of any previous return since the new mill started. If these evidences of progress are not good enough for Day Dawn Block shareholders, they must, indeed, be hard to please.

YANKEE GIRL.

LITTLE need be added to the pretty exhaustive summary of the position of Yankee Girl we published last week. The impression produced by the speeches of Mr. Stewart Pixley and Mr. Crowther at Tuesday's meeting was wholly good. The harsh criticism to which the company has lately been subjected was met in the most direct manner by Mr. Crowther. Shareholders must have left the room feeling that there is every prospect that the remarkable history of Yankee Girl in the past will be repeated in a future by no means so remote as the low price of the shares would seem to indicate. At all events there are, at least, nine ore bodies on the different properties, and if out of these there are not evolved some chimneys of ore, such as those which have characterised Yankee Girl in the past, we shall be as greatly surprised as all those connected with the management.

ORITA.—EARLY RESUMPTION OF HYDRAULICKING.

THE resumption of hydraulicking on this company's property may shortly be expected. Mr. Kirkpatrick explained the difficult work which the manager has now all but accomplished, and mentioned that the company has four points of attack upon which all its water supply (the greatest of any mine in the neighbourhood) can be employed. At the time the hard zone of ground, which has now been penetrated, came in to interrupt the returns, the company was making between 1,200*l.* and 1,300*l.* a month profit, and as it has now several points of attack available beside the one from which this profit was previously made, it may be expected that the returns will be larger. Orita shares may be regarded as in the nature of a capital mining investment.

MORE ABOUT THE NUNDYDROOG MINE.

(BY ANGLO-INDIAN.)

AS I am animated by no other than a sincere desire to promote the best interests of the Kolar Goldfield in general, and of the Nundydroog Mine in particular, and as I happen to have some personal acquaintance with the locality, I beg that you will, on public grounds, permit me to add to the remarks which you were so obliging as to insert in your issue of the 26th inst. I am convinced that the time has arrived when the directors of the Nundydroog should adopt a more energetic policy than they have yet done, and I assume that they will accept in good part criticism that is not only friendly, but is also, perhaps, to some extent, according to knowledge.

Since the date of my former communication the directors have seen their way to declare dividend of 1s. 8d. per fully-paid 1*l.* share, on account of the second period of four months in the current year. This is at the rate of 5s., or 25 per cent. per annum. An excellent return is this, and it may at first sight seem ungracious for any shareholder to look, or "ask for more." But that shareholder, if an original allottee, had to wait eight weary years before the mine turned the corner; and he needs large returns now to compensate him for his loss of interest during that time on his investment. The question for all shareholders is, could the mine be reasonably expected to do better than it is now doing? Or, would it be fair to ask the directors to take prompt measures for increasing the speed and extent of the development?

The company owns about $\frac{1}{2}$ a square mile of what has so far proved to be the richest part of the field, and the Champion reef, it is believed, runs right across the block; but the ore is at present obtained from only one shaft, which is close to the Ooregum boundary. The contiguous portion of the Ooregum Mine has proved to be wonderfully rich, and the deeper that the Probya shaft (or the shaft next to Nundydroog) is sunk the wider and the better does the lode seem to be. That lode has a northerly dip, and is bound to dip at depth into the Nundydroog ground; but Ooregum is doing so remarkably well that it need not grudge its northern neighbour the reversion of a portion of the lode. Already, however, does the lode that is found in the deepest, or 600-ft. level of the Nundydroog, measure 8 ft. broad, and assay nearly 3 ozs. of gold to the ton of ore. But, notwithstanding the most encouraging results of development and milling, the Nundydroog still has but one means of access to the treasure that has been discovered. It might have been expected that the directors would have used the utmost possible expedition, and have had two or three new shafts sunk to give scope for the rapid development of the property; but so far as the shareholder outside the board room is aware, they seem to have been animated by the advice to "tak' it aisy," or, at least, to "tak' it as aisy as ye can."

The Ooregum Co. has had of late years to fight against the grave drawbacks of the exhaustion of its capital, and the incubus of its debt. Its development was, consequently, slow after the lode had been cut in two of its shafts, and its success was retarded accordingly. But now its development is proceeding by "leaps and bounds;" it is breaking rich ore in about 30 places, and drawing that ore up by four, if not five, shafts, and another shaft, making six in all, is being commenced south of Wall-roth's. To the south of Ooregum is the Mysore block of the Champion Reef Co. That company was started so recently as June, 1889, for the purchase and development of a large block, known as the Coromandel, north of the Nundydroog, and of the northern portion of

the property of the Mysore Co. Two shafts had been sunk to some depth in the Coromandel block, and these have now been pushed to a depth of about 330 ft. On the other block four shafts have been sunk simultaneously, and have now reached a depth of about 240 ft. The lode is thus being attacked from six distinct points in the two blocks, and "when found," the superintendent may be safely trusted to take full "note of it."

The Nundydroog has the command of more disengaged capital than any other company on the field. This is due to the fact that the directors have banked rather than invested a large portion of the late increase of the capital. Ooregum has four or five, and Champion Reef has five or six strings to its bow; but Nundydroog not only has but one effective one, but it will not have another for a considerable time to come unless the board soon despatches air-compressors, rock-drills, and other machinery. The mine is well-officered, and it has the command of ripe experience in London. It has the men and it has the money requisite to make a great mine of it, but the directors wait on events, instead of doing as much as lies in their power to shape events without violating the recognised canons of safe mining. This is certain, that just as Kennedy's shaft, near the northern boundary, will make very slow progress as long as it is dependent on hand labour, instead of a full equipment of first-class machinery, so the other shafts which are wanted to prove the third of a mile of ground between Kennedy's and Taylor's will not sink themselves to oblige the directors. The new capital was not subscribed in view to the increase of the metallic reserve of the company's bankers, but in order to strengthen the hands of the directors and executive in developing the company's property—out several years hence, but at once. It is well at the beginning of a risky enterprise to yield to the dictates of prudence, and to play a waiting game; but that kind of game is played too long if the opportunity of winning an easy triumph over difficulties is lost for want of courage. There is an old adage that "None but the brave deserve the fair." Let the Nundydroog directors act in reason up to it, and the contemplative shareholder will be happy.

Sept. 29, 1891.

ST. AUGUSTINE DIAMOND MINE.

ST. AUGUSTINE has always had enemies on the other side who, as the chairman said, "are determined that the company shall not succeed if they can help it." Equally determined is he that it shall succeed, if its ultimate prosperity can be secured by human effort. In this determination he is backed by the entire body of shareholders, who carried, with unusual alacrity and unanimity, his suggestion to re-construct the company on the basis of 18s. per share, credited as paid up, and 2s. liability. Evidences of the hostility of persons whose interests are not those of the shareholders, were forthcoming at the meeting, but these were treated with the indifference and contempt they merited. The meeting properly concentrated its attention on the business before it. The mine, so far, has not been successful, but then it has not reached the depth at which the Kimberley adjoining found its valuable blue. The prospects of finding blue in paying quantities are extremely good.

But if, as we have said, St. Augustine has not wanted for enemies who have endeavour to retard its success, it has never been destitute of true and self-sacrificing friends. There is Mr. Finlason, for example, who is so distressed at the non-success of the company, that he is prepared for its benefit, if called upon, to sacrifice the whole of his 25,000 shares. Then there was the late Col. McMurdo to whom the company in its financial straits never appealed in vain. In spite of all the disappointment of the past, there is a solid basis of belief in St. Augustine's future—so solid, indeed, that if the shareholders will not take up the new shares which will be offered to them, there are those on the Stock Exchange who will. Moral:—If it answers the purpose of the Stock Exchange to take up what St. Augustine shareholders may leave, it surely must answer the purpose of the shareholders to leave nothing for the Stock Exchange to take up.

PROSPECTS OF BRITISH LEAD MINES.

LEADHILLS, ROMAN GRAVELS, GREAT LAXEY, VAN. MR. PETER WATSON raised a very important point at Roman Gravels meeting when replying to some rash criticism to which his re-construction policy in that case was subjected. Can lead mines be made to pay? An hour before, Leadhills Co., of which he also is chairman, had held a meeting where a dividend of 4s. per share, instead of 3s. 6d., as formerly, was paid. The accounts showed that 4s. 6d. might also easily have been paid. Great Laxeay directors report their ability to declare a 10s. dividend; Roman Gravels is almost paying its way, and in Van, in the bottom level, there has latterly been a decided improvement. The answer therefore to Mr. Watson's question was practically an affirmative one. Lead may not be so high in price as it was a few years ago, but blende, which was then regarded as almost a bye product, has recently in the case of Roman Gravels realised as much as 7l. 4s. per ton. Moreover, it must not be forgotten that with rock-drills and improved mechanical appliances, lead mines can be developed more rapidly than heretofore. These points neutralise in a great degree the reduced price of lead. These are the general facts in regard to this industry, but our remarks would be incomplete without further reference to the meetings of Leadhills and Roman Gravels.

The position of Leadhills is satisfactory in every respect. The new lease has given the greatest encouragement to the management to proceed with vigorous development works. To whatever

department we may look we see evidences of renewed life and activity. The smelting works have been still further improved, a new reservoir is to be added, and a lift will be provided for the men which will be a boon to them, to the shareholders, and to the ground landlord, who, it is to be hoped, will liberally assist in providing it. Had Wednesday's meeting taken place on the mine, as suggested by a shareholder, those present would have seen 800 tons of lead ore in stock—a sight which, Mr. Watson observed, no other lead mine in the country could show. Leadhills Co. is a fair illustration of what, with good management, lead mines can be made to do in the present day.

Roman Gravels is in a different position. Not many years ago it made in profits about 150,000l., of which the shareholders received 120,000l., the balance being spent on permanent improvements, which has left the mine in its fully equipped position. For some time past the production has fallen off, but at the moment at which we write every end being worked is in payable ground, and the mine is almost paying its expenses with its monthly production of 100 tons of lead ore, and between 30 tons and 40 tons of blende. To call a mine like Roman Gravels "worked out," as a shareholder did, is obviously to misapply the term. Further capital is needed, and Mr. Watson and his colleagues, on Sept. 9, submitted a re-construction proposal, which was carried unanimously, and confirmed on Wednesday. The shares will be 10s., and the liability upon each of them 5s. So far as the opinion of the general body of the shareholders has been ascertained it is entirely with the directors, who themselves hold about 8,000 of the shares. It may be taken for granted that Roman Gravels will be re-constructed and the capital found—if not wholly by the shareholders (as we hope it will), by independent persons, who will thus, for a mere bagatelle, enter into possession of a property upon which 47,000l. has been expended, 30,000l. out of the profits of the mine itself, and 17,000l. only out of capital provided by the shareholders. The mine has therefore practically been its own banker. We understand that 1s. 6d. per share will place the mine in an excellent position for a considerable time to come, even should no further discoveries be made; but on this point the speeches of Mr. Watson and Capt. Waters (manager) may be perused with advantage. Shareholders who understand their real interest will not refrain from taking their full quota of shares in the re-constructed company, and more if they can get them.

DEATH OF MR. A. J. LAMBERT.

WE deeply regret to announce the death of Mr. Alfred James Lambert, a director of Indian Consolidated and Colar Central Co. Mr. Lambert had been ailing for some time past, and more than a month since his life was despaired of. He succumbed about 10 days ago, and was buried at Shenley on Saturday last. Mr. Lambert was a gentleman of great business capacity and remarkable powers of organisation. Several of the tramway companies with which he was connected were brought into a successful position from one of ill-fortune by his untiring exertions and administrative skill. In social as well as in business life Mr. Lambert was warmly esteemed, and will be greatly missed by a large circle of friends.

MYSORE HARNHALLI GOLD MINING CO., LIMITED.

MR. LEWIS EVANS' REPORT—A CAUTION.

MR. LEWIS EVANS has written a report on this property, in which he says:—"It is very evident that gold has been extracted from near surface, and your workings are not deep enough for anyone to say it is proved that you have no mine there. I think that in depth you will find a great change in the country rock, and that the lodes and veins you have met with may form a valuable lode when they enter it." This report is of the negative rather than the positive order, and does not justify the audacious puffing of the shares at 15s., for which the unfortunate victims cannot now get 4s. The directors do well in all their official communications to disclaim any responsibility for the statements made by persons who seek to profit by the bad advice they give to those in whose interest they profess to act.

PRINCE OF WALES MINE.

IMPORTANT DISCOVERY ANNOUNCED.

THE managers, under date Sept. 30, write:—"We are very pleased to be able to report a good discovery in the bottom of the mine. In blasting down the lode in the 130-fm. level west we find it to be nearly 4 ft. wide, of a splendid character, in tinny capel and peach, and worth fully 30l. per fm., having every indication of still further improvement. It will be remembered this is the first point of real value since the Flat (or Flucan lode) passed through the main lode just below the 166, and carried the main lode downwards with it. As the junction of both lodes, together with the heave of the main lode, is dipping east, we think this end is now below the unfavourable influence of Flat lode, consequently we have this improvement, which we think is important. In order to expedite the drivage of this level, those men have re-started the drivage by the lode. In the 180 east there is nothing to be seen at present but the Flat lode, which is large and composed of flucan and killas. We put the men to cross-cut a little to ascertain if any part of the main lode is standing in that direction. The lode in the 166 west is somewhat disturbed in the 6 ft., but is again getting defined and to its former size, and yielding very good tinstuff. The ground in the cross-cut south is more porous and water issuing from it more freely."

GOLDEN FEATHER CHANNEL, LIMITED.

COL. MCLAUGHLIN EXPLAINS.

Sept. 16.—It is impossible to foresee delays due to unexpected causes, and a river claim seems to develop the unlooked-for at all times. I try hard to confine my cables to what may be regarded as certainties, but often in an hour the entire prospect is radically changed by the cropping up of accidents that were looked upon as most improbable. Owing to a leak in the elevator, which could not be overcome, we had to rig up and place in position an additional pump elevator. It is needless to say that the work this involved greatly delayed the draining of the claim, but when it was accomplished the work the two elevators then did (on the 10th) more than justified me in cabling, as I did on that date, that we would be "sluicing about end of next week." This was the condition of affairs at 9 o'clock last night, and I was congratulating myself on the outlook when I was called to the telephone by ditch-tender Bickford, who reported a slide on the ditch near the head-dam, 36 miles from here. The slide filled the ditch to such an extent that it will take fully four days to get it repaired, and will stop work in the claim for two days. It required a hard night's work to get a gang of men together, with camp equipage, supplies, &c.; but this was accomplished, and the foreman and men are now on their way to the break, and should have same repaired by Sunday. When sluicing is started we can depend on rapid returns as the *debris* in the claim is very fine and such as can be easily and rapidly handled by the hydraulic elevators. On the 3rd, I commenced sinking a pit to reach bed-rock below the head-dam at a point which indicated that there was but little *debris* above the pay gravels, but I had to suspended work here as it was necessary to put all the men that could be spared from the head-dam and elevators at cutting race-ways through the high points of gravel to drain the deep pools down to the lower end of the claim where the pump elevators are working. In the excavation made previous to withdrawing the men from this place, we obtained good prospects from the bed-rock uncovered at the river bank, which point is, of course, considerably above the true channel of the river. The gold is coarse, turning finer as we sunk down, and, in a crevice, was true river gold. This gold was found at a place worked over by the Cape Claim miners, and is additional proof that the claim was worked by them in a hurried and wasteful manner, and that little, if any, bed-rock was creviced. In conclusion, I have to say that river mining of to-day, and the river mining of 1849-58 totally differ. In early days the task was but to divert the river by dam and flume, and then drain the dead waters between head and foot dams, and when this was accomplished, the first gravel exposed above the receding waters paid to wash; but now, after diverting the river and draining the dead water, and many deep pools caused by *debris*, we find a river of *debris* overlaying the pay gravels which is far more difficult to get rid of than the river itself, but this can be done by us by reason of the enormous power brought on to the claim from the Miocene ditch, and by which we will work off the *debris* so economically, that it in itself will pay to sluice. It has been an unceasing task to carry out the great works of the Golden Feather, and to do so, and also get to mining this season, has been regarded as an utter impossibility by those who have looked into the project, but I am now confident that I can make returns from the claim this season and pave the way for a brilliant success during 1892. I regret the impossibility of writing more frequently to post our board and shareholders on affairs here, but it is an imperative necessity that I should be at the claims, which leaves me but scant time for office work. With the exceptions noted all affairs are in first-class order. The weather is cool and pleasant, and there is but little sickness among the men.—F. MCLAUGHLIN, Manager.

GOLDEN GATE ALLUVIAL, LIMITED.

COL. MCLAUGHLIN EXPLAINS.

Sept. 16.—I regret the delay in forwarding this report, but it is impossible for me to attend to office work except at such times as I can be spared from the claims. I can best serve all our interests at the present time by work at the claims, and I try to make amends for the scarcity of letters by cabling our progress and all important matters from time to time, which I trust will be acceptable for the present in lieu of reports. It is needless for me to say that I deeply regret the delay we are meeting with, but I assure our board that I am doing all in man's power to reach pay, and in these efforts I am most earnestly assisted by every employe of the company. The delay in mining pay gravels is now entirely due to *debris* in the claim. This *debris* presents difficulties that the early river miners had not to contend with, and which, therefore, were not looked for and provided against in the planning to work the auriferous rivers of the present day. Despite the scouring of the claim during the last winter by the almost clear water (clear owing to the impounding of the suspended *debris* by our head-dam) of the river, we still find vast quantities of *debris* in the claim, and particularly at the places where I am sinking. The *debris* was washed from point to point in the claim throughout the winter, and where there were deep depressions last year there are now high points, and *vice versa*, thus entirely changing my contemplated plans for working the mine this season. The points I am now sinking at are most favourable locations for the retention of gold, being the river terminus of rich ravines, showing soft bedrock on both banks, and presenting many other favourable indications which guided me in here opening the claim. I have now been stripping and sinking for 19 days, under great difficulties, due to seepage, loose gravels, long runs to deposit the excavated material, breaking down of pumps, and the constant repairs and lengthening of same, due to the depth excavated from day to day, and as yet have struck no indication of hard gravel, and until such gravel is reached we cannot expect pay. It is an absolute impossibility to tell what day or what hour we will strike it, but there can be no doubt whatever that when pay dirt is reached, in such a locality, it will reimburse us in one hour's washing for all the expensive dead work now under way. It is impossible to describe all the difficulties we are labouring under, and I am only buoyed up to continue the struggle by the knowledge that the river is a wonderful sluice throughout the claim, and one that would have been paying to-day had we the water at command to run off the *debris* and top gravels by means of elevators. I started a small gaug yesterday to follow down a crevice on

the bank of the river, and we find gold going down on the bedrock in the excavation we are sinking. Here we may find the rock running level at any moment, and should we do so we will at once have rich pay. Your reply of Sept. 10 to my cable of the 9th gives me great encouragement, and on its receipt I at once added to the force of men sinking at the Turner pit. I sincerely appreciate the confidence in me expressed by the promise of continued support, and I beg to most heartily assure our board that I will leave nothing undone to reach the rich pay that certainly lies below the level of the claim.—F. MCLAUGHLIN, Manager.

COMMERCIAL NOTES.

METALS.

COPPER has been weak. A fair business has been reported in G.M.B. warrants from 52½. 5s. to 51½. cash, and from 52½. 17s. 6d. to 51½. 12s. 6d. three months. To-day's prices are 51½. 7s. 6d. cash, and 52½. three months. The arrivals in Liverpool and Swansea for the fortnight have been 1,719 tons, not including 700 tons in transit from Havre, and the deliveries, 1,497 tons. The month's statistics are not yet made up. We quote English tough, 53½. 10s. to 55½.; best selected, 55½. to 56½.; strong sheets, 64½. to 65½.; India sheets, 60½. to 61½.; yellow metal, 5½d. to 6d.; ore, 9s. 6d. to 10s. 9d. per unit.

TIN has been steady. Straits sold from 91½. 15s. to 91½. 2s. 6d. cash, and three months from 92½. 5s. to 91½. 15s. To-day's prices are 91½. 10s. cash, and 92½. 2s. 6d. three months. Australian, 92½. 10s. and 93½. cash. The stock in London, including that now landing, is 3,099 tons; arrivals, 1,918 tons; delivery, 1,575 tons, of which 90 tons to America; Dutch delivery, 577 tons; billiton afloat, 1,550 tons. Powell's cable gives the Straits shipments for Sept. as 1,780 tons. The Dutch market has been firm at about £55 for banca and billiton. The Dutch sale of banca went at an average of £54½, or 91½. 15½. per ton; English ingots, 91½. 10s.

TINPLATES are quiet, and ordinary coke quoted 13s. 3d. per box Liverpool.

SPELTER steady, closing rather easier. We quote ordinary brands, 23½. 12s. 6d. to 23½. 15s. ex ship here.

SHEET ZINC.—At public sale yesterday 105 tons sold at 26½. per ton net at works.

LEAD quiet. We quote soft Spanish, 12½. 2s. 6d. to 12½. 5s.; soft English, 12½. 5s. to 12½. 10s.; L.B., 12½. 15s.; sheets, 13½. 5s. to 13½. 10s.

QUICKSILVER firm. Rothschild advanced his price yesterday to 7½. 10s. Very little offering from second hands.

ANTIMONY dearer, and we quote Hallett's and other brands 42½. to 43½. per ton.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING OCT. 3.

Agra Bank	5s. per share.
Agency Land and Finance of Australia	7 per cent.
Alliance Mortgage and Investment	5 per cent.
Army and Navy Co-Operative Society	5 per cent.
Brazilian Imperial Central Bahia Railway	3 per cent.
Bank of Australasia	14 per cent.
Chartered Bank of India, Australia, and China	7 per cent.
Callender's Bitumen	5s. per share.
City of Chicago Brewing and Malting	8 per cent.
Colonial Bank of New Zealand	7 per cent.
Dick, Kerr and Co.	7 per cent.
Dunaberg and Witepsk Railway	10s. per share.
East London Water	8 per cent.
Freehold Trust of Australia	10 per cent.
Henry Ford and Co.	12½ per cent.
J. C. and J. Field	8s. per share.
John Colmer	12 per cent.
J. and P. Coats	8 per cent.
Lands Allotment	5 per cent.
Lands Trust	5 per cent.
London and Glasgow Engineering and Shipbuilding	5 per cent.
London and North-Western American Mortgage	6 per cent.
London and Brazilian Bank	10 per share.
London Trust, Deferred	5 per cent.
London Trust, Preference	4 per cent.
Northern Investment of New Zealand	6 per cent.
Regent's Canal	2½ per cent.
Sheepbridge Coal and Iron	7½ per cent.
Southern Brazilian Railway	10s. per share.
Tarapaca Waterworks	10s. per share.
Voigt Brewery Preference	7½ per cent.
Voigt Brewery, Ordinary	10 per cent.
Waterlow and Sons	8s. per share.

HOLLOWAY'S PILLS AND OINTMENT are particularly recommended to persons who have to pass their lives in confined and crowded places; hundreds of thousands of our fellow creatures toil from morning until evening in factories and workshops to the detriment of their health, and the deterioration of the race. They suffer, in consequence, from indigestion, flatulence and want of appetite, and these complaints, if neglected, bring about nervousness and failure of the vital powers. Holloway's remedies can be used by such sufferers to their very great advantage, as they are mild in action, and certain in their effects. No one need, therefore, lose a day's work when using them, a matter of consequence to those whose daily bread depends on daily toil.

REPORTS OF MEETINGS.

THE YANKEE GIRL SILVER MINES, LIMITED.

POSITION OF THE MINE FULLY EXPLAINED—HOSTILE CRITICS ANSWERED—NUMEROUS ORE BODIES OF PROMISE—SPEECHES BY THE CHAIRMAN AND MR. CROWTHER.

THE second ordinary general meeting was held at Winchester House, on Tuesday, "to receive and consider the balance-sheet, the revenue account, and report of the directors and auditors for the year ending June 30, 1891, to elect a director in place of the one retiring by rotation, and who, being eligible, offers himself for re-election; to elect auditors, and to transact any other business which, under the articles, ought to be transacted at an ordinary meeting."

Stewart Pixley, Esq.

(chairman of the company), presided.

Mr. BEDFORD MCNEILL (secretary) read the notice of meeting.

RESULTS OF THE YEAR.

The CHAIRMAN: Gentlemen, I presume that we may take the report as read. In moving the adoption of the same I will only trespass upon your patience for a few minutes. My colleague, Mr. Crowther, will follow me, and refer to matters connected with the mine. During the year under review 7,539 tons of ore were sold, which realised 158,687. 9s. 9d., or 207. 19s. 4d. per ton. The total mine cost and charge on this output, including income tax and loss on exchange, was 60,141. 2s., or 7. 19s. 9d. per ton. The experience of the first year has taught us one or two important lessons. The ore deposits are peculiar in their form and composition, very variable in their metallic contents, and liable to a quick transition from high to low, and from low to high grade ore.

NEED OF CARE IN WORKING.

It follows that mines of this class have to be worked with much forethought and care, in order to keep the returns fairly constant, and to adjust the profits to the normal capacity and value of the productive ground. Estimates of the money value of ore in reserve, or of "broken" and "sorted ore," varying in contents from 30 to 1,900 ozs. of silver per ton, have proved unreliable. The money value can only be determined through special and careful sampling. On these grounds it has been deemed advisable to discontinue fortnightly estimates, and to issue monthly circulars based upon the results of the sampling. On referring to the revenue account it will be seen that during the year ending June 30 the sales of ore and royalties amounted to 161,651. 12s. 7d., to which amount must be added the sum of 7,653. 18s. 6d., value of the ore in stock on June 30, as well as sundry receipts, viz., 1,730. 19s. 1d., making a total of 171,036. 10s. 2d. Against this sum, the expenses at the mine and in London, together with 6,230. 13s. 9d. and the sum of 2,600. to meet income-tax on the dividends already declared, make 66,374. 15s. 9d., which leaves a profit of 104,661. 14s. 5d. The item, 6,230. 13s. 9d. represents the profit which accrued between June 15 and the date of the incorporation of the company, viz., July 3. This amount has been dealt with in the balance-sheet as a rebate on the purchase price.

ACCOUNTS.

Turning to the balance-sheet, and dealing first with the items on the credit side, we find, as already explained, that the purchase price (235,000l.) has been reduced to 228,769. 6s. 3d. This item is followed by the sum of 11,651. 8s. 10d. for new buildings, machinery, concentrating mill, improvements, and prospecting works. These figures (11,651. 8s. 10d.) represent a little more than one half of the sum actually spent, viz., 21,654. 8s. 10d., out of which we have charged to revenue account the sum of 10,000l., leaving the figure standing in the balance-sheet to be dealt with at some future period. Probably most of the shareholders will have seen statements to the effect "that the last dividend was not earned, and that the directors had to arrange for advances in order to carry on the mining operations. The figures of the revenue account effectually dispose of the first allegation, whilst the balance-sheet is as equally clear as regards the second, which I will deal with more in detail.

POSITION AT END OF JUNE.

On June 30 we had: In actual cash, 7,087. 13s. 11d.; sales of ore, 14,015. 0s. 10d.; sundries, 220. 17s. 4d.—14,235. 18s. 2d., which amount has been received since June 30; ore in stock, since shipped, almost the whole of which amount has been realised, 7,653. 18s. 6d.; total, 28,977. 10s. 7d. If to this is added the amount borrowed from revenue for capital purposes, viz., 2,110. 7s. 7d., we have 31,087. 18s. 2d. On the other side stands: Unclaimed dividends, 34. 15s.; June mine cost, paid July 20, 4,959. 0s. 9d.; advance 8,500l., of which we have repaid 3,500l., 8,500l.; sundries, 1,462. 13s. 6d.—14,956. 9s. 3d.; total, 16,131. 8s. 11d.; add Consols deposited with Inland Revenue, 139. 5s. 6d., which gives a total of 16,261. 14s. 5d., and represents the balance of revenue account, 13,661. 14s. 5d., and provision for income tax, 2,600l.—16,261. 14s. 5d. Having realised the satisfactory profit of 104,661. 14s. 5d. during the first year of our operations, and feeling that our future prospects were highly encouraging, we deemed it advisable to effect such repairs and improvements as were necessary in the shafts, levels and stopes, and to get these works completed as soon as possible. These works naturally interfered with the output during the last three months, consequently our shipments of ore have been materially reduced.

GRADE OF ORE.

The grade of the ore has also, for the time being, become deteriorated in value. We are, therefore, not in a position to declare a dividend for the quarter ending the 30th inst. You will not feel discouraged by this statement, for now that the improvements and repairs are completed we shall reap the benefit of them, and renewed shipments of ore will be made, while the exploratory works may at any moment strike chimneys of high-grade ore. It is obvious that your directors and mine superintendent cannot be held responsible for fluctuations, which may take place either in the value or extent of the ore bodies met with in the mine. We believe, however, that the property has large ore-bearing resources, consequently we are intent on developing

them as vigorously and economically as circumstances will allow. I have now to submit to you the following resolution, viz.:—"That the report of the directors and accounts to June 30, 1891, as presented, be received and adopted." (Cheers.)

EXHAUSTIVE STATEMENT OF THE COMPANY'S PAST, PRESENT, AND PROBABLE FUTURE HISTORY.

Mr. FRED. P. CROWTHER (director): Gentlemen, it falls to my lot to second the resolution Mr. Pixley has proposed, and before that is done there are certain points on which I desire to address you. It must be self-evident to every shareholder that we have, as a body of men working together for our mutual benefit, every reason to congratulate ourselves upon the results of Yankee Girl, Orphan Boy, and Robinson Mines during the past year, for a profit of 104,000l. distributed in dividends and bonus, and 10,900l. written off permanent improvement and development account, may be fairly considered by our most adverse critics a very satisfactory result. (Cheers.) We must remember that all through the time this has been done, and has been going on, we have met with the

FIERCEST KIND OF CRITICISM.

We were told when we acquired the property that it was worthless, that it was worked out, that we were paying far more for it than it was worth, and, if worth nothing, of course we were, which is a self-evident fact. These gentlemen have told us consistently from the beginning to the end of our owning this concern that it was a played-out one, and I suppose they will go on doing so to the end of the chapter, because there are no people so difficult to convince as those who are convinced against their wills. It is a most remarkable fact that during this period of prosperity the selling of our shares has been something enormous. 213,000 of the 17s. 6d. shares have been sold and transferred through the books of the company, and seeing that there were only 173,500 issued, you will notice that more than one and a quarter times the number of shares had been sold and transferred, and I am quite satisfied from my own personal knowledge that there has been an additional number of shares of at least 200,000 or 300,000 sold that have never passed through the transfer books, but have been settled for on the Stock Exchange. It is difficult for any ordinary-minded individual, who has, perhaps, not the means of arriving at facts, and who, likewise, has not the knowledge to enable him to digest the lessons to be learnt from the facts—I say it is difficult for this class of individuals to realise why this should be so. Now, we have all to remember that during the past 12 months, or a large portion of it, we have been passing through financial troubles of the gravest kind; they have been far-reaching, and hardly an individual who has anything to lose has not been more or less affected by the circumstances which have influenced financial matters. It is a very difficult thing for shareholders to realise that our success has been in the main the principal cause for the selling of our shares. Men have

HAD TO REALISE MONEY AT ANY COST,

not only to meet direct losses, but likewise to fortify themselves against those they dreaded. I have had many an interview with our principal shareholders upon this very subject, and some of them have told me that they have been compelled to sell. It was not that they had not plenty of means, but the means were not available. The securities, which under ordinary circumstances would have been readily realised, were not realisable at any price, and, therefore, they were compelled to sell Yankee Girl shares, which stood at a large premium, in order to provide the funds they needed for their business operations. We know that these financial troubles affected the grain market, the cotton market in Liverpool, and all markets, and one of our shareholders told me some time ago, when I asked him why he was selling Yankee Girl shares—"Well (he said), the fact of the matter is, that I have to provide a large amount of money to help to carry some of these cripples in the Argentine Republic, and I can realise Yankee Girls at a large profit; whereas if I sold anything else I should have to realise it at a large loss, and that is my reason for selling." So this class of sellers came upon the market, and every share sold caused other holders to think there was something wrong, and they sold too. In addition there have been a class of sellers, whom I know, who had a large profit upon their entire holding, and sold half of it to make themselves safe—to sit upon velvet for the balance—and I am not the man to disapprove of that kind of action. I think it wise, when shareholders can get a large profit, to realise half their holdings, and hold the remainder without risk. Personally,

I HAVE NEVER SOLD A SHARE, EITHER DIRECTLY OR INDIRECTLY,

and I want you to clearly understand that—(cheers)—but I have watched the course of matters with great interest, and tried with the utmost of my ability to solve this problem, which is a conundrum that has bothered more minds than mine, and I think there you have the principal solution. When you come to realise the fact that we paid 148,500l. in cash for this property (I put aside the vendors' shares, because if the mine is worthless the vendors' shares are worthless also)—but we paid this in cash for the mines, and we have taken out of those mines in the first year's working 161,000l. in cash. (Cheers.) If that is not satisfactory I do not know what is. (Cheers.) The next point I wish to touch upon is this—of course, we, as directors, stand in a very peculiar position. You will remember that many of us are directors of the Mines Co., Limited, who were the promoters of the Yankee Girl Co., and we have naturally felt our position very keenly. We have, indeed, been criticised very freely, and have been called all sorts of names. That does not matter. Hard words do not break bones, and they have not broken ours. But I do want to draw attention to this fact, that this period of prosperity through which we have passed fully justifies everything that we ever said, either as promoters, or otherwise, of this property which you shareholders acquired, and the justification of vendors, promoters, directors, and all interested is in the accounts which we have furnished to you to-day, and in the dividends we have paid to you during the past year. (Cheers.) Now, as regards the future—that always is a very interesting subject to shareholders. The future must be judged in a measure by the information of which we are in possession, and likewise by the facts we have accumulated, and notably the profits of the past year. These mines have had a very successful career (marred by one or two blemishes) since they were discovered.

REMARKABLE PRODUCTION.

The Yankee Girl Mine has returned something like \$2,600,000, or over 500,000% in hard cash to the men who originally acquired it for \$125,000; and I say that the past history of the mine, which goes back if I remember rightly to 1881, has been not an uninterrupted course of prosperity, but it has been (taking it as a whole) an exceedingly prosperous one; and when you consider that our lowest level, in which you are working at the present time, in the Yankee Girl Mine is only 755 ft. from the surface, you can understand that there are many years in which you can reasonably look with expectation that they will do average profits, as well as they have done in the past. When, also, you come to consider that since the acquisition by this company of these mines the Robinson Mine has been developed, and has produced a large amount of ore, with prospects exceedingly encouraging for the future, and that the Yankee Girl Mining Co., which originally owned this property, never received any benefit out of the Robinson, for the simple reason that, although they owned it, they did not work it—I say, we have an additional incentive to go forward with encouragement, and to look hopefully for future results. Those who are responsible for expressing their opinions regarding the future are men who have had experience.

MR. CRAWFORD.

For instance, Mr. Crawford has been connected with the mine from its inception. He was the original purchaser of it. He is still one of the largest shareholders—in fact, the largest shareholder, and in a letter to me written immediately after his return from a visit to these mines, he says this:—

"I shall be very pleased indeed to attend the meeting of Yankee Girl, Limited, on the 29th, but I cabled you my eldest little girl has been ill with malarial fever, and I do not think I should, under the present circumstances, leave home. I believe the future of Yankee Girl to be beyond our comprehension in value. There is everything to indicate that we have scarcely developed any part of it, and I believe that with proper development it will be a large producing mine for many years to come."

Capt. Harvey, who is an exceedingly cautious Cornishman, loth to express opinions, and when he does, expresses them in very guarded language, says: "During the past year both the Yankee Girl and Robinson Mines have opened up exceedingly well. The future prospects are certainly encouraging, and with the same persistency shown in conducting the general operations of these mines, there is every reason to believe that good results will be obtained."

CAPT. HARVEY WILL BE MANAGER.

Since that was written, we have persuaded Capt. Harvey to take the management of these mines—that is, their sole and absolute control. Up to the present time he has simply been advising engineer. That is to say, he went, on the part of the directors, into the mine every fortnight, examined it, and made his report to them, which report has been issued to the shareholders, but he has not been responsible for the management. That has been in the hands of the men there when we took possession, largely owing to Mr. Crawford's lothfulness to disturb those in charge, and partly owing to the difficulty that we had in persuading Capt. Harvey to increase his duties on the other side. Many of you know how successful he has been in bringing the New Guston Co. to the full tide of prosperity, and we have great confidence in him and in his opinion, and, therefore, the sentence which I have just read, expressing his opinion, is one that conveys to our minds, at any rate, a great deal of meaning. We have in his latest reports and cables information upon which, no doubt, he has largely based those opinions. Down to the 6th level Yankee Girl has produced pretty much all the money that has been taken out of it, and it stands to reason that those workings will not last for ever, and, in fact, they are pretty well exhausted. There may be new ore bodies to be discovered, but that remains to be seen. Still, down to that level the original ore bodies as they existed have been worked out, and Capt. Harvey says the mine is looking poor from the 6th level upwards, but below the 6th level the mine is looking well and that is an important point, because we have to depend upon the lower portion of the mine for our earnings and profits in the future. Until quite recently (Aug.) there had never been any discovery made in the lower portion of the Yankee Girl Mine of rich ore below the 6th level. I am happy to say that the developments that are now going on below the 6th level are extremely favourable.

IMPORTANT REPORTS.

We have discovered a new ore body which was not known before to exist, called the south-west ore body, and I will read you the information that we have regarding it. On Aug. 24 Mr. Harvey informed us that he had driven 12 ft. in ore 4 ft. wide, running from 20 to 40 ozs. of silver and 20 to 40 per cent. of lead. On Sept. 10 he informed us that he had driven 32 ft. on the same ore body which ran from 1 ft. to 5 ft. wide, and that the ore in the forebreast has recently improved in character, and that some nice peacock ore has been found, assaying 893 ozs. of silver per ton and 33 per cent. of copper. On Sept. 18 he told us that he is still in this ore body, and that the ore is 7 ft. wide in the face of the drift and looks well—the silver running from 30 to 800 ozs. per ton. On Sept. 27, by cable, he says (this is all in the No. 9 level) the south-west ore body in No. 9 level, the ore in the stope (which he has opened on in the earlier portion of the shoot) is 18 ft. in length, 4 ft. thick and looking well, and that the ore in the face of the drift, and the breast of the drift was 7 ft. in width, looking well. Now, I need not tell you that this discovery in No. 9 level is one of great importance. The shaft is down to the 11th level, but there has never been much work done in connection with it at the 10th and 11th levels, and no great discovery of high grade ore made below No. 6. Now we have discovered high grade ore in No. 9, and also the same body of ore in No. 8, and believe from the reports that they have it in No. 7. They are now going to unwater the bottom of the mine (for the water is still in it as when we took it over) and search for the same ore bodies seen in Nos. 10 and 11 drifts.

POINTS OF ENCOURAGEMENT.

We hope to open the ore bodies in these two drifts, and soon to be in a satisfactory position. If this ore goes on as it is doing we shall have large reserves, and get at them quickly, and not only have

supplies of ordinary ore, but from present appearances we shall have rich ore again. (Cheers.) The No. 1 Yankee Girl ore body above No. 6 level, which produced very largely the high grade ore taken out of that mine, was cut off at No. 6 level by what is called a slide. That slide we have followed, and it has taken a turn back again, and through the reef again in No. 6 level. We do not know what to make of it, but the slide cut off the chimney, and until we can find that ore again below the No. 6½ level, it will interfere with the shipments of high grade ore. We shall search for it diligently until we find it, and none of us have any doubt in our own minds (either Capt. Harvey or anyone else) that in a short time we shall re-discover it below the slide. There are one or two other points I want to speak about, and the first is this—that the returns during the past year from the Yankee Girl have been given to you as so many tons monthly, with such a value. That value is estimated, but the ore varies in quality so much that these estimates cannot be made correct—in fact, they have been found to be very incorrect. The greatest care has been taken, and still we have found them unreliable, and, of course, many of you complain that the profits as shown in the yearly accounts are different from what they are in the circulars. That is the reason these estimates have been found unreliable, although every care has been taken to make them as correct as possible. Another point we think it advisable in your own interests to do is that to wait to get the smelters' returns. We shall have to wait until the 15th or 18th of the month, but then we shall be in possession of figures more correct than mere estimates. We propose in future to send out the monthly returns about the 15th or 18th of the month or as soon as they are received, and I hope in future they will be found to be much more correct than the estimates of the past. Another point is that we have been shipping from Yankee Girl in the past a variety of grades of ore running from 30 ozs. a ton in silver up to

AS HIGH AS 2,700 OR 2,800 OZS. OF SILVER.

At the present time we have none of that very high grade ore available, but trust before long we shall have it again. There is no reason to suppose we shall not. There is every reason to suppose we shall have a certain proportion of it. It is upon this high grade ore that we depend for pulling up the average. If you were to ship \$30 ore only you would have very small returns, but when you come to throw in, say, one car a month of the very high grade ore, that would yield from \$1,900 to \$30,000 for 10 tons, you can see the effect it will have upon the profits. At the present time the returns are likely to be small until the ore body in No. 9 is sufficiently opened to enable us to begin to stope. We are stopping on the poorer portion—the galena ore—and very shortly they will open a stope on the richer ground. If it runs only \$100 a ton it will give magnificent profits. New Guston is producing ore of 15½ value—in other words, \$75 nett—the gross value would be, allowing for smelters' charges, about \$20 more. You can see that if the Yankee Girl ore obtained in No. 9 should turn out \$100 per ton, we shall have good results. I do not want you to feel too much disappointed, because just at the moment our returns are small. Capt. Harvey has only just taken charge, and being a thoroughly practical man, is determined to get the mine into good shape. There are something like

SEVEN ORE BODIES ON THE YANKEE ALONE,

and one in the Orphan Boy, and the ore body in the Robinson is more in the nature of a vein than a chimney. It is impossible to explain them, but we have in the aggregate a very large area of ore-producing ground. In the Robinson Mine we have in our 5th level a shoot of ore something like 400 ft. long running from the boundary of the Guston into the Robinson. At this level we have also cross-cutted from the Yankee Girl into the Robinson about 440 ft. south of the Robinson workings, and have met with mineral. That is a strong indication that there we are dealing with an ore bearing ground more of the nature of a lode than a chimney of ore, as we have been in the habit of considering these deposits heretofore. In the new strike in the No. 9 level, the ore bodies which they have been driving into for something like 35 ft., they have ore 7 ft. wide in the forebreast.

YOU HAVE EVERY REASON, GENTLEMEN, TO BE SATISFIED

as regards the past, and to look hopefully to the future. I hope you will all go home to-day with that idea thoroughly saturated in your minds. (Hear, hear.) I think, gentlemen, that that is all I have to say, except I have to second "That the report and accounts, as presented by the directors, be passed. (Loud cheers.)

The motion was put to the meeting, and carried unanimously without discussion.

Mr. THOS. PHILLPOTTS: The director who retires to-day is Mr. Frederick Crowther. You have heard his address, and I am sure you will agree with his colleagues in saying that you could not have a better director at your board. I have very great pleasure in proposing his re-election.

Mr. FRANK BIGLAND: I second it with equal pleasure. I have known Mr. Crowther for a great number of years, and I know the determination he throws into all these matters.

Carried unanimously.

Mr. CROWTHER: I will endeavour to do for you in the future what I have done in the past—serve you faithfully to the best of my ability.

Mr. T. E. SYKES: I propose, "That Messrs. Monkhouse, Goddard and Co. be re-elected auditors, at a remuneration of 52½ lbs., for the coming year."

Mr. J. C. REED: I second the motion.

Carried unanimously.

THANKS.

Mr. SYKES: I am sure we cannot dissolve without proposing a vote of thanks to the chairman and directors, or without expressing our appreciation for what they have done on our behalf, not forgetting the able address of Mr. Crowther. I beg to propose a vote of thanks to the chairman and directors.

The motion was carried by acclamation.

The CHAIRMAN: On behalf of my colleagues, as well as myself, I beg to thank you very much. I can assure you that we really do work very hard, and if we could give 1 per cent. for every visit we pay to the offices, you would have a very big dividend in a very short time. (Cheers.)

CUMBERLAND GOLD MINING CO., LIMITED.

£22,000 WORKING CAPITAL AVAILABLE, AND A FULLY EQUIPPED MINE, WITH EXCELLENT PROSPECTS.

The statutory meeting of this re-constructed company was held on Monday, at Winchester House.

Mr. Edmund A. Pontifex

(chairman of the company) presided.

Mr. ARTHUR GIFFARD (secretary) read the notice of meeting.

A SUCCESSFUL RE-CONSTRUCTION.

The CHAIRMAN: Gentlemen, as this is the statutory meeting of the newly re-constituted Cumberland Co., there are no resolutions which we have to offer, or any accounts which we have to present. All I can do, therefore, is to give you such general information as may be interesting to you with regard to the present position and prospects of your property. You are aware that at the last annual general meeting of the old company we had arrived at such a point, when, having passed through a very deep bar of poor ground, we had come to some promising stone in the bottom of the shaft, but at that time our funds were very nearly exhausted. You will remember when the old company was formed, as it was a going concern it was not considered necessary then to provide any large amount of working capital, and such as had been provided was utilised in constructing the dam, and providing and erecting the machinery required to treat the larger quantities of ore we expected to raise. At that time, therefore, although we had encouraging prospects, we had arrived very nearly at the end of our tether, and it was a race between the improvement of the stone and the exhaustion of our funds, and, unhappily, our funds became exhausted rather quicker than the stone improved. We were, therefore, obliged to suggest the re-construction, which was carried through very successfully.

A FULLY EQUIPPED MINE.

All the shares were taken up on the terms offered, and the company is now in a position it never occupied before, that is to say, the works of construction are completed and paid for, and we have an admirable dam—the finest in that part of the colony—so that we shall never be likely to have our water supplies fail. We have machinery of the best construction, ready to deal with a much larger quantity of stone than we are likely to raise for some time to come, and we have now by means of the re-construction

22,000L. OF WORKING CAPITAL,

which ought to be sufficient not only to prove the mine in depth, but if, as we believe we will, we find good ore, to open out the mine in a proper and far-seeing manner so as to be able to work it economically for many years to come. We have also completed the tramroad from the mine to the mill, which our superintendent calculates will effect a saving equal to nearly 1,200L. a year when at full work. He has also succeeded, after a great deal of difficulty and contention with the miners, in reducing somewhat the extravagant rate of wages we have to pay in that country by about an average of 10s. a week all round. He had to make a common cause with the other mine owners in the neighbourhood for such a purpose, and this economy when in full work will effect a further saving of 2,500L. a year, so that we shall be better by some 3,700L. a year, if we can only find the same amount and the same quality of stone as that we had in the early days. In regard to that I may say our prospects are very encouraging. They seem likely to quite come up to what was held out at the last annual meeting. I will read you the views of the manager on the working of the mine. On June 15 he says:—

REPORTS FROM MANAGER.

"The stone in the south end under foot is really most encouraging, and is undoubtedly the same run as that at the bottom of the shaft. From present appearances too much importance cannot be put on the fact that under foot is where we must concentrate all our energies, and I should not be surprised if large bodies of ore were met with, coming in again from the south. If this is so there is undoubtedly a great future for the Cumberland Mine."

On Aug. 1 he says:—

"There is now a reef of very nice stone across the shaft on the footwall of the lode about 10 ins. in width, showing a little free gold, besides being fairly well mineralised; also a reef on the hanging-wall which I hope to be able to speak well of."

We have told you that our only chance was to make a bold sinking of the shaft, which we are doing. We authorised him at once to sink it a further 100 ft., and sink a winze at the same time, and in a letter on Aug. 1 he says he started sinking the shaft on July 6, and he expects to be down the 100 ft. by the end of Nov. On Aug. 5 we received a telegram, stating 15 ft. had been sunk below the No. 7, and that there was a great improvement daily; and on Sept. 5 we had a telegram, which stated the shaft had then been sunk 30 ft., and that a vein carrying free gold had been discovered, and the prospects were very encouraging. The winze was down to a depth of 43 ft. from No. 7 level. In regard to the telegram of Sept. 5, we did not publish it, because it came in a mutilated form, and even with repetition we are not absolutely certain as to the correct translation of the code words. Although we have no doubt as to the meaning, still, if our rendering should turn out to be somewhat inaccurate, you will not blame us. Our superintendent says he has also started work on tribute to a small extent on the old and abandoned workings in the upper levels. Six of our old miners have started on that work, and from their being old and experienced hands we imagine they would not undertake it without a fair prospect of success. At the same time it was a spot that Capt. Straughan, our former mining superintendent, abandoned as not being likely to pay, and we can only hope the tributers may find work that will pay them, and answer our purposes too. I think, therefore, I may congratulate you so far that although gold mining is more risky, uncertain, and capricious than any other kind of mining, as far as we can judge you have every prospect of recovering some portion, if not all, the prosperity we had formerly. We are certainly in a better position both for economical working and dealing with larger quantities of quartz. We also have a greater

abundance of working capital than we had at any previous period. I hope at the annual general meeting, which will be held in the course of next year, all the hopes we have now been able to form will have been fulfilled. I shall be happy to answer the questions of shareholders. (Cheers.)

QUESTIONS.

A SHAREHOLDER: What tribute do the miners pay?

The CHAIRMAN: We have not yet received a copy of the agreement with them. All we know is that the manager has let a portion of the old workings for three years to six old hands. These men worked under Capt. Mullens in the early days, and appear to know parts of the mine left untouched by him and by Capt. Straughan, which they think they can work profitably. Our superintendent tells us that the men think the ground will repay them for working, and if they succeed in getting good stuff it will be all the better for us, for it will help to keep the mill going and besides the crushing charges, we shall net a percentage on the gross yield of gold. Copy of the agreement with terms will be sent when prepared.

Mr. TURNER: Is the cost of transit from the mines to the coast reduced?

The CHAIRMAN: The transit of the gold forms an inappreciable cost.

Mr. TURNER: I refer to the stores.

The CHAIRMAN: We have already passed through the cost of getting the machinery from the coast to the mines, and I do not think that any reduction would affect us much. There will be no appreciable saving in the cost of getting the stores up to the mine until the railway gets nearer.

Mr. TURNER: Is the railway being built?

The CHAIRMAN: Yes; but it is about 100 miles from us still. It is nearly as far as Croydon.

Mr. TURNER: What do you calculate to be the cost of mining?

The SECRETARY: The cost in 1890 was 17. 12s. 7d. per ton.

The CHAIRMAN: The costs are very great on account of the high wages we have to pay, but they will now be proportionately reduced.

A vote of thanks to the chairman closed the meeting.

LEADHILLS SILVER-LEAD MINING AND SMELTING CO., LIMITED.**AN INCREASED DIVIDEND PAID—ADJUSTMENT OF NEGOTIATIONS BETWEEN THE LANDLORD AND THE COMPANY—SATISFACTORY OUTLOOK.**

THE 29th ordinary meeting was held at the Registered Offices, No. 30, Finsbury Circus, on Wednesday, "to receive the directors' report, the balance-sheet to June 30, 1891, and the report of the resident manager, and to pass such resolutions in reference to them as may be determined."

Mr. Peter Watson, C.C.

(chairman and managing director of the company), presided.

Mr. FELIX F. WILSON (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I suppose, the secretary having read the notice, you will take the directors' report, the manager's report, and the balance-sheet and statement of profit and loss as read. (Taken as read.) Of course, I shall have to refer to it later at some detail. Well, gentlemen, the business of the meeting will be, to receive the directors' report, the balance sheet to June 30, 1891, and the report of the resident manager, and to pass such resolutions in reference to them as may be determined. I have not got much to say to you on this occasion on the subject of the balance-sheet, except that I think all the shareholders will agree with me, under the circumstances of the low price of minerals, which we have had to contend against, the result has been somewhat satisfactory, and we show a slightly increased amount of profit on the 12 months over that of the previous 12 months. Of course, we have during the last 12 months gone to a very considerable outlay on our smelting works by the erection of a double new condenser, and that with other smaller expenditure will amount to about 1,100L. With respect to the amount standing to the permanent works account, we have now written off just 300L.—that is to say, 299L. 18s. 8d., and, therefore, I may say we have written off 300L. We have gone, as I said before, to considerable expense, of course, with regard to

THE CONDENSER AND THE NEW LEASE.

This was one of the matters which we had to carry out as soon as possible, and we set to work manfully to carry it out, and I think that on the whole it is working exceedingly satisfactorily. The sales of lead and the average price for the smelting ores have been nearly about the same amount as we had in the previous 12 months. Now, I come to the new lease business. I had fondly hoped that it would have been carried through by this time, but owing to some little discussion with regard to the water rents and the delay in getting the renunciation of the old lease, there has been some delay which

COULD NOT HAVE BEEN FORESEEN.

At any rate, I may say this in the interests of the shareholders present as well as those absent, that as far as the new lease is concerned, the terms have been fully arranged. Recently Mr. Glen and I have been to Edinburgh about this water question, maintaining that under all circumstances we have taken the right view with regard to a certain diversion (so-called) of water, but which has been in existence for the best part of a century, and I hope before the next 24 hours are over this matter will have been finally adjusted. This lease business will be a great satisfaction to the shareholders, because when it is once finally settled, it will work for the benefit not only of the lessor, but the lessee and everyone associated with the undertaking. In the report of the directors we called attention to

THE SMELTING WORKS,

and to the erection of a double condenser, which is working, as I have said, very satisfactorily, but we are making further improvements in

this direction. We are also making improvements in the dressing floors, and at the next meeting I hope to say more on this subject. With regard to the smelting works, we say in our report: "The directors have under consideration as to the desirability of renting the farm or farms near to the smelting works as may be agreed on, and as to sub-letting any portion of the same with a view of obviating any future annoyance of claims for land damage, &c." We do not want to go farming. It is far from our thoughts, because we have quite enough to do with mining, but if hereafter it should be desirable to take a farm, or farms, I think the meeting will act wisely in giving the directors authority so to do. We have gone thoroughly into the matter, and if the farmers complain as they have done, and continually threaten actions, it is our duty to prevent anything at all of the sort and to take these farms ourselves. Lord Hopetoun has given us, through his commissioner, Mr. Thomas Hope, the option of taking them at a fair rental. That rental we do not know at the present time, but if in our negotiations it could be found necessary to take upon ourselves these farms (which we might work at a fairly good profit) we should be empowered by this meeting so to do, and a resolution, by the advice of the solicitors, has been prepared, and will be submitted to you. Royalty and rent have been charged in the account to the end of the year on the basis of the new agreement. Mr. Newbigging's report on the mine, I think, on the whole, you will say is exceedingly satisfactory. His last remark is, "It is my candid opinion that your property here remains in a very satisfactory and encouraging condition." My colleague and I were on the mine a fortnight ago, and from what we could gather I think our prospects are equally as good for the next 12 months as they have been for the past—perhaps a little better. We are now erecting a water-wheel for the purpose of going deeper. We have here the plan of the mine showing the long section of ore ground we have gone through, and we intend to sink Jeffrey and Wilson shafts below the present bottom levels. We have now an enormous extent of ground. We are pushing our levels on in a vigorous manner, and hope in the next 12 months to make equal, if not better, returns and discoveries of ore than have characterised those of the last year. Jeffrey shaft will have to go down and also Wilson shaft, and between the two there is

AN ENORMOUS QUANTITY OF ORE GROUND

still left to be taken away. We hope to have the water-wheel at work by the end of the year at latest. We have bought about 70 or 80 fms. of pumps, which are on the point of being despatched. We drove a long level for six or seven years, with very little result, on the George Roust vein. We thought that by the extension of that level into the hill, sooner or later we must get into some good ore ground either in that or some of the other veins. We went through a small bunch of ore in the George Roust vein, and have intersected a lode called the Sarrowcole. This lately has produced 5, 10, 15 cwt., 1 ton, 1½ and 2 tons, with the average about 1 ton. At the present time I think it is worth about 2 tons. As to what this is going to do for us it is impossible to say. At any rate, we are extending on it, and if it holds we shall then proceed to drive on the George Roust proper, and I think we may during the next 12 months cut an ore body there. A shareholder stated to me the other day, "What a pity it is that this meeting is not held on the mine." Well, if it had been we could have made a very nice show at the present time. It happens that we have 800 tons of lead ore in stock, which has been accumulating for some four or five months. This would be a very nice thing for shareholders to see, and it would be a sight such as no other mine in the country could show. I hope the day is not far distant when the shareholders, of whom we have a great many in Scotland (and it is there the buying has been principally of late)—English as well as Scotch, will

MEET ON THE MINE.

(Cheers.) It has been suggested to me that having the new lease we might at some future time (please God we all live) be able to invite the shareholders down there. Out of the profits we have been able this time to declare a dividend of

4S. PER SHARE INSTEAD OF 3S. 6D.

(Cheers.) For this dividend you will not have long to wait, as I believe that cheques are ready to be posted to-morrow. I think, on the whole, we may say that we can give a fairly good account of our property this time, and I hope it certainly will not be worse on the next occasion on which we meet. We have felt it our duty to call the attention of the lessors to the importance of having a cage for the miners to go up and down the mine in. These mines are getting very deep, and it will be a great advantage for the company as well as to the lessors to have a cage in the shaft. Lord Hopetoun, I believe, on his last visit to Leadhills promised that he would do everything he possibly could in the interests of the miners, and I think that would be one of the best things he could do. I believe Mr. Thomas Hope has the matter under consideration. We have also called his attention to the need of another reservoir. Although we have had an enormous amount of rain in this part of the country, and during the last three or four weeks in Scotland, yet in the early part of the year the weather was dry, and our reservoir ran low. Now to develop these mines more effectually than ever, we think it will be an excellent thing to have another reservoir, and we have asked Mr. Thomas Hope's kind consideration to that matter, as it will be for the benefit of all concerned. I am sorry to say

NO FURTHER PROGRESS HAS BEEN MADE IN THE RAILWAY, which Lord Hopetoun, said when he came back from Australia, he hoped would be running from Elvansfoot to Leadhills. Half of his period of absence is passing away, and very little has been done. I fear very little will be done in view of the North British dividend of 1 per cent., as against 4½ per cent. in the previous year, and the Caledonian decreased profits. If shareholders were to pay a visit to their property they would be highly delighted, and would not regret it if they had to go again. These are the remarks I have to make in regard to your property, and, as I said before, I think, under the circumstances, we meet you with a fair account. (Cheers.)

Mr. GLEN (director): I second the motion.

DISCUSSION.

Mr. WEST: There is an amount of 1,500*l.* loan. By whom is that

owing? The travelling expenses are heavy, 80*l.* 13*s.*, and so also is the carriage of the lead ore.

The CHAIRMAN: 1,500*l.* was lent to the Roman Gravels Co. at the bank rate of interest, which we could not have got if we had lent the money elsewhere, but of that amount 1,250*l.* has already been repaid. With regard to travelling expenses—Mr. Glen and I have been to Scotland several times, and have saved you many times the amount. (Hear, hear.)

The motion was carried unanimously.

Mr. HORSLEY proposed, and Mr. WEST seconded, the following resolution, which was carried:—"That the directors are hereby authorised and empowered if and when they in their discretion may deem it advisable or expedient in the interests of the company to take upon lease, or otherwise rent, for such period of years, and subject to such condition as to rent, and otherwise as they may think proper, such farm or farms, land and buildings, at or near the company's mines and works at Leadhills as they may consider desirable in the interests of the company, and they are hereby further authorised to sub-let any portion of the same, or assign the lease or leases they may enter into if they think it expedient so to do."

The CHAIRMAN expressed his regret that his colleague, Mr. Southgate, the largest shareholder, was unwell, and unable to be present to-day.

Mr. LONG proposed, and Mr. HORSLEY seconded, the re-election of the auditor, Mr. Ashmead, which was agreed to.

On the motion of Mr. LONG, seconded by Mr. SCOTT, the meeting closed with a cordial vote of thanks to the chairman and directors.

LATEST REPORT.

(Sept. 29).—Brown's vein: Five men are set to stope above the 145 north of Jeffrey's shaft, at 45*s.* per fm.; worth 20 cwt. of ore per fm. Four to drive above the 145 south of Wilson's shaft, at 75*s.* per fm.; worth 25 cwt. of ore per fm. Twelve to No. 5 winze below the 130 north of Jeffrey's shaft, at 130*s.* per fm.; vein 5 ft. wide, showing a nice rib of spar mixed with ore; worth 20 cwt. per fm. This for air to the 145 forebreast, and to lay out ground for stoping. Four to No. 1 stope above the 130 north of Jeffrey's shaft, at 45*s.* per fm.; worth 30 cwt. of ore per fm. Five to No. 2 stope, at 45*s.* per fm.; worth 25 cwt. of ore per fm. Five to rise above the 130 north of Jeffrey's shaft, at 90*s.* per fm.; worth 10 cwt. of ore per fm. Four to clear out broken ore from stope above 130 south of Wilson's shaft on shifts. Five to drive 115-fm. level, now 53 fms. 5 ft. 6 ins. north of Jeffrey's shaft, at 115*s.* per fm.; promising quartz vein above 4 ft. wide, mixed with ore; worth 30 cwt. per fm. Four to stope above the 115 north of Jeffrey's shaft, at 47*s.* 6d. per fm.; worth 40 cwt. of ore per fm. Three to drive the 100-fm. level, now 26 fms. 4 ft. 3 ins. north of Jeffrey's shaft, at 105*s.* per fm.; vein above 4 ft. wide, nicely mixed with kindly spar, and ore worth 25 cwt. per fm. Two to sink below the 100 south of Wilson's shaft, at 75*s.* per fm.; worth 20 cwt. of ore per fm. Two to stope above the 85 north of Jeffrey's shaft, at 50*s.* per fm., charged with bits of ore scarcely to value. Eight to drive the 70-fm. level, now 94 fms. 3 ft. south of Wilson's shaft, at 100*s.* per fm.; vein 6 ft. wide, showing a rib of nice spar with spots of ore, not, however, to value. The indications here keep us anticipating a decided improvement soon. Four to No. 1 above the 35 south of Flat Rod shaft, at 27*s.* 6d. per fm.; worth 30 cwt. of ore per fm. Twelve to No. 2 stope, at 37*s.* 6d. per fm.; worth 30 cwt. ore per fm. Sarrowcole vein: Five to drive Gripp's adit, now 28 fms. north of George's Roust, at 100*s.* per fm.; vein 4 ft. wide, composed mostly of kindly spar with ore; worth 30 cwt. per fm.—T. NEWBIGGING.

ROMAN GRAVELS MINING CO., LIMITED.

RESOLUTIONS CONFIRMED — IMPORTANCE OF EAST ROMAN GRAVELS — ROMAN GRAVELS MINE GREATLY IMPROVED — IMPORTANT SPEECHES OF MR. PETER WATSON AND CAPT. WATERS.

A SPECIAL MEETING of this company was held on Wednesday, at the Offices, 30, Finsbury Circus, to confirm, or otherwise, reconstruction resolutions passed on Sept. 9.

Mr. Peter Watson, C.C. (chairman of the company), presided.

Mr. FELIX F. WILSON (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, in moving the resolution, "That the special resolutions passed at the extraordinary general meeting of the company, held on the 9th inst., be confirmed," I desire to make some remarks following what took place at that gathering. The principal discussion on the last occasion was with reference to working the East Roman Gravels Mine, and uniting it to Roman Gravels. Of the desirability of doing so, having visited the mine only this day week with a shareholder and some mutual friends, I am more convinced than ever. I feel more inclined than ever to regard the policy of uniting East Roman Gravels to Roman Gravels as in the highest degree desirable. I told you on the last occasion that these mines ought to have been united many years ago, and worked in unison. Roman Gravels has been a very productive mine, having raised in our time very nearly the value of

HALF A MILLION STERLING IN MINERALS.

As to East Roman Gravels, that property was once considered the richest mine in Shropshire, and was, in fact, the pioneer of the whole district. One lode alone—the Wood lode—has produced over 300,000*l.* worth of mineral, and the Cornish and California lodes, 350,000*l.*—together 650,000*l.*, and putting that to the production of Roman Gravels, the united mines have produced in the past ore to something like the value of a million sterling. It may be said, "That is all very well as to the past, but what about the present and the future?" My own reading of this district, in which I have had experience for 40 years, is that what it has done it may do again. I, with my family, have been associated with this very property (East Roman Gravels),

then called Batholes, for years, and I kept the books 40 years ago, and, therefore, the records of the district are known to me, and certainly indicate a good future for us. Nay, I will go further and say that I think the united mines will be as productive in the future as they have been in the past. If we sink the old engine shaft at East Roman Gravels we will intersect these two lodes—the Wood lode and the Cornish lode, that produced such an enormous amount of mineral in the past. In 15 fms. we would

MEET THE JUNCTION OF THE LODE,

and I believe if that had been done years ago the property would not have been for sale now. There was a divergence of opinion with regard to the working the California lodes, but it remains for us to sink these 15 fms., so as to get to the junction of the lodes, which at that time was not done. What we have to look to is this: we drove the 110, the 115, 125, 140, and 155-fm. levels, close up to the boundary of East Romans, where they were each as productive going into it as previously, and we believe by extending them we shall very considerably increase our returns, and moreover have no more water to contend with than at the present time. We are draining a portion of East Roman Mine, and have been doing so for years. Of course some of the shareholders are hesitating as to whether they should subscribe fresh capital to develop the property or not. I hope they will not long hesitate to do so, because I feel satisfied that if they will only subscribed this 5s. per share (which will be extended in payments over the period of two to four years) we shall have very good results. A shareholder I had the pleasure of meeting in Wales accompanied me to the mines this day week. He is a banker, and has a large interest in mines, and, where possible, goes and sees them for himself.

VIEWS OF A SHAREHOLDER WHO VISITED THE MINES LAST WEEK.

Now, he has been to Roman Gravels, and has expressed his great satisfaction with all he has seen and heard when on the mines. I hoped he would have been present to day, but he writes, Sept. 25:—

"I do not see the slightest probability of my being able to attend Roman Gravels meeting on Sept. 30, but from what I saw at the mine on Wednesday, and from the full and lucid explanations given to me I am fully persuaded that the directors are acting rightly in securing the lease of the adjoining sett, and the shareholders will be very unwise if they do not approve of their conduct in the matter. Speaking for myself, I will gladly take more new shares than I am entitled to if I can get them."

(Hear, hear.) I have a wire this morning (quite unsought for) from a gentleman who attended the last meeting, who says:

"Since last meeting I have made further enquiries from the old miners, and find the mines more prosperous than reported at the last meeting. I trust you will settle matters so as at once to commence working on East Romans, which will soon make good returns with proper management."

This statement is quite correct. These mines are not a myth. I have told you what they have done, and my belief is that the capital this re-construction will give us will enable us to put them in a very profitable position. The shares will be 10s. each, credited with 5s. paid, and 5s. to be called up. The directors consider that 6d. a share on application and 6d. on allotment, with probably another 6d. in about four or six months, will be ample to purchase East Romans property, with all the plant thereon, and enable us manfully to go to work in both concerns. We shall have to provide some extra machinery and numerous rock-drills.

FUTURE OF LEAD MINES.

A good deal has been said from time to time about lead mines, that they are "going down," that they "cannot be made to pay." I have only to say that less than an hour ago we held the Leadhills meeting, where we have paid the shareholders a dividend of 4s. There, for a long time, we could not pay a dividend, and even ran into debt. We had to ask the shareholders to give us their confidence as well as time to resuscitate that property, with the result I have named. I believe if the shareholders will do the same here the result will not be different from what it has been in Leadhills. I have every confidence myself. The low price of mineral is largely made up for by the extra work we are able to do by means of rock-drills, and by the fact that whereas we used to pay 6l. and 6l. 10s. per fm. for stoping, we now pay about 3l. or 3l. 10s. When I saw Capt. Rowe, the resident agent, on the mines, this day week, he assured me that they were looking better than they had done for the last five years, and our prospects point to the opening up of a profitable mine. We are promised a new lease for East Romans on similar terms to that granted for the old mine. We have finally settled the matter of the way-leave. Our solicitor, Mr. Greenip, has gone through it, and found it correct. I now move the resolution. (Hear, hear.)

Mr. GLEN: I second it.

VOICE OF A SHAREHOLDER IN OPPOSITION.

Mr. CODD: I do not believe in mining reports at all. We have had many reports from Mr. Waters, and not one has turned out right. I am casting no reflection upon Mr. Waters. No doubt he wrote as he thought, but still his reports have deceived us. The mine is worked out. We were told we should prove the mine for 20,000l., and having spent it, why should we throw good money after bad. As far as I am concerned I will oppose this re-construction for the reasons I have stated. I observe that when there has been a call there has always been a favourable report.

The CHAIRMAN: This speech of Mr. Codd (a small shareholder) would have been better delivered at the first meeting than at the present one. If you had had the mine inspected you would have heard a different opinion of it from that you individually entertain.

Mr. CODD: I have told you I do not believe in these reports.

The CHAIRMAN: You are one shareholder only expressing your opinion, but there are others who think differently. I can only tell you that the directors have had a great deal of uphill work and anxiety—especially myself.

HOLDING OF DIRECTORS.

The CHAIRMAN: The directors hold about 8,000 shares, and have put a great deal more money into it than they have drawn out. I do not think anyone of them has suffered more than I have, and do you suppose that we, as large shareholders, would go on unless we were likely to get our money back. (Hear, hear.) You can retire from the concern

if you like, but, I as chairman, will advise the general body in what I conceive to be their truest interests. What I have said I honestly believe, and I feel satisfied that if the shareholders follow me they will do wisely, and if they follow you they will do the reverse.

Mr. CODD: How long is it since Roman Gravels paid its last dividend?

The CHAIRMAN: It has had 26,000l., all told, of working capital in last 17 years. We have a great deal of work to show for the money spent in last three years—two shafts deepened 30 fms., and a large section of ore ground opened up, and I utterly deny the mines are worked out—an incorrect suggestion. It has made in profits about 150,000l., and dividends 120,000l.

A SHAREHOLDER: In the reports of the last meeting, which I read, I think sufficient stress was not laid on the statement you made that the mine even now was almost paying its way. (Hear, hear.)

The CHAIRMAN: Since then we have sold blende at 7l. 4s. a ton—the highest price which the mine has ever obtained. Capt. Waters will now address you.

THE LOCAL MANAGER SPEAKS.

Capt. WATERS: With regard to Roman Gravels Mine being worked out, and as to whether my report and that of Capt. Paull (who is the only gentleman who has inspected the mine for years) are correct, no mining engineer can vouch for his opinions as certainties, but I can assure you that if you were to send down three mining engineers you would find those reports to a great extent, if not entirely, corroborated. I think the prospects foreshadowed by the mine at the present time infinitely better than they have been since we commenced to deepen the shaft of the old mine below the 125 during the last three years. It is well known that that shaft ought to have been sunk years ago, but the company was not in the position to do it, for reasons well known to the shareholders. Our present position with regard to the adjoining property is this, that we have followed courses of ore in levels driven up to the boundary. That boundary lies between the Caunter lode and the Roman lode. It will be seen by the statement that the 110-fm. level has been driven south-east from the Roman lode to the boundary, and passed through a course of ore, which produced 450 to 500 tons of lead ore. Beneath that comes the 125, which is also driven as far as we can, and below that is the 140, which passed through a course of ore, 12 to 14 fms., averaging 2½ tons per fm. That bunch is dipping south into the adjoining property, where between the 109 and the 115 it is drained by our engine. All we have to do is to

EXTEND THOSE THREE LEVELS.

The reason East Roman Gravels did not stope more ground was that they could not contend with the water. Their engine was at a distance from the shaft, and they had to pump by means of flat rods and big lifts. Previous to the suspension of operations they were selling 30 tons of lead ore per month, and probably 20 tons of blende. With regard to Wood lode, there are several known veins there which proved very productive, but the extent to which they have been worked in depth is slight as compared with other mines in the district. It is simply down to the 60 below adit, or say 80 fms. from surface, and by comparing the workings there with those at Roman Gravels it can be seen easily that the mine is not deep enough to get into a correspondingly rich zone to that in which Roman Gravels proved so productive. The inference is, therefore, that when we get to a corresponding depth we may meet with the same good fortune, but it is impossible for any living man to say we shall do so for certain. At Batholes there are two lodes, each of which has proved productive from surface to the depth at which they have been at present worked. These veins are parallel, but underlie towards each other, and by estimating their inclinations it is judged they will be

FOUND IN JUNCTION 15 FMS. BELOW

the present bottom of the engine shaft. Now, if two productive veins form a junction, and especially longitudinally, you may expect a very rich run of ore ground. In addition to Wood lode and Cornish there are also the two Californias and the Blue String vein. The two Californias have proved very productive, and during the working of the Wood Mines were drained to a depth of 23 fms. below adit, and if we may believe what people tell us and what we read there is still a lode in that shaft worth 4 tons of lead per fm. Speaking of the property generally and as a whole—I do not think there is a finer speculation in Shropshire or in England, viewed from the standard of a lead mine. (Hear, hear.)

Mr. SMITH: What is the position of the agreement in regard to the union of the two properties?

The CHAIRMAN: Power will be given to the new company to purchase, and arrangements have been entered into already, and terms negotiated for new lease, &c.

Mr. SMITH: What is the position of the negotiations?

The CHAIRMAN: Short of the signatures to the document they are arranged, but provisionally.

The motion was carried *nem con.*

Mr. OLDING proposed, and Mr. SMITH seconded, the appointment of Messrs. Peter Watson, Thomas Glen, and Felix Francis Wilson as liquidators.

This was carried, and the meeting ended with a vote of thanks to the chairman and directors.

LATEST REPORT.

Oct. 1.—The 155 north of main shaft has now been driven 22 fms. 1 ft. from the cross-cut; the lode, is split into three parts, and we are driving on the footwall division. The 155 on Caunter lode is driven 26 fms. from the Roman lode; the lode, which still continues to be very wet, is about 6 ft. wide, and worth 1 ton per fm. for blende, and also contains good stones of lead ore. The 140 on Caunter lode is driven 25 fms. 1½ ft. from the Roman lode; the forebreast is in a lode 6 ft. wide, and is worth 2 tons lead ore per fm. The two stopes in back of this level are together worth 5 tons lead ore per fm. The 140 south of main shaft has been driven 20 fms. 3 ft. from No. 1 winze; the lode here is still in two divisions, but we see no change in it worthy of note. The winze in the 140 north is now 3 fms. 5 ft. deep; the lode is about 5 ft. wide, and worth 1 ton of lead ore per fm. A stope in back of the 140 north of main shaft is worth 1 ton lead ore per fm. The 125 south of main shaft has improved since last week, and is to-day worth 1½ tons lead ore

per fm.; the winze in this level is now 4 fms. deep. Two stopes in back of the 125 south of Lewis winze south of main shaft are together worth 2 tons lead ore per fm. Three stopes in back of the 110 south of Watkins' winze south of main shaft have improved since last week, and are to-day worth $4\frac{1}{2}$ tons lead ore per fm. A stope in back of this level south of shaft is worth $1\frac{1}{2}$ tons lead ore per fm. Three stopes in back of 80 south of Jones' winze south of main shaft are together worth 4 tons lead ore per fm. Two stopes on east lode north of main shaft are together worth 2 tons lead ore per fm. We shall send out samples of a parcel of 20 tons blende on Thursday next.—A. WATERS and SON.

ST. AUGUSTINE, LIMITED.

THE PAST HISTORY AND PRESENT POSITION OF THE COMPANY ARE TOLD BY COL. MALLESON IN AN EXHAUSTIVE SPEECH, WHICH HE CONCLUDES BY UNFOLDING THE BOARD'S PLAN FOR FURTHER WORKING THE MINE—SHAREHOLDERS ADOPT IT PRACTICALLY WITH UNANIMITY.

A MEETING of shareholders was held at the Cannon Street Hotel, on Wednesday, "To hear the statement of the chairman, and to consider the means to be adopted for the successful development of the mine."

Col. G. B. Malleson, C.S.I.

(chairman of the company), presided.

Mr. G. H. Newman (secretary) read the notice of meeting.

COURSE OF RECENT WORKINGS.

The CHAIRMAN: In the notice you have just heard read you will have remarked that I proposed to read a statement at this meeting. That statement has, I believe, been circulated among all the shareholders, and I take it that every one of the shareholders has read it. (Hear, hear.) The fact is that we came to the conclusion that it was better to circulate it a few days before the meeting in order that the shareholders might come to the meeting with their minds prepared, and knowing exactly all we know ourselves. Now, I want to ask you, in the first place, if you will take this statement as read. (Hear, hear.) It was carefully drawn from the records of the company, and is a statement of all that has happened since its incorporation. You will see that we started with every hope that before the present time we should have been able to put a large number of diamonds on the market, and I still believe we should have done so if we had pursued the course of going on sinking direct. (Hear, hear.) But it is impossible to be wise under all circumstances. The action of the board was guided to a very great extent indeed, I may say almost entirely, by the advice we received from the experts. Prominent among those experts were the author of the mine, Mr. Finlason, and Mr. Hartley, our manager out there, and both gentlemen concurred in the advice that we should be most unwise if we did not follow the blue, and that we were bound, as miners, to sink a winze and drive. But again coming upon hard rock blue in the drive at the 607-ft. level it was decided to abandon driving and to go on sinking the winze, which was carried down to the 735-ft. level, when another drive was made through rock blue, and this changed into soft blue, which Mr. Hartley writes would have showed itself in the upper level had he continued driving through the rock blue another 20 ft., but he was fully justified in sinking, and so to gain that greater depth at which the De Beers Mine found their uniformity of yield. It requires, therefore, only that we should sink 60 or 70 ft. to be in the same position as the mines, which are within a few hundred yards of our own, and I take it for granted that—at least I hope—you will see fit to adopt a measure which will secure that end. Since this report was written, a week ago, we have received a report from the new manager who was placed in charge by our solicitor out there. He is a Mr. Wilson, and I will ask the secretary to read you what he says. Mr. Wilson came with a clean mind to the St. Augustine Mine. He was employed at the time in the Kimberley Mine, and it was by the courtesy of its manager that we were able to secure his services month by month, or until such time as an agreement could be entered into with him. Mr. Wilson, assisted by an engineer, who, we are informed, is the engineer of the Kimberley Mine, made a thorough examination of our mine, which examination you will all agree is thoroughly independent. In fact, it is the examination of a gentleman who, if I may call him anything, might be termed a hostile witness, and you will hear what he says.

REPORT READ.

Mr. NEWMAN here read the report from Mr. Wilson.

A SHAREHOLDER: Is he the same person who figured in connection with the Wesselton Mine in May last?

MR. WILSON'S QUALIFICATIONS.

The CHAIRMAN: I cannot tell you. We simply directed our solicitor to appoint the best man he could to be in charge of the mine until we could make permanent arrangements, and he appointed Mr. Wilson as answering to that description. Mr. Finlason describes Mr. Wilson as a gentleman of very good character and competent in over-ground work. As to underground work, he does not know his capabilities. The question of whether we shall appoint Mr. Wilson is not the one which presses at this moment. If we go on and the shareholders wish me to retain my present position—(cheers)—I will lay before them a scheme, which, I think, will secure the very best and most economical working on the spot. This report which Mr. Newman has read shows, at all events, that our late manager, Mr. Hartley, fulfilled his duties most admirably. It shows that he did all he said he had done, and it is most unfortunate he should have died at the moment he did, because in the last letter we received from him, which was three days before his death, he expressed his confident hope that he would soon be in the soft blue. Now, we have to meet the question of what we are to do. The situa-

tion of the mine is explained in the circular, and we shall have to provide further funds if we determine to continue the development. Mr. ROBERTSON: How much?

DEBENTURES OR RE-CONSTRUCTION.

The CHAIRMAN: I think 20,000*l.* would be ample, but it is always well to be on the safe side. I have seen a great many of the shareholders, especially some of the largest shareholders, since the scheme was on foot, and have gathered generally from their tone that they are very anxious indeed we should raise the money to continue the working. There were two schemes which we have indicated in the report—the one being the raising of money by debentures, and the other by re-construction. Now, I am bound to admit that there are exactly opposite opinions on this point. A few favour the debenture scheme, and a great many re-construction. I had a visit yesterday from Mr. Giles, the member for Southampton, who strongly urged upon me the desirability of re-construction on the basis of 18*s.* paid. If we are to re-construct on that basis it would mean a call on every shareholder of 2*s.* per share—not to be paid up at once, but at the rate of 6*d.* per share as wanted. Those who are in favour of re-construction argue that this is the very best method for the shareholders, and my reply always has been undoubtedly it would be if we were certain that all the shareholders would come in and subscribe, but this morning I received a very important communication, and have authority to state that if we go to re-construction all the money will be subscribed. There is no contract signed or any arrangement entered into, because I felt it was for you to decide, but I have been assured, on behalf of large capitalists, that they are prepared to

TAKE UP ALL THE SHARES THAT THE SHAREHOLDERS MAY DECLINE.

(Cheers.)

A SHAREHOLDER: On what terms?

The CHAIRMAN: On the same terms as on the last occasion—a discount of 3*d.* per share.

A SHAREHOLDER: What would that realise?

The CHAIRMAN: Over 40,000*l.* They argue as my friend, the member for Southampton, argued—It is all very well your getting 20,000*l.* by 8 per cent. debentures, but supposing you should want 25,000*l.*, supposing you are on the verge of success, and the debenture-holders foreclose, all the shareholders would be turned out, and so it is far better to put our hands in our pockets, and pay up at the rate of 2*s.*, to be called as it is wanted, than to raise the money by debentures, and I, for one, am bound to say I think he is right—(hear, hear)—especially after the assurance I received at 11 o'clock this morning, that all the money would be subscribed which the shareholders failed to supply, and it would be a considerable sum. I may mention that I am the receiver of

THE MCMURDO ESTATE, WHICH HOLDS UPWARDS OF 80,000 SHARES,

and I cannot move without the consent of the chief clerk, and the chief clerk would not give me permission to subscribe on these shares; but you see what an enormous advantage it is if we have a capitalist outside who says, "I will take up the shares on the same terms." I should like, in justice to Mr. Finlason, to mention his name. Mr. Finlason has been extremely distressed at our want of success to the present moment, but has the most absolute confidence in the future of the mine. He started with holding 25,000 shares, and he holds them still. In pursuance of the promise he made to the shareholders at one of the earlier meetings, he placed those shares in an envelope and I sealed that envelope, and that envelope, with his shares, is now in the hands of our bankers, Messrs. Roberts, Lubbock and Co. It cannot be touched without my sanction, for it stands there under my guarantee, but Mr. Finlason has stated to me that

HE IS PREPARED TO SACRIFICE ALL HIS SHARES,

if he can in any way benefit the company. (Loud cheers.) He believes in the mine. He wishes it to succeed more than anything, and his greatest regret is that he is not able to go out and make it succeed. He is in a very delicate state of health, but as soon as I received the news of Mr. Hartley's death I asked him to come and see me and he did so. I put before him the advisability of his going out, if only to give confidence to shareholders, in order to make such arrangements as he might think fit for the carrying on of the mine

IT WAS A MOST PAINFUL INTERVIEW.

Here was Mr. Finlason earnestly desirous of going out, but feeling that if he ventured upon the voyage he would never survive the journey. He has been obliged to go away, and cannot be here to-day. I cannot say enough for the interest which Mr. Finlason has taken in the mine. He has constantly attended our board meetings, and always been ready to interpret the telegrams received and give us all possible advice. He has shown his disinterestedness by his willingness to sacrifice the whole of his shares, if that sacrifice would be of any benefit to the company. (Cheers.) I may say that the estate of Col. McMurdo, notwithstanding the statement you may have read in some financial papers as to putting 70,000 shares on the market, *has not put one.* (Loud cheers.) If I wished to do so, I could not without the leave of the chief clerk of the Court of Chancery, and for that leave I should never have thought of applying in the face of the assurances I have made to the shareholders. (Cheers.) My friends, who are some of the largest shareholders, are in favour of re-construction, and will go on. These are the circumstances of the case. I know when a scheme does not succeed there is always a desire amongst a certain section of the British community to enquire

WHOM SHALL WE HANG?

If you want to hang anyone hang me—(cries of "No, no")—because I have been the head and front of the offending. I was the chairman, and the two colleagues who were with me then, and whose advice has ever been freely given, have left the board, and the two gentlemen I have now the pleasure of welcoming as colleagues were not responsible for that deviation to which I referred. I only am responsible, but I feel sure, as Mr. Finlason said to me only a few days ago, "If the same thing were to occur again I would give the same advice." The great secret in diamond mining is to follow the blue, and we followed it. There has at least been this good result,

that we found immediately beneath the shaft there is still blue ground, and that our best chance is

MINING IN A SLANTING DIRECTION,

and that we shall do if you should see fit to provide funds for the purpose. This is an informal meeting. The board were anxious to put themselves *en rapport* with the shareholders; to tell them all they knew, and to hear from them any suggestions which they might be inclined to give. I will only state before sitting down that my suggestion is that we raise the money by re-constructing the company on the principle of 18s. paid, calling up 2s. a share by instalments of 6d. per share as the money may be wanted. (Cheers.)

A SHAREHOLDER: You may not want to call it all up.

The CHAIRMAN: It is quite possible.

Mr. JOHN OGLE: There can be no doubt whatever that the course you propose to adopt in regard to re-construction is the best, because

EVERY SHAREHOLDER MUST DO HIS SHARE OR LOSE HIS SHARE.

(Hear, hear.) If you ask for debentures and get them you have a very heavy charge to meet each half-year, which eats into the capital subscribed, and you are spending it for the benefit of a great many people, as is generally the case, who have not assisted the company in any way. Therefore I think the suggestion about re-construction is the best. I am not at all surprised to hear our chairman has received a promise that the whole of what is not subscribed by the shareholders will be underwritten by the Stock Exchange. All companies that have been re-constructed on these terms have been satisfactorily conducted; therefore you will have no difficulty in raising the necessary money, and I hope it will bring the mines to a success.

Mr. DALBY: How did the board change their opinions from debentures to re-construction? What was their reason for doing so?

The CHAIRMAN: I did not believe we should get the money by re-construction. I did not think all the shareholders would come in, and knew that the McMurdo estate could not, and, therefore, felt doubtful as to whether a scheme of re-construction would succeed, but it was only this morning I received the assurance from a gentleman in whom I have the most implicit confidence, that he could arrange for the taking up of the whole of the shares not subscribed, and it was that which altered my opinion.

Mr. DALBY: We hear that the McMurdo interest will be entirely lost, although the deceased gentleman helped this company for a great many years. In fact, if Mr. Finlason was the father of this company, Col. McMurdo was the mother. (Laughter.)

The CHAIRMAN: Col. McMurdo advanced money, but has been repaid every farthing.

Mr. DALBY: Then his interest will be lost?

The CHAIRMAN: I do not know that it will, but certainly the estate cannot take it up, though it may be done by friends.

Mr. OGLE: Under re-construction, whatever the shares are worth their value will have to go to the estate, and therefore it will not be a total loss, though a considerable loss.

A STRANGE REPORT.

Mr. SAUNDERS: A friend of mine has visited the mine, and the following are the heads of his report dated May 1, 1891:—

"I found nothing doing except pumping water out of the mine. No blue ground had been hauled for four months. No workings had taken place for 12 months. The staff consisted of two kaffirs at the pumping shaft, and one white man at the engine. Four kaffirs were at work—two employed to chop up wood for domestic purposes. Mines were full of water, and required to be pumped out every 12 hours." (Laughter.)

AN EXPLICIT DENIAL.

The CHAIRMAN: Our reports have been published every fortnight or week in the papers as we have received them, and the report, which has been read from Mr. Wilson, shows that it is absolutely impossible that the mine on May 1 last should be in the condition stated by this correspondent. (Cheers.)

Mr. SAUNDERS: I am prepared to take his word against your report. (Cries of "Oh.")

The CHAIRMAN: The fact is, there is a great deal of

JEALOUSY IN KIMBERLEY REGARDING THE ST. AUGUSTINE MINE.

There is a party in Kimberley who are determined that it shall not succeed if they can help it, and who take every opportunity of disparaging it. Although you may say that Mr. Hartley was not the man I have represented him to be, here is a report from a Kimberley miner, which the secretary has read to you, and which shows that the mine is admirably equipped, that it has been timbered down to upwards of 600 ft., and that everything is in excellent condition, and also I beg to call your attention to the remark he makes regarding the *employés* of the mine. Instead of one or two kaffirs we have several European miners of, as Mr. Wilson says, the first quality. It is possible to write anything and to make any report, but the question as to which is the true report I think is decided by this report of Mr. Wilson. (Loud cheers.)

Mr. BROAD: I was the person who inspected the mine and had the information from Mr. Hartley himself. My friend has not read the notes as they should have been read. (Laughter.) I will give you the exact notes Mr. Hartley gave me on May 1 last.

The CHAIRMAN: Let him read what he likes, but I will send to the office for Mr. Hartley's report, dated May 1.

Mr. BROAD (reading): Friday afternoon, May 1—visited St. Augustine; saw Mr. Hartley, the manager; inspected the mines. (A VOICE: Are you a shareholder?)

AN ASSERTION.

Mr. BROAD: I have a charging order on the shares of one of the directors.

The CHAIRMAN: There is no director upon whose shares there is a charge. (Cheers.) Why do you not name him? (Cheers.)

Mr. BROAD: I will write the name down and give it you.

The CHAIRMAN: State it publicly for the satisfaction of the shareholders.

Mr. BROAD: It is no one in this room.

The CHAIRMAN: All the directors are in this room.

Mr. BROAD: He has retired since the last meeting.

Mr. OGLE: It is quite the rule that no one but a shareholder should speak. It is clear that the reading of a report like this is

FOR THE PURPOSE OF DAMAGING THE PROPERTY. (Loud cheers.)

A VOICE: Yes, wrecking it.

Mr. BOYDELL: I am one of those who favour re-construction, because I believe, with the ample borrowing powers you have, that you would have raised money by debentures had it been possible. I am also in favour of re-construction on other grounds, because it ought to take into account the position of the royalty certificate holders, which was not done at the last re-construction. 250,000% of certificate shares have been issued to the vendors as part payment for the mine, and they take 25 per cent. of the gross output of the mine without spending anything upon it. Now, in re-construction they ought to bear their share of the burden, and I want to see this re-construction properly carried out. I want to see a good amount of capital with some safeguard that it shall not be called up without a sufficient amount being subscribed to put us in a good financial position, and not to require the directors to come with another re-construction scheme in a couple of years hence. To do that the articles ought to be altered, and you could not get a quotation as the company is now constituted. I do not want to create difficulties between one section of proprietors and another. I suppose the shareholders have still a pretty considerable interest in the mine. You speak of having appointed a mining engineer with experience, but to my knowledge he left England in the early part of Oct. last, and there were some differences of opinion between him and Mr. Hartley. I, therefore, think the best way would be for the shareholders to

APPOINT A COMMITTEE OF FOUR,

not in any hostile spirit, to consider the various points I have alluded to, and the best scheme for re-construction. I threw out almost the same hint in Apl., but the chairman was so sanguine that we listened to him. As soon as the mine gets into productive ground you are sure to want increased capital, and it would be for the interests of the shareholders to provide it on the best terms possible.

The CHAIRMAN: I should like to reply, and especially with reference to the engineer sent out. We took the greatest care in selecting an engineer. Acting on the advice of a gentleman, who was well qualified to give it, we selected one who worked in the coal mines of Yorkshire and Lancashire, and who had the highest testimonials. Our St. Augustine Mine was being worked on the principle of a coal mine, and, therefore, we could not have a better agent than the one who was actually selected. But when he got out on the ground he became incapacitated by drink, so that he did not dare to go once down the main shaft.

Mr. BOYDELL: He was down for 4 hrs. according to your own advices.

The CHAIRMAN: Not down the main shaft.

Mr. OGLE: And what would be the use of him only being down 4 hrs.?

The CHAIRMAN: As regards the appointment of a committee, my experience has shown that the appointment of a committee to watch over directors

ALWAYS ENDS IN LIQUIDATION.

(Hear, hear.) It is far better, if you have not confidence in a board to appoint a new one. The present board will put no obstacle in your way, but I, for one, will not work with a committee. (Cheers.) I have given my time and labour to this company for five days in a week. The directors have held their meetings in my own offices without charge, and there has not been a single day in the week, except Saturday and Sunday, in which I have not gone thoroughly into the affairs of the company. For the shareholders to put four irresponsible gentlemen over us is a thing

I WILL NOT SUBMIT TO.

(Cheers.) At the same time I am perfectly ready to resign, and will be glad to do so if you will appoint three independent men in our place, or one in my place. I only am responsible for the deviation in underground work, and for the change in front this morning. My colleagues did not know of the receipt of this communication until just before the meeting, when I announced to them that under the circumstances I should favour re-construction. We are your servants and you are our masters, and if you are dissatisfied with us we will retire—at all events, I will. I will sit in the body of the room and watch the proceedings as a shareholder, but if you are satisfied, I will go on working, but I will not have a committee to control me. (Loud cheers.)

THE MARKET CHANGES FRONT.

Mr. OGLE: It is not you who have changed your front, it is the market. (Cheers.) During the last few days the market has been entirely different. A fortnight ago you could not have got the shares underwritten at all, and I do not think anybody could have acted otherwise than you could have done. With regard to a committee, my experience is just the same as yours, sir. A committee comes in that knows nothing of the work, wastes a great deal of time, and generally ends in giving no advice of value, if not worse. If there is a necessity for strengthening the workers, the plan will be to add to the board a couple of men of intelligence who are largely interested.

Mr. CHURCHILL: I am here on behalf of one of the largest shareholders, and to show his faith in the mine, he says, as a holder of 10,000 shares, "I agree with the issue of debentures, but at the same time think the directors should forego their fees until the mine becomes dividend paying. In such a case I would not object to subscribe a fair share of the debentures, provided they were all applied for." I think that shows his faith in the mine.

A SHAREHOLDER: What will re-construction cost?

The CHAIRMAN: If we re-construct on the same basis as before, the chief cost will be the registration of the company, and the payment of 3d. per share to the underwriters. I have assurances from gentlemen that they will underwrite the whole of the shares, but, of course, they will not do so without a consideration, and the consideration we gave them on the last occasion they are willing to accept on this.

Mr. BOYDELL: Is there any other condition?

The CHAIRMAN: None that they named to me this morning. Of course, all the shares will be offered in the first instance to the general body of shareholders. There is one other question which Mr. Boydell raised and that is about getting rid of the royalty certificates. On the occasion of the last re-construction a great endeavour was made to get rid of them, but the lawyers declared it to be impossible. If a new firm of solicitors can get rid of them I shall be only too pleased. It does not so much affect us, because royalty certificates are paid off

out of gross returns, but, meanwhile, they stand idly by and do nothing. As to promoters, there are no promoters. Col. McMurdo was one of the promoters, and his 80,000 shares will be sacrificed to a very great extent. The only promoter who had the property, and who sold it, obtained the modest sum of 25,000 shares for it, which shares he holds still, and that is Mr. Pinlason.

Mr. BOYDELL: Was not 300,000^l. originally given for the property?

The CHAIRMAN: 315,000^l. in shares, which had to be divided amongst a lot of claimants on the St. Augustine Mine, and that is how the capital went.

A SHAREHOLDER: Is the underwriting 3d. on the whole of the capital?

RE-CONSTRUCTION TRIUMPHANT.

The CHAIRMAN: Yes. The underwriters run a tremendous risk, for probably they will have to take up 200,000 shares, and there must be some consideration. I will now take your opinion as to whether we should re-construct on the basis of 18s. a share. It is only an informal opinion, but if you decide upon it I shall have to call a formal meeting as soon as possible to carry it out. All who are in favour of re-construct on the basis of 18s. per share—that is, 2s. a share to pay—will hold up their hands. There are 43 in favour and 5 against, so that I may say there is a large consensus of opinion in favour of re-construct, and your directors will act accordingly. (Cheers.) I thank you very much for attending this morning.

A cordial vote of thanks to Col. Malleon closed the meeting.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

"FUTURE PROSPECTS."

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—When will the directors of our mining companies, not to say of our other companies, cease to talk rubbish and learn to speak grammar? Now that education is free they could get a few lessons in syntax on the cheap. They are always talking of the "future prospects" of the company as excellent. Shades of our mother tongue, do they not know that "prospects" cannot be otherwise than "future"? Please eliminate this hateful expression from your reports of their speeches, and you will cease to display their ignorance, whilst, at the same time you will spare the irritable nerves of

A SUBSCRIBER ALMOST FROM THE COMMENCEMENT.

THE MYSTERY OF BERTHA CONSOLS.

SIR,—I wonder with my fellow shareholders why the present management declined to print and circulate amongst us the accounts and directors' report laid before the meeting on the 22nd ult.

Some of us have now been informed by the secretary that "the directors have not thought it proper to go to the expense of printing and circulating a statement of accounts for the past year." If this question of expense is the real cause then I am willing to bear that expense myself. Therefore if the directors will entrust you with a copy of the said accounts and directors' report I will get it printed and circulated. Surely this is a liberal offer on my part. We have been told that the accounts have not been audited. Why not? The company has an auditor, but is it true that he was refused admittance to the meeting? Will the secretary tell us who are our present directors, and what officers resigned at the meeting, and what "ordinary business" was transacted at the meeting.—I am, &c.,

A SHAREHOLDER FROM THE FORMATION.

Oct. 2, 1891.

SIR,—As a shareholder in this company I fully appreciate your remarks in last Saturday's issue.

Why should we shareholders be kept entirely in the dark as to what has been and is being done with our property? I cannot find that any directors' report or accounts have been issued, and in answer to my enquiry of Sept. 19 the secretary writes me that—"It is not usual to issue the directors' report or copy of accounts till after the meeting, and only then when recommended to do so," if so, he would send me copies.

Over a week has passed and no report or accounts have I received, so suppose he is not advised to do so.

It looks as if things are in a very bad and rotten state when they won't bear the light of public inspection, but with closed doors must be looked at. "Open and above board" should be our motto, especially amongst shareholders in public companies.—I am, &c.,

DISGUSTED.

[If the secretary of Bertha Consols wrote as alleged, that "It is not usual to issue the directors' report or copy of accounts till after the meeting, and then only when recommended to do so," he may be congratulated upon his courage rather than his knowledge of the Limited Liability Companies Acts. It occurs to us that if the shareholders do not look promptly after their interests in Bertha Consols they stand a fair chance soon of having no interests to look after.—Ed. M. W.]

THE LINARES LEAD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of this Company will be held at this Office, on THURSDAY, the 8th October, at One o'clock p.m.

To receive the Accounts, Balance-sheet, and Reports of the Directors, Auditors, Superintendents, and Mining Agents, for the half-year ending 30th June, 1891.

RICHARD DONAGAN, Chairman.
6, Queen Street Place, London, E.C.,
30th September, 1891.

THE FORTUNA COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of this Company will be held at this Office, on THURSDAY, the 8th October, at Half-past One o'clock p.m.

To receive the Accounts, Balance-sheet, and Reports of the Directors and Auditors, for the half-year ending 30th June, 1891.

ROBERT HENTY, Chairman.
6, Queen Street Place, London, E.C.,
30th September, 1891.

THE ALAMILLOS COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of this Company will be held at this Office, on THURSDAY, the 8th October, at Two o'clock p.m.

To receive the Accounts, Balance-sheet, and Reports of the Directors, Auditors, Superintendents, and Mining Agents, for the half-year ending 30th June, 1891.

ROBERT HENTY, Chairman.
6, Queen Street Place, London, E.C.,
30th September, 1891.

"A FEW SHARES NOT YET ALLOTTED."

SIR,—I have no more interest in the Evisse Syndicate than the babe unborn, but this is the way a person signing himself "G. P. Ivey," addresses me.

"I have great pleasure in informing you that a contract has been signed between this syndicate and the 'Trustees and Bankers Securities Co., Limited,' of 10, Finsbury Square, E.C., for the sale to them of Brentini's patent. This will enable us to declare a dividend of about 5^l. per share, in cash and shares of the new company when completed, not later than Dec. next.

The syndicate will go on with other matters it has in hand, which, I have, no doubt, will prove equally profitable."

After this I was not unprepared for what follows:—"There are about 275 shares out of the 2,500 not yet allotted. These are offered to the members of the syndicate and their friends at 1^l. premium. Should you desire to secure any please send application at once with cheque, crossed 'Martin and Co.' If more shares are applied for than the number unallotted, the amount overpaid will be returned."

Any of your readers who feel disposed to go in for this "good thing" have now a chance, which I must decline. If they do, however, I advise them to look at their sovereigns as they would at friends bound for a shore where war, pestilence and famine will beset them.—I am, &c.,

Sept. 30.

AN OLD BIRD.

GOLDEN LEAF v. EMMA—A CONTRAST.

SIR,—I received by this morning's post copy of plan and sections of the Golden Leaf property, with a full and succinct report of every point in progress. I may add that each month shareholders are furnished with a statement of the profit made upon the Empire part of our property and a resumé of exploiting work, &c., throughout the company's mines system. After perusal of these documents, so suggestive of energy in working and of anxiety that shareholders comprehend the stages of progress, which in our opinion are leading us up to the receipt of early dividends, I could not help making a comparison, and an invidious one, with another company, in which I also possess an interest—I refer to the Emma, over which a mysterious darkness appears to have crept. Week after week I look in vain for information as to the realisation of the sanguine hopes raised a few months ago, but we do not even get stones instead of bread.

This heedlessness or incapacity of the management calls for explanation from the board, who are, no doubt, equally annoyed with ourselves. Fortunately, I am not disposed to attribute this mysterious darkness and silence to an unsatisfactory condition of the mines, for advices, both public and private, last spring were most encouraging, and appeared to point unmistakably to the success we have been for a long time expecting. It is, therefore, most annoying that at a time when American securities are booming, our high expectations should be dashed and frustrated in this manner.

I am quite sure such management would not be tolerated by the Golden Leaf Co., whose chairman, Mr. Stuart Wallace, would be very quickly off to the mines and rectify all abuses. This gentleman is now at the mines in Montana. If he could join the Emma board, infusing into it a little of his superabundant energy, it might be a good thing for the shareholders. I am quite sure we should not be long without copious reports of good work accomplished.—I am, &c.,

CREDO.

Sept. 30, 1891.

LETTERS of allotment for shares in the Ripanji Quicksilver and Silver Mines Co., Limited, have been posted. The registered office of the company is at No. 3, Gracechurch Street, London, E.C.

SALT UNION, LIMITED.—The approximate tonnage of salt delivered by the union in Aug., 1891, was 110,000 tons, against 146,000 tons in Aug., 1890.

THE mining property, known as the Gwernymynydd and Cat Hole Mines, situate in the Parish of Mold, Flintshire, will be sold by public auction by order of the trustees for debenture-holders. The auction will be conducted by Mr. J. E. Davies, and will take place at the Black Lion Hotel, Mold, on Wednesday, Oct. 14, at 4 o'clock in the afternoon.

"LAUNDRY OPERATIONS IN CORNWALL."—The *West Briton* quotes our article of last week in its issue of Thursday, and says:—"We are able to state from unquestionable data that in all our well-managed mines the fullest information is given to every shareholder, whether resident in the county or not. About eight millions of money have recently been invested by British capitalists in South African gold and other mines. If a tithe of the money had been judiciously spent at home we believe the results would have been far better for the investors."

EAST GRASSINGTON (Sept. 30).—Report from the mine manager:—Hammond shaft: The lode in the 47 west is wider, and the encasing rock easier for progress. We are now close to the old underlay shaft, west of which we shall be in whole ground to surface. No. 3 sump: In the western level the vein is 2 ft. wide, and worth 20 cwt. of lead ore per fm. In the eastern level the vein is 2½ ft. wide, and worth 22 cwt. of lead ore per fm. Slope in back of the 47 east yields 8 cwt. of lead ore per fm. Harris main engine shaft: As explained to the directors during their inspection last week, the great influx of water has considerably impeded our progress here.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.]

SATURDAY, OCTOBER 3, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

THE MONTANA CO., LIMITED.

POSITION OF THE MINE INDICATES EARLY AND IMPORTANT DISCOVERIES—A TWO YEARS' SUPPLY OF ORE ON HAND, EVEN IF NO NEW FINDS ARE MADE—EXHAUSTIVE SPEECHES BY THE CHAIRMAN AND MR. R. T. BAYLISS.

THE fifteenth ordinary general meeting was held at Winchester House, on Tuesday. The business of the meeting was "to receive and consider the statement of income and expenditure, the balance-sheet and report of the directors and auditor for the past half-year, and to transact any other business which, under the articles, ought to be transacted at an ordinary meeting."

Stewart Pixley, Esq.

(chairman of the company), presided.

Mr. THOS. NEAL (secretary) read the notice of meeting, and the report of the directors was taken as read.

A RETROSPECT.

The CHAIRMAN: In moving the adoption of the report, I remember a year or two ago it was my pleasant duty to refer to the favourable developments of the previous six months, and announce the declaration of a dividend, but although I cannot to-day give you any glowing description of the property, and we must, as stated in our circular of May 27 last, suspend the payment of dividends for a time, it is far from my wish or intention to speak in discouraging terms of our prospects. You will remember that seven years ago our circumstances were infinitely worse than they are to-day. During these seven years past the extent of our property has not only been increased tenfold, but a profit of 686,000% has been made, which amount exceeds the entire capital of the company. Out of these profits 537,000% have been paid in dividends—the difference between these two amounts having been devoted to meeting liabilities chargeable against capital, but which, as having no working capital, had to be met by revenue.

150,000 TONS IN RESERVE.

Our mills and machinery, hoisting gear, pumps, &c., are in excellent condition. The mine is well equipped, and, according to Mr. Robinson's estimate, 150,000 tons of ore are in reserve. Neither the administration here nor our executive on the other side can be held responsible for the impoverishment or existence of ore in the veins, or for its value. We can only do our best to develop the resources of our property in the most economical manner, and to the greatest advantage in the interests of our shareholders. This has been our aim, and continues to engage our constant attention and best energies. We are making some practical experiments on portions of the oxidised tailings, and hope to achieve satisfactory results. It was explained to you at our last meeting that we had met with a long and deep zone of barren and impoverished ground, and that by continuing our exploration works, especially by sinking and developing the lodes to a greater depth, we might reasonably expect to meet with a recurrence of those richer deposits of ore which had been found in the upper levels. Such is still our expectation, and we are energetically pursuing this work, but it is a somewhat tedious process, requiring not only time, but the exercise of no little patience.

OUTLAY CONFINED TO EMPIRE AND DRUMLUMMON.

We shall, however, continue to devote all our resources to the attainment of this object. We have satisfactorily proved the existence of rich ore in the Blue Bird and Hickey Mine, but find that it will require about 10,000% to properly equip and develop that outlying property. We have, therefore, determined to postpone such expenditure until our discoveries in the Drumlummon Mine shall have so improved our financial position as to warrant our undertaking that work. I purposely refrain from entering into any description of the progress of our underground developments during the last six months, as Mr. R. T. Bayliss—who has recently returned from the mines—will presently give you full information upon such points, and will be happy to answer any questions you may desire to put to him. The lawsuit to which we are a party has not yet come on for trial. We cannot, therefore, report any progress in this business, but are still confident that the ultimate decision of the Courts will be in our favour. You will, I think, find the accounts as clear and explicit as usual, but if there is any point upon which you require further explanation I shall be happy to give it to the best of my ability. I now beg to move the

following resolution, viz.:—"That the report of the directors and the statement of accounts to June 30 last, as presented, be now received and adopted." (Cheers.)

Mr. FRED. P. CROWTHER (director): I have the pleasure to second that resolution, and, in accordance with the plan which was established at our last meeting, prior to that resolution being put to the shareholders, we will ask Mr. Bayliss to speak to you upon all the subjects of interest in connection with your property. With these few remarks, I beg to second the adoption of the report.

VIEWS OF MR. BAYLISS.

Mr. RAWLINSON T. BAYLISS: Ladies and gentlemen, in rising to review briefly the operations of your mines in Montana during the past half-year, I find myself in a position to which I am not accustomed, for during the seven years I have directed the management of your affairs in Marysville, this is the first occasion I have ever been called upon to address you at a time when you were not receiving dividends. Now, although the present position of the mine, and the developments during the past half-year, do not justify me in stating that the payment of dividends will be resumed at the end of the current half-year, I honestly feel that it is a possibility well within your reach—and I shall be able this morning to offer some good reasons for the belief—that the future payment of dividends will not be indefinitely delayed, and that what I may call the "seven years of plenty" will not be succeeded by seven years of famine. (Laughter.) I can quite understand and appreciate that after what was said at the last meeting you hardly expected to receive in lieu of your usual dividend warrant a circular stating that you were not to get any dividend at all, and although upon that point my colleagues were not able at the time that circular was issued to give you further information, I feel that you are now entitled to some fuller explanation than has already been laid before you. My remarks at the last meeting were based upon the estimate that the output could be maintained at about \$70,000 per month, and in making that estimate I relied mainly upon the support of an ore body then recently discovered, and which, from its appearance at that date, held out a very good prospect of supplying such quantities of ore and of such grade as would maintain the output at about \$70,000, pending further discoveries, but, unfortunately, the value of that ore body as exposed in the drift was not maintained in the stopping ground above, and we were, therefore, compelled to fall back upon a lower grade of ore for treatment in the mills. In addition to this we simultaneously encountered a partially barren zone in another productive stope then being worked, so you may consider that during the past five months we have met with abnormally bad luck, and the value of the returns has been correspondingly lower than the average we had hoped to maintain. The condition of affairs just mentioned as referring to the half-year ending June 30, which I have now under review, has shown

A DECIDED IMPROVEMENT SINCE THE EARLY PART OF JULY,

and justifies Mr. Robinson in stating that he hopes to make a substantial addition to the monthly runs. To a very slight extent that increase was apparent in our last return, and I am very confident, and fully expect, that the returns will henceforth show a still further increase, and leave a considerable balance of profit at the end of this half-year. It is the first time I have ever had to meet you without a dividend, and I sincerely trust it will be the last. (Hear, hear, and cheers.) Turning to the development of the past half-year and to our prospects, our efforts have been mainly directed towards the discovery of the continuation of the Empire ore body below the 400-ft. level, and to the further development of the Drumlummon lode upon the 1,400 and 1,600-ft. levels—two points which we consider of the greatest importance. With regard to the Empire ore body, we are in much the same position now as we were six months ago, with this one favourable exception, that we have proved by two winzes that at the further depth of 60 ft. below the 400-ft. level the Empire ore body is of the same size and thickness as it was on that level, and when you bear in mind that the ore bodies in the Drumlummon Mine have invariably become impoverished below the 400-ft. level, it is apparent that the prospects of further vertical development upon the Empire vein are most distinctly encouraging. In the 800-ft. level we have been making great efforts to discover the whereabouts of the Empire vein, and although we have not yet been successful we have derived some very valuable and practical information from our explorations.

CONFIDENCE UNSHAKEN.

My faith in the ultimate discovery of the Empire ore body in the lower levels is as firm and as unshaken to-day as it has ever been—(cheers)—and I confidently look to our further developments in these two winzes to dispel the doubt which heretofore has existed as to the locality in which we shall find the Empire vein in depth, and to lead us to the discovery of that ore body in all its

magnitude in the lower levels. In the near future there will be the probability that we shall add considerably to our reserve tonnage by further developments upon the Empire lode, north of our present workings. We have still 800 lineal ft. of the Empire vein which has never yet been explored, and when you look at the section and see the large quantity of ore which has been produced in that stope, and resulted from the development of the Empire vein for only 500 ft. in length and 400 ft. in depth, the possession of an additional 800 ft. of Empire vein in virgin ground holds out possibilities which should not be overlooked in considering the prospects of the Montana Co. (Cheers.) During the past six months

A VALUABLE DISCOVERY HAS ALSO BEEN MADE

in the south end of the Empire Mine, 150 ft. below the surface, and the ore body there encountered has been partially developed in the No. 2 level at another point. I am sorry to say the ore extracted from that stope to date has not been of very high grade, but we anticipate that the tonnage still to be extracted both above and below our workings there will add a very large supply to our available reserves. Coming back to the Drumlummon Mine—whilst our developments in the 1,400-ft. level during the past half-year have not resulted in the discovery of any valuable or profitable ore body, they have been very encouraging as compared with our developments in the 1,200 and 1,000 levels above, and particularly encouraging as regards the mineral contents and general appearance of the vein. Whilst the vein filling in these two levels was absolutely barren in the neighbourhood of the No. 1 shaft, we have encountered in the 1,400-ft. level several seams and bunches of ore, carrying a sulphide of copper and iron, and yielding high returns by assay in both gold and silver. Although only in small quantities, we have obtained assays from those little seams running up into the hundreds and thousands of dollars to the ton, and when it is remembered (or, rather, you will not remember it, but it is a fact) that in all the high grade bodies discovered and worked in the past sulphide of copper and iron has been a most prominent feature, I regard its renewed presence in the 1,400-ft. level as a most encouraging indication. (Loud cheers.) Holding, as we do, the firm conviction that patient and persistent development of the Drumlummon vein in depth will result in the discovery of large and valuable ore bodies, we have been making every effort to get below the barren zone, which has diminished the value of your returns for so long, and that shaft which when I last addressed you had only reached the 1,400-ft. level, is now at the 1,600-ft. level, and I look forward with the greatest interest to our further developments in the latter. We are now running a cross-cut at the 1,600-ft. level to encounter the vein, but as yet it has not been advanced a sufficient distance to reach it, though, from the indications presented at the 1,400-ft. level, and the improved appearance of the vein at that point, I have very great hopes that your directors will be able to lay some encouraging information before you concerning our further developments in the 1,600-ft. level at or before our next meeting. (Cheers.) In the south end of the mine a very limited amount of work has been done during the past half-year. The No. 2 shaft has not been sunk any deeper, and with the exception of the 1,200-ft. level, which has been advanced to a connection with No. 1 shaft, all the drifts are in about the same condition and position as they were at the beginning of the year. The ore body shown at the extreme end of the section still continues to be very profitable, and in order to further test its value in depth a winze is being sunk, and it is gratifying to learn from the latest advices received from Mr. Robinson, that at the bottom of the winze and in the workings therefrom the size and value of that ore body as worked above the level is fully maintained. Those gentlemen, are my opinion concerning the present position of your mine, based upon my own personal inspection, but I think it will be interesting to the meeting to hear read

THE LATEST INFORMATION

received from the mine by cable of the 26th of this month. This cable was not sent for the meeting, but for the information of the directors. Mr. Robinson states: "The returns should shortly improve consequent upon better ore being put through the 50-stamp mill, and prospects are more encouraging. In the 1,600-ft. level from No. 1 shaft we are driving west, and expect we shall have to drive 70 ft. before we reach the Drumlummon lode. We are meeting quite a flow of water in the face of the drift which is a very favourable indication, and are cutting stringers of ore. The rock is very much softer than heretofore. Present appearances are encouraging. In the south winze below the 400-ft. level we are drifting north. The face is in a very good grade of high grade rock, assaying from \$20 to \$30 per ton. Average width of pay ore may be taken at 12 ft. The Castleton, or Empire, lode in the Cruse level south, and the Castleton in the No. 2 longitudinal drift, and the Samson shoot over the 1,000-ft. level south are all in good ore. The ore continues so far to improve. Generally the workings are more encouraging. Otherwise I refer you to my half-yearly report." (Cheers.)

POSITION SUMMARISED.

In the matter of the prospects of the mine, gentlemen, I think I cannot do better than read you a short extract from the letter written me by Mr. Robinson in explanation of his half-yearly report. He says:—

"You will notice that I have not said very much about the future prospects of the mine. The fact is there is not a great deal to say for the condition of affairs is such that a slight discovery would put us considerably ahead, while failure to make discoveries for several months would only leave us in our present condition."

That, gentlemen, sums up the present situation. A slight discovery in the Empire or in the lower levels of the Drumlummon Mine would put us considerably ahead. (Cheers.)

IT WOULD ENABLE US TO RESUME THE PAYMENT OF DIVIDENDS,

whilst, if further immediate disappointment is before us, we have still upwards of two years supply of ore in sight, regardless of further discoveries, which would enable us to develop our mines and still leave a small profit. (Cheers.) Should any of you feel inclined to give up all hope in the future of this company, I would ask you to reflect, and to do so at some length, upon the great possibilities of your mines, both laterally and in depth, and at the same time to remember that you are

FORTIFIED BY THE OPINION OF THE LATE PROF. CLAYTON, given after a most searching examination of the mine, and especially

directed to the points of disturbance in the lode. If you do not remember it—that opinion is to the effect that there is no reason, mechanical or chemical, why ore bodies as large and valuable as anything we have ever had in the past should not be met with below the barren zone. That, gentlemen, is the opinion of your late adviser, who justly held the reputation of being one of the most incorruptibly honest men, and one of the most practical geologists in the United States—(loud cheers)—and I feel sure that

MY GOOD COLLEAGUE, MR. PHILLPOTTS,

who had the privilege of close acquaintance with Prof. Clayton for many years—(hear, hear)—will endorse his right to the reputation so freely accorded to him by the most eminent men in the profession to which he belongs. (Cheers.) And if your faith should ever falter, I would urge you to recollect the opinion expressed by Prof. Clayton, and to take courage therefrom, particularly in a time like the present, when there are strong indications in our lower levels, that his opinion is going to be borne out by facts. It is essential that we continue our policy of exploration and development in order to bring to light the ore-bodies at present undiscovered, but which undoubtedly exist, and when won they will repay you for all your patient waiting and present sacrifice, and will re-establish this company in its old prosperous condition. With regard to the

BLUE BIRD AND HICKEY MINES,

we fully appreciate the prospective value of those properties, and recognise the desirability of opening them up at the earliest possible date, but in the present condition of the company we do not think it advisable to expend large sums in the equipment and development of the Blue Bird and Hickey Mines, which we believe may be used in the development of the Drumlummon Mine with even more profitable results. I think I have now touched upon all points of interest in connection with the past half-year's operations, and with the present condition of the mine, and, speaking now for myself and Mr. Robinson, I can assure you that if due regard be paid to the development of your property, our faith in its ultimate success is

AS FIRM TO-DAY AS IT HAS EVER BEEN,

and the opinions we have so often expressed upon that point are held still. (Cheers.) It is not given to us to work miracles. All we can do is to strive earnestly and diligently to bring to light and discover the mineral which your mines contain, and that we are doing, and shall continue to do with unsparing effort so long as we feel we have the full confidence of the shareholders. (Loud cheers.) No one, not even the largest shareholder, has a greater interest in the speedy success of this company than Mr. Robinson and myself, for after our repeated expressions of confidence in the mine, it is a matter of great importance to us, from a professional point of view, that these ore bodies should be brought to light as quickly as possible. Mr. Robinson, as resident, will I know—for I know the man—do all within the limit of human capacity to accomplish this, and I shall not hesitate to devote whatever time may be necessary for the same end, and to show you I am in earnest about that statement—since our last meeting

I HAVE DEVOTED FOUR MONTHS OF MY TIME EXCLUSIVELY

to the affairs of the Montana Co., having left London in the early part of April, and not returning until Aug. 15. (Cheers.) Now, gentlemen, if there is any point connected with the mine or its present condition which I have overlooked this morning that will be of interest to the meeting, I shall be glad to reply to any questions which you may put to me, or if any shareholder desires for his personal satisfaction to have information which I may properly communicate to an individual, my time will be at his disposal at the conclusion of the meeting. (Loud cheers.)

The CHAIRMAN: If any lady or gentleman would like to make remarks on the report, now will be the suitable time; otherwise, I will put the resolution.

After a pause, the CHAIRMAN put the resolution, and it was carried unanimously.

THE TAILINGS.

Mr. STEWARD: I should like to ask Mr. Bayliss, with your permission, whether he can supplement your remark as to the treatment of the tailings. That seems to me a possible asset of the company, and I think it may be a valuable one. When you come to consider the immense amount of oxidised ore, treated ore, that must have accumulated during the past eight years, I think it is possible—I only say possible—that under the recent discovery of modes of treatment, which have been adopted successfully elsewhere, that the tailings of the Montana Co. may be of considerable value. I merely make the suggestion, because the matter is in competent hands, but I think our recent readings in connection with that subject has shown that in other mines there are large results—large and growing results—from that source of operation. I am not sufficiently competent to offer any precise opinion upon the matter, but I find that in the old days of the St. John del Rey they treated their tailings by an arrastra. Mysore, Nundydroog, and Ooregum all treat their tailings themselves. They have a plant which it is to be presumed they work profitably, or otherwise the workings would not be continued by such competent people as officer those mines. In South Africa the results are well-known. The Sheba is actually giving at this present time 2 ozs. per ton from the tailings. Of course, the gold ought not to be there, but it is there and they are getting it out and profiting by it, and, therefore, I just wish to put the question to Mr. Bayliss, whether the slight allusion made by the chairman to this subject can be further explained and worked upon, I hope with profit to us and credit to you. (Cheers.)

AN IMPORTANT DIFFERENCE.

The CHAIRMAN: The mines you mention are all gold mines, which makes a considerable difference. I can assure you the subject has never been lost sight of by us, and now they are working these tailings over again we shall have better results, I believe, than we have experienced up to the present. Every month brings to light some new method of treating these tailings by which more of the precious metal is got out and at a more economical rate. The subject will not be lost sight of.

Mr. BAYLISS: I take great pleasure in replying to Mr. Steward's practical enquiry. I think the matter was only dealt slightly with

by the chairman, for the reason that our workings upon the tailings to this date have

ONLY REACHED AN EXPERIMENTAL POINT.

Whilst our mills were all running upon high grade ore we had not any amalgamating accommodation which could be devoted to the treatment of the tailings, but under the recent re-arrangement of management, we have at liberty now the amalgamating pans, which heretofore have been employed in the 30-stamp mill, and, finding them idle, it occurred to Mr. Robinson that he might ascertain if the tailings saved during the earlier days of the company had not been sufficiently oxidised by the action of the air and the weather to make them yield a considerable profit if merely treated by the process commonly called the "slum" mill. During last month he made a few experiments, and thought them very successful—(hear, hear)—and he is now enlarging those experiments, and I hope (and he believes) that in the course of a month or two he will be able to make an addition—I do not say a very big addition—but a considerable addition to the monthly output from that source. (Cheers.)

THANKS TO THE STAFF.

The CHAIRMAN: I now propose that the best thanks of the meeting be given to Mr. G. H. Robinson, the resident manager, and Mr. Henley, and all the members of the staff at home and abroad. I will ask someone on the other side of the table to second this motion. These gentlemen have all worked uncommonly well, and deserve our thanks. (Cheers.)

Dr. WIGLESWORTH: I have great pleasure in seconding that, more especially seeing that I was deputed to come here and make some stringent remarks upon the very unsatisfactory condition the mine has arrived at, but after hearing Mr. Bayliss, and what has been said by the chairman, I think that anything one could say under the circumstances is better unsaid—(cheers)—and, therefore, to show my feeling on the matter, I cannot do better than second the motion that the very best thanks of the meeting be given to Mr. Robinson and the other members of the staff, not forgetting Mr. Tennant Bayliss, for the large attention they have given to the mine, and the earnestness and zeal that has been shown by everybody connected with the management of the company.

The CHAIRMAN: Of course, the motion includes our friend, Mr. Tennant Bayliss.

It was carried by acclamation.

The CHAIRMAN: That concludes the business, and I am very much obliged to you for your attendance.

THANKS TO THE CHAIRMAN AND DIRECTORS.

Mr. RICHARD GREEN: I am quite sure, gentlemen, you would not wish to separate without passing the usual vote of thanks to the chairman and directors. (Applause.) I feel quite certain they will devote the same untiring attention to it in the future that they have done in the past.

Mr. WELLS OWEN: I second the motion—carried amidst cheers.

The CHAIRMAN: I am sure I must say on behalf of my colleagues, as well as on my own behalf, that if it were possible to give more time and attention to our duties than we do we should not spare ourselves. We do work very anxiously and very earnestly, and I only hope at our next meeting, if I live as long, that from this chair I shall be enabled to announce to you some very pleasant news. (Cheers.)

ORITA GOLD MINES, LIMITED.

HYDRAULICKING TO BE SHORTLY RESUMED—EVERYTHING IN ORDER—MR. POWLES HELPS THE SHAREHOLDERS—REFERENCES TO OTHER COLOMBIAN MINES.

The ordinary general meeting was held at the Offices, No. 10, Blomfield Street, on Thursday, "for the purpose of receiving the directors' report and accounts for the past year, and electing directors and an auditor in the place of those retiring."

Mr. T. S. G. Kirkpatrick

(chairman of the company) presided.

Mr. SYDNEY A. COBBETT (secretary) read the notice of meeting.

A BIG PIECE OF WORK.

The CHAIRMAN: Gentlemen, by looking at the date of this report you will see that, as compared with last year, we have run beyond our time considerably. We had expected to do work in seven weeks, which would have seen us at the bottom of the dip, but it has continued a distance of 40 ft., very much further than the manager had expected it would, and it was essential to bottom this dip in order to work the mine properly. This work has been accomplished. It has been a very heavy one, as you may imagine—40 ft. through granite 10 ft. wide and several hundred ft. long. It has cost us a very large sum of money during the time that that was being done, but I am happy to say it is finished and the sluices are being made in it. We have opened two new attacks on the face of the gravel. We were driven out from the channel by this mass of granite, and have been obliged to take all our gold from what we call the "branch," which is some rim rock work yielding very poor gold. While he has been making this cutting he has also prepared two other attacks—one called Mondeco, where he has very poor stuff, but easy to work, which shows a profit of 70 per cent. on the working, and another No. 4, to which he has brought his pipes up, and where he has everything in order. That is already partially begun upon, but he has not had time to clean it up, though he thinks very well of it. We have therefore these

FOUR POINTS OF ATTACK—

the channel, the branch, the Mondeco and No. 4. With these we can employ all our water, always and at all times, because if one stops we have always another to turn to. I do not think there is much in the report to which to call your notice beyond what you have had on the cards from month to month; but turning to the accounts we have an increase of cost over last year of about 1,270l. and a decrease of gold produced of about 1,200l., which just balances the 2,495l. we are to the bad on the mine. Of course it represents permanent work, and, there-

fore, is not actual loss. With regard to other items, they are almost identical with our usual ones, and you will observe that the

DIRECTORS HAVE NOT TAKEN THEIR FEES,

in order to help the mine through its difficulties. (Hear, hear.) In Nov. last it became a question how we were to get through this bit of work. We had the Baring failure and other commercial houses in trouble, and money was at any price you like. Now, it is very unpleasant to communicate to shareholders in any way, except when you are sending them something to put into their pockets instead of asking them to take something out of their pockets. At this moment Mr. Powles, who is, as most of you know, our largest shareholder, besides being our landlord, came to the front.

MR. KIRKPATRICK BURSTS INTO SONG.

I must say, like Dryden's Achithophel, he is

"A daring pilot in extremity.

Pleased with the danger when the waves went high,
He sought the storm."

(Laughter.) He appeared with his lifeboat in the shape of his well-filled money bags, and said he would see us through. I consider this as the very best testimonial we could have of the value of our mine, because his only security was the success of the mine, and it was no rash speculation on his part. He did not act like the proverbial Cornishman, who, the moment he saw a hole, threw his shirt into it, jumped after it, and broke his neck for his pains, but the action of Mr. Powles was the calm and deliberate outcome of his scientific training as a miner, and his thorough local knowledge of the mine. It is not the only time he has done this for a mine. I daresay some of you know all about Tolima. Tolima a few years ago was in desperate straits, and Mr. Powles was out there at the time. They wrote to him and begged him to dispose of the mine at any cost. They could not contribute another shilling, and what did he do?

TOLIMA SAVED BY BULLOCKS.

He happened to have on his farm a fine herd of bullocks which he sent off to market and wrote home to say he was quite certain Tolima shareholders were close to success, and he did not want to see them fail, so he had put the bullock money into the mine. In three months he had cut the lode, and only this year

THOSE HAPPY SHAREHOLDERS

have divided 60,000l. upon a capital of 100,000l., and they have 400,000l. worth of ore in reserve, even if they did not put another pick into the mine to develop it further. I hope this is an omen of what we are going to do in Orita. You see we have at the present time the Honda water question entirely settled. We have given the town a supply of pure water, so that no question can arise of fouling the river. We have a gate for all time through which the gravel we wash from the mine in future will pass, and we have beyond that a face of gravel 2,000 ft. wide, and four points of attack, with the pipes in and the monitors arranged, the sluices to the bank and everything in order. Then we have the largest supply of water of any mine running in Colombia, which we are now in process of improving, and withal we have the smallest capital of any mine on the mining list. The first small preliminary run has given us 700l., which, though it is not up to what we left off at, for we were making 1,200l. and 1,300l. a month, is yet good as a preliminary, as it was run through broken stuff, and this month we will not have a run at all. The manager has written to say this. It is a dry time in the country. He says:—

"Aug. 17.—Operations at the mine: We have had but little water in Medina, not more than enough for one mine. I had a consultation with Mr. Oakes on the 8th inst., and he expressed a great desire to have enough water to run the month, as it will not now answer us to run 15 days in turn, and have sluices dry for the same period. I had a break at Medina, and to repair must put in 120 ft. of flume. Mr. Oakes offered me 200l. for the water, which I accepted. I went to Medina on the 9th inst., and only came down yesterday to write you. I am taking full advantage of low river to repair the break, and improve capacity of our main syphon pipe. I have put 2,000 ft. of double string, and in about five days will have finished jointing, &c. I have almost all the men up at Medina, and trust when we finish to have more water in the river. For our part we are gaining by stoppage, and when we start the pipe will carry a considerable amount more water to the mine. When we finish at Medina we have here a lot of pipe-clay to clear out."

We have not only this 200l. but an increase of water, and an opportunity of doing other work at a time when it does not interfere with us in any way whatever. I do not think there is anything more to say, but will move: "That the accounts and report be adopted," and when it is seconded, should any gentleman want further information I shall be happy to answer his questions.

Major ROSS (director): I second the motion.

A DOLEFUL CRITIC.

Mr. MICHELL: The accounts, as made up here, show that the mine has got into debt to the extent of 5,000l. Fortunately, Mr. Powles has come to our rescue, and at present we are safe. I take it that since Mar. 31 we have run another six months. If we add on the expenses the same as last year (which we may fairly do at this present moment) the mine is indebted to somebody about 7,500l. It looks on the surface of it very much as though in some way or other in the course of the next 12 months, before the next meeting, money must be raised. Of course, Mr. Powles will go on, but I do not think he will. Then the only question is this, if money is to be raised it is necessary that two things should be done. In the first place, the

ROYALTY AMOUNTS TO ONE-SEVENTH OF THE GROSS RECEIPTS

of the mine, which seems to me to be a very heavy sum indeed. In the last 12 months we have lost 2,500l., and our office expenses, &c., are another 1,000l., so that virtually we are 3,500l. worse off than we were at the beginning of the year. There are two points absolutely necessary if this mine is to be put right and if more money is to be raised. It is necessary, first, that the directors should approach the royalty owner, with a view to see if they cannot make some better terms with him. I know, of course, it is very difficult indeed to ask a man to forego anything, but still the question will occur probably to Mr. Powles as it would do to everybody, that should the mine be shut down the royalty will be lost altogether. In the second place, I think that during such time as the mine is in its present unsatisfactory

condition the directors' fees are too high. Until a dividend is declared the directors should alter their articles of association.

Mr. PECHEY: They are not drawing a penny. (Cheers.)

Mr. MICHELL: You are putting it down as owing by the mine. It does not matter whether you draw it or not. It does matter to you that you simply have a blank piece of paper, but there is the indebtedness 300%.

Mr. PECHEY: I am sure that my co-directors would say the same as I do, that if this money can never be paid out of profits, we should not dream of taking it from any other source. (Cheers.)

Mr. MICHELL: It is included in the sundry creditors. If we can go on as we are doing now without raising any money, well and good. I shall say nothing about it. If there is going to be a call, as I cannot but think there will be, then as long as the present royalty remains as it is now, and the directors' fees continue at the present rate, I do not think there will be much forthcoming, and should not be inclined to subscribe.

The CHAIRMAN: With regard to the indebtedness, I think Mr. Michell has stirred up a question he might just as well have let alone. The last time we were in want of cash in the earlier part of our career, Mr. Powles lent us 10,000% on the same security as he has done now—our simple prospects. We paid that off, and he is our largest shareholder, and is not going to let the company drop. As to the fees of the directors—I do not think they can be called excessive. I do not know what Mr. Michell is in the habit of working for, but if he has as much worry and trouble as we have had, then I do not think 60% a year particularly heavy,

ESPECIALLY AS WE DO NOT DRAW IT.

(Laughter.) I quite differ from Mr. Michell in his views of the probability of having to raise money, and I think that the next month will see us rapidly putting ourselves back again where we were. On our capital of 30,000%, 500% a month nett pays dividends of 20 per cent. We were making pretty nearly double that when we left off. We have now four places to attack instead of one, and it seems to me it is

A FOUR TO ONE CHANCE IN OUR FAVOUR.

The whole prospect, I think, is better than it ever has been, because, unquestionably, it is now the best laid-out mine in the whole of Colombia, and has the greatest water power. Every point in the mine is put in perfect order, and we have now to see what the gravel will do for us. We know what it did, but what it will do is the only doubtful question in the whole situation. We have already sampled it on a pretty large scale and paid 20 per cent. out of it up to the time we were stopped by this mass of granite rising between us and the face. All these Colombian Mines look to me to be doing extremely well, and I do not see why we should have any doubt as to Orita. There is our next door neighbour, Colombian Hydraulic, which has altered its arrangement in such a way that instead of having its jog-trot 20 per cent., will give more. Gravel Gold has passed through its vexatious delays, and is well on the road to prosperity, and the Guarino Mine will begin very shortly. There is also

OUR FRIEND LOMA AT THE TOP OF THE HILL.

True it is making its 10-mile ditch, and will not be ready for a few months, but Mr. Prender is helping them with his counsel, and has managed to rig up a little dam, and with water about as much as would be used in a garden squirt of ordinary size is getting out 300% a month. Loma is working one hour in 48, and each hour in those 48 is making 20% at a cost of one sovereign. In other words, at an outside expense of 20%.

LOMA IS REALLY MAKING ABOUT 300% A MONTH.

I do not see why all these mines should not go on increasing in value; and as to Orita, I can only say that if we do not get up to 1,000%, a month very shortly we will take further steps in the matter. Mr. Powles is quite as confident of the future of the mine as anyone connected with it, and as it is not his habit to lend money where there is not a chance of seeing it back again, I think we may draw a hopeful augury from what he has done for us, and that we should not start the question of the loan, but do far better by allowing it to rest as it is. (Cheers.)

The motion was carried unanimously.

The CHAIRMAN: You all know Mr. Cobbett and Mr. Pechey. They are our old supporters, and I move their re-election as directors.

Mr. CHURCH seconded the motion, which was carried unanimously.

MR. PECHEY THINKS HE IS "JONAH."

Mr. PECHEY, in returning thanks, said: Really, gentlemen, I do not know whether you are doing a very wise thing in re-electing me as a director. I feel as though I were a kind of Jonah. I came in about one and a half years ago, when the company had been making dividends for some time, but since I joined the board the dividends of the shareholders have ceased and the fees of the directors have been stopped. (Laughter.) I can assure you we will do all we can on this side of the water to make the concern a success. I am very much impressed by the absolute confidence Mr. Prender and Mr. Powles always expressed in the future of this company. Mr. Prender has had a difficult task to get through. We have heard the details from the chairman. It is no light task in a tropical climate where the rain comes down in a deluge to run a cutting like this for such a length, width and depth as he has done, but I think he is nearing the end of his work, and there seems to be no question that he has a large space of gravel to work upon, and that at almost every point it will pay more or less profit.

MR. POWLES' CONSIDERATION.

I am very happy to think that we have such a willing sponsor as Mr. Powles has proved himself to be. I know he is a gentleman who has lived out there for many years, and who is conversant with mining matters, and I feel sure he would not go on with his advances unless he felt that in the future—the immediate future—there was a prospect of profit. Not many returns will be required to turn our heavy balance into one on the right side, and I hope, before many months are over, we shall see that done.

Mr. E. A. Harvey, the auditor, was re-elected at a remuneration of 10 guineas.

MR. PRENDER'S SERVICES.

Mr. C. O. ROGERS: I think we ought to pass a vote of thanks to

Mr. Prender. I, as representing Mr. Powles, of whom the chairman has spoken, can say that that gentleman has made the first advance of 10,000%, and also the second, entirely upon the recommendation of Mr. Prender, and as long as Mr. Prender says there is hope in the concern you may depend upon it Mr. Powles will continue his advances without any appeal to the shareholders whatever. When Mr. Powles ceases those advances you may depend upon it it is not worth your while going on.

The CHAIRMAN: I second the motion most heartily. Mr. Prender has acted most courageously and pluckily through all this trying business.

The motion was carried unanimously.

Mr. PECHEY: I think the gentleman who has just sat down (Mr. Rogers) might be asked to convey an expression of feeling from this meeting to Mr. Powles. The shareholders feel greatly indebted to him for the kindness he has shown. (Cheers.)

EAST POOL.

DIVIDEND OF 10s. PER SHARE.

A TWELVE-WEEKLY MEETING of the adventurers in East Pool was held on the mine, on Monday.

Mr. J. R. Branwell

presided.

The accounts showed:—Debits—Labour costs, 7,718% ; merchants' bills, 3,460% ; Wheal Agar adventurers, 50% ; stannary assessment, 16% ; dues, 839% ; total, 12,084% . Credits : 266 tons 4 cwt. 1 qr. 8 lbs. of tin sold for 13,198% ; sales of wolfram, 347% ; copper and halvans, 80% ; arsenic, 1,158% ; discount, 115% ; carriage on tin ore sold, 20% ; income-tax on dues, 19% ; sundries, 9% ; property tax received on appeal, 398% ; total, 15,348% ; leaving a profit on the 12 weeks' working of 3,264% .

The CHAIRMAN said he thought they would agree with him that the accounts were satisfactory. They showed a considerable increase in the sales of tin, and they hoped that that was a harbinger of good time to come. He moved that a dividend of 10s. per share be declared, and that the residue be carried to the reserve account.

Mr. WOOLCOCK, in seconding, expressed the belief that they would have the pleasure of receiving larger dividends in future. The proposition was carried.

Mr. HEARD said he ventured to hope that the auditor they had appointed would be "substantial and real," and that the accounts would be prepared as they ought to be. The auditing of Cornish mining accounts in many cases was nothing less than a farce, a delusion, and a snare. (Applause.) Accounts had been audited and placed before the adventurers when the mines had been 20,000% and 30,000% in debt. In three different mines false accounts had been placed before shareholders. A mere formal audit was of no value whatever, and whilst he had every confidence in the accounts of East Pool, he recommended the committee to have a prescribed form for the auditor to sign. (Applause.)

The CHAIRMAN said the committee would endeavour to make the audit as complete as possible.

Capt. BISHOP, in supplementing the report, said their average produce of tin stuffs during the 16 weeks was 51 lb. to the ton, as compared with 46½ in the previous 16 weeks. The average produce of their tributaries was 62½ tons, against 52. They had sent 12,065 tons 8 cwt. of tin stuff to the stamps, against 11,431 tons 12 cwt. 2 lb. Tin had also risen 6s. in price.

CORRECT INFORMATION is the basis of successful dealing in Mining Shares.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

RE-CONSTRUCTIONS.

BEFORE making further Investments Write for Advice.

A similar remark applies to joining new Mining or other enterprises.

"MINING WORLD"
All communications should be sent to
W. DUNBAR QUINLAN, 234, 235, 236, GRESHAM HOUSE, OLD BROAD STREET, LONDON.

INDIAN MINES.

The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for cash.

MOLD, FLINTSHIRE.

Highly Important Sale of Valuable Leasehold Mining Property, known as "The Gwernymynydd and Cat Hole" Mines, together with the whole of the Plant and Machinery, &c., &c.

MR. J. E. DAVIES begs to announce his instructions to OFFER for SALE by AUCTION, at the Black Lion Hotel, Mold (about 40 minutes run from Chester, on the Chester, Mold, and Denbigh Railway), on WEDNESDAY, October 14th, 1891, at Four o'clock in the afternoon punctually, in One lot, or such other lots as may be determined upon at the time of Sale, subject to the Conditions of Sale to be then read, the undermentioned Valuable LEASEHOLD MINING PROPERTY, viz., the unexpired term of a lease of 21 years, from the 24th day of June, 1881, of the "Gwernymynydd" and "Cat Hole" Lead Mines, with the Shafts, Sumps, Levels, Drifts, Adits, Air Ways, Water Courses, Washing and Dressing Floors, Engine Houses, Blacksmith's and Joiner's Shops, Weigh Bridges, Store Houses, Offices, and other appurtenances thereto belonging, together with the Mines, Veins, Seams, Beds of Lead and Lead Ore, already opened, found or discovered, or which may be found or discovered, within, under, or out of the land comprised in the lease, situate at Gwernymynydd and Cat Hole, in the parish of Mold, in the County of Flint, and containing by admeasurement 464. 1r. 2Sp. or thereabouts, excluding a small plot of ground (etched green in the plan, which will be produced in the sale-room); also the Valuable PLANT and MACHINERY for working the same, comprising—At Gwernymynydd, powerful Pumping Engine, 85-in. cylinder, 10 ft. 6 in. stroke in the house and 9 ft. out, with all the connections built in 1871, by Williams Perrau Foundry Co., Cornwall; pair of 14-in. Horizontal Winding Engine, with winding drum, capstan and connections, by Ratcliffe and Sons, Hawarden; Five "Galloway" and "Tubular" Boilers with connections; the 21-in. Lift, together with the Material in shaft to the depth of 166 yds., Pit Head and Pulleys, Wire and Hemp Winding and Capstan Ropes; a 22-in. Lift (not now in use), Four Crab Winches, and sundry other loose material, the contents of Blacksmith's and Joiner's Shops, Storehouses and Offices, &c., &c. At Cat Hole, powerful Pumping Engine, 85-in. cylinder, 10 ft. 6 in. stroke in the house and 9 ft. out, with all the connections, by Williams Perrau Foundry Co., Cornwall, built in 1868; 18-in. cylinder Winding Engine, with capstan and connections; One Semi-Portable Winding Engine, 9-in. cylinder, Pit Head, &c.; Four Tubular and other Boilers, with the fittings and connections; Pit Head and Pulley, Wire and Hemp Winding and Capstan Ropes, the Lift and Material in shaft, a number of 22-in. Pumptrees, and other loose material.

Further particulars may be obtained from Messrs. West, King, Adams and Co., Solicitors, 66, Cannon Street, London, E.C.; Messrs. Kelly and Keene, Solicitors, Mold; Capt. Benjamin Williams, Diggle, near Oldham, Lancashire; or from the Auctioneer, 11, Wrexham Street, Mold.

Largely used for Ore Crushing, Stamping Flour Mills, Cotton Mills, and Electric Lighting.

PAMPHLET ON APPLICATION TO
GILBERT GILKES & Co.
KENDAL.

ROBEY & CO., Globe Works, LINCOLN.

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBNEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

THE WEATHER AND THE MARKETS—GOLDEN GATES AND FEATHERS—INDIAN SHARES BRIEFLY REVIEWED—FLAGSTAFFS—GENERAL COURSE OF BUSINESS.

FOR the most part the weather has been wet this week. The reader may ask, "What has that to do with market quotations and business?" Let the following conversation we overheard this week tell its own story. "Another wet day," said broker No. 1; "we shall have low prices again." "What for," said broker No. 2; "what's the weather to do with prices?" "Everything in the world," said broker No. 1. "Ask a tradesman whether a wet Saturday night has anything to do with his counter sales. Ask a costermonger how his barrow looks at the end of a wet day, and at the end of a fine one." "I don't see the connection," said broker No. 2, "between the sales of a tradesman over the counter and that of a share dealer on the market, and as for the costermonger, you surely don't mean to bring us down to that level." "My dear sir," said broker No. 1, "everything in these days is like water—it finds its lowest level, and the business of the tradesman and of the costermonger is not dissimilar from that of the mining dealer. There are those who, otherwise disposed to do business, will not sally forth to either the Market or the Telegraph Office on a wet day. They say, 'Whether I buy or sell to-day does not much matter; I will put it off till to-morrow, and perhaps prices will be a shade lower, and I shall come in cheaper;' or he says 'They may be a shade higher, and I shall get a better price. No, I will not go into the City to-day—perhaps it will be fine to-morrow—do you twig?' The sceptic walked away—a fashion they have on the market, when they get what they call a "poser." In the by no means elegant language of broker No. 1 we ask our readers—do they twig?

But though it has been with us, as it was in the days of Noah; and though the fountains of the deep have been opened up with no patriarchal boat in which the mining fraternity could take shelter, the week has not been one devoid of incident.

For example, there has been a good deal of life in the Indian Market; the returns having led to a fair amount of investment buying. The Mysore return in particular was generally spoken of on the market as brilliant.

First of all in this connection we may tell our readers that the Bengal Mines, about which there was so much excitement in

Calcutta some months ago, have practically come to grief. The "industry," if such it can be called, has, to all seeming, gone to smash. There has been a dismal procession to the Winding-up Court, and the companies remaining, for the most part, are following along the same well trod path. There was an abortive attempt to float these concerns on the London market, but timely warnings in the Press prevented what would have been little better than the perpetration of a gross fraud.

When we come to the mines on the Colar field we are, in more senses than one, on a totally different ground. With scarcely an exception they can be recommended as an investment. We have been re-reading the late reports from the Ooregum Mine, and if this property does not astonish the mining community within the next 12 months, it will very much astonish us. The developments are almost phenomenal. There has been a fair amount of business in both classes of shares this week. Then there is Nundydroog, in speaking of the merits of which our vocabulary has been well nigh exhausted, and our inkpot dried up. A correspondent writing from India says of this mine (and he knows): "Should Kennedy's shaft get gold in fair amount, Nundydroog will be one of the best companies on the field. This shaft is on the line of the reef from where they are getting such large gold returns. I have great faith in the company—it is so well managed." So has everybody, but some would wish to see, like Anglo-Indian, more rapid development. The shares have been dealt in largely, though the market does not close at its best.

It is denied from the spot (India) that Goldfields of Mysore has by any means sold all its good land. It is alleged to be only at the beginning of its sales—in the opinion of our correspondent. So far the purchases have been confined to companies under practically the same administration, but there is every prospect that soon outside buyers of a substantial status will be in the field. At present prices the shares are decidedly cheap. Champion Reefs have been firmer this week. Time will prove what we now say, that this will in the future be one of the leading companies in the Colar Field.

The correspondent whom we have previously quoted writes of Mysore West—"I consider these the cheapest shares on the market. They ought, with their prospects, to be nearer 10s. than 5s. I have faith in this mine—also in Colar Central, Mysore Reefs, South-East Mysore, and Indian Consolidated."

Talking of Indian Consolidated, the veritable "father of lies" has been at work to malign and misrepresent it. First of all, it was said that there would be an immediate re-construction. Then, when it was pointed out that the whole of the capital was not called up, it was asserted that the company was short of funds, and that the last sixpence would be called without delay. Evidently the disease which proved fatal to Ananias has assumed in these latter days an epidemic form. We may tell our readers that Indian Consolidated will not be immediately re-constructed, and that no call is contemplated. The present funds will not last for ever, but they will be sufficient for a fair amount of time. The outlook for the mine is, however, not quite so good at the moment as it was judged to be a little while ago.

A telegram has been received from the Alluvial Mine, Mysore-Nagar, to the effect that everything is progressing satisfactorily. Fuller details are promised later on, and the management in England appears to possess every confidence in the future of the enterprise which is certainly novel to India.

The warrants for the Mysore dividend recently declared were posted to-night.

The violent fluctuations that have this week characterised the market for Golden Gate and Golden Feather shares have formed one of the features of mining during the current week. Golden Gates have been as low as 13s. 6d., and as high as 18s.; Golden Feathers have been as low as 15s. and as high as 19s. Generally, Feathers have led the way by an advance of a shilling upon Gates. It used to be very much the other way. The inquiry has been made Why the difference? The reason is that the latter company is known to have water power, by which it can work its hydraulic elevator so as to turn up and turn over the bed of the river, whereas the Gate Co. will have to do all this by hand. Col. McLaughlin, so far as we can gather from the information

we have sought to-day, has still two good working months before him, and possibly more, according as the rainy season is expedited by Dame Nature, or the reverse. When the rains set in the Colonel will retire to his tent, but until then he may be relied upon to do his best. For the general position of the works we must refer the reader to the exhaustive reports from Oroville's only Colonel, which we published last week. To the pointed question we have again put to-day to those who ought to know, "Will the Colonel in any degree this season realise his many telegrams and reports?" we have received an almost unqualified reply in the affirmative. Holders of these shares are well advised to give more heed to the responsible statements of the management than to the baseless rumours that are circulated on the market—of course, with "disinterested" motives. It is just possible Col. McLaughlin may not, this season, realise the dream of his life, but it is absolutely false, at the present moment, to assert that he has abandoned the attempt as hopeless.

The Copper section has been fairly firm. Mason and Barry led off feebly with a 2s. dividend, but Rio Tinto followed with the fine distribution of 12s. Upon this, prices hardened.

In the General Foreign section quotations for the most part are weak. All the backbone has gone out of Lisbon-Berlyn. Whenever anybody has mentioned that fatal compound word he has been "stuck with the shares"—an expression peculiar to the market, and another which means the same thing, "they have been put into him." Ottos Kopje have also been somewhat offered, and Lomas have fallen on the rumour that a call will be made next week. The company, as we pointed out last week, is constructing a 10 mile ditch, and this cannot be done without the wherewithal. There has been an attempt, not a difficult thing, to depress Amador shares from the same quarter as there was to inflate them a little while ago. Here it is a case of diamond cut diamond, in which the brokers are everywhere and the public nowhere. Glenrocks have been dealt with up to 4s., but close scarcely so good. The report from Callao Bis is decidedly good, and we cannot understand why the shares fell upon it. We expect to be able to announce more favourable news from this mine in our next. The story of Flagstaff is told in another column by "one who has studied it." There are rumours of large buying orders of shares from America. The Professor is on the spot, and will soon make his presence felt by sales. Oscars were largely bought on a remarkably good telegram from the mine showing quartz worth 3½ ozs. to the ton. It is surprising the market did not respond to such news in a more notable way.

Colons have risen, and close at 4s. 9d. to 5s. 3d., the Government of Colombia having decided the water question in favour of the company, which will now immediately resume hydraulicking. The mine has already made returns of a satisfactory nature, and successful results from the hydraulicking are, therefore, considered to be beyond question.

In the Kaffir circus the horsemanship has been of a mediocre character. The fluctuations in Diamonds call for no comment, and a similar remark applies to land shares, with the exception of Oceanas, which fell heavily on the rumour that there is a tightness of the company's purse. They close between 15s. and 17. lower on the week. The movements in Land shares have been unimportant. The returns from the Randt are dealt with in another column.

In Australian shares Cumberland Gold, to which we called attention a few weeks ago, have been largely bought up to 4s., and show a rise on the week of 1s., though the market does not close at its best. In other shares the movements have been without feature, if we except Australian Broken Hills, the dealings in which have been large, prices closing easier.

The Cornish market has been looking up. The Dolcoath dividend is fully equal to expectation—17. per share on the 16 weeks. Killifreth declared a dividend of 3s. Tineroff, Wheal Agar, Wheal Basset, and Wheal Uny are all up. The shares of the latter company are steadily rising, and in a healthy state of the Cornish market would be quoted at a much higher figure than they are now. The movements in Cornish shares have been almost without exception, upwards. It is long since we could say so much for this section.

In regard to the outlook, it seems decidedly better than it was a week ago. Brokers expect a large amount of business, and we do not think they will be disappointed. Clients expect better prices, and the outward signs seem to favour the inward conviction.

KAFFIRS.

The market has been steady, and though there are no important alterations in prices, the chief shares dealt in close firm. The principal dealings have been in Ferreira, Geldenhuis, and Salisburys, which show a slight improvement, but Johannesburg Pioneer, Jubilee, Kimberley, Langlaagtes, and Robinsons are lower.

Business.—A rise is shown in Aurora of 1/8; Bothas Reef, 6d.; Ferreira, 1/4; Forbes Reef, 6d.; Geldenhuis, 1/8; Great Gold Zone, 1s.; Main Reef, 6d.; Salisbury, New, 6d.; and Wolhuter, 1/4. The following have fallen: Pigg's Peak, 6d.; Sheba, 6d.; Glencairn, 6d.; Johannesburg Pioneer, 1/2; Jubilee, 1/2; Jumpers, 1/2; Kimberley Roodepoort, 1/2; Langlaagte, 1/2; Langlaagte Block B, 6d.; Robinsons, 1/8; Spes Bona, 6d.; and Witwatersrandt (Knight's), 6d.

DIAMONDS.

The market in this class has been somewhat limited, and dealings have been confined chiefly to De Beers, which, after several alterations in price, close a shade lower. There is no other alteration calling for special notice.

Business.—A rise is shown in North-Eastern Bultfontein of 1/8; whilst a fall has taken place in De Beers of 1/8; New Jagersfontein, 1/8; and Burma Ruby, 1/8.

AFRICAN LANDS.

A fair amount of business has been transacted in Land shares but the close is not the best—in fact, prices are weak. This is to be accounted for to an extent by the near approach of the settlement, which commences next Tuesday. Oceanas have been freely offered, and show a drop of 15s., this being the principal

fall. London and South African Exploration are also lower, and a very limited market. There is no rise to call attention to.

Business.—A rise is shown in Johannesburg Estate of $\frac{1}{8}$, whilst the following have fallen:—Bechuanaland, $\frac{1}{8}$; British South African Chartered, $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{8}$; London and South African, $\frac{1}{8}$; Moodies, 15s. paid, $\frac{1}{8}$; Oceana, $\frac{1}{8}$; Ophir, 3d.; South African Gold Trust, $\frac{1}{8}$; Southern Land, 1s.; Sutherland Reef, $\frac{1}{8}$; Transvaal Estate, 1s.; Transvaal Lands, 2s.; and Zoutpansberg, 1s. 6d.

AUSTRALIANS.

These shares have been unsettled, and in most cases lower quotations rule. The chief declines have been in Mosman to the extent of 1s. 6d, British Broken Hill and Scottish Australian, 2s. 6d. each. The market closes somewhat firmer.

Business.—A rise is shown in Cumberland of 1s.; New Queen, 6d.; but a fall is noted in Australian Broken Hill of 6d.; Bonnie Dundee, 3d.; British Broken Hill, $\frac{1}{8}$; Day Dawn Block, 6d.; Gympie Golden Crown, 6d.; Gympie Great Eastern, 3d.; Mosman, 1s. 6d.; Mount Morgan Extended, 3d.; Mount Zeehan, $\frac{1}{8}$; and Scottish Australian, $\frac{1}{8}$.

INDIANS.

A restricted market has prevailed here, and prices have not altered very much. Nundydroogs and Goldfields mark the principal falls, which, however, are only to the extent of $\frac{1}{8}$.

Business.—A rise is shown in Champion Reef of 1s.; Glenrock, 3d.; Mysore Harnhalli, 6d., and South East Mysore Preference, 3d. A fall has taken place in Balaghat of 1s.; Goldfields of Mysore, 1s. 6d.; Indian Consolidated, Mysore Reefs, Mysore West and Wynaad, 3d. each; Nine Reefs, 1s.; and Nundydroog, $\frac{1}{8}$.

COPPER.

There has been little doing in this class, and, with the exception of Libiola and Tinto, which show an improvement, the market generally has been weak.

Business.—A rise is shown in Libiola of $\frac{1}{4}$ and Rio Tinto, $\frac{1}{8}$; whilst Mason and Barry and Quebrada close $\frac{1}{8}$ lower.

GENERAL FOREIGN SHARES.

Business has been fairly good in this market, but the approach of the settlement has to a certain extent kept buyers from coming into the market, and hence lower prices rule. El Callao are a point lower, while many others show a fall of from 1s. 6d. to 3d. American Belle, Colon, Gravel Gold, and Oscar on the other hand have risen.

Business.—A rise is shown in American Belle of 9d.; Colon, 1s. 9d.; Gravel Gold, 6d.; Monte del Oro, 6d.; Orita, 6d.; Oscar, 9d.; and Sierra Buttes, $\frac{1}{8}$. The following have fallen:—Almada, 3d.; Amador, 3d.; Balkis, 6d.; Barretts, 3d.; Callao Bis, 6d.; Colombian Hydraulic, 1s.; De Lamar, 1s.; Don Pedro, $\frac{1}{8}$; El Callao, $\frac{1}{8}$; Elkhorn, $\frac{1}{8}$; Emma, 3d.; Esmeralda, 6d.; Garfield, 3d.; Idaho, 3d.; Kapanga, 3d.; Lisbon Berlyn, 3d.; Loma, 9d.; Ottos Kopje, 6d.; Silver Mines of La Luz, 3d.; and Tesoro, 6d.

The following list shows the principal changes which have taken place:—

	Last Week.	This Week.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT-MYSORE.—A telegram, dated Oct. 5, gives last month's return of gold as follows:—"270 tons of quartz yielded 505 ozs." The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Aug., which realised 1,974l. 8s. 11d.

CHAMPION REEF.—Letters of allotment of first mortgage debentures were issued on Saturday.

MYSORE.—A telegram, dated Oct. 5, gives last month's return of gold as follows:—"3,220 tons of quartz yielded 5,122 ozs.; tailings, 204 ozs.; total, 5,326 ozs. Scarcity of water tailings. The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Aug., which realised 22,604l. 15s. 10d.

MYSORE NAGAR.—A telegram from the resident engineer of the Mysore Nagar Gold Mines has been received by the directors, dated Oct. 1, stating that everything was progressing satisfactorily.

NUNDYDROOG.—A telegram, dated Oct. 5, gives last month's return of gold as follows:—"1,000 tons of quartz yielded 2,331 ozs.; tailings, 66 ozs.; total, 2,397 ozs." The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Aug., which realised 8,433l. 17s. 11d.

OOREGUM.—A telegram from the mine, dated Oct. 3, gives last month's return of gold as follows:—"1,376 tons of quartz produced 3,163 ozs. of gold." The directors sold the gold produced in Aug. for 10,320l. 16s. 2d.

COLONIAL MINES.

BRITISH BROKEN HILL.—For week ending Oct. 1 463 tons of ore were treated (including 104 tons of iron ore), yielding 63 tons of lead, containing 5,093 ozs. silver. For the week ending Oct. 3, 516 tons of ore were treated (including 121 tons of iron ore), yielding 77 tons lead, containing 4,614 ozs. silver.

BROKEN HILL PROPRIETARY.—For week ending Oct. 1 4,936 tons of ore were treated, yielding 543 tons of lead, containing 177,696 ozs. silver. For the week ending Oct. 8, 4,446 tons of ore were treated, yielding 578 tons of lead, containing 177,840 ozs. silver.

CUMBERLAND.—Cablegram, Oct. 6: "Shaft is down 27 ft.; the average thickness of the quartz is 2 ft., payable.—PIPER." Note.—It is probable that the above cablegram means that 27 ft. were sunk during the month (Sept.) making a total depth below the No. 7 level of 57 ft.

DAY DAWN P.C.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold, ex s.s. Jumna, which realised 4,467*l.* 18*s.* 10*d.*

KANGARILLA.—Cablegram states:—"Last fortnight's crushing produced 48 tons first concentrates, containing 2,400 ozs. of silver and 40 per cent. lead." The freehold, containing 269 acres, on which the Aclare Mine is situated, has been purchased by the company.

MIDAS.—Yield for week ending Oct. 3, 41 ozs.

MOUNT ZEEHAN.—The shipments of silver-lead ore, per s.s. Wilcannia and s.s. Bungaree, amounting to 47 tons 10 cwt. 0 qrs. 14 lbs., yielded 32 tons 12 cwt. 2 qrs. of pig lead, and 5,239 ozs. of fine silver.

NEW QUEEN.—Crushing for the past fortnight:—370 tons (yielding) 620 ozs. (gold). The stopes are looking better towards Kelly block.

TASMANIAN LAND AND EXPLORATION.—Telegram from the engineer at Zeehan, Tasmania, dated Oct. 7, has just been received: "Lamb's section: Have shipped 30 tons of ore to Hobart for London; output was 6 tons last week."

WENTWORTH GOLDFIELDS PROPRIETARY.—Cablegram from Mr. W. H. Irvin, manager:—"We have started a rise on the calcite vein discovered last week in the Phoenix mine, 200-ft. level, the ore assaying 1½ ozs. of gold per ton. In the winze the ore continues to be bunchy. The cross-cut in the Shamrock shaft, 240-ft. level, has made a further progress of 40 ft.; still in serpentine. In the south drift we have struck the Melville's vein with good indications. Have finished timbering the Reform shaft, and are now starting on the lower workings."

FOREIGN MINES.

ARGENTELLA.—A telegram from the manager states that the works have been re-commenced at No. 2 Marine, quartz reef, and No. 3 Rowe's workings.

BIG CREEK.—An interim dividend of 1*s.* per share has been declared by the directors of the Big Creek Antimony Mining Co., Limited, payable Oct. 14.

COLON.—The secretary reports that he has this day received a cablegram from the manager of the mines to the effect that the Government of Colombia have decided in favour of the company, and that the mines which the Government have restrained from hydraulicking in the past six months will at once resume work.

CORTEZ.—A cablegram shows the results for Aug.:—"Production, 49,000 ozs.; expenses, \$15,840; tons crushed, 662; development expenditure, \$2,385."

DE LAMAR.—Cable:—"During Sept. 1,362 tons were crushed, producing \$38,900 bullion; estimated value of shipping ore, \$15,000; miscellaneous receipts, \$850; total revenue, \$54,750; total expenses, \$24,530. Everything is going right. Good progress is being made with the enlargement of the mill. There are 8,000 cords of wood ready stacked."

ELKHORN.—Cables from the mine:—"Bullion produced for week ending Oct. 3, \$7,890." "During the month of Sept. the mill ran 24½ days, and crushed 863 tons; shipped bullion amounting to \$29,095; smelting ore sold, 186 tons, \$14,000; total produce, \$43,095; total expenses, \$22,838."

EMMA.—Cablegram from the manager:—"10 tons concentrates sold at \$83 per ton."

GOLDFIELDS OF URUGUAY.—Telegraphed result of milling for Sept.:—"3,000 tons of ore crushed, 469 ozs. of bullion produced, value \$6,200; 49 stamps running 30 days."

MAID OF ERIN.—Cable from the mines:—"Gross yield for the week ending Oct. 3:—1,150 tons; estimated value, \$26,000."

MAMMOTH.—The manager telegraphs from the mine that the bullion product for the month of Sept. was \$15,500; tons crushed, 1,696; mill has run 18 days; expenses, \$9,000; everything going well; mine looking well.

MESQUITAL DEL ORO.—A cablegram giving the result of the Sept. mill-run has been received from the mine:—"50 stamps ran 637 hours (26 days 13 hours). Quantity of ore crushed, 2,893 tons; bullion produced at clean-up, 1,399 ozs.; value about 5,225*l.*" The directors, roughly estimating the results to the end of Sept., believe that the net profits made in the nine months (Jan. 1 to Sept. 30) will amount to not less than 12,000*l.*

NEW EBERHARDT.—Cable:—"Mine prospects remain unchanged. Weekly output quantity, 18 tons; the average is \$34 per ton; gross output during the month of Sept., \$9,500; all expenses, \$2,500; net profit, \$7,000. Eberhardt expenses during the month of Sept., \$3,500."

NEW GOLD HILL.—Cablegram from the manager:—"Crushing commenced Sept. 24."

NEW PIERREFITTE.—The company has declared a dividend of

10 per cent. for the quarter ending Sept. 30, this being the third for the nine months, amounting in all to 30 per cent.

OSCAR.—Telegram from the mine, dated Oct. 5:—"The quartz in bottom of shaft continues to increase. Assays 3½ ozs. free gold to the ton."

PITTSBURGH.—Cablegram:—"Total cost for Sept. at mine and mill, \$7,700; bullion shipped, \$4,500."

SAMBAS EXPLORATION.—The directors have received a cablegram from the manager stating that the machinery has arrived. The directors anticipate that the mills will be running in four weeks.

SAN LUIS.—Cable from the manager in Nicaragua:—"Bullion shipped, Sept. 18, 710*l.*" Office memorandum:—"The above is the first shipment for the month of Sept., 10 days only having elapsed since the last shipment of 1,500*l.*"

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro, Oct. 5:—"30 fms. sunk, 3 fms. driven during Sept."

TOLIMA.—Cablegram from the superintendent respecting the estimated Sept. returns:—"The gross returns are 8,500*l.*; the nett profit is over 5,500*l.*"

HOME MINES.

NEW MORGAN.—The gold from the last clean up has been sold, and produced 1,391*l.* 3*s.* 4*d.*

POLBERRO AND TREVAUNANCE.—It was decided at the meetings of these companies on Tuesday last to work the properties as one concern. A new company will therefore be formed for the purpose of effecting the amalgamation.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

MEYER AND CHARLTON.—1,731 ozs. for Sept.

SIMMER AND JACK.—Profit for last month, 4,000*l.*

SALISBURY.—The crushing for last month was 800 ozs.

STANHOPE.—Result of last month's crushings is 1,074 ozs. of gold.

CITY AND SUBURBAN.—Result of last month's crushings is 1,465 ozs. of gold.

FERREIRA.—Crushings for last month (Sept.), 4,966 tons, yielding 4,011 ozs. gold.

WORCESTER EXPLORATION.—Result of last month's crushing is 1,506 ozs. of gold.

JUBILEE.—The result of last month's crushing is 665 ozs. of gold; will not pay a dividend.

AURORA.—Aug., 1,326 tons crushed, yielding 850 ozs.; Sept., 1,508 tons crushed, yielding 859 ozs.

MOODIES.—"295 claims rented or leased; 1,145 tons crushed by claimholders yielded 534 ozs. of gold."

FERREIRA.—Cablegram from Johannesburg Oct. 3:—"Crushings for last month (Sept.) 4,966 tons, yielding 4,011 ozs. gold."

EDWIN BRAY.—Cable advices just received report "That during the month of Sept. 750 tons were crushed, yielding 350 ozs. of free gold."

WEMMER.—The result of work done during Sept. is as follows:—1,137 tons crushed; 1,176 ozs. of gold won; 18 days working 25 stamps.

NEW PRIMROSE.—Sept. crushing 2,505 ozs. from 4,504 tons; 50 stamps running 28 days. The London agents have declared a second dividend of 5 per cent.

FORBES REEF.—A telegram from the mine manager dated Oct. 6 gives the results for month of Sept. as follows:—"Crushed 1,200 tons; obtained 189 ozs. gold."

LE CHAMP D'OR (FRENCH).—Sept. crushings:—"Battery worked 22 days; crushed 660 tons, yielding 900 ozs. An accident happened to the engine during the month."

NORTH-EASTERN BULTFONTEIN.—Telegraphic advice for last week announces 17,000 loads, mainly re-washings; yield, 1,100 carats of diamonds. Increase of blue ground on floors, 11,000 loads.

GELDENHUIS MAIN REEF.—During Aug. and up to Sept. 10, the company crushed 1,000 tons, producing 500 ozs. of retorted gold, after which date work was stopped for removal of tailings and repairing of machinery.

JUMPERS.—Profit on month's operations, 695*l.* 10*s.* 8*d.* During the month there was expended upon permanent works, &c., 1,748*l.* 11*s.* 5*d.*; upon buildings, machinery, &c., 796*l.* 2*s.* 8*d.* Cablegram from Johannesburg Oct. 2:—"Obtained 1,269 ozs. gold during month (Sept.)."

DURBAN-ROODEPOORT.—Crushings since Sept. 4 last are as follows:—"4,115 tons crushed; 25 working days; 2,446 ozs. retorted gold." The 3,876 tons crushed during Aug. were composed of 2,069 tons of south leader reef, and 1,815 tons of main reef, all taken from the 13 claims block. The news from the mines continues to be satisfactory.

ROBINSON.—Telegram from Johannesburg:—"40 stamps at work 29 days; crushed 4,810 tons of ore; yielded in smelted gold, 5,530 ozs.; from tailings, 1,700 ozs.; chlorination works, 1,015 ozs.; total, 8,245 ozs." The Aug. crushing was telegraphed as follows:—"40 stamps at work 29 days; crushed 4,851 tons of ore; yielded in smelted gold, 5,529 ozs.; from tailings, 1,578 ozs."

GELDENHUIS ESTATE.—The crushing for 26 days during last month has, owing to an error in cabling, been inaccurately given; it yielded 3,200 ozs. An amalgamation of this company with the Stanhope-Geldenhuis Deep Level has been provisionally arranged on the unanimous vote of the directors on satisfactory terms. It is

provisionally arranged that the Geldenhuis Estate Co. pay to the other company 41,000 shares and 23,000*l.* for their entire adjoining property. The property of the Stanhope-Geldenhuis Deep Level Gold Mining Co. consists of 45 claims, machinery and water right.

PIGG'S PEAK ESTATE.—Mine report for week ending Sept. 5:—Devil's reef: Drive 200-ft. level—South end: Drove for the week, 42 ft.; total, 302 ft. Going through a body of ironstone. North end: Drove for the week, 24 ft.; total, 210 ft.; passing through soft slate. Remaining boys cutting wood and putting away dump. Durning's new reef: Boys cutting wood and putting in tramline in tunnel. England's reef—Low level drive: Drove for the week, 24 ft.; total, 124 ft. Battery: All concrete filled in round mortar blocks, and started levelling tops of same. Dam: Excavating and blasting away boulders, and have laid a short tram to carry clay to dam. One white man and natives cutting and hauling poles for ore-shoot and dam.

CERRO DE PASCO.—The mine manager writes under date, Barberton, Sept. 7:—Block F extension: South-east cross-cut has been driven 6 ft., making total distance, 353 ft.; this cross-cut still continues in hard slate. Drive south on 10 ft. reef has been driven 10 ft., making total distance 94 ft.; quartz extracted, 20 tons; reef about the same as last reported (last report gave an average of 13 dwts. for full width of lode, but in cases panning as high as 1½ and 2 ozs. to the ton). Drive north on 10 ft. reef. This drive was commenced on Sept. 1, and has been driven 9 ft.; quartz extracted, 18 tons; reef continues about the same as when first cut in cross-cut. Air shaft, No. 1 south: This shaft was commenced on Sept. 1, and has been sunk 15 ft. Two sets of timber and 10 sheets of corrugated iron has been put in to secure collar. Block 12: North-east cross-cut has been driven 9 ft., making total distance 207 ft.; this cross-cut still continues in mica schist.

HORO CONCESSION.—Report from the superintendent, Sept. 2:—I beg to send you below the report of work done here during the month of Aug. last. No. 1 tunnel: The cross-cut to the north from the end of the drive to the east from tunnel is in 29 ft. from the drive. As the prospects here are very small, about 1 dwt. to the ton, I have left this part alone for the present. The cross-cut to the north from the No. 2 west drive, at 18 ft. to the west of No. 1 tunnel, is in 18 ft. The last 9 ft. is driven in fairly solid quartz, giving prospects of from 3 to 10 dwts. to the ton in the drives to the east and west, which I have put in on this part of the reef to stoep it. The distance driven eastward is 11 ft., and westward 17 ft. A cross-cut to the south has been begun from the No. 2 west drive at 65 ft. from No. 1 tunnel. The ground is hard quartz and a little slate, averaging for 6 ft. wide from 6 to 7 dwts. of free gold to the ton. No. 1 shaft: The drive along the reef to the east half-way down this shaft is now 193 ft. from the shaft. Prospects from this drive and cross-cuts from it show hardly 1 dwt. to the ton after the first 50 ft. from No. 1 shaft. The bulk of the ore crushed during the month has been surface stuff, as explained in my report, dated Aug. 6 last, and, consequently, poor stuff; the rest has come from an open cutting on the reef 40 ft. to the east of No. 1 shaft. Battery: From July 11 to Aug. 22, when we cleaned up the battery, the 20 stamps ran 29 days, crushing 1,870 tons of ore, yielding 208 ozs. of smelted gold. I would point out that the new copper plates have absorbed a certain amount of gold. Since Aug. 22 the 20 stamps have run four and a-half days.

TRANSVAAL GOLD EXPLORATION AND LAND.—The company has received the following cablegram from the manager.—“Mined during month, 775 tons. Battery working 23 days, double shifts. Crushed 725 tons Mu ore, yielding 240 ozs.; pans (rich ore and tailings) 800 ozs.; total for Sept., 1,040 ozs. Expenses follow.” The following particulars are from general manager's advices, dated Sept. 7:—Mining.—Ophir Hill—Theta reef: Ore extracted, 63 tons; assay value, 1 oz. per ton; and 14 tons; assay value, 1 oz. 6 dwts. per ton. Brown's Hill—Nu reef: Ore extracted at No. 1, 209, 25 tons; assay value, 5 ozs. 10 dwts. per ton; and at Nos. 1, 220 and 1, 270, 10 tons; assay value, 1 oz. 19 dwts. per ton. Edin Hill—Rho vein: Ore extracted, 18 tons; assay value, 2 ozs. 2 dwts. per ton. Glinister's—Sigma vein: Ore extracted, 25 tons; assay value, 1 oz. 16 dwts. per ton. Mill: After the monthly clean-up the battery and pans were re-started. A short trial run had been made with the new small dry-grinding mill, which was expected to be ready for regular work in another week. Bullion: Two bars melted gold, weighing 200 ozs. 10 dwts. (part of Aug. produce), value 750*l.*, were forwarded on Sept. 1. Summary for Aug.: Mined during month, 607 tons; average assay value, 2 ozs. 13 dwts. per ton. Battery working 52½ hours; crushed, 725½ tons, Theta, Mu and Nu ores, yielding 414 ozs. 5 dwts. retorted gold, equal to 11 dwts. 10 grs. per ton. Pans working 498 hours, treated 183 tons, mixed tailings yielding 104 ozs., equal to 11 dwts. 9 grs. per ton; and 22 tons rich Nu ore, yielding 259 ozs. 10 dwts., equal to 11 ozs. 15 dwts. 22 grs. per ton. Sundries, 2 ozs. 15 dwts. 4 grs.; total for month 730 ozs. 10 dwts. 4 grs.

COMMERCIAL NOTES.

METALS.

COPPER has been lower. Rumours of the probable re-opening of the Anaconda Mine, and considerable quantities of Chili produce offering, induced considerable realisations of warrants, and the price for cash declined to 49*l.* 15*s.*, and three months to 50*l.* 5*s.* Yesterday's prices improved to 50*l.* 7*s.* 6*d.* cash, and 51*l.* to 51*l.* 2*s.* 6*d.* three months. To-day's prices are 50*l.* 15*s.* cash, and 51*l.* 10*s.* three months. 15*s.* per ton was paid for several hundred tons to carry three months. The supplies to England and France for Sept. were 10,851 tons. Deliveries, 11,030 tons. Visible supply on Oct. 1, 59,450 tons, against 59,629 tons on Sept. 1. We quote English tough, 53*l.* 10*s.* to 54*l.* 10*s.*; best selected, 54*l.* 10*s.* to 55*l.* 10*s.*; strong sheets, 64*l.* to 65*l.*; India sheets, 59*l.* 10*s.* to 60*l.*; yellow metal, 5*g.*d. to 6*g.*; ore, 9*s.* 3*d.* to 10*s.* 6*d.* per unit.

TIN has been steady. Straits on the spot sold from 91*l.* 10*s.* to 92*l.*, and three months from 92*s.* to 92*l.* 5*s.* To-day's prices are 91*l.* 15*s.* cash and 92*l.* 7*s.* 6*d.* three months. Spot Australian still scarce, and quoted 92*l.* 10*s.* to 93*l.*; visible supply, including American, on 1st October, 11,908 tons. English ingots, 94*l.* 10*s.* to 95*l.*. The Dutch market is firm. Banca and Billiton on the spot quoted fl.55½.

TINPLATES are quiet. Ordinary coke quoted 13*s.* 3*d.* Liverpool. **SPELTER** steady. Ordinary brands, 23*l.* 15*s.* ex ship here.

LEAD has been dull and easier. We quote soft Spanish, 12*l.* to 12*l.* 2*s.* 6*d.*; soft English, 12*l.* 5*s.* to 12*l.* 10*s.*; L.B., 12*l.* 15*s.*; sheets, 13*l.* 5*s.* to 13*l.* 10*s.*

QUICKSILVER steady. Rothschild's price, 7*l.* 10*s.*; seconds, 7*l.* 9*s.* to 7*l.* 10*s.*

ANTIMONY firm and dearer, 44*l.* to 45*l.*

WHEAL GRENVILLE MINE.

AGENTS' REPORT IN ANTICIPATION OF THE MEETING NEXT WEEK.

(Sept. 23).—The 220-fm. level is driven east of Goold's engine shaft 105 fms. At this level we have driven through about 10 fms. of lode, worth fully 30*l.* per fm. for 6 ft. wide. The lode at this point is large, so that we cannot at present tell its size or full value, but we have put six men to stoep from the rise we have just communicated with the 205-fm. level, and shall soon know the width of the lode at this point. The last 3 fms. driven have not been so productive, its value being about 20*l.* per fm., which is the value to-day of the end driving. The 205-fm. level is driven east of Goold's shaft 219 fms. At this level we have driven through a piece of ground for 20 fms. in length on a lode worth fully 25*l.* per fm.; but for the last 2 fms. driven the lode has been small, and not so good for tin; worth now 10*l.* per fm. This end, we think, will again improve soon. The rise in the 165-fm. level west of Pease's shaft is communicated with the 150-fm. level. The 165-fm. level west is worth 10*l.* per fm. The 150-fm. level west of Pease's shaft is worth 10*l.* per fm. The 120-fm. level west of Pease's shaft is worth 14*l.* per fm. The 110-fm. level west of Pease's shaft is worth 8*l.* per fm. Stopes: There is one stoep in the back of the 220-fm. level, worth 30*l.* per cubic fm. There are two stopes at the 205-fm. level, worth 25*l.* per fm. There are four stopes at the 178-fm. level, worth, on an average, 18*l.* per fm. each stoep. We have stopped the stopes at the 165 and 150-fm. levels until we commence drawing through the eastern shaft. Eastern shaft: We have put in a double skip-road from surface to the 150-fm. level. We are also cutting ground at the 80-fm. level for a balance bob. We have 10 men stopping ground from the 165 to the 178-fm. level to make the shaft full size. We also commenced to sink below the 178-fm. level in line for the shaft. Surface work: We have put in the 36-in. stamping engine complete, with fly wheels, shafts, &c. We have built the loading for the horses to carry the stamps axles, and put up 4-16 heads axles, and are now putting in stamps, frames, &c., and have commenced to lay out the floors in the front of stamps, &c. We have also put in a large dipper wheel at the lower floors, and a great many slime frames, built several new slime pits. We have driven the water level 180 fms., and hope to complete this level in about two months from this time. The weather being so wet has made much against our surface work, especially with our building operations. Therefore we have not made so much speed in building the engine house for the 90-in. pumping engine as we should have desired; but the weather being dry now the contractor is making all possible speed. Tribute: We have 27 pitches working by 87 men. The average tribute 10*s.* in the *£*, at 50*l.* per ton for black tin. The number of persons employed is 406.—C. F. BISHOP, J. HOSKING, S. WILLIAMS.

LEAD ORE SALES.

BRITISH MINING INTELLIGENCE.

BWLCHGLAS (Sept. 19).—Fortnightly report: The No. 2 cross-cut (adit level) has been driven 16 ft.; the ground has become a little easier for driving. The No. 1 cross-cut has been driven 1 ft. 5 ins.; this ground has been much harder, and difficult to make much headway in. The west end (south lode) has been driven 12 ft. 4 ins.; we have had some very good lead from here, but at present the lode has been turned by a crossing; we shall, however, be soon on its course again. This end is now almost underneath the cutting east of the west winze, where the large deposit of lead was discovered. The eastern end has been driven 13 ft.; we have had a very fine lode for the last fortnight—on an average over 6 ins. of lead solid. This, too, is heaved by a crossing, but to-day we have the lead appearing again. This end is now underneath the cutting at surface east of the eastern winze, where the lode was shown to be disturbed. The west end on main lode has been driven 7 ft. 7 ins. There is no change to report in this. The level has now been turned to drive across the lode to the footwall of the lode, and if we strike nothing then we shall stop it.—I am afraid we are rather too shallow to get much.—R. A. THOMAS.

DEVON GREAT CONSOLS (Oct. 8).—Wheal Maria, eastern shaft, Capel Tor lode: The lode in the stope in the back of the 36-fm. level west is worth 4 tons of copper and mundic ores per fm. In the stope in the back of the 12-fm. level west, the lode is worth 4 tons of mundic per fm. Wheal Anna Maria: The lode in the stope in the bottom of the 110-fm. level east of the engine shaft is worth 8 tons of mundic and 2 tons of copper ore per fm. The stope in the bottom of the 130-fm. level west of the field shaft, on the south lode, is worth 10 tons of mundic and 4 tons of copper ore per fm. Wheal Josiah: In the stope in the back of the 130-fm. level east of Hitchin's shaft, the lode will yield 6 tons of mundic ore per fm. The lode in the stope in the bottom of the 130-fm. level east of Hitchin's shaft on the south lode, the lode will produce 2 tons of copper ore and 2 tons of mundic ore per fm. In the stope in the bottom of the 103-fm. level east of Agnes shaft the lode will yield 3 tons of copper ore and 2 tons of mundic ore per fm. Wheal Emma: Thomas's engine shaft: The lode in the stope in the bottom of the 100-fm. level east will yield 8 tons of mundic ore per fm. In the stope in the bottom of the 100-fm. level east the lode is worth 8 tons of mundic ore per fm. The lode in the bottom of the 100-fm. level west of Jewel's winze, east of Thomas's shaft, will produce 10 tons of mundic ore per fm. In the stope in the back of the 100-fm. level east the lode will yield 18 tons of mundic ore per fm. Inclined shaft: The lode in the stope in the back of the 150-fm. level east is worth 2 tons of copper ore and 2 tons of mundic per fm. In the stope in the back of the 112-fm. level west the lode will yield 2 tons of copper and 1 ton of mundic per fm. The lode in the stope back of the 112-fm. level west will produce 2 tons of copper and 4 tons of mundic ores per fm. The stope in the back of the 100-fm. level west is yielding 6 tons of mundic per fm., and saving work of copper ore. New shaft, new south lode: In the stope in the bottom of the 190-fm. level west of the lode will produce 5 tons of mundic per fm. In the stope in back of 130-fm. level east the lode is worth 3 tons of copper and 1 ton of mundic ore per fm. The lode in the stope in the back of the 100 level east will yield 6 tons of mundic ore per fm. Watson's engine shaft: In the 172-fm. level east the lode is 3 ft. wide, producing a little copper and mundic ores. In the 160-fm. level west the lode is 4 ft. wide, and is worth 1 ton of mundic and copper ores per fm. In the 148-fm. level east the lode is 3 ft. wide, and is producing a little copper and mundic ores per fm. In the two stopes in the bottom of the 160-fm. level west—east and west of Mumford's winze—the lode is yielding 5 tons of good copper and mundic ores per fm. In the stope in the back of the 148-fm. level west the lode is producing 5 tons of copper and mundic ores per fm.—W. CLEMO.

DEVON UNITED (Oct. 7).—Willesford's shaft. In the 144-fm. level east the lode is 1½ ft. wide, containing a little mundic. In the 144-fm. level west the lode is 3 ft. wide, yielding a little copper and mundic ores, and is looking more promising. In the stope in the bottom of the 132-fm. level east and west of the winze the lode is worth 3 tons of good copper and mundic ores per fm. The stope in the back of the 132-fm. level west is yielding 2 tons of copper and 1 ton of mundic per fm.—W. CLEMO.

DRAKEWALLS (Oct. 8).—There is nothing new to report in our underground operations this week. The very serious breakage of two of the main pumping rods and balance bob at surface last week has caused all the bottom part of the mine to be flooded up to within 5 fms. of the 132-fm. level. Fortunately there was no damage done to the cylinder or any part of the engine, except one of the iron loops breaking. The engine was put to work again about 11 p.m. on Tuesday night. The forking of the water is progressing satisfactorily and the engine is being worked as fast as we can safely do so.—H. RODDA.

EAST BLUE HILLS (Oct. 7).—To drive the 30 end west on south section by four men at 37. 15s. per fm. The lode is about 18 ins. wide, and produces stuff varying from 2 qrs. to 11 lbs. of tin to the ton; here we are opening out good tribute ground. In the 30 level west on north section we are driving a cross-cut south by six men, at 57. 5s. per fm., to communicate with the south level for ventilation, and when holed we can employ more tributaries. The tribute department looks much the same. Our tinstuff still increasing on the floors. We hope soon to have plenty of water for stamping and dressing purposes.—J. WHITE, F. WILLOUGHBY.

LEADHILLS (Oct. 5).—Brown's vein: The stope above the 145 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 10 cwt. of ore per fm. No. 5 winze below the 130 north of Jeffrey's shaft keeps in a vein 5 ft. wide, mixed with spar and ore; worth 25 cwt. per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 5 and 20 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 5 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows a promising vein, above 4 ft. wide, charged with nice spar and ore; worth 25 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a nice-looking vein, above 4 ft. wide, charged with quartz and spar, and ore worth 20 cwt. per fm. The sinking below the 100 south of Wilson's shaft is worth 10 cwt. of ore per fm. The stope above the 85 north of Jeffrey's shaft has only one (good) spot of ore not to value. The 70-fm. level south of Wilson's shaft is in a vein 3 ft. wide, mostly of stone of a dried nature, and entirely

without ore again. The two stopes above the 35 south of Flat Rod shaft are worth 20 and 40 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit, north of George's Roust vein, is in a vein 3½ ft. wide, made up of spar of kindly character, and ore worth 30 cwt. per fm.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Sept. 25:—275-yd. level—No. 2 rise and stope, and stope east of No. 1 rise: The heavy ground has necessitated a stoppage of ore getting, in order to put in timber and fill up. The other rise west of No. 1 is in a lode 4 ft. wide; worth 2 tons blende per fm. The 295-yd. level—Driving west: Lode 6 ft. wide; worth 4 tons blende per fm. Driving east: Lode of great width, and divided into two portions; the south worth 1 ton blende and 1 ton lead ore per fm.; the north side worth 2 tons blende and 1 ton lead ore per fm. The 315-yd. level: Lode 5 ft. wide, and worth 3 tons blende per fm. Two stopes have been commenced near the winze from the 295, the one on the east side being worth 4 tons blende per fm., and the other, the west, worth 3 tons blende per fm. Dressing: 691 tons blende and 233 tons lead ore have been dressed and sold since the commencement. Hope to deliver for Sept. 150 tons. The additional dressing machinery is being put up as quickly as possible.

PRINCE OF WALES (Oct. 7).—The lode in the 180-fm. level west has every appearance of fully maintaining its size, character, and value; 4 ft. wide, and worth 30% per fm. The men are advancing by its side in a very stiff killas, blending into the lode without any wall, which in this mine is invariably a good indication. In this level east the men are still cross-cutting to ascertain if any part of the main lode can be found north, but we are inclined to believe that as we have only the fluean lode here that this end is still in the heave by that lode. In the 166 west we are also going forward by the lode in which there are indications of improvement. There is no material change in the cross-cut south at this level since last week. We have prepared a parcel of very good copper ore for sampling on Friday next.—S. ROBERTS.

ROMAN GRAVELS (Oct. 8).—The 155 north is driven 25 fms., 2 ft., the vein here being still in three parts, and that which is being driven upon is 3 ft. wide, contains good stones of lead ore and blende. The 155 on caunter lode is driven 26 fms. 5 ft. 6 ins., the vein in present forebreast being 6 ft. wide, very wet, and producing about 1½ tons of blende, with rich stones of lead ore to the fm. We are expecting further improvement here day by day, and believe that the forebreast is just on the point of reaching the rich bunch now being worked upon at the level above. The last named 140 south-east is driven 27 fms. 4 ft.; lode in present forebreast 6 ft. wide, producing 1½ tons of lead ore to the fm. A cavity here has, we believe, caused only a temporary falling off in the productiveness of the vein. The two stopes in back of this level are together producing 5½ tons to the fm. The 140 south on main lode is 21½ fms. south from No. 1 winze the lode in the end being 5 ft. wide, but does not contain sufficient ore to enable us to value it. The winze below the 140 north is 4 fms. 1 ft. 6 in. deep, the lode at present being 3 ft. wide, worth 1½ tons of lead ore per fm. We have lately intersected by means of a cross-cut near the forebreast of the 95-fms. level south, the eastern portion of the main lode which has been so productive in the stopes in back of the 110 south of Watkin's winze. The said portion is worth 2 tons per fm., and we calculate that the bunch will last up to the 80, and taking dip into consideration, it will extend beyond the south stope in that level so that ore ground may be said to exist here, say 22 fms. long by 14 fms. high of an average value of 2 tons per fm. We have to day sampled a parcel of blende computed 20 tons for sale next week.—A. WATERS and SON.

SOUTH CONDURROW (Oct. 7).—The men at Marshall's shaft are busily engaged cutting trip-plate below the 138-fm. level. We have just cut into a lode in the 138 cross-cut north, that which we passed through in the level above, it carries a little tin close to the cross-course; but we cannot well open on it till we have intersected the main tin lode, which is several fms. ahead. The stope in the back of the 123 east of cross-cut is worth 12% per fm.; the lode in bottom of this level is worth 14% per fm. Three stopes in the back of the 40 east of engine shaft are worth together 30% per fm.—W. RICH, W. THOMAS.

SOUTH DARREN (Oct. 8).—The following bargains are let for one month: To cut lodge at the 154-fm. level by 11 men, at 87. per fm.; and to drive east and west at the 154, 1 fm. each way, at 117. 10s. per fm. In cutting the lodge we find the lode is very strong; we are about 5 ft. into it, and are not yet through it. There is a good mixture of lead all through it. A little has been driven in both ends; they maintain the value put on them last week, viz., east end, 12 to 15 cwt.; west end, fully 1 ton of silver-lead ore per fm. To stope in the 142 west by six men, at 47. per fm., worth 1 ton of silver-lead ore fm. To sink winze in the 130 west by 4 men, at 127. per fm. The lead here is looking better, and I think it will soon improve. Two men are engaged tramming.—J. MITCHELL.

VAN (Oct. 8).—Since last week's report there are no changes of importance at any of the points in the mine. The several stopes continue to yield lead ore, as then stated; one, 25 cwt. per fm.; one, 20 cwt. per fm.; three, 15 cwt. per fm. each. The cross-cut towards the south lode at the 150-fm. level is now driven 21½ fms., leaving 17 or 18 fms. more to drive up to the line of the lode. The ground in the present forebreast is of good appearance, and another string of lead has been passed through this week. At the 150-fm. level east from Seaham's winze (now driven 12 fms.) the lode is somewhat softer, but still charged with blende of a promising character. The dressing of ore is going on regularly.—J. PAULL.

WEARDALE.—Report for week ending Oct. 3.—Ore raised for week, 36 tons; ore dressed for week, 98 tons; ore, slag and fume smelted for week, 126 tons, producing 64 tons of pig lead.

WHEAL CREBOR (Oct. 6).—The part of the lode carried in driving the 156 east end is worth 3 tons of good quality mundic per fm. The end has now been driven 11 fms. since the lode was last cut through. We have to-day suspended the drirage and put the men to cross-cut as near to the present end as it can be done to find out at this point the full size and value of the lode. The lode in the 156 west end is 4 ft. wide, yielding 3 tons of fair quality mundic per fm. The lode in the 132 end driving west is worth 3 tons of mundic and a little copper ore per fm. All other points in the mine are without any change to report since my last.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Oct. 7).—The lode in the 27 end east is split up in branches, and the north branch contains a seam about 4 ins. wide, full of iron pyrites. The lode, I may say, is in a

very transitory state. The pulverisers are working well. The 22 new frames are again placed and started to work, and are working well.—S. P. CURTIS.

WHEAL UNY (Oct. 7).—To cut down south side of shaft by 15 men at 30¢ per fm., to get ready for sinking on south and main part of the lode. The 244 east to drive by six men at 10¢ per fm. Here we have about 8 ft. to reach the eastern end of shaft; this finished, we shall put these men with six others to rise in back of this level, against the shaft at 16¢ per fm. The 244 end to drive west by six men at 12¢ per fm. in a strong lode; at present worth for tin 18¢ per fm. A stope behind this end by eight men at 5s. per ton; worth over 20¢ per fm. The 230 west to drive by six men at 3¢ per fm.; turning out stamping work for tin. The 203 east by four men at 7¢ per fm.; worth for tin 12¢ per fm. We have suspended the drive of the 203 west and 230 east for a few weeks, to push on the work in rising in 244 east, and cutting down shaft, as the bottom of the mine must receive all the energy possible.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report from the superintendent at the mine for the month of Aug., dated Sept. 8.—Mining operations.—Explorations: Driving south on the 100 lode from west cross-cut at the 137-ft. level, Cruz Verde, 31.6 ft.; total length of drift, 48.1 ft.; the lode is narrow and disordered, and further driving was suspended. Cross-cutting east from north end at the 12 level, main lode, 7.5 ft.; total, 7.5 ft.; the ground is hard and barren. Driving north of No. 11 winze at the 12 level on the 100 lode, 6.6 ft., on partially mineralised ground, but not carrying ore enough to pay for stoping; the little ore carried here is of high grade. Driving the north end of the 36 level on the 100 lode, 14.8 ft., on hard rock, with occasional stones of black ore; total exploration, 60.5 ft. Development: Sinking No. 11 winze from 12 level, on the 100 lode, 20.7 ft.; total depth, 40 ft.; the winze holed into the stope over the 24 level (new shoot). All the ground opened by this winze is remunerative. Sinking No. 12 winze from 24-ft. level, 100 lode, 33 ft., on ground varying in value from 8 to 18 tons ore per fm.; total depth of winze, 47 ft. Daily samples of the smalls from this winze averaged for the whole month 26.54 ozs. silver per ton. Driving south of No. 11 winze at the 12-ft. level, 100 lode, 4.6 ft., on ground worth 6 tons per fm. Driving north-east of No. 7 winze stope on a branch of ore varying from 2 to 3 ft. in width. The ore gave out abruptly, and further driving was discontinued. Driving south from stope over 36-ft. level, 100 lode, east branch, on very hard ground, carrying a streak of 1 ft. of ore. The latter pinched out, and the work was stopped; total development, 73.7 ft. Stoping: The ore supply was obtained from the main stope, the No. 7 winze stope, and the small stope in back of the 24 level, south end on 100 lode, besides the ore produced from the development work. Very little ore was taken away from the other reserves during the month. Miscellaneous work: The Dios Padre shaft has been cleared of debris to a depth of 223 ft., collared up, divided, cased and furnished with ladders for 72 ft. The erection of a horse whim and gallows to support the hoisting sheave are approaching completion. In the loop tunnel we have straightened curves, graded the level, and laid rails to within 30 ft. of the breast, and intend to continue the drive and complete the work as soon as possible. In the surface working on the 100 lode, west of the big Tafo (open cut) of Mina Grande, the heavy rains caused the ground to subside, and we had to timber the drift for a distance of 40 ft., in order to be able to take away a piece of ore ground opened up by said drift, about 30 ft. long. Reduction: The ores extracted during the month yielded, after cobbing and dressing: Smelting ores, 18.2 tons; milling ores, 697.3 tons; total yield, 715.5 tons. The cobbled ores sent to the mill amounted to 762.3 tons, with an average ley of 24.79 ozs. per ton, against 33.54 ozs. for the previous month. The stamped ores chloridised amounted to (1,436 furnace charge at \$1,000) 718 tons, the average assay value of which was before roasting, 29.75 ozs. per ton; after roasting, 26.25 ozs. per ton; against 32.96 ozs. and 30.04 ozs. respectively for the previous month. The roasted ores served to the leaching vats amounted to 509 tons, with an average ley of 27.71 ozs. per ton, against 31.50 ozs. for the previous month. The tailings thrown to the dump amounted to 191 tons, averaging 2.63 ozs. per ton, against 2.92 ozs. the previous month. The black precipitate obtained was 8,406 lbs., with an assay value of \$13,079.63. The refined silver obtained, and sold at the Alamos Mint, through Mr. Ocharan, was:—six bars; weight, 171,690 kilos; pure silver, 168,973 kilos; value at \$39.109 per kilos fine, equal to \$6,608.37. Financial result: The receipts from bullion realised amounted to \$6,608.37; the expenditure for the month was \$14,607.57, so that there was an excess of disbursements over receipts of \$7,999.20; but the estimated net value of argentiferous stocks on hand was increased by \$9,855, consequently, there was a net profit for the month amounting to \$1,855.80, after having charged against revenue account \$444.90 expended in the Dios Padre shaft; \$616.56 expended in explorations; and \$1,421.79 expended in development work; \$2,483.25 total expenses outside of ordinary working costs. Remarks: The profit was small, owing chiefly to the falling off in the grade of the ores extracted. The quantities of ore raised and treated were considerably larger than in the previous months, but noticeable lower in grade. We have now a full supply of water and labour, and are only embarrassed by scarcity of fuel; this difficulty will be overcome very soon, as the wood-cutters from the neighbouring districts will return before the end of Sept., according to their promise. The prospects for Sept. are not favourable enough to anticipate better results. The low grade of the ores continues, fuel is very scarce and expensive, and we have to spend considerable money in underground improvements, machinery, and surface repairs.

BALAGHAT MYSORE (Sept. 15).—Report of work done for fortnight ending Sept. 15: North engine shaft: The 600-ft. level north has been driven 36 ft., or 267 ft. from the shaft; the quartz is about 10 ins. wide, and assays 2 ozs. 6 dwts. 21 grs. of gold per ton. The stopes in the back of this level yield quartz of about 14 ins. wide, and assay about 3½ ozs. The No. 1 winze in the bottom of the 500-ft. level has been communicated with the 600-ft. level north (at about 10 ft. behind the present end); this has not only very considerably improved the ventilation, but has also laid open a good section of ground for stoping. The 600-ft. level south has been suspended for some time, but the driving of it will be resumed as soon as possible. The 500-ft. level north is also idle for the present, owing to a breakdown in the level; this is being cleared as quickly as possible. The winze in the bottom of this level has been sunk 4 ft. 9 ins., or

101 ft. 9 ins. below the level, and is now communicated with the 600-ft. level as referred to above. The stopes in the back of the 500-ft. level north yield quartz of about 14 ins. wide, and assay about 3½ ozs. The No. 1 winze in the bottom of the 500-ft. level south has been sunk 3 ft. 9 ins., or 38 ft. below the level; the quartz is about 9 ins. wide, and assays 4 ozs. 7 dwts. 9 grs. of gold per ton. The mid-level in bottom of the 410-ft. level north has been advanced 8 ft., or 36 ft. 9 ins. from the winze; the quartz is at present small and not of much value, but will probably again improve. The winze in the bottom of the 410-ft. level north has been sunk 4 ft., or 50 ft. 9 ins. below the level; the quartz is about 1 ft. wide and assays 2 ozs. 4 dwts. 6 grs. The 270-ft. level south has been driven 17 ft. 9 ins., or 732 ft. from the shaft; the end is poor, and unless a decided improvement is met with within the next few feet, I shall suspend the driving and cross-cut instead. The stopes in the back of the 270-ft. level north yield quartz of about 1 ft. wide, and assay 3 ozs. 8 dwts. 14 grs. The stopes in the back of the 270-ft. level south produce quartz of about 9 ins. wide, and assay 2 ozs. 18 dwts. 19 grs. Haines' shaft: The men are still engaged in putting in the necessary dividings, &c., below the 330 and 410 levels, and ought soon to have the shaft completed to the 410-ft. level. This is one of the most important points, and shall be pushed forward as quickly as possible. Surface: The general work at surface is progressing fairly satisfactorily.—Capt. PRYOR.

BRATSBURG.—Report for week ending Sept. 26.—Hoffnung Mine: At No. 2 adit level the lode is yielding about ¾ ton per fm. No. 1 rise for the present is less productive than it has been; worth now ½ ton per fm., but the general outlook is good. No. 2 rise is worth 1 ton per fm. At No. 2 adit level we have two strong ore-bearing leaders imbedded in a favourable matrix, showing very promising features, but it is still without sufficient ore to value. The rise in the back here appears to be opening up a good piece of ore-ground; now worth about 1 ton per fm. No. 4 level remains the same as when last reported on, a very strong lode, but no ore to value. At Murchison's section we are now sinking through an arch of ground for easing transport of stuff when the lode is worth ¾ ton per fm. Johannes Mine: The western level on Howard lode is yielding good saving stuff. The main rise in the back of this level remains exceedingly good; worth 1½ tons per fm. The eastern level is producing about ¾ ton per fm., and the rise in the back a similar quantity. Surface work and remarks: Dressing has gone on fairly well during the week, and we hope during the coming month to clear off all the surface accumulated ores, and be able to devote the whole of our time to that mined daily and accumulated in the mine. During the past few days we have received several new miners, and hope during the coming month to get more. In response to our advertisement we have had numerous inquiries, which we hope will result in our obtaining the number we urgently need. For the past month we have had engaged in all 52 miners on Hoffnung and 19 on Howard lode; total, 71, an increase of 10 over last month, but the most of them have worked only a few days, and, of course, being as yet unacquainted with the mine it had no effect on the ground excavated, and hence the estimated quantity mined is the same as last month, viz., 100 tons 20 per cent. ore.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Sept. 26.—Smelting was begun again last Monday morning, and was continued throughout the week with great success, 321 anodes, or over 16 tons, of copper being obtained. We found the flux dust and slime ore bricks answer well, and must devise some means of making these other than by hand, which is expensive. The man here whom the Frenchman is training is now so far advanced that he took the convertor alone on a night shift on Saturday, and got 29 anodes, a very good result considering he had no extraneous help in the shape of old copper from the electro deposition works. We having had great trouble by the wheels of the convertors breaking, have had to order solid wheels to be cast for same. There are only two convertors we can use at present, having had to take the wheels off one to take the place of others broken on the other two. The construction is far too light for the heavy work they have to do. Electro deposition: There is nothing new to report on here, everything going on satisfactorily. We shipped on Saturday to you 5,851 kilos copper and 357 kilos silver residue, which we hope will arrive safely, and will make another shipment this week.—T. F. SMITH.

BROKEN HILL PROPRIETARY (Aug. 26).—Ore dressing mill is now running steadily one shift a day, and some dressed ore is being sent up to the smelter floor. Some alterations are being made in the water supply tanks.

CALLAO BIS (Sept. 13).—The directors have received advices from the mines as under:—Independiente: Since the 30th ult. the shaft has been continued a further distance of 2 ft.; total from surface, 194 ft., or 4 ft. below the No. 4 cross-cut. The miners have been principally employed cutting ground for tank to fix our plunger lift; as soon as this is completed, we shall continue sinking with force. About 150 ft. of new main rods are already down the shaft to connect to bob. The No. 4 cross-cut south advanced 5 ft.; ground very hard. This will be driven as fast as possible to intersect the lode. The No. 3 level west has been advanced 3 ft.; lode 2 ft. wide, of fair value. In the back of this level we are putting up a raise to communicate with the works between this and the No. 2 level west. As soon as this is communicated it will give us every facility for transporting our quartz, besides proving the valuable lode we have at this point. The No. 3 level east has been advanced 25 ft.; lode 2 ft. wide, at present a little poor, but between good foot and hanging walls. The No. 3 cross-cut north has been advanced 9 ft., or 46½ ft. from the side of the level, where communication is made to the winze sunk from the No. 2 level north-east on the new discovery. This will give us every facility to resume work at that point. The No. 2 level west has been advanced in a south direction, "as last report," 32 ft., or 184 ft. from shaft. Lode showing 5 ft. wide of good value. Stopes: We have suspended all work here, as we are able to supply our mill with quartz from other points of operation. Surface work: Water line completed from the Mocupia river to the mine, giving good satisfaction. This will be used for boilers only. The carpenters are enclosing all buildings requisite, such as covering mill, which roof is completed over 20 stamps.

—The following telegram has also been received: "488 tons; 645 ozs. gold; 22 days; 10-stamp mill."

CAPE COPPER (Aug. report).—Ookiep: The ground in the 117-ft. level south towards the new shaft is still composed chiefly of quartz. Nothing of importance has yet been found in the 117-ft.

level north of 72 winze, although the rock at times presents spots of copper ore. The driving of the 105-fm. level (No. 6) north of main east level has been temporarily suspended, and the men are put to cut outside of level to prove the productive ground recently passed through. The 105-fm. level east of No. 6 level is producing stones of copper ore, but not to value. The 68-fm. level (No. 6) south of 24 winze is still yielding stones of copper ore. The stopes in the 92 and upper levels continue to yield well. Trial Mines (Aug. 31).—Nababeep south: The 59-fm. level south-east of north-east level is producing a little saving stuff, and the 59-fm. cross-cut north of this level is worth fully 1 ton of copper ore per fm. Nothing of value having been met with in the 59-fm. level north-west of north-east level, it has been suspended, and the men are put to resume the driving of the 43-fm. level to reach a point over the 59-fm. cross-cut below, with the object of sinking a winze to prove the ground between the 43 and 59-fm. levels, and also to improve the ventilation in the bottom workings. Spectakel: The stope in bottom of 36-fm. level south-east of Kelly's shaft is yielding 3 tons of copper ore per fm., and the winze sinking below this point is worth 2 tons per fm. We have resumed the sinking of the new shaft below the 36-fm. level; the ground in bottom of shaft is producing a little saving stuff. The 20-fm. level south-east of new shaft is yielding occasional stones of copper ore. This driving has also been temporarily suspended.—Capt. HENWOOD.

—Returns for Aug.: Ookiep, 1,800 tons of 26 per cent. Arrival at Port Nolloth: The Inverness. Arrivals at Swansea: The Mary Moore, Foxhound and Bottle. Bill of lading received: 430 tons of ore per Cumberland.

CHAMPION REEF (Sept. 15).—Fortnightly report.—Carmichael's shaft: The timbermen have been engaged timbering down the shaft, which is now almost finished, and if we can get a pair of men the sinking will be resumed in a day or two. At the 225-ft. level the drift north on the lode has been advanced 11 ft. 9 ins., and the drift south 10 ft. 6 ins. The average width of lode is about 2 ft., which carries 1 ft. of quartz, of low quality. The north end is suspended, and the No. 1 cross-cut from shaft will be continued east a further distance of about 30 ft. to cut the lode; the north drift will then be continued from that point. Ribblesdale's shaft: Sinking 1 ft. 9 ins.; total depth, 247 ft. 6 ins. We have some difficulty in getting good men for sinking, consequently very little has been done. As the men would not remain at this work, we have a rock-drill now at work, and it is to be hoped that better progress will be made. At the 240-ft. level the north drift has been advanced 11 ft. 6 ins.—one week's work only; total length, 66 ft. 3 ins. The south end has been extended 17 ft. 6 ins.; total 67 ft. 6 ins. The lode north is about 4 ft. wide, and carries 2 ft. of quartz, which assays 1 oz. 1 dwt. per ton. The lode in the south end is a little smaller, the quartz being about 1 ft. 6 ins. wide, which assays 1 oz. 18 dwts. per ton. Garland's shaft: Sinking 1 ft. 6 ins.; total depth, 258 ft. We have not been able to get coolies for this place; during the past day or two we have been sinking with a rock-drill worked by natives. The lode carries over 2 ft. of quartz, and worth, according to the assays, 1½ ozs. per ton. At the 240-ft. level the drift north has been advanced 20 ft.; total, 117 ft. 11 ins. At this distance we ought to have cut into the shoot of ore passed through in the shaft, so before driving any further north a cross-cut will be driven a few feet east to prove if any portion of the lode is remaining on that side, as it is quite possible that the lode was affected by the intrusion of rock passed through about 60 ft. from shaft. The south end at this level has been driven 16 ft. 6 ins.; total distance, 89 ft. We are still in the shoot of quartz, which is 2 ft. wide, and assays 1 oz. 8 dwts. per ton. Dalyell's shaft: Sinking 8 ft.; total depth, 267 ft. We are sinking with a rock-drill, and very fair progress has been made by the Italians in charge, assisted by natives; the lode is small, but continues down very regular. At the 240-ft. level the north end has been driven 12 ft.; total, 121 ft. 10 ins. The lode is very small, but we do not expect any improvement at this point until we get into the shoot of ore now being worked south of Garland's shaft. The south level has been driven 4 ft. 9 ins.; total, 87 ft. 6 ins. This end will be stopped for the time as the ground south of shaft can be more advantageously proved at a greater depth. Coromandel section: Driving the 380 drift north 4½ ft.; total 41 ft.; lode 2½ ft. wide, carrying 15 ins. of quartz. Cross-cut west from the 320-ft. level has been extended 2 ft.; total, 14 ft. 9 ins. As no other portion of the lode has been met with in this direction the driving is stopped. The winze below the 320-ft. level has been sunk 2 ft.; total depth, 36 ft. The lode is 3 ft. wide, carrying 18 ins. of quartz, which assays 18 dwts. 6 grs. per ton. Cross-cut west from south drive at the 290 level advanced 4 ft.; total 16 ft. We are still passing through branches of quartz, and the drivage will be continued a few feet further. We have not been able to get a sufficient number of coolies to carry on all the work, which accounts for the slight falling off in some of the measurements. Surface work: The masons are now employed building houses for the Italians and East Indians, and the carpenters are engaged putting up more temporary sheds for the coolies, and erecting poppet heads, &c., at Dalyell's shaft. We hope to start the new winding engine at this shaft in the course of another week. Machinery is in good order throughout the mine, and the health of the camp good.—R. C. JONES.

CHIAPAS (Sept. 6).—I beg to hand you my report for the month of Aug.—Mine: 20 Guanojuato miners have been working on day's pay, breaking ore in the face of the cliff, producing 2,300 lbs. first-class ore, assaying 2 ozs. Au, 70 ozs. Ag, and 45 per cent. copper; 17,650 lbs. on hand July 31; making 19,950 lbs. on hand Aug. 31. 400 tons second-class ore concentrating at the rate of 9½ per cent., the concentrates assaying 12 ozs. Au, 48 ozs. Ag, and 36 per cent. copper; 2,148 tons on hand per last report; making 2,548 tons on hand Aug. 31. Santa Fe Mine, tunnel No. 2: Four men have been driving this end all the month, making 3.30 metres, at \$50 per metre; the end is still in good concentrating ore and turning more to the north. It concentrates in the proportion of 8 per cent., the concentrates assaying 4 ozs. gold, 48 ozs. silver, and 33 per cent. copper. The end is very bad for breaking, being very short indeed, and the ground hard. Tunnel No. 3 has been driven 1.35 metres, at \$50. The face is in ore, concentrating at the rate of 6.4 per cent., the concentrates assaying ½ oz. gold, 51½ silver, 32 per cent. copper. It will be noticed that the assay of gold is unusually low, corresponding, more or less, with the assay of the ore from the top of the winze. Between tunnels Nos. 2 and 3 there is still a large mass of *débris* that has fallen from the top of the cliff. To stope out all the ore between these two tunnels this

mass will have to be taken away. I am, however, anxious to get up some track iron and a car ready before commencing it, as it can be done so much cheaper than by barrow work. Future development: I have had a long conversation with Mr. John T. Taylor (who, I am glad to say, has come back again), and we propose driving into the cliff a heading at the top of the ore, which is running towards the centre of the hill, so as to be able to take off underhand stopes down to the level of the patio. We also propose running the track across Pine Creek, near the Providencia, and back on the south side of the creek towards the Jardin, so as to quarry the ore on this side of the creek. In order to do this I shall have to ask for more rails. Mill: We are getting on very well indeed with this work; all the main building is up and roofed in, and the greater part boarded up. The carpenters are making jigs, and getting the timber in for carrying the rolls. Road: The heavy rains have delayed us a good deal in this work, and I hope to get through to meet Hardy's road by the end of this week. With this object I kept the men working yesterday (pay day), and told them there would be no pay till the road was finished. Water power: The Pine Creek flume is finished, and is a very good job, and good progress is being made on the copper creek side. The pipe, 22 ins. in diameter, will be all rivetted together by the end of the week. I am pleased to say everything is working smoothly.—A. H. STOCKDALE.

COLAR CENTRAL (Sept. 15).—New shaft: 200 north has been driven 4 ft. 3 ins., making a total of 47 ft. 9 ins. The lode has pinched; it is only 3 ins. wide, assaying 2 dwts. 14 grs. to the ton. The rock is very hard, and does not blast well. The 200 south has been driven 5 ft. 6 ins., making a total of 34 ft.; the lode is 12 ins. wide, assaying 10 dwts. 8 grs. to the ton. Winze sunk 4 ft.; total depth, 24 ft. 9 ins. The lode is now about half way across the winze; it seems to be making from north to south; the assay value is 6 dwts. 12 grs. to the ton.

CORTEZ (Sept. 19).—Report from the superintendent.—Work at the mines for the week ending this date has been as follows:—Cross-cut No. 1 east advanced 3½ ft. No. 2 tunnel west stoped 6 tons of ore; No. 3 tunnel west stoped 4 tons of ore; North-east raise stoped 30 tons of ore; north-west raise stoped 112 tons of ore; run out to ore house, 131 tons of ore; trammed to mill, 123 tons of ore; worked at mill, 140 tons of ore; average assay for the week, 65½ ozs. silver per ton. On Sept. 17 shipped 12 bars of bullion, lot No. 74, containing, as per our assay, 14,973½ ozs. fine silver.

EMMA (Sept. 21).—I now hand you report of work carried on at the mine the past week, and since my report of 14th inst. On the Emma tunnel level we worked nine men stoping and timbering, also three carmen running ore and waste rock to surface. We mined about 50 tons low grade ore which has been put through the concentrating mill, producing about 6 tons concentrates; assay value, from \$80 to \$85 per ton. In the footwall drift we worked two men sinking; sunk 9 ft.; total, 27 ft., showing no material change; the fissure still narrow, carrying iron and decomposed vein matter. On the Illinois tunnel level we worked four men drifting south-east in the vein of oxidised iron; advanced 18 ft.; total, 68 ft.; besides some stoping. The body of iron continues from 3 to 6 ft. wide, showing a little galena ore at times. This vein will certainly lead to paying ore. On the Bay City tunnel level we worked one man in face of No. 3 level south-east; advanced, 6 ft.; total, 17 ft. The rock is still improving, is becoming very considerably stratified and broken, and is much mineral stained, and shows considerable iron and manganese. I have great hopes of this No. 3 level. We are now in the vicinity where we may expect an ore body. Drift from Bay City tunnel south-east, and running on the No. 3 fissure, advanced 10 ft.; total, 33 ft.; worked two men; the rock is still hard but considerably broken. On this same No. 3 fissure we are also drifting to the north-west; worked one man; advanced 4 ft.; the rock is also hard. Ore sales the past week are: Sept. 19, lot No. 11, concentrates, average assay, 47.85 lead, 81.16 ozs. silver, .045 ozs. gold, 26,640 lbs. net ore sold at \$88.35 per ton=\$1,176.82. Ore now on hand, 6 tons concentrates, and about 1 ton crude. Although the mill is not running out so much concentrates as anticipated, still the quality is very much better than that produced last year, and I am in hopes of producing a considerable quantity yet before the season closes. In the matter of writing you weekly reports, I have consulted with Mr. Bennett, and we have decided that in future my weekly letter will be written you on Thursdays (instead of Mondays as heretofore), then mailed to Mr. Bennett at Salt Lake City, who will mail it from there, so that it will catch the Wednesday's steamer from New York instead of the Saturdays as heretofore, and I trust and hope my letters will reach you in due time, and that no more occasion will be given for complaint. I shall certainly write you regularly in future.—H. C. WALLACE.

FLAGSTAFF (Sept. 26).—I have the pleasure of again reporting the progress in and about the mine. The machinery is nearly completed and I think that we will be ready to start on Oct. 1; I also have the oil-room nearly finished. Main 6th is now in 216 ft., and the rock is somewhat better. We cut a small seam of iron a few days ago, but it did not amount to anything, but it goes to show that we are on the right course for more ore. The raise above 6th is still turning out a fair quantity of good ore. I am not driving this ahead now, but taking the ore out overhead, I am driving the cross-cut to get direct under it, then raise on it, so that we will not have so far to handle the ore. The cross-cut is now in 51 ft. Main 7th level is now in 170 ft. The raise between six and seven is up 116 ft. I think that we shall make connection here in a few days, and then we will be able to take out more ore than we do at present. The ore taken out the past week is six cars of first-class and three cars of second.—A. L. SWOPE.

GARFIELD (Sept. 19).—Report from the mines:—Western Mine—180-ft. level: No. 15 winze has been sunk 9 ft., making in depth 72 ft. Our progress has been slow, as we have been sinking through a hard bar of rock. A slight flow of water still continues to run down the walls of the winze.

INDIAN CONSOLIDATED (Sept. 12).—Phoenix section:—Tramway level has been extended 9 ft. There is not much change, the ground still being hard with quartz at foot. No. 1 level: At this point we have driven 7 ft. The quartz mentioned in my last has gone altogether, and the ground is very hard. But little progress has been made in either drive, as every available hand was taken to remove the slip in tramway, and I could not spare stoping men for that purpose. Stopes A and B remain 3 ft. in thickness, mixed with black

rock. Stopes C and D: The lode here is about 5 ft. in width, and of much the same value as before. Stope E: The rise up from below has been finished, and proves the lode at this point to be much thicker than we thought, it being now quite 9 ft. wide, and of fair quality. Stope F remains unchanged. Stopes G, H and J: At H the stone is still pretty fair, but G is getting so small and J so poor that these points will soon have to be stopped. We had a serious slip in tramway level on 3rd inst., bringing down the wall that had been built up some years ago, and completely stopping all tramming. We are, however, hoisting steadily from No. 2 level and keeping the mill going. I expect to have everything cleaned and ready for trucking to-morrow. I found I had to hoist two boxes when we stopped crushing, and as these were not together I was only able to resume crushing with 10-head on 4th and 20-head on 6th, since which everything in mill has gone smoothly.—C. A. PATERSON.

—Office note.—A telegram has been received announcing that during the month of Sept. 720 tons of quartz were crushed which yielded 57 ozs. of gold.

—Sept. 15.—Colar section: No. 1 new shaft has been sunk 6 ft. 6 ins.; total depth from surface, 252 ft. 3 ins. The rock here still continues to be very hard for sinking. No. 2 new shaft has been sunk 15 ft. for the past fortnight, making a depth on the underlie of 122 ft. 9 ins. We are now sinking through the trap dyke. 240 main shaft, west cross-cut: This drive has been put out 22 ft., making a total of 524 ft. 6 ins. No change at this place. No. 5 shaft, 425 cross-cut, has been driven 18 ft. 3 ins.; total distance, 75 ft. 6 ins. The ground here is much the same as when last reported on.—M. STEPHENS.

LEEDS COPPER (Sept. 24).—Kent's shaft: The 20-fm. level driving west of Kent's shaft has improved, showing good vein and bed ore 4 ft. wide, and producing 4 tons 15 per cent. copper ore per c.f.g. No. 1 stope in the bottom of this level is not producing quite as much ore as when last reported on, but the falling off, I think, is only temporary, producing 2½ tons 15 per cent. copper ore per c.f.g. No. 1 stope in the back of this level is in good bed ore, 4 ft. wide, and producing 4 tons 15 per cent. ore per c.f.g. No. 2 stope in the back of this level is not producing quite as much ore as when last reported on, the bed being smaller, and producing 2½ tons 20 per cent. ore per c.f.g. The 15-fm. level driving west of shaft continues in bed, 3 ft. wide, and producing 3 tons 15 per cent. ore per c.f.g. No. 1 stope in the back of this level continues in bed 5 ft. wide, and producing 4 tons 15 per cent. copper per fm. No. 2 stope in back of this level continues in bed, 4 ft. wide, and producing 3½ tons of 15 per cent. ore per c.f.g. No. 3 stope in the back of this level is in bed 7 ft. wide, and producing 5 tons 15 per cent. ore per c.f.g. No. 4 stope has been started here, and is in bed vein 4 ft. wide, and producing 4 tons 15 per cent. ore per c.f.g.—T. R. DAVEY.

MACATE.—Under date Aug. 29 the following has been received from the mine, bearing on the recent discovery: A level has been started in this lode, and has gone in about 3 metres. So far it shows the lode is a strong one, and carries in the face at present two veins, the upper one 10 ins. wide and the lower 4 ins. The washings (hand) show gold in quantity in all the samples from this lode, and a large sample gave by crushing and washing a result equal to 3 ozs. gold per ton of 2,000 lbs.

MONTE DEL ORO (Sept. 29).—Fortnightly report.—Taylor's engine shaft: The total length of the 316-ft. level north of this shaft is now 125 ft., showing an advance of 16½ ft., in the past fortnight; composed of flookan, slate and small stones, of quartz; the lode averages from 4 ins. to 6 ins. in width, but the sample taken from it yielded no gold. In the same level south 19 ft. were driven, making the total drirage 138½ ft.; the lode in the present end is 10 ins. wide, and its composition is slate, flookan and fine quartz. Two samples were obtained, assaying respectively a trace and no gold. The 316-ft. level south of winze No. 12 was extended 27½ ft., making its total length 34 ft. Here we are now carrying all the quartz; the lode averaging 2½ ft. in width, and both the samples from it showed a trace of gold on assay. Shaft No. 6: Good progress is made in driving the intermediate level north of No. 11 winze, 30 ft. being driven in the two weeks, making a total of 53 ft.; the quartz lode is 2 ft. wide, and the result of the assay of the two samples taken is no gold and a trace. Low's engine shaft: In the 120-ft. level north 20½ ft. were driven, making its total length 156 ft., when operations at this point were suspended in consequence of the lode showing no signs of improvement either in its size or value, the last sample obtained from it yielding a trace of gold.—J. ROBERTS.

NEW DEVALA MOYAR.—Mine manager's report for week ending Sept. 10:—The 186-ft. level, Drive west, driven 6 ft.; total, 65½ ft. The 186-ft. level, Drive east, driven 2½ ft.; total, 20½ ft. The 116-ft. level, No. 4 winze, sunk 3½ ft.; total, 34½ ft. In the eastern drive we expect to have to drive another 40 or 50 ft. before striking the pay shoot. In the western drive, as in the winze, the lode is taking a more downright course.

NEW EBERHARDT (Sept. 20).—The mine manager reports as follows:—Monitor: Number of tons of ore extracted and assorted during the fortnight, 33 tons; assay value of the same as per mine sample, \$33 per ton. The mine prospects remain about the same as last reported; the seams of ore upon which we were working have become smaller during the past week. Mill: The mill has run steadily during the fortnight, crushing 174 tons of ore; assay value of the same as per battery samples, \$36.75 per ton. We have worked up to date through the mill; 247 tons of ore, leaving still on our mill dump 178 tons.

NEW HOOVER HILL (Sept. 22).—Briol's shaft: We have worked out the bunch of ore at the 230 south of shaft. Driving south at the 130 we are cutting through a good deal of quartz, but it is poor. Sinking south of Provost shaft the vein continues about the same as when last reported.

NEW VISO.—Manager's report:—I beg to submit to you the following brief report on our mines, especially in reference to the work done and changes effected in the month now ending:—The driving of the California adit north has made good progress, the stiff slate-rock which appeared about the middle of the month having, as I anticipated, been quickly cut through, and the ground become easier. The lode has also resumed its compact and kindly character, and produces good stones of tin. I have re-set the driving of this gallery at a dollar per metre and one-third tribute. I have also started a rise in the roof of this level, about 15 metres from the forebreast, from which we have to-day broken some very fine stones of tin, and,

judging from present appearances, I think there is a good probability of our finding this section of ground remunerative. The price paid for rising is 6 pesetas (about 5s.) per metre and one-third tribute. The winze being sunk below the adit is now down about 12 metres, and the men have contracted to sink it 8 metres deeper for \$3 per metre and one-third tribute. A fortnight ago we discovered a nice little bunch of tin, but, unfortunately, it continued only a few days; the lode, however, fully maintains its promising character, and rarely a day passes without our obtaining from it saving work for the washing-floor. I am, therefore, hoping that it will soon improve in value again. The alluvial washing at Mi Amor has been carried on under the disadvantage of a diminished water supply, but on the whole we have found the quality of the alluvion better this month than at any previous time, consequently the result has been fairly satisfactory, and more than covered the cost incurred. I may add within the last few days there is a slight falling off in the quality, but I have no reason to think that it will be permanent.

NUNDYDROOG (Sept. 15).—Report of work done for the fortnight ending to-day:—The 600 south: Distance driven, 28 ft., by two Italians with a rock-drill; total length of level, 46 ft.; the lode is a very fine one, 8 ft. in width, and worth 2 ozs. 11 dwts. per ton. The 520 north: Distance driven, 20 ft., by one Italian with a rock-drill; total length of level, 267 ft.; the lode still maintains its size of 1½ ft., assaying 16 dwts. 6 grs. per ton. The 520 south, stope in back: Ground stoped, 3 fms., by two Italians with a rock-drill; the lode is a fine one, 4½ ft. in width, assaying 3½ ozs. per ton. The 480 north, intermediate level: Driven 9 ft. 6 ins., making a total of 32 ft. 6 ins., and 450 south stope in bottom, stoped 5 fms., by one Italian with a rock-drill; the lode in this stope is a very good one, 3 ft. in width, and worth 2½ ozs. per ton. The 480 from Webb's winze in bottom, sunk 17 ft., making a total depth of 40 ft., by one Italian with a rock-drill; we shall commence to drive north from here in a day or two to meet the 520 south. The 370 north: Driven 12 ft. 6 ins., by one Italian with a rock-drill; we have resumed the driving of this level, but our progress has been hindered owing to trouble with regard to labour. The stopes working by hand are as follows: The 520 north, No. 1 stope in back: Lode 1½ ft., assaying 3 ozs. 1 dwt. 18 grs. The 450 north, No. 1 stope north: Lode 3 ft., assaying 1 oz. 7 dwts. 6 grs. The 450 north, No. 1 stope south: Lode 1½ ft., assaying 2 ozs. 2 dwts. 6 grs. The 450 north, No. 2 stope north: Lode 1½ ft., assaying 18 dwts. 12 grs. The 370 south stope in bottom: Lode 2 ft., assaying 3 ozs. 5 dwts. The 370 north stope in bottom: Lode 2 ft., assaying 1 oz. 12 dwts. 12 grs. The 370 north stope in back: Lode 2 ft., assaying 1 oz. 2 dwts. 13 grs. The 300 north stope in back: Lode 1½ ft., assaying 13 dwts. Taylor's shaft sunk 6 ft. by one Italian with a rock-drill; total depth, 616 ft.; our sinking has been greatly hindered here owing to our being short of coolies for clearing stuff and water. Kennedy's shaft: Sunk 8 ft. by two Italians, with a rock-drill; total depth of shaft, 171 ft. We are also commencing to drive north at the 160 level; the lode at this point being about 1½ ft. wide, we shall commence working south also as soon as we can get more coolies. Mill: The mill has been doing good duty, though for some days, owing to the cholera, we have been able to run only two shifts. Tailings running well. Health: The cholera has, we hope, disappeared, as during the last few days there have been only two cases.—F. W. GREY.

OOREGUM.—Mine report for the fortnight ending Sept. 14: Wall-roth's shaft has been sunk 2 ft. only; total depth from surface, 422 ft. 6 ins.; lode, 2 ft. 6 ins. wide, assaying 3 ozs. 10 dwts. 18 grs. per ton. The small amount of work done is to be accounted for by scarcity of labour. We have every reason to hope we shall do much better by next report. The 360-ft. level south advanced 4 ft.; total length, 93 ft. 6 ins.; lode, 2 ft. 6 ins.; value, 6 ozs. 9 dwts. 5 grs. per ton. The 280-ft. level south advanced 23 ft. 9 ins.; total length, 781 ft. 6 ins.; lode, 7 ft. wide; worth 5 ozs. 8 dwts. 21 grs. per ton. This end maintains a most promising appearance, and is opening up what we may consider to be a valuable piece of ground. For the last 143 ft. the lode averages 5 ft. wide; worth over 3 ozs. per ton. The 215-ft. level north advanced 1 ft. 3 ins.; total length, 89 ft.; lode, 2 ft. wide, assaying 3 ozs. 22 grs. per ton. Low's shaft: Driving 350-ft. level north, 1 ft. 10 ins. done; total length, 92 ft. 6 ins. The timbermen are proceeding with the re-timbering of this shaft from the 200-ft. level to surface. Probyn's shaft sunk 6 ft.; total, 571 ft. 1 in.; lode, 8 ft. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. The 550-ft. level south advanced 20 ft.; total length, 60 ft.; lode, 7 ft. wide, worth 2 ozs. 5 dwts. 17 grs. per ton. No. 2 winze, 450-ft. level south, sunk 4 ft. 8 ins.; total, 27 ft. 6 ins.; lode, 3 ft. 6 ins. wide; worth, by assay, 1 oz. 16 dwts. 8 grs. per ton. No. 3 winze, 450-ft. level south, has been sunk 3 ft.; lode 4 ft. wide, assaying 2 ozs. 5 dwts. 17 grs. per ton. Winze 450-ft. level north has been sunk 7 ft. in a lode 3 ft. 6 ins. wide; worth 5 ozs. 15 dwts. 23 grs. per ton. The 450-ft. level south has been driven 1 ft. 8 ins.; total length, 329 ft. 7 ins.; lode 1 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. No. 3 winze, 366-ft. level south, sunk 7 ft. 5 ins.; total depth, 23 ft.; lode 2 ft. 6 ins. wide; assay value, 1 oz. 10 dwts. 21 grs. per ton. No. 2 winze, 300-ft. level south, sunk 3 ft. 4 ins.; total depth, 15 ft. 10 ins.; the lode is 1 ft. 6 ins. wide; worth 2 ozs. 8 grs. per ton. The 300-ft. level south has been driven 8 ft.; total length, 307 ft. 3 ins.; lode 1 ft. 9 ins. wide; assaying, 3 ozs. 16 dwts. 5 grs. per ton; the lode in this end is improving. Health of the camp is now good, and we are every day improving our position with regard to employment of labour. There is, however, a scarcity of carpenters and masons. Aug. crushing: As per our telegram, we crushed 1,186 tons of quartz, which produced 2,708½ ozs. of gold, being an average of 2 ozs. 5 dwts. 16 grs. per ton. Owing to an epidemic, and the consequent loss of labour, a very small percentage of this quantity was broken during the month, the bulk being result of cleaning down stopes, &c. Machinery: The machinery continues to work satisfactorily, and the mill is being supplied with quartz.

OSCAR.—The following report has been received from the mine, dated Oct. 3:—Hodgkinson's lode: We have again a good quartz lode in shaft, 2 ft. in width, well impregnated with copper pyrites and showing gold—altogether a very promising lode, in fact, about the best we have yet had here. Of the stuff so far broken about 25 per cent. shows gold. We are now about 360 ft. from surface. I consider, therefore, the meeting this rich gold bearing quartz run looks promising for increasing richness in depth. I am sending box of stuff to the London office. The new winze sinking from 200 north is now down about 20 ft. below the level. There is a capital quartz lode in bottom 2½ ft. wide, well mineralised, and showing some free gold;

assays give value 2 ozs. 13 dwts. gold per ton. All other points are without alteration, and average progress is being made.

PAHANG.—Mining report for the month of July:—Pollock's bottom drive: During nearly the whole of this month there has been nothing showing in the end, but now the lode is making again, and is now about 6 ins. wide. The stopes between this and the middle drive are turning out stone of fair quality; the reef in these stopes varies from 1 ft. to 3 ft. in width. Pollock's middle drive: There is a good looking reef in the end with a little tin, and improving as the drive is extended. The winze from this level to the bottom has been sunk mostly in poor ground, but getting better as depth is attained; the reef in the stopes is from 1 ft. to 3 ft. wide, and carrying fair tin. Pollock's top drive is being extended, and I expect to cut through the hill in another month. A winze is now being sunk to the middle. It is in very poor ground, but it was necessary to sink it for air and to prove the ground; the stopes are turning out stone of fair quality. Willink's lode: The only work doing on this lode at present is done in No. 3 winze; the ground is very hard with very good bunches of tin stone. The main drive will be started again as soon as a party of good men can be got. The Kolam Pahat drive to Nicholson's lode is being pushed ahead; no change to report. At Jeram Batang the drive was extended 33 ft. during the month; the reef is 6 ins. wide, and carrying tin and shows signs of improving in width.—**R. MCKENZIE.**

—Extracts from letter from the superintendent, dated Kuala Kuantan, Aug. 18.—Kuala Reman: At this place I found the tobacco looking extremely well. About two piculs are already cut, and in the drying shed. The leaf is of good size and very thin and elastic, but has suffered somewhat from worm, due in a great measure to our not having skilled coolies to look after it. The Kuala: There is little doing here just now as the amount of stores, &c., going up to the mines is small, I am glad to say. The new wharf is getting on well and the timber put in by the contractor is of first-rate quality. In the meantime, we have no wharf for steamers to lie at, so we are deriving no revenue from wharfage dues. This is of less consequence just now, as the Perse rarely calls here and many of the small native steamers go in any case to Tow Kay Ah Sam's wharf. I think, however, that when the wharf is finished and the Perse running regularly, the Kuala will fairly cover its expenses on the rates at present charged. I left Kuala Pahang on the 12th, and on my arrival at Pekan saw Mr. Clifford re planting and other matters, and was informed by him that the Governor was expected on the following day. He advised me to wait and see him with Mr. Clifford, when we could once for all settle the matter. It is now definitely settled that all land not taken up for planting at the date our concession was signed belongs absolutely to us, and we are free to let such land on lease for any term not extending the length of our concession (viz., 80 years old) at such rates as we may see fit. The land taken up at the date of our concession belongs to the Government, and they can impose such rents and taxes as they think proper. To guard leaseholders against the chance of the company falling through, the Government will give a letter practically inserting a clause in our concession to the effect that in the event of our not continuing work the Government will hold good any leases given by us under our concession. The above terms are very good ones for us, as they enable us to let land at any rate either above or below that of the Government. This enables us to let land on leases at almost nominal rents for short periods, and when we had succeeded in establishing a fairly large population, and proved what the country is worth, we can get far better terms. As soon as I have this on paper from the Government I intend advertising in the Hong Kong, Ceylon, and Straits papers, offering land on five to 10 years' lease on extremely easy terms. I am convinced that only in this way can population be brought in, and though the revenue will be small, yet more people in the country means lower wages, and we have also a very large tract of land to deal with. The other thing which remains to be done is for the Government to inform us as to the amount and situation of the land they claim. As they have no man here capable of doing this, I suggested to the Governor that to save expense one of our men should do it, when marking out our own leases, his time when on Government work being, of course, charged to them. This idea he quite approved of. The mill: The new engine at the battery is working well, driving the 20 head and pump with ease, and also burning less fuel than the old ones. We have now plenty of power to work another 10 head should it be advisable to add them to our mill. We have now got the jiggers ready to put in, and shall be obliged to shut down the mill for a month to get in these and the buddles. The extra percentage of tin recovered will fully compensate for the delay, and on starting again we can run night and day to catch up the mines. The output last month (19½ tons bagged, and 1 ton in the concentrates) was not quite so good as the previous month (21 tons 19 cwt.), but still very fair. The oxide A is of excellent quality, according to the buyers in Singapore 70 per cent.

PORT PHILLIP.—Advices from Clunes Aug. 31:—Mine, north shaft: This is now down 29 ft. below the No. 18 level. The country at the bottom of the shaft is composed of quartz veins, and sandstone underlying to the east. No. 18 level: This was opened out to the extent of 10 ft. in a hard bar of sandstone, and is, of course, stopped. No. 17 level: The drive west at this level is now 376 ft. from the shaft in good working slate. Tributaries: Work at the Nos. 6 and 7 levels, east lode, Criterion ground, and Robinson's lode, No. 5 level, north shaft, is being continued; the yield of crushings for the fortnight ending Aug. 22 was 40 ozs. 9 dwts. of gold, from a total of 96 tons of quartz, giving an average of 8 dwts. 10 grs. per ton, which leaves a profit of about 60% to the company.

RUBY.—Report upon the mines for the week ending Sept. 19.—Dunderberg: We have four tributaries at work here. Above the 800-ft. level we have run across and timbered the winze from the 700 to keep up the waste. Below the 800 there is a pipe of ore about 2 ft. in diameter. Lord Byron: We have eight tributaries at work here. During the week we struck into a cave about 20 ft. by 20 ft., and about 10 ft. high. There is about 3 by 5 ft. of good ore still in the bottom and on one side. There is about 4 ft. of ore exposed, about 15 ft. in length, making over (apparently) the place from which we have been extracting ore lately. I may say this is the best showing I have seen in the Lord Byron yet. Bullwhacker: This mine still looks well, but the ore is not quite so high in grade. We have five men at work.—**A. FRASER.**

SILVERTON (BROKEN HILL).—Cable advice from the manager:—"Assays new chloride and horn silver lode on our property

over 300 ozs. to 1,000 ozs. to ton of ore." This is in answer to the directors' cable requesting the manager to test the new lode which has been recently discovered on the property as notified in a cable published last week, which ran as follows:—"Chloride and horn silver lode, giving splendid shows, has just been discovered immediately north of our mine. Lode can be traced into our mine."

TILT COVE.—East mine—Minnie winze: The men have completed fixing bearers, cistern, shaft collar and windlass. We shall now resume sinking without any further delay. Sunk last month 3 ft., taken by nine men, at \$180 per fm. Output for month: 3,950 tons of 4 per cent. wet assay. Arrival at Swansea: The s.s. Rochefort, with 558 tons of regulus of 20 per cent., and 390 tons of East Mine ore of 6 per cent. wet assay.—**W. R. TOMES.**

REPORT OF MEETING.

DE BEERS CONSOLIDATED MINES, LIMITED.

REMARKABLE FIGURES.

THE third annual meeting was held at Kimberley on Sept. 24. The shareholders were numerously represented from all parts of the world, and there was also a large attendance of local shareholders.

Mr. Barnett Barnato, M.L.A.

(the acting chairman), presided.

The CHAIRMAN, in moving the adoption of the report, which spoke in very favourable terms of the position of the company, explained many items which, he said, would avert the necessity of dealing otherwise with the financial statement and the general manager's report. Mr. Barnato, after expressing regret at the unavoidable absence of the Hon. Cecil Rhodes, chairman of the company, described as a splendid investment the purchase of 210,000 Chartered Co.'s shares at par, and with no further liability of the Consolidated Mines with the Chartered Co. in any respect whatever. The directors felt assured that the future of the Chartered Co. was so bright that this would prove a brilliant asset of the Consolidated Mines. No alarm need be felt at the efforts of a few irresponsible people of no influence, political or otherwise, in the colony to introduce diamond tax proposals. Not only the Government, but the leaders of the Opposition, and the vast majority of both Houses of the Cape Parliament, were strongly opposed to any measure for the taxation of colonial products, and were also opposed to handicapping the diamond mining industry which did so much to improve the credit of the colony, and was responsible for more than half of its exports, besides adding so largely to the revenue derivable from imports, and encouraging colonial trade and industry to the extent of an expenditure of nearly 2,000,000% per annum. In addition to an available cash balance of 717,000% in round numbers, large amounts had been written off machinery, property and investment, blue ground at Dutoitspan and Bultfontein, and shafts and the development of the work, and the necessary sums had been set aside for the redemption of the debentures due last Aug. and on Jan. 1, 1894. The blue ground in sight in the Kimberley and De Beers Mines amounted to over seven million loads, and the blue ground on the floors to a million and a-half loads. The grand total value was estimated at considerably more than eight millions sterling. A large reserve fund was being established which, the chairman hoped, would in 18 months amount to a million sterling, and he also expressed confidence that the company, instead of now paying a nominal 20 per cent. only, would soon be in a position to pay 30 per cent. or 40 per cent. The chairman expressed the utmost confidence that the company's operations would continue to increase in profit, and that its business would be the mainstay of the colony as a productive and wage distributing enterprise. He vigorously repelled the attacks made on the diamond mining industry in connection with the agitation culminating in the recent Select Committee of the House of Assembly, whose majority report clearly set forth that if any distress existed, it was due only to natural causes, and must be left to natural remedies. Other points of the company's position and policy were adequately explained, and the chairman received a hearty vote of thanks at the close of the meeting.

Several shareholders expressed their satisfaction at the chairman's statement and at the highly-favourable character of the report.

It was arranged to place the audit department in the hands of a firm of eminent London accountants for the satisfaction of the European shareholders.

RIO TINTO CO., LIMITED.

DIVIDEND OF 12s. PER SHARE.

THE directors submit a brief interim report upon the business of the company as carried on during the current year. Deliveries of pyrites continue without interruption, and indicate an amount for the year in excess of those of 1890. The quality of the ore is being well maintained. As stated at the annual meeting, the new contracts for pyrites for a term of three years were entered upon in Jan., the price for sulphur being 3s. per ton less than in the previous three years' contracts. The production of copper at the mines goes on regularly, and will show an increase of about 1,500 tons on last year's quantity. The refining of precipitate and regulus, in the company's works at Cwmavon, is carried on as usual, and with profitable results. The directors declare an interim dividend on the share capital on account of the year's profits of 12s. per share, free of income-tax, payable on Nov. 17. The share transfer books will be closed from Friday, the 6th, to Monday, the 16th Nov., both days included. The share-warrant coupon to be presented is No. 26.—**H. M. MATHESON, Chairman.**

CAPE OF GOOD HOPE AND NATAL MAIL SERVICE.—The Union Steamship Co.'s new twin-screw Royal Mail steamer Scot, which left Southampton on Saturday, Oct. 3, with the outward Cape of Good Hope and Natal mails, arrived at Madeira at 11 p.m. on Tuesday, Oct. 6, and proceeded for Cape Town at 5.15 a.m. on Oct. 7. The Scot's passage was made in 3 days 3 hrs. 23 mins., giving an average speed of 17 knots per hour.

NEW GUSTON CO., LIMITED.

MINE LOOKING WELL THROUGHOUT.

Mr. HARVEY, the mine superintendent, under date Sept. 22, reports on the mines, viz.:—No. 5 level: Four men have been employed near the south boundary extracting ore from a small arch of ground. There was a little ore left standing at this point which I now deem necessary to remove. No. 6 level—No. 6 ore body stope: Height of stope over back of No. 6 level 90 ft.; length, 40 ft.; thickness of ore, 10 ft.; value, from 70 ozs. to 5,000 ozs. silver per ton; gold from $\frac{1}{2}$ oz. to 2 ozs. per ton; copper, 2 per cent. to 4 per cent. This stope has been worked up close to the bottom of No. 5 level. South drift—new stope: Height of stope over back of No. 6 level, 40 ft.; length, 24 ft.; thickness of ore, 6 ft.; value, from 40 ozs. to 150 ozs. silver per ton. We have also opened in on the east side of stope for a distance of 30 ft., on ore from 3 ft. to 6 ft. wide; value of ore same as that given on main portion of stope; the stope continues to look well. South drift: This drift (which was referred to in my last) has been driven a further distance of 15 ft., and securely timbered; total length driven from main south drift 36 ft. North level—South drift: Distance driven, 12 ft.; total distance extended from south end of winze, 67 ft. During the fortnight we have also been engaged timbering the drift; thickness of ore in the forebreast, 6 ft.; value from 40 ozs. to 100 ozs. silver per ton; gold from $\frac{1}{2}$ oz. to $\frac{3}{4}$ oz. per ton. North level—Pioneer level: Distance driven, 3 ft.; total distance driven from north end of winze, 49 ft. No ore of importance has yet been met with. The reason more ground has not been driven here is the men have been busy securely timbering the Drift. North level—South stope: Length of stope, 49 ft.; height over back of No. 6 level, 33 ft.; thickness of ore, 5 ft.; value, from 45 to 1,000 ozs. silver per ton; Gold from $\frac{1}{2}$ oz. to 1 oz. per ton. North level, north stope: Length of stope 45 ft.; height over back of level, 33 ft.; width of ore 5 ft.; value from 60 ozs. to 700 ozs. silver per ton; gold from $\frac{1}{2}$ oz. to $1\frac{1}{2}$ ozs. per ton. No. 7 level, No. 7 ore body stope: Length of stope 43 ft.; height over back of level, 28 ft.; length of ore 35 ft.; average thickness, 10 ft.; value from 30 ozs. to 200 ozs. silver per ton. Gold $\frac{1}{2}$ oz. to 1 oz. per ton; copper 2 per cent. to 5 per cent. The stope looks well. South drift: Distance driven, 13 ft., total length extended, 84 ft.; owing to the swelling nature of the ground, we have been obliged to ease the ground off the drift timbers and effect repairs. Thickness of ore in the forebreast, 4 ft. 6 ins.; value from 40 ozs. to 120 ozs. silver per ton; the forebreast looks fine. Shaft: Good progress is being made in cutting station for No. 8 level. We have commenced putting in skip road from No. 7 station to point for No. 8 station. General: North of shaft at No. 6 level the points in operation are opening out well. At No. 7 level we are discovering larger quantities of ore than were ever found on the upper levels. The mine continues to look well throughout.—A. HEDDEN, Secretary (*pro tem.*).

YANKEE GIRL SILVER MINES, LIMITED.

PROGRESS REPORT.

Mr. HARVEY, the mine superintendent, under date Sept. 23, reports on the mines, viz.:—Yankee Girl mine: No. 2 level—Orphan Boy ore body—Stope: Length of stope, 23 ft.; height over back of level, 20 ft.; ore scattered in appearance; value, from 20 to 75 ozs. silver per ton. No. 6 level—North-east drift—Robinson ore break—South drift: The drift referred to in my last as the west or outside drift, has been driven south on the ore break 10 ft. There is a streak of low-grade iron pyrites in the forebreast 18 ins. wide. West cross-drift: Near the winze which has been sunk to the slip, a cross drift has been driven a little south of west 18 ft., and communicated with the old drift running north-west. The main or north-west drift having caved in, and being badly choked, this communication was effected in order to prospect and discover, if possible, the south-west ore body at No. 6 level. Six and half level—Yankee Girl ore body—Winze stope: Length of stope, 50 ft.; ore broken in appearance, varying in thickness from 1 ft. to 2 ft.; value, from 30 to 200 ozs. silver per ton. No. 8 level—South-west ore body: Length of stope, 35 ft.; height over back of level, 37 ft.; ore 4 ft. wide; value, from 15 to 35 ozs. silver per ton; lead, 10 to 35 per cent. No. 9 level—South-west drift: Drift extended through ore 15 ft.; total length of drift from station, 167 ft.; ore in forebreast 7 ft. wide; value, from 35 to 100 ozs. silver per ton. South-west ore body—Stope: Length of stope, 22 ft.; height of stope over back of level, 14 ft.; average width of ore, 3 ft.; value, from 20 to 50 ozs. silver per ton; lead, 10 to 30 per cent. Shaft: At No. 9 station, ground 14 ft. by 10 ft. by 7 ft., has been cut for pump tank, and the tank, 10 ft. by 8 ft. by 5 ft., built in place. The pump has also been lowered, and is now being placed in position. Robinson mine: No. 1 level—South drift—No. 1 stope: Height of stope over back of level, 31 ft.; length, 67 ft.; width of ore, 12 ft.; value, from 10 to 40 ozs. silver per ton; lead from 15 per cent. to 30 per cent. No. 2 level—South drift: Having considerable repairs to effect to drift timbers, no work has been done here during the past fortnight. No. 3 level—South drift—No. 3 stope: Length of stope, 50 ft.; height over back of level, 55 ft.; average width of ore, 18 ins.; value, from 10 to 40 ozs. silver per ton. No. 4 level—North drift: A raise has been put up 35 ft. Nothing of value has yet been met with. No. 5 level—South-east drift: Drift extended 10 ft.; total length driven 330 ft. There is low-grade iron pyrites, 3 ft. thick, in the forebreast. North drift: Drift extended 8 ft. At this point a cross-cut has been driven east 8 ft. Raise: A raise has been commenced near the boundary, on ore 2 ft. thick, worth from 30 to 60 ozs. silver per ton. Shaft: Sinking of the main shaft was re-commenced on the 15th. Shaft sunk 13 ft.; total depth below base of No. 5 level, 27 ft.—T. NEAL, Secretary (*pro tem.*).

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the manager at the mine:—"Total weight of ore crushed during Sept., 7,000 tons; yield from the mills, \$58,100; working expenses for the month, \$48,300." N.B.—The estimated number of ounces contained in returns by assay being, gold 1,998 ozs., silver 13,023 ozs.

GYMPIE GREAT EASTERN GOLD MINING CO., LIMITED.

TOTAL AVAILABLE PROFIT OF 17,570*l.*

THE accounts of the company for the year ended June 30 last are published. The receipts comprise 21,910*l.* 1*s.* 9*d.* from the sale of bullion, 1,077*l.* for crushing quartz for neighbouring companies, and 664*l.* 1*s.* 4*d.* for interest on deposits and transfer fees, making a total of 23,651*l.* 16*s.* 1*d.* The expenditure, which includes 500*l.* charged for depreciation of machinery, was 13,500*l.* 4*s.* 11*d.*, leaving a profit for the year of 10,151*l.* 11*s.* 2*d.* The balance of profit brought forward from the previous year was 7,418*l.* 13*s.* 8*d.*, thus bringing up the total profit available for distribution to 17,570*l.* 4*s.* 10*d.* A dividend of 6*d.* per share was paid in Nov. last, which, with the income tax, reduced the balance of profit in hand on June 30 to 12,066*l.* 9*s.* 1*d.* An interim dividend paid on July 21 absorbed 10,500*l.* of this amount. The tabular statement annexed gives particulars of the results of the monthly crushings during the past year. The total quantity of stone stamped was 5,875 tons, the gold obtained 6,259 ozs. 3 dwts. 12 grs., and the net proceeds 21,910*l.* 1*s.* 9*d.* The shareholders have been made acquainted, by the published reports, of the serious disaster which occurred to the mine some months ago, and of the temporary cessation of mining work in consequence thereof on June 9 last. Owing to the extraordinary rains which prevailed at that time throughout Queensland, the company's mine, in common with other mines in the Gympie district, was completely flooded, and all underground operations necessarily suspended. Steps were immediately taken to unwater the mine, and on Sept. 15 the directors had the satisfaction to learn that the mine was free of water, and full operations resumed. This interruption of mining work for a period of upwards of three months has of course been a great drawback to the company, but fortunately no damage has been done to the underground workings. The mine manager's report shows that the prospects are good. The Orient reef is opening out satisfactorily, and another reef intersected to the west of the dyke and successfully worked in the adjoining mine owned by the No. 1 North Glanmire Co., also presents a very encouraging prospect. It is intended vigorously to develop both these reefs, and the board look forward with confidence to a successful future for the company.—J. GARLAND, Secretary.

LIST OF CRUSHINGS AND AMOUNT REALISED FROM EACH CRUSHING FOR THE 12 MONTHS ENDING JUNE 30, 1891.

DICKENS CUSTER MINES, LIMITED.

A CREDIT BALANCE OF 6,502*l.*

THE directors in their report state that the policy of the board, as explained at the last general meeting, has been carried into effect during the past year, and that this policy has been attended with satisfactory results as the enclosed summary will show. At the meeting an account will be given of the work done during the past year, and a plan of work to be performed during the coming winter. A suggestion which has been made to the directors as to the purchase of the Lucky Boy Mine, if the same can be obtained at a reasonable price, will be considered at the meeting. The chairman, Mr. E. Wolseley, has retired, and at the request of some of the larger shareholders Mr. T. Allen has been elected as a director in his stead, subject to confirmation at the general meeting. Col. Robinson has also retired from the board, and, not seeking re-election, the directors, with a view to limit the home expenses, think it unnecessary to appoint another director in his place. Mr. H. Chester Master has been elected chairman of the company.

The following statement shows sales of bullion and expenditure at the mines, from Apl. 1 to Sept. 30:—To sales of bullion: Apl., *nil*; May, 2,090*l.* 14*s.* 10*d.*; June, 4,213*l.* 17*s.*; July, 3,521*l.* 17*s.* 3*d.*; Aug., 3,290*l.* 19*s.* 6*d.*; Sept., *nil*; total, 13,120*l.* 8*s.* 7*d.* Expenditure: Apl.—By cash expenses, 368*l.*, by milling and mining supplies, 140*l.*—508*l.*; May—By cash expenses, 889*l.*, by milling and mining supplies, 735*l.*—1,624*l.*; June—By cash expenses, 1,720*l.*, by milling and mining supplies, 870*l.*—2,590*l.*; July—By cash expenses, 1,750*l.*, by milling and mining supplies, 980*l.*—2,730*l.*; Aug.—By cash expenses, 1,480*l.*, by milling and mining supplies, 830*l.*—2,310*l.*; Sept.—By cash expenses, by milling and mining supplies, estimated at about 400*l.*; by balance, 2,967*l.* 8*s.* 7*d.*; total, 13,120*l.* 8*s.* 7*d.* To balance, being excess of sales of bullion over expenses for the six months ending Sept. 30, 2,967*l.* 8*s.* 7*d.* The balance to the credit of the company at Martin's Bank, Limited, on Oct. 1, 1891, was 6,502*l.* 18*s.* 1*d.*, and there were no liabilities in England or America.—G. B. BENTHAM, Secretary.

DON PEDRO GOLD MINING CO., LIMITED.

IMPORTANT TELEGRAM.

MR. JOHN E. DAWSON, secretary, writes:—Oct. 7.—I am instructed by the directors to hand you at foot copy of a telegram received from the mine in response to a cable, asking Mr. Touzeau to advise by telegraph when Gordon's shaft had intersected the 50-fm. cross-cut, *i.e.*, the bottom of the mine.

Copy telegram, dated Marianna, Oct. 5:—"Gordon's shaft, expect to intersect 50-fm. cross-cut, month to-morrow."

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Lilian.—Good speculation.
Hayward.—Sell at the price you mention.
Rosely.—Very remote chance of a rise.
Dublin Reader.—Yes. It accounts for the fall, although nothing definite is known.
S. W. (Calais).—Cannot recommend them as investments—neither as very bright speculations.
Jorehant.—Sell and buy back again when they go lower, which seems soon likely.
Sturgeon.—Average by all means. It is the pick, and should eventually prove profitable.
J. Blount.—They are expected to advance to much higher quotations, but we advise you not to wait very long before selling.
Almoner.—A call is probable very shortly. In fact the rumour has affected the price.
Wheatcar.—Your broker is right in his demands. How would he get on if all his clients acted in the manner as you describe?
B. R. Canton.—You would do well to hold. The capital is very small.
Wary.—Thoroughly sound concern, and the money you have invested in it is safe.
M. A. (Clifton).—The market is active for the first mentioned, but not for the latter.
Grecian.—You would do better by investing the proceeds in a few Indians.
R. T. Stern.—Will ultimately improve in our opinion.
Collinman (Dewsbury).—You are right. Such concerns spoil legitimate business.
Warrior.—More money will have to be spent on developments. It will be some considerable time before profits can be realised. A good feature of the concern is that it is well managed.
Brightonian.—Sell 7 and 10, but hold others, and with No. 5 join proposed reconstruction.
N. W.—Regret you did not sell months ago, but was assured the mine was improving. Do not like to advise you to sell at a loss, but we hear very bad accounts of the mine.

Owing to the pressure on our space we are compelled
to hold over our Table Pages.

INDIAN CRUSHINGS.

THE returns for the month of Sept. from the four principal Indian mines have now been received, and, on the whole, compare favourably with those for Aug. The Mysore, it is true, shows a decrease of about 450 ozs., but this is explained in the telegram by the fact that there was a scarcity of water for the tailings. As a matter of fact, the quartz treated by this company during Sept., though about 200 tons less in quantity than in Aug., has yielded 38 ozs. more of gold, while the result from the tailings is 500 ozs. less. Ooregum comes to the front again, with a yield of 3,168 ozs., or an increase of 400 ozs. over that of Aug., and Nundydroog shows an increase of 177 ozs. Balaghat remains stationary, the yield for Sept. being exactly the same as for Aug., though the quantity of ore crushed has slightly increased. We give below a comparative table of these four mines:—

	Sept.	Aug.
Mysore ...	3,220 tons, 5,122 ozs.	3,420 tons 5,084 ozs.
	Tailings, 204 ozs.	Tailings, 705 ozs.
Ooregum ...	1,376 tons 3,168 ozs.	1,186 tons 2,708 ozs.
Nundydroog ...	1,000 tons 2,331 ozs.	1,085 tons 2,160 ozs.
	Tailings, 66 ozs.	60 ozs.
Balaghat ...	270 tons 505 ozs.	207 tons 505 ozs.

RANDT CRUSHINGS.

So far as the results of the Sept. crushings at present announced enable us to judge, the probability appears to be that the aggregate gold production from the Randt Mines last month has exceeded that of August, which, our readers will remember, amounted to 59,070 ozs. If it does the record will again have been broken. That this result is expected, is proved by the strength displayed by Randt shares generally this week. At times the "bears" have gained sufficient courage to sell stock, feeling that the inactivity in markets generally would lead to a break in prices in this department; but although there has been but little active buying, there have always been supporters enough to prevent anything like a serious decline, and for the last day or two the operators for the fall have been closing their commitments in view of the near approach of the settlement. It is notorious that the market is pretty bare of stock, and this fact alone

makes "bear" selling dangerous. In the following table we compare last month's yields of some of the leading mines with those for the preceding three months:—

Mine.	June. ozs.	July. ozs.	Aug. ozs.	Sept. ozs.
Aurora	419	—	850	859
City and Suburban ...	952	1,325	1,304	1,465
Ferreira	4,001	3,173	3,225	4,011
Geldenhuis	1,883	2,289	3,251	3,200
Jubilee	521	540	426	665
Jumpers	1,659	1,208	1,342	1,269
Langlaagte	4,375	4,367	4,318	4,013
Langlaagte Block "B" ...	930	1,276	1,138	1,342
May Consolidated ...	2,000	2,200	2,400	2,400
Meyer and Charlton ...	1,562	1,580	1,476	1,731
New Primrose	2,241	2,363	2,475	2,505
Robinson	6,607	6,605	7,107	8,245
Salisbury	1,150	1,030	615	800
Simmer and Jack ...	3,305	3,319	3,333	3,373
Stanhope	934	830	855	1,074

The Geldenhuis Main Reef Co. crushed 1,000 tons in Aug. and the first ten days of Sept., producing 500 ozs. of gold; but the effort seems to have been too much for it, for work has been stopped in order to permit of the removal of the tailings and repairs to the machinery. The most satisfactory increase is that shown by the Robinson Co., whose total of 8,245 ozs. is one of the best it has ever obtained. During the month 4,810 tons of ore were crushed, yielding 5,503 ozs., or well over an ounce to the ton, the other 2,815 ozs. being made up of 1,700 ozs. from the tailings, and 1,015 ozs. from the chlorination works. Apart from this, the crushings so far announced are not brilliant in point of yield. The Ferreira Co., it is true, got its 4,011 ozs. of gold from 4,936 tons of ore; but the New Primrose Co. had to work 4,504 tons to produce 2,505 ozs., the Langlaagte obtained 4,013 ozs. from 5,781 tons; Block "B," 1,342 ozs., from 4,874 tons; and May Consolidated, 2,400 ozs., from 6,100 tons. It will thus be seen that the quality of the ore varies considerably; or, perhaps, it would be more accurate to attribute the divergent results to the fact that at some of the mines the processes of extraction are satisfactory, while at others they are not. Speaking generally, the Randt industry appears to be in a healthier condition; though much yet remains to be done to remove from the district the bad odour in which it has been placed by the vagaries of a few unscrupulous adventurers.

CORNISH TIN SHARES.

IN our issue of Aug. 15 last we referred to the steady decline which had been going on in the shares of the leading Cornish tin mines, pointing out at the same time that this shrinkage in market values owed very little to the fall in the price of the commodity produced. Since then the price of tin has fluctuated within narrow limits, and is now about what it was when the current year opened; but for all that the downward movement in Cornish shares has gone on with scarcely a real break. The severity of the fall will be seen at once from the following table, in which we show the highest quotations touched this year, the prices ruling when we wrote in Aug., and those touched on Wednesday, with the amount of the fall from the top figures reached:—

	Highest Price.	Price Aug. 13.	Price Oct. 7.	Decline from Highest.
Carn Brea	61½	41½	29½	31½
Cook's Kitchen ...	17½	9	7½	9½
Dolcoath	74½	53	51	23½
East Pool	23	18½	18	5
South Condurow ...	6½	4½	3½	2½
South Frances ...	11	8	7	4
Tincroft	35½	23½	23	12½
West Bassett	2½	½	¾	2
West Kitty	9½	9	8½	½
Wheal Agar	13½	8½	8½	4½
Wheal Grenville ...	12½	11½	11½	1½

We are told that the decline in prices is absolutely unwarranted; but if that be so it is a little curious that there is not enough enterprise in the Duchy to prevent such a monstrous shrinkage. To us it seems that the fall is due mainly to the fact that investors spread throughout the length and breadth of the land, rightly or wrongly, refuse to take shares in cost-book mines or other concerns with unlimited liability. However, if the Cornish people are so fond of old-fashioned methods, it is absurd for them to complain that investors in mining undertakings select other channels for the employment of their capital.

THREE QUARTERS' TRADING.

THE Customs returns of the Board of Trade continue to indicate the depression of business resulting from past events, the recent improvement not having as yet made itself felt. Our Home exports were valued at 20,793,000*l.* for September last, or a decrease of fully 9 per cent. upon the corresponding month, but the decrease for the first three quarters of the year is only 5 per cent. The imports were 34,189,000*l.*, being also a decrease of 4 per cent., reducing the increase

on the year to rather over 1½ per cent., while the re-shipments were 4,353,000*l.*, exhibiting a reduction of over 5½ per cent., making the average decrease for the nine months 5 per cent. The unfavourable position shown by the returns is modified by the falling off in the imports, slight though it is. Generally, our exports show a decrease, the only class recording an increase being food and drink, while among the imports similar articles, together with those of foreign manufactures, alone record any augmentation, which, of course, are not the most favourable as representing "loss." As regards metals, &c., the imports were valued at 1,837,000*l.* for the month, and 17,152,000*l.* for the whole period, or a decrease of 84,000*l.* and 462,000*l.* respectively; while the exports, which include the added value of the manufactured article, represent 3,040,000*l.* and 30,518,000*l.*, being a reduction of 537,000*l.* and 3,296,000*l.* Machinery and millwork, in addition, was valued at 1,247,000*l.*, or a decrease of 200,000*l.* for the month, and 11,950,000*l.*, or a decrease of 292,000*l.* for the nine months, the falling off being mainly to the Continent (Russia, Germany and Italy), the River Plate and Australia. The imports of copper have declined, but those of tin and lead have increased, while the export of copper, except of the wrought metal, has also decreased. The shipments of lead were not so large, but those of tin improved. The smaller demand for copper has been on French and Dutch account, while of tin more than double the quantity has gone to Russia. The exports of iron and steel show a reduction mainly to Germany, Holland and the United States, and coal, which shows some increased tonnage, is a fraction less in value.

The following tables in our usual form give the particulars as to metals, &c., for the month:—

		IMPORTS.		Increase or decrease	
Article.	Quantity	Value	per cent.		
	Tons.	£	Quantity.	Value.	
Copper ore	6,462	67,489	—35.3	—26.3	
„ reg. and precip. ...	8,740	224,234	— 8.5	—20.3	
„ un. and pt. wrought	3,618	202,931	—19.6	—22.3	
Lead	13,076	161,430	+11.7	+ 4.0	
Tin	2,444	223,030	+77.0	+77.2	
		EXPORTS.			
Copper, unwrought ...	2,317	124,852	—40.6	—49.0	
„ wrought	1,350	91,631	+80.9	+68.6	
„ mixed	1,178	67,073	—19.3	—23.1	
Lead	3,994	53,457	— 1.5	— 5.8	
Tin	469	44,840	+29.9	+23.7	
Coal	2,793,268	1,670,950	+ 4.5	— 0.4	
Iron and steel	233,806	2,085,691	—12.2	—16.1	

THE PENINSULAR COPPER COMPANIES.

THE two leading Peninsular copper-producing companies have this week announced their interim dividends for the first half of the current year. Mason and Barry led the way in point of date, but there its pre-eminence ends, for while in that case the directors were only able to recommend the attenuated payment of 2*s.* per share, or at the rate of 2 per cent. per annum, the Rio Tinto board made up minds to distribute 12*s.* per share, or at the rate of 12 per cent. per annum. At the corresponding date last year the Mason and Barry Co. paid 3*s.* per share, which was thought at the time to mark the lowest dividend point the undertaking was ever likely to reach; but, as we have seen, the distribution has got still nearer to the vanishing point. The dismal result is attributed to the shortness of the water supply. Over the greater part of Europe the complaint has been that the rain has been superabundant; but in Portugal, or, rather, in that part of the country in which the Mason and Barry properties are situated, the weather appears to have affected a singularity. But if the company had had water enough, it is to be assumed that some other course would have affected the profits. At the present price of Mason and Barry shares, the yield to an investor on the basis of the dividends for the last two half-years is 5 per cent., or just about one-half of what mining shareholders have been taught to regard as a fair rate of interest on their capital. On the other hand, the Rio Tinto Co. paid 15*s.* per share a year ago, against 12*s.* now, and the yield on these shares calculated in the same way is a little over 7½ per cent. Rio Tintos may be too dear at 21*l.* That is a point which investors must decide for themselves; but that anybody should be willing to pay 5*l.* for Mason and Barry shares, under existing circumstances, is inconceivable.

NINE REEFS MEETING.

WE have little to add to the exhaustive statement of this company's affairs which we printed last week. It was a foregone conclusion that the resolutions would be carried unanimously, and the Stock Exchange think so well of the new issue that it has offered to underwrite the whole of it. The company is proceeding to work, as Mr. John Taylor informed the shareholders, on the joint report of Mr. Rowse (secretary) and Capt. Scantlebury, who recently inspected the property. It has several strings to its bow. First of all, comes the Malleson reef, 4 ft. wide, but with low quality quartz, though almost throughout containing gold. Will the lode improve in depth? So far as mining experience can give an opinion of the unseen and

unknown, Mr. Rowse and Capt. Scantlebury think it will, and they draw much of their inspiration, and not a little of their belief, from the character of the lodes in the neighbourhood. Of course, to prove this the shaft will have to be deepened, and that is one of the reasons why more money is wanted. Another, is to proceed with Vyvyan shaft at the north end of the property, the most promising point of all, where a well-defined lode already discovered contains 16 dwts. of gold to the ton. This will pay well when treated in any considerable quantity. There is also the Balaghat lode, more to the east, rendered all the more important from the extensive old workings that are about it. These are the grounds of encouragement the shareholders have to provide the further capital required, and the management on its part may be relied upon to give a good account of what they may spend. The systematic development of this property promises to yield results not less satisfactory than those of other mines in the Colar field.

THE DUAL DIRECTORSHIP OF PORT PHILLIP.

Most people will agree that two directors are insufficient for managing a mining company. If these two disagree who is to decide? If the chairman has the casting vote then it practically comes to this—that his colleague must be a dummy. Port Phillip Co., whose course under the present direction, and particularly during the past year, has been like that of true love, is managed by Mr. Chas. Dixon and Mr. Thomas Cornish. These gentlemen, however great may be their talent individually or in combination, are, in the opinion of several shareholders who attended the meeting this week, totally insufficient numerically to manage the company. Do we understand should one be away from illness or from any other cause, that the other forms a quorum? The curious part of it is that these two gentlemen divide between them 300% per annum in fees. In his opening speech, Mr. Dixon professed a keen desire to have another colleague or colleagues, but he said there was great difficulty in getting the assistance of any shareholders. When, however, Mr. Mackeand, who has taken a great interest in the company, who has a substantial holding, and who is in every respect as well qualified to administer its affairs as either of the two gentlemen now on the board, was proposed as an additional director, Mr. Dixon and Mr. Cornish both exhibited a strong reluctance to have the assistance that had previously been courted. Has this reluctance anything to do with a remark that fell from the shareholder who proposed Mr. Mackeand that the remuneration now paid to two directors would be then divided amongst three? Be that as it may, we hold that the Port Philip Co., though it may not be badly officered, is insufficiently officered at the present time, and the shareholders should see that they are more adequately represented.

MOUNT MORGAN EXTENDED.—SIGNS OF SUCCESS.

DURING the able administration of the present board its policy may be summed up in one word—development. This policy, the chairman said, has been sanctioned by experts of great repute whom he named, and he might have added that it has also the imprimatur of common sense. 1890 was not a year that toed up to the copy-book line, "Perseverance commands success." It was, in fact, a year of disappointment and vexation of spirit—a year which the chairman said "has scorched the hearts and tried the frames of your directors." We notice as an indication of the spirit in which Mr. Ballard is working on the spot, that, seeing the results of the year were so poor, he refused to draw all his remuneration, and the directors at home and in the Colony have also reduced their previously modest emoluments by one-half. Mount Morgan Extended has a very large quantity of low grade ore, and to treat this profitably has been the dream of the directors by night and the object of their study by day. In fact, Mr. Henry Wilson (chairman) and Mr. Jenkins (deputy chairman) may almost be said to have qualified for a scholarship in any of the chemical or metallurgical schools which they might choose to enter, for they have examined with minutest care the different processes for extracting the utmost contents from low grade and other ores, and may be relied upon to apply the best method to Mount Morgan produce. The "Immanuel" vein is improving, and the most satisfactory feature about it is that the ore is becoming richer as depth is attained. A point made by Mr. Jenkins should not be lost sight of—viz., that Mount Morgan (the big Mount Morgan as it is called for brevity) is operating diligently in the direction of Mount Morgan Extended. The feature of the year has, perhaps, been the acquisition of the Phoenix Mine for the small sum of 250%. The treatment of the ore produced from this mine in the mill on the customs system before it became the property of Mount Morgan Extended, yielded 2 ozs. to the ton, and the tailings were so much in addition. There is every encouragement to proceed with the vigorous working of Phoenix mine. Altogether we detected at Wednesday's meeting a spirit of hope and confidence which has been somewhat wanting at former gatherings held by this company, and we shall watch with great interest the progress of this enterprise during the present year.

ELMORE GOLD.

THE last thought in the minds of Elmore shareholders on Tuesday was to abandon the mine. By a unanimous vote they decided to submit to a small call in order that the shaft might be deepened, and the venture brought to its legitimate conclusion. Mr. Armitage gave a succinct account of his stewardship during the few months that have elapsed since the re-construction, and also spoke of his visit to Chicago, and the serious talk he had with manager McCornick over the position of the mine. This gentleman now strongly advises sinking, which was suspended for a time in order to allow certain apparently promising levels to be driven. These levels have not realised the expectations he formed, although it is but justice to him to remember that it was in the upper levels that Alturas made those riches out of which several dividends were paid. There is a prospect—indeed, a strong probability—that Elmore and Alturas lodes will come together at a greater depth than has yet been reached, and we all know it to be one of the canons of mining that a junction of lodes in the great majority of cases means the advent of riches. Mr. McCornick has been the victim of good intentions. By driving these levels he intended to make Elmore shareholders rich, but the result has been the reverse. Is he to be blamed for this? Mr. Gritton, one of the directors (and we do not know that he differs from his colleagues) thinks not, and let the critic who has made no mistake cast the first stone at him. Mr. Gritton's defence of the manager found favour with the meeting. The shareholders will judge him by his actions, but in the meantime give him their confidence without reservation. Of the two questions submitted to them—to go on, or not to go on—they decided in favour of the former, and may be complimented on their wisdom. The extra risk they incur is not great—3d. per share—even in the event of failure, whereas the stakes played for are high.

A GROUP OF SPANISH LEAD MINES.

LINARES, FORTUNA, ALAMILLOS.

THE meetings of these three companies, held this week, will reassure any shareholders who may have had misgivings as to their future. It is true the profits have not been so large as anticipated a year ago, and the dividends have not been so good as the shareholders have been in the habit of receiving, but still it is gratifying to know that there is no reason to think there will be any permanent falling off in the value of the mines, but that, on the contrary, all the indications are in favour of an improvement. Then, again, it must be borne in mind that although the reduced profits are due in a certain degree to decreased output, this is by no means the only reason or the chief reason. The price of lead has been abnormally low during the current year, and there have been none of those spurts which have occurred in former years, when companies, which possessed a stock of the metal, could sell to advantage. The development works being carried out, and those about to be undertaken, as explained by Mr. John Taylor, will be of vast importance to the respective companies, and especially those in connection with the Alamillos Co. These three companies have been paying satisfactory dividends for a number of years, and we see no reason why they should not continue to do so for many more to come.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, Sept. 7, 1891.

THE DE BEERS CO.—A CONTRADICTION.

ON Saturday last our local morning paper published a cablegram from London announcing that the De Beers Co. had purchased Mr. Ward's fourth share in the Wesselson Diamond Mine for 175,000%. The same paper this morning publishes a letter from Mr. W. H. Craven, the secretary to the company, contradicting the statement, and informing the public that the company has not bought Mr. Ward out at that, or any other price. Nevertheless, Major Wollaston, who is in the employ of the company, is still working there with very powerful machinery. It is a notorious fact that Mr. Ward and the Messrs. Armstrong are still finding remarkably well, and the mine is proving as rich as any on the fields. Litigation still hangs fire, Mr. Welch's case not having yet been heard either here or in the Supreme Court.

THE PRINCE ALBERT GOLDFIELDS.

Prospecting is still being actively carried out on these fields. So far as alluvial gold is concerned, nothing has yet been found beyond small nuggets. The best find I have heard of yet is one party winning two and a half pounds weight of gold in 20 days. But it is currently believed that the whole district is covered with payable reefs. If this is so, it is difficult to see how the wealth is going to be developed. These reefs cannot be worked without capital, and colonial capitalists have dropped so much money on the Rautd that they altogether fight shy of new ventures.

THE LONDON AND SOUTH AFRICAN EXPLORATION CO.

During the last few days Mr. H. Lawson, M.P., a director of this company, and also of the Kimberley Diamond Mining Co., has been

on a visit to the diamond fields, and as the London and South African Exploration Co. are lords of the soil of the whole of Beaconsfield and the greater portion of Kimberley deriving therefrom an annual income of 100,000*l.*, Mr. Lawson has been very much deputed since he has been here. Of late several applications have been made to the company for leave to prospect on the estate for diamonds, but they have invariably been refused, and the parties have been informed that the Kimberley Diamond Co. has the exclusive right, in point of fact it is now an accepted fact that the London and South African Exploration Co. and the Kimberley Diamond Mining Co. are one, and working under the same board. Since Mr. Lawson has been here he has explained the position of the two companies, and from these explanations it appears that the Kimberley Diamond Mining Co. has acquired from the London and South African Exploration Co. all the diamondiferous soil, known and unknown, on its estate unleased at the time of the formation of the new company in May, 1890, and although things are kept remarkably close, it is pretty well known that the new diamond mining company working in Belgravia has been very successful. Included in this very large extent of ground are all the abandoned claims in the Dutoitspan Mine, and (much more important) all that portion of the mine lying outside the registered claim-area. That the unleased and virgin portion of the mine is very extensive has long been known. The New Gordon Co. has acquired 220 claims in the eastern section, and it is now ascertained that the blue which they have struck in many claims outside the old workings, and at the depth of some 300 ft., is as promising as any in the mine. The original intention of the New Gordon Co. was to have taken out 600 new claims, but in consequence of the paralysis of the financial world at the time of the re-construction of the company, the requisite capital was not forthcoming, and they had to be content with 220. Now it is suggested that the balance of claims which they were unable to take up being, it is presumed, still in the market, steps should be taken to form a working syndicate, and that negotiations should be opened up with Mr. Lawson for the lease of a workable block therein, and it is thought that, provided satisfactory guarantees were given of the financial responsibility of the applicants, Mr. Lawson could hardly refuse to entertain any reasonable proposals in that direction. The question for the syndicate should be, not so much is this part of the mine as rich as the old claims, but, rather, is it payable, and if half of what was said by several witnesses before the Distress Select Committee as to the cost of working in these more experienced and cheaper times is correct, a very low yield in the virgin ground should suffice to pay by an association dividing the profit *pro rata* on cash actually adventured. Premium certainly, and claim rent might be made to be dependent on the proved value of the block, and if Mr. Lawson can be induced to accept this principle, the financial risk incurred by the syndicate would not, with honest management and capable engineering, exceed what must be faced in every business enterprise. Mr. Lawson does not leave here for three or four days, and I have every reason to believe that some such a suggestion as this will be laid before him. It is not expected he will act on his own responsibility, but, at all events, he will be asked to lay the proposal before his brother directors. Mr. Lawson says prospecting licenses cannot be issued, because the Kimberley Diamond Mining Co. has taken that work into its own hands, and seeing that prospecting is only a hope and a chance, Beaconsfield will lose little in leaving that work to somebody else; but there is ground in plenty, certainly diamondiferous, and probably payable, and we have not only the men waiting to work, but we have local capitalists able to offer substantial security. The North-East Bultfontein is working a block of nearly 800 claims; the New Gordon Co. some 416; the British United has about 80, and is applying for more; whilst the 76 claims of the Old Central Dorstfontein are about to be worked as a separate block on tribute. To these may be added the eastern and southern extensions of Dutoitspan, which can hardly be less than 500 claims, and if these were all at work we should presently see Beaconsfield restored to its old prosperity.

RIVER DIGGINGS.

I am keeping my eye on the river diggings. I thought I had got hold of a good thing a few days ago, and was on the point of running down to make personal observations, but a little preliminary investigation proved that it was only a flash in the pan. At the same time it is well to be continually on the watch. Prospecting is now going on over 200 square miles of country between the Orange and Vaal Rivers, and the unexpected is sure to turn up one of these fine days. I do not mean to say that the little affair I allude to has proved to be a frost, but I find that it has not yet been ascertained whether it will turn out to be a "dry" mine or not. If it does I shall have something to write about in a week or two. They have not yet sunk more than 20 ft., but then again the deeper they go the more promising the indications appear to be.

FLAGSTAFF.

BY ONE WHO HAS STUDIED IT.

THERE has certainly been a lull in Flagstaff's for some little time, but unless I am much mistaken, we, who have had the courage of our convictions in holding on to our shares, are likely—and very shortly—to be rewarded for our confidence and patience.

As I think you are aware, I have always made it my business to keep myself *au courant* with what has been going on at the mine, and from enquiries I have been recently making, this is the present position and immediate outlook.

For the past 18 months Capt. Swope has been steadily opening up the mine above, and between, the 6th and 7th levels, and as the reports, published each week in the mining papers, have told us, he has laid open a very considerable area of stoping ground, ready to be stoped as soon as the new machinery goes to work; and he has, moreover, in the progress of this work, extracted or mined some 1,500 tons of good saleable ore—limited to that quantity only by reason of the difficulty of storing it away in the drifts and levels of the mine.

Fortunately, some 500 tons of this ore was able to be stored in the ore bins at the mouth of the Vellajo tunnel, which is on a line with the Flagstaff's 6th level, and these 500 tons have been already brought down from the mine.

Some 100 tons of it were sold in July last it will be remembered, and fetched about 10*l.* a ton, and the remaining 400 tons have, I understand, now been brought down from the mine, and are being sampled for sale at Sandy, and news of their sale may, I am informed, be received by the company any day now, thus putting into the coffers of the company something like 4,000*l.*

Prof. Vincent's arrival at the mine (and a cable was received on Sept. 30 announcing his arrival at Salt Lake City) was timed specially to enable him to personally superintend the sampling and sale of this ore, as well as to be present at the starting of the new hoisting and air compressing machinery, reported by Capt. Swope, in his report received this week, to be ready to start on Oct. 1—the turning point, in the mind of those who, like myself, know the importance of it, in the future of the old Flagstaff Mine.

Once this machinery is at work (and it can work both winter and summer, the winter's snow being no impediment to the full working of the mine), the first and more immediate valuable result to the company will be the hoisting to the surface—i.e., to the 6th level—of the remaining 1,000 or more tons of ore, already, as I have mentioned above, mined and stored away in the drifts and workings, and by means of the cable tramway this ore will at once be brought down the mountain and shipped to market; and, say, it produces but 7*l.* to 8*l.* a ton, here is a further respectable addition to the company's exchequer of from 7,000*l.* to 8,000*l.*

But with the machinery at work, the *real* business of mining will commence, and from what I can gather, the number of tons minable per week may run into hundreds, *once that the ore can be hoisted to the surface as fast as mined*. Then will the steady work of development carried on so quietly by Capt. Swope for the last 18 months be realised.

My attention was drawn a few days since to some remarks in one of your mining contemporaries concerning the supposed dealings of Prof. Vincent in the shares of the company, and saying, as a curious fact, that when the mine was on the eve of making a good show for itself, orders for the purchase of shares had been cabled over from Salt Lake City. Now, I have made it my business to inquire in likely quarters as to these facts also, and the result of such inquiries is that I find that the Professor's dealings in shares have been exclusively confined to the *purchase* of shares—pretty fair evidence one would think of his confidence in the property. I have ascertained also that there *are* persons at Salt Lake who believe in the old mine, and who are watching the progress of events on the spot with quite as much interest as we are on this side, and who are shrewd enough to know that since the continuous discoveries of ore made, first by the late Capt. Mitchell, and since by Capt. Swope, between the 6th and 7th levels (requiring only the replacement of the machinery, which was destroyed by fire last year, to enable it to be mined and sent to market), the prospects and future of the Flagstaff Mine are totally changed; and it is, therefore, surely not to be wondered at that orders to purchase shares should be cabled over by those people at periods like the present—when, practically speaking, the mine is about to make a fresh start for itself.

The knowing ones here, however, have not been behindhand, as far as I can learn, in picking up shares at the present prevailing low prices, and I am sanguine enough to believe that it will not be long before Flagstaff shares are again quoted above par.

My apology for trespassing so much on your space is this—that I have always remarked your consistent and steady confidence that Flagstaff would once again assert her value.

OCT. 8, 1891.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

SOME surprise has been occasioned in the Discount Market by the *non* advance of the Bank rate, an upward movement having been ardently expected from the fact that brokers and others were only doing business at 3 per cent., subject to any alteration. Although upwards of three quarters of a million in gold had been taken for export on balance for the *Gazette* week, it was not at all certain that the directors would move in the matter this week, because the dividends being just out the supply of capital afloat has been so augmented as to for the present militate against the efficacy of any further advance upon the existing figure. The directors have some control at present, but it does not follow that they would do so at a higher rate unless they first took steps to reduce the floating supply. Bills have since been easy, at 2½, 3 per cent., and money at call nominally ½, ¾ per cent. The Bank return shows a reduction of 1,400,000*l.* in the reserve to 13,920,000*l.*, which compares with 10,500,000*l.* at this time last year. This is wholly due to the export of gold, and the increase of 650,000*l.* in the circulation of coin. The payment of the dividends accounts for the other changes, and a reduction of a million in the liabilities has further affected the proportion, which has fallen 2½, to 38½ per cent. The Government has

borrowed, apparently, 2,500,000*l.* for the dividends, and an amount of 2,729,000*l.* has been applied to the reduction of private securities.

On the week business at the Stock Exchange has not been active and prices have fluctuated, but not widely, under varying considerations, with the result that the Funds are a fraction firmer, Foreign Stocks lower, Home Rails irregular, and American higher. The Funds benefited by the *non* alteration of the Bank rate, but the foreign market sympathised with the continued dullness of the European Bourses, Paris prices being heavy, in spite of the success of the Credit Foncier Loan and the issue of the New Russian Three per Cent. Loan for 19,775,000*l.* at 78*l.* 17*s.* per bond of 98*l.* 17*s.* 6*d.*, which is quoted at $\frac{1}{2}$, $\frac{1}{8}$ premium. A further cause for depression in this market has been the fear that through the death of Mr. Parnell and the possible union of the Irish party. Mr. Gladstone may be returned to power, when he would doubtless attempt to carry out his well-known policy of "scuttling" out of Egypt. This has caused a fall of $\frac{1}{2}$ to $\frac{3}{4}$ in Egyptian. Russian have also fallen $\frac{1}{4}$, and Greek $\frac{1}{2}$. Argentine shows a fall of 2 per cent., but are above their worst, as although the premium on gold remains as high as 347 per cent., it is understood that the Senate will reject the Government financial proposals, while Uruguay have fallen $\frac{1}{2}$, the Government having notified a modification of the original scheme. In Home Rails, the Scotch lines have been good at a recovery of 1 to 2 per cent. on a prospect of more amicable working. Brighton "A" has fallen 2, and others are mostly lower, while American show a rise of $\frac{1}{2}$ to $\frac{1}{4}$ per cent., with $\frac{1}{2}$ in Eries, and 3 in Atchison, but no special feature is apparent in other securities.

Bills were in fair supply to-day, and, despite a superabundance of floating credits, rates were nearly sustained at their former level. Three months' bills are $2\frac{1}{2}$ per cent., and loans $\frac{1}{2}$, 1. The Bank of England received 135,000*l.* in gold from Portugal, but 50,000*l.* was absorbed for New York. Bar silver recovered to 44*½**d.*, and in this department a better feeling is reported.

To-day the Stock Markets have, with the exception of Foreign securities, been dull, at generally lower quotations, the whole tendency being probably mainly controlled by closing accounts in view of the settlement next week. The Funds improved $\frac{1}{8}$; Consols closing 94*½*, $\frac{3}{4}$, and 94*½*, $\frac{3}{4}$, for money and account. Foreign securities rallied, with a firmer tone, and some re-purchases by bears, induced by the better disposition on the Paris Bourse, where more activity has prevailed, and a further recovery in Argentine Bonds, the premium on gold having fallen back to 334 per cent. Argentine 1886 and Funding Loan have risen $\frac{1}{2}$, and other securities of the international class $\frac{1}{4}$ to $\frac{1}{2}$. Home Rails were tolerably steady, the Scotch lines relapsed $\frac{1}{4}$, $\frac{3}{4}$ on realisations, but the Southern Deferred Stocks improved $\frac{1}{4}$. Bears buying back on slightly more genial weather, as the account is near at hand. The American market was also the subject of realisations; prices opened lower, and continued dull to the close without any special feature except a firmer tone for Atchison shares at the last on an excellent traffic return. A decline of $\frac{1}{4}$ to $\frac{1}{2}$ is generally shown. Grand Trunk Stocks were dull with a fall of $\frac{3}{4}$ in the First Preference, but the Thirds were steady. Mexican issues were fairly active but weak, and Nitrate Rails firm, but the other properties flatter. Electric Light shares also gave way and Banks and Cables were lower in some cases.

Annexed are the final quotations to-day:—Consols Account, 94*½*, 94*½*; Egyptian Preference, 90*½*, 90*½*; Egyptian Unified, 96*½*, 96*½*; French Four-and-a-Half per Cents., 104*½*, 104*½*; Hungarian, 89*½*, 89*½*; Italian, 89*½*, 89*½*; Mexican, 85*½*, 86*½*; Peru Five per Cents., 93, 104; Peru Six per Cents., 27*½*, 28*½*; Russian 1889, 96, 96*½*; Portuguese, 37*½*, 37*½*; Spanish, 69*½*, 69*½*; Turkish 1871, 94*½*, 95*½*; Turkish Defence, 90*½*, 90*½*; Caledonian Railway, 117*½*, 117*½*; Great Eastern, 87*½*, 87*½*; Great Western, 157*½*, 157*½*; Brighton "A," 146, 146*½*; North Western, 169*½*, 170*½*; Metropolitan, 84*½*, 85; Metropolitan District, 29*½*, 29*½*; Midland, 158*½*, 159; North British, 41*½*, 41*½*; North Eastern, 154, 154*½*; South Eastern "A," 84, 84*½*; Mexican Ordinary, 33*½*, 34; Grand Trunk, 10*½*, 10*½*; Grand Trunk First Preference, 71*½*, 71*½*; Grand Trunk Second, 50*½*, 51*½*; Grand Trunk Third, 28, 28*½*; Canadian Pacific, 91*½*, 91*½*; Denver Preference, 50*½*, 51*½*; Erie, 31*½*, 31*½*; Milwaukee 76*½*, 77; Lake Shore, 128*½*, 129*½*; Louisville, 82*½*, 82*½*; Atlantic First, 39*½*, 40; Ontario, 21, 21*½*; Ohio, 25*½*, 25*½*; Norfolk and Western, 57*½*, 57*½*; Reading, 20*½*, 21; Reading Bonds, 84, 86; Union Pacific, 42*½*, 42*½*; Wabash Preference, 31*½*, 31*½*; Ottoman Bank, 11*½*, 11*½*; Anglo-Telegraph, 48*½*, 49*½*; National Telephone, 44, 44*½*; Hudson's Bay, 16*½*, 17; Suez Canal, 113*½*, 114*½*; Guinness, 314, 316; Allsopp's Ordinary, 22, 24; Bryant and May 13*½*, 14; Eastmans Ordinary, 4*½*, 4*½*; Elmore's Copper, 3*½*, 4*½*; Salt Union, 4*½*, 4*½*.

MINING IN VICTORIA.

(Continued from page 325.)

During the quarter the quantity of wash-dirt treated amounted to 161,559 tons, which gave a yield of 13,727 ozs. of gold, averaging 1 dwt. 16*grs.* per ton. These particulars are only complete as far as the mining registrars have been able to obtain reliable information, and do not represent the total amount treated. Amongst the companies which obtained good returns from wash-dirt the following may be mentioned:—Berry Consols, 5,324 ozs. 2 dwts.; Madame Berry, 5,317 ozs. 17 dwts.; Earl of Beaconsfield, 2,131 ozs. These companies are situated at Creswick, and are working private lands. Only 443 tons of cement were reported as having been crushed, giving a yield of 65 ozs. 13 dwts. 6 *grs.*, or an average of 2 dwts. 23 *grs.* of gold per ton. On Mar. 31 there were 23,815 miners employed in the colony in gold mining operations, being an increase of 103 compared with the returns for the preceding quarter. In quartz mining there were 12,804 at work, and 11,011 in alluvial. The number of Chinese engaged in both classes was 3,091, only 139 of whom were employed at quartz mining. In the Sandhurst division during the quarter several good yields were recorded from mines working at depths from 2,000 ft. to 2,025 ft., amongst which the following may be mentioned:—Lazarus Co crushed 929 tons of quartz taken from a depth of 2,000 ft., the yield from which was 746 ozs., being an average of 16 dwts. 1 *gr.* per ton;

Lazarus No. 1 Co., from a crushing of 865 tons, obtained a yield of 753 ozs., or an average of 17 dwts. 9 *grs.* per ton. This stone was obtained at a depth of 2,000 ft. The New Chum Railway Co., who are working the same reef as the above-mentioned companies (namely, the New Chum), crushed 1,703 tons of quartz which was procured from depths ranging from 1,100 to 2,025 ft., and which gave a yield of 1,373 ozs. 13 dwts., or an average per ton of 16 dwts. 3 *grs.* of gold.

The amount paid in dividends by gold mining companies during the past three months was 102,843*l.* 5*s.*, the several districts contributing in the following order:—Ballarat, 49,700*l.*; Sandhurst, 19,271*l.*; Beechworth, 9,542*l.*; Maryborough, 7,900*l.*; Castlemaine, 7,800*l.*; Gippsland, 7,140*l.*; Ararat, 1,490*l.*. The following is a list of the companies that disbursed the highest amounts during the quarter:—Star of the East, Ballarat, 21,600*l.*; Berry Consols, Creswick, 9,000*l.*; Madame Berry, Creswick, 8,100*l.*; New Red, Whi and Blue, Sandhurst, 7,312*l.*; Great Northern Extended, Indigo, 6,500*l.*; Long Tunnel Extended, 6,240*l.*; Specimen Hill United, Eaglehawk, 5,000*l.*; Lord Nelson, St. Arnaud North, 4,500*l.*; North Cornish, Daylesford, 4,200*l.*, and Sir Henry Loch, Ballarat, 3,600*l.*

GOLDEN LEAF, LIMITED.

IMPORTANT CABLES.

I AM instructed to inform you that the monthly report for Aug. and cabled "run" for Sept. not having yet arrived (doubtless owing to the time of the manager being taken up by the chairman's visit to the mines) the directors think it right to forward at once the subjoined cabled information, which appears to be of importance.—H. C. RICHARDSON, Secretary.

Cable sent Sept. 28:—"Your usual letter not to hand; telegraph if contents important. Have received your letter of the 4th."

Cable received Oct. 2:—"Have struck pay ore Empire at the lower level face. Average width of the vein is 8 ft. The vein has been prospected for the length of 60 ft. There is every encouragement there. Bannack, have made a rich strike in—and—continues in high grade ore.—The north drift—from—driven 50 ft. The average assays for last week were \$55. Mill working splendidly."

The latter portion of this cable being unintelligible, in consequence of the blanks representing code words to which no meanings had been advised us, the directors cabled on the same day:—"No meanings attached words 14, 16, 18, 20, 22, 23, in our code. Repeat other manner. When did you write? Has Wallace left?" And yesterday received the following reply:—"Letters were posted for you Sept. 4, Aug. 28, Sept. 28, Oct. 4. Strike reported in south drift, on 100-ft. level below the main tunnel. The average assays for last month were—gold, \$37; silver, \$41. From 1 south raise, north drift has been run in ore 50 ft. The average assays for last month were \$31. Mine is looking well everywhere. Working mill to its utmost capacity on \$30 ore."

The secretary further announces the following telegram received Oct. 7 from Mr. J. Henry Longmaid, the company's general manager:—"During Sept. the mill at Empire worked 60 stamps for 27 days, crushed 4,800 tons, and the yield was as follows:—Bullion, \$13,200; sundries, \$800; total, \$14,000; the working expenses for the month were \$9,000—\$5,000; expended on capital account, \$1,250."

NEW HORNACHOS SILVER MINES, LIMITED.

THE directors' report and balance-sheet for the year ended June 30 last has been issued, and show that the amount received from mineral has been considerable, although the quality was not up to the average of the previous year. The raising and working of the mineral was mainly confined to the first six months. After frequent repairs the hoisting cable finally and rather unexpectedly broke on Mar. 23, and although the new cables were sent with the greatest possible despatch, they were only in position on May 18; the raising of nearly 5,000 tons of water from the mine had then to be faced, which was accomplished in 11 days. The quantity of crude ore fed through the mill amounted to 3,488 tons, producing 281 tons of mineral (and $\frac{7}{8}$ tons of picked ore). The quality was considerably inferior to that of the previous six months. Two reasons are assigned; first, the worn condition of part of the mill; secondly, that the greater part of the crude ore was drawn from the north end of the mine, where the mineral has never been of such a rich quality as in the south, and is far more difficult to treat without the loss of silver. The outlook at the mine is at present somewhat better, the parts being now stoped in the south are reported and found to be rich, in what has gone to market.

THE *Australian Mining Standard*, of Sydney, has opened a London office at 124, Clerkenwell Road, E.C. By going to the watchmaking district of the metropolis it is evident that our contemporary wishes to be "up to time."

M. B. FOSTER AND SONS, LIMITED, announce that the home trade sales of the Bugle Brand of bottled beers for the nine months ended Sept. 30, as compared with the same period last year, show an increase of 33 per cent.

Mr. J. A. ALSOP, of Willesden, whose death occurred on Saturday last, through falling from a tricycle whilst suffering from heart disease, was greatly esteemed as chairman of the Drachenfels Gold Co., over whose meeting he presided less than a fortnight before. Mr. Alsop will also be remembered on account of the active part he took in obtaining improved management for Notre Dame des Victoires Co. At the time of his death he was 59 years of age.

HOLLOWAY'S PILLS AND OINTMENT.—It is impossible entirely to prevent the noxious vapours which are given off in mines and tunnels, and those who, like miners and railway operatives, have to work day after day in such vitiated atmospheres, suffer in health and strength in consequence. The chest and liver often become clogged with the products of coal combustion, necessitating great attention to the health. No remedy is more valuable for miners and the like than Holloway's Pills, as they carry off all effete matter from the blood, and healthily stimulate the liver. They are also invaluable for costive bowels and for all bilious disorders. The Ointment is a priceless remedy for piles, sprains, ulcers, and all manner of sores.

REPORTS OF MEETINGS.

THE MOUNT MORGAN EXTENDED GOLD MINING CO., LIMITED.

LATER REPORTS THE BEST RECEIVED FROM THE MINE, THOUGH 1890 WAS A YEAR OF DISAPPOINTMENT—SELF-DENIAL OF MR. BALLARD, THE MANAGER—THE BOARD HAVE A YEAR OF ANXIETY AND HARD WORK, BUT NOW SEE THE PROVERBIAL "SILVER LINING"—AN IMPORTANT PROPERTY ACQUIRED FOR A TRIFLE.

AN ordinary general meeting was held at the City Terminus Hotel, on Wednesday, "for the purpose of receiving the directors' report and statement of accounts; the re-election of directors; the appointment of auditor or auditors; and for general business."

Mr. Henry Wilson

(chairman of the company) presided.

Mr. G. L. S. MAGGIOLINI (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, it must be somewhat strange to some of the shareholders that this meeting is convened at such a late season of the year. We make no apology, however, for its being so seeing that it is strictly in accordance with the articles of association, which provide that the statement of accounts and balance-sheet with the report shall be submitted to a meeting convened in the month of Oct. of every year. Of course, it is competent for the shareholders to have that altered, but it will scarcely be worth while to interfere with the arrangement at present. I need hardly remind you, gentlemen, that our duties as a board are purely administrative, and that the duties of the local management are as purely executive. But, although in the report there is the absence of those results which you and we alike desire, I hope to satisfy you that to develop your property expeditiously, economically, and intelligently has been the motive which has governed all our actions, and I hope also to give you every sense of satisfaction, if any explanation is desired, that your affairs have been wisely and well administered by the present board. Now, the

POLICY PURSUED HAS BEEN ONE OF DEVELOPMENT.

That policy has received the sanction of such men as Mr. Bennett, the Government Inspector of Mines, Mr. Dunn, the Government Geological Surveyor, and of Mr. Westley Hall, of that phenomenal mine, the Mount Morgan of Queensland, whose opinions are stamped with the hall mark of a ripe experience. With this preface, I will submit to you the first resolution—"That the report as circulated, and the statement of accounts as duly audited, be received and adopted." Before, however, formally putting that, I will give every opportunity for questions to be asked. A report from Mr. Ballard, comprising 21 paragraphs, was circulated to the shareholders on Sept. 29. There is a great deal of interest therein, and I take it for granted that it has been read by you. On the whole, as the author says, it is a wretched report. The greater part of

1891 WAS A SERIES OF DISAPPOINTMENTS,

expectations, and hopes alike unrealised, and if any of you gentlemen have ever been on a mining field undergoing development, you will readily understand that the frame of mind in which a man must have been during those circumstances of repeated disappointment has been anything but easy to bear. But in order to show you that he had sympathies with you, from June 1 to Oct. 31

MR. BALLARD ACTUALLY REFUSED ANY REMUNERATION

whatever as general manager. (Hear, hear, and cheers.) Now, I think that is an instance of generous self-denial which the history of few mines makes us familiar with. The position of your directors during that period can, I think, easily be conceived. Harassed as we were by numerous letters, not always of a complimentary character, received I am bound to tell from small shareholders, we, however, as is our duty, replied carefully to all those communications, and, I believe, gave them satisfactory answers. I will now break adrift from the report of 1891, which is far from satisfactory, and say that that year has pretty well scorched the hearts and tried the frames of your directors, because it is not a very pleasant position to occupy when matters are not going smoothly. In the exercise of this discretion, during a considerable portion of that year Mr. Ballard, with a view to economy, thought it desirable to apply for what is called exemption. He readily obtained exemption for six months for one part of the property, and during three months for the whole. The readiness with which that exemption is granted to Mr. Ballard may be accepted as a sufficient surety that he stands well in the estimation of the authorities there, and that he is pursuing a proper course. The most interesting portion probably of what I have to tell you to-day will be found in his report to July 31, 1891. To us it is decidedly satisfactory, but in addition we shall be able to tell you the exact position that we occupy to-day, because we have a telegraphic despatch which we received on Oct. 5.

A FULL REPORT ON THE POSITION.

I must ask your patience while I read to you the following report:—

REPORT FOR YEAR 1891 TO END OF JULY.

July 30.—The following report is to give a general view of our progress during the year 1891:—Shaft No. 3: Immanuel was 81 ft. deep at end of 1890. After baling water, we resumed work on Jan. 7. At 81 ft. the average stone yielded nearly 1 oz. to the ton, but at 84 and 88 ft. it came down to 3 dwts. 6 grs. of bullion. On Jan. 26 the shaft was 90 ft. deep. It had been raining very heavily, and the water was a great trouble, so we decided to leave off sinking, and put in a drive to the eastward to form a water chamber, exploring at the same time the eastern country. Immanuel No. 3 eastern cross-cut at 86-ft. level: By Jan. 26 we had fairly entered this cross-cut, and got in about 8 ft., so that the men could work dry. We then sent the rock-drills below, and began to

drive. We found no gold in the cross-cut after the first 6 ft., until at 61 ft., in Mar., we cut a little vein, which yielded nearly 3 dwts. On May 4 we had got in 158 ft., only finding traces of gold between 130 and 140 ft. On June 1 we had got in 188 ft., and we now determined to carry the drive on until we could get under the bottom of J winze, in tunnel No. 2, which is about 50 ft. above our heads, so as to drain the water therefrom, and enable us to prospect the country in the neighbourhood of Classen's drive, hitherto impracticable from water. On June 29 we had attained a total distance in this drive of 210 ft.; and on July 27 the face of the drive was 267 ft. from shaft No. 3; thus, in 26 weeks we had driven 260 ft., or exactly 10 ft. a week, which, considering the hard nature of the country, is the best driving that has ever been done upon this goldfield. We are now immediately under J winze; but we have not yet cut any veins by which to drain the water from the oxidised country above us. I expected to have done this before reaching the perpendicular line of the winze. We must carry the drive a little further so as to get well past our point, for which purpose I propose to drive for two weeks longer until Aug. 10, after which date this work will be completed. We shall then come back, blow up the bottom of the drive for about 100 ft. from the shaft, erect a strong dam across the drive near the Immanuel shaft, and then proceed with the sinking of the Immanuel; collecting all our surface water in this drive, from which we can lift it to the surface with great economy by our steam pump, and we shall only have to pump the water which we meet with in sinking from the bottom of the shaft up to this drive, which will then perform the office of a capacious underground reservoir. Although the exploration made by this drive has been unproductive of any discoveries, it has established important facts, about which we were in the dark, viz., that the soft, decomposed rhyolite country to the westward of the Immanuel is separated from the oxidised country under tunnel No. 2 by a compact belt of hard blue rock, containing no gold, at least 270 ft. in width, and that future exploring operations must be confined to sinking in the Immanuel; and, at convenient opportunity, upon vein E, and the other veins in the auriferous belt penetrated by our tunnels. As soon as we have got fairly to work sinking again in the Immanuel we will carry J winze on down, and connect it with the eastern drive for the purpose of prospecting the promising country under tunnel No. 2, which we shall be able to do now without expense, other than two miners, through the facilities offered to drainage by the eastern drive.

PHOENIX MINE.

In Feb. we opened negotiations with the Phoenix Co., for the purchase of a portion of their mine, and sent samples to you. I endeavoured to arrange to erect winding gear for them, and got a very cheap second-hand plant for the purpose. Our treatment of about 36 tons of their stone had proved the value of their ore, and I was also aware that the tailings remaining were worth more than 1 oz. to the ton, so that we had, by mercury, managed to extract for them 75 per cent. of their gold. By the end of Mar. I found that I could not make satisfactory arrangements with them, and gave up the attempt, the smallness of the vein influencing me very much in this decision, so that in Apr. I formally broke off negotiations. They have lately, at the bottom of their shaft, struck a vein, which Mr. Paton, our mill manager, reports to be nearly 2 ft. thick, of solid pyrites, and to assay about 5 ozs. to the ton. This find is of no use to them as they are unable to treat such stone. They have, therefore, applied for exemption, being blocked for an expedient. I authorised Mr. Paton to negotiate with them, which has resulted in his buying all Linde Bros.' title to the mine for the sum of 2500l., which will give us the whole title, all but that of one or two small holders, of whom Mr. Paton himself is one, and with whom I expect little difficulty after securing the property. With a view to occupy our mill and earn a profit, we have been in the habit of crushing customs or outside ore. We crushed a considerable portion from the Phoenix Mine, of which I will presently give you the results. That property we have now acquired for a mere song. (Cheers.) We used to give them the gold we extracted, and keep the tailings ourselves, with which arrangement they were very well satisfied. We made strict enquiries with reference to the extent and value of that property, and had a sample of the ore sent home, which yielded remarkable results, and treatment under a process which is now in successful operation upon the tailings of the Sheba Co. in South Africa. The process is called here the Cassell process, but out there the McArthur-Forrest process, and it seems that at Sheba they get more out of the tailings than was obtained originally from the ore. Mr. Jenkins and I had interviews with several people on the subject of these processes, and I daresay many of you are also familiar with the treatment of ore under the process called the Clarkson and Stansfield concentrator. My colleagues and myself have considered it our duty to make ourselves familiar with every new process introduced, whether mechanical or chemical. We have paid several visits to the gentlemen who preside over the Clarkson and Stansfield process, and were struck with its adaptability. It is simply a process of concentration, the principle of which is centrifugal. We have given our manager all the information that could be obtained, of which a good supply was received from headquarters in Glasgow, and we are acting under the reports of that company in London, from whose representative also we received a great deal of courtesy and attention. You must not think we have delegated to Mr. Ballard authority to purchase any new property, nor do we intend to do so save under exceptional circumstances. It is possible we may acquire mines in the neighbourhood, but before we do you may take this from me, that we shall have your express sanction. That brings us pretty closely to the present day.

THE BALANCE-SHEET IS BEFORE YOU,

but there are some items in it it is necessary to explain. You will observe that one item is sundry creditors, 437l. 10s. to directors. We entered into a compact with you, and resolved by resolution on Aug. 9, 1889, that although the articles provided for our remuneration to the amount of 7000l. a year we would not draw any more than half of that until such time as we paid you a dividend. (Cheers.) The auditors' fees are 20l. 64l. 18s. 1d. was an amount due to Mr. Ballard, but not drawn at the termination of the year. He places himself on an equality with us, and only draws out there half his salary, whilst the local directors get 50l. a year each, instead of 100l. The expenses of the mine, 1,179l. 6s. 8d., are made up of such items as outlay on the concrete dam, which was heavy, haulage, candles, travelling, postage,

oil, charcoal, erection of machinery and the like. There is an item of 347. 18s., which was freight for tubes and other things sent from here, because cheaper. There is also an item of freight, 147. 12s. 1d., which has reference to stationery and piping. Under the head of general charges, 1637. 13s. 1d., the greater part of that is the cost of remittances to the mine. We only make our remittances at such times as we are satisfied they are really required or will be required, and the result is we remit by telegram. The rest has reference to petty cash. When the local manager has funds in excess of what he requires for immediate use, our instructions to him are to place them at interest, and we do the same here. I think that explains pretty clearly all that may be necessary in connection with the balance-sheet. My next duty is to

MAKE YOU ACQUAINTED WITH THE PHOENIX MINE,

of which you hear for the first time, and it may just be possible that you may think I am placing the matter before you too much *couléur de rose*. We have acquired the mine for 250%, and work will be proceeded with immediately. The Phoenix used to be called the Kangaroo Mine, but about 12 months ago it came into the hands of four working men—the Lynn Bros. and another. The mine is situated about 2 miles north-east of Mount Morgan, and it consists of eight men's ground, being 800 ft. long by 400 ft. wide. Previous to the present ownership rich surface stone had been taken out, and the crushings in 1890, at the Crocodile mills, were 37 tons for a yield of 106 ozs., and at your mill 28 tons for a yield of 80 ozs. Thus the total yield of the mine during the past year from the desultory work of these four men, unaided by any machine facilities, has been 341 ozs. of gold, producing 7457. At least, 1 oz. per ton, or 2607., has been lost by these men through the utter impossibility of saving all the gold. These men have divided their claims into 48 shares, and have sold several to chosen partners. The mine is now your property for the payment of 250%, which has been remitted, and already paid. One circumstance that induced us to settle this purchase very promptly was the fact that we received samples of stone, which were divided into three portions, one being sent to the Cassell Gold Extraction Co., and another to the Gold Ores Reduction Co., and the remainder we kept ourselves.

RESULTS.

The result, as obtained by the Cassell Co. from a sample weighing 1½ lbs., was 34 ozs. 6 dwts. 23 grs. of gold, and 5 ozs. 16 dwts. 12 grs. of silver to the ton of 2,240 lbs. The assay, inclusive of the coarse gold, was to the extent of 40 ozs. 10 dwts. 17 grs. of gold, and 7 ozs. 2 dwts. 2 grs. of silver. They were so pleased with the ore that they stated they would make no charge for their services. (Cheers.) At the same time we sent a sample to the Gold Ores Reduction Co., which at that time was very popular. We received no reply from them, although we wrote frequently asking the results of their treatment. Accidentally, on July 3, I met a gentleman connected with the process in Moorgate Street, and upbraided him for not attending to the matter in a more business-like manner. He surprised me by saying that he had the result in his pocket, but for reasons of his own had not handed it to his superior. The treatment gave 41 ozs. 6 dwts. 11 grs. of gold to the ton. Now, if the ore of the Phoenix Mine gives only one-fourth of that we have obviously

ACQUIRED SOMETHING VERY GOOD INDEED,

but, at the same time, we should remember that these are laboratory results, which cannot be expected when the ore is dealt with on a commercial scale.

A SHAREHOLDER: What was the weight?

The CHAIRMAN: 1½ lbs. in each case, and it was only by sufferance we obtained these specimens. We received about 5 lbs. weight of stone altogether, which was exactly as taken from the vein. There does not seem much necessity when the ore is subjected to the Cassell process to reduce it to a fine mesh. Although Mr. Ballard asked us to send him fine vanners and concentrators, the action of these two machines does not differ widely. When we have the knowledge of the fact that it does not require to be reduced to a mesh higher than 60 we are in hopes that by our own process, with the aid of the Watson and Denney pans, we shall be able to reduce it sufficiently fine to treat it by that process. We thought it desirable to telegraph to Mr. Ballard on Oct. 1, so that you should know the exact position of affairs at the present time.

A TELEGRAM AND A REPLY.

"Own meeting, Oct. 7; telegraph position of affairs."

On the morning of the 5th we received his reply:—

"Immanuel No. 3 shaft has been sunk 20 ft. deep, making total depth from surface, 110 ft. We are working night and day shifts. Ore improving as we go down. Phoenix hauling machinery will be finished on Oct. 11, and work will be commenced Oct. 12. Sinking the shaft below the 150 level everything looks well. Now building chlorination process; expect to finish Oct. 21." The great point is that

THE ORE IS IMPROVING AS WE GO DOWN.

(Cheers.) I told you the result of our treatment of the Phoenix ore by mill. We returned 2 ozs. to the ton, and kept the tailings to ourselves. The chairman closed amidst cheers by offering to answer any questions that might be addressed to him.

Mr. JENKINS: I beg to second the adoption of the report so ably proposed by the chairman. I need hardly say that, like my colleagues, I give a great deal of attention to the affairs of this company, and shall be pleased, in concert with Mr. Wilson, to answer any questions that are put. I am satisfied that in the Phoenix we have acquired a property likely to be of great value. In sending the reports of the Cassell Co. to Mr. Ballard we suggested to him that if he knew there was undoubtedly a quantity of stone similar to that which he had sent to us existing in the Phoenix property he should endeavour to continue his negotiations either to obtain the stone for the purpose of crushing or get an out and out interest in the mine. The reference Mr. Wilson has made to the cross-cut we have put in from the No. 3 Immanuel, which, you will remember, is the point most westerly from Mount Morgan we have yet worked, is important. There are a series of shafts called "Immanuel," which have tested a large range of ground. Mr. Ballard was satisfied with the results he obtained in the No. 3 at the 65 and other points, and he then tested this ground by taking his shafts to the north 2, 3 and 4, so that we had a good range of ground in the event of our getting anything good, and he proved that it

was fairly equal to what we had passed through in the No. 3 shaft. With reference to the eastern side, the old property on the slope of the hill—that part we had temporarily abandoned in consequence of the water. In sinking Immanuel shaft we get relieved from that water by means of a cross-cut which runs from the Immanuel shaft No. 3 to underneath the winze J. One word with regard to the telegram. The statement is that *the ore is improving as we go down*, and our hope is concentrated in that. This company was formed for the purpose of going to the deep to see if we could tap the sources from whence sprang the Mount Morgan deposit. Immanuel No. 3 shaft is 70 ft. lower than in any point we have attacked on the tunnel side, and it is undoubtedly to reach the lodes which we feel sure do exist in depth that we have carried on this business at all. Our experience warrants the belief that there is stone to be found at a depth likely to be profitable, and we are only doing what our friends adjoining us are doing. They, as you are probably aware, are sinking a most important shaft, at large cost, close to our southern boundary, within 200 yds., and directly towards us, and, therefore, they must have it in their midst, or why should they not have gone off in other directions than in ours. We may take it they have evidence that that is the point at which they expect to be able at a certain depth to get profitable ore. We only know from what we see in the Press as to what they are doing, but I think that they must hold the same opinion that we have, that there are lodes at a depth in the direction we are attempting to seek them, and if they exist on their property at the point they are working they must, as we are advised, also exist in ours. (Cheers.)

DISCUSSION.

Mr. LOVELL: I am only a small shareholder, but consider the report of the manager unsatisfactory. It ends all in promises, for which we are paying 6,500% in expenses, of which 5,625% is spent in Queensland and 1,200% here, out of which the directors receive 700% a year. (Laughter.)

The CHAIRMAN: I have already explained that they receive nothing of the kind.

Mr. LOVELL: The secretary is paid 250%, and probably gets the same from several other companies, but I think 100% a year ample. The office rent is charged in the same way, whereas it should be only a proportion.

The CHAIRMAN: We desire the fullest criticism, but you, sir, are referring to items that do not exist. Where is the office rent? (Cheers.)

Mr. LOVELL: I withdraw that statement.

The CHAIRMAN: 250% is the remuneration paid to the secretary, for which he provides us with clerical assistance, gas, coal, office rent, and other necessities. (Cheers.)

Mr. LOVELL: Then this is 101% represents calls in arrear.

The CHAIRMAN: We are dealing with the balance-sheet only to Dec. 31, but even as it is that amount of arrears compares favourably with most other companies one could name, in whose balance-sheets it is not unusual to see sums between 2,000% and 4,000% unpaid. At the present time our arrears of calls do not much exceed 50%. (Cheers.) When you consider the shareholders have been without a dividend so long (a fact we deeply regret) such a close payment is a sufficient warranty that they are pretty well satisfied with those who administer their affairs.

Mr. LOVELL: I was threatened with law proceedings, though I was abroad. It is just possible this piece of ore has come from somewhere else, and may not be a true sample of what is to be found in the Phoenix. We have dwindled from a mining company to a crushing company for other people.

The CHAIRMAN: Your criticism is somewhat scathing and not altogether correct. In the first place you accuse us of making promises. I never made any promises.

Mr. LOVELL: I said the manager.

The CHAIRMAN: I am an ardent disciple of that cute philosopher who said you should never prophesy unless you are sure. I never do, but it is my duty to place before you the position of affairs to the latest date, to tell you what has been done, what we are doing, and what it is proposed, and there my duty ends. I am afraid you are influenced unfavourably towards us in consequence of steps it was necessary to take to recover the calls due from you. (No.) We are entitled under the articles to make calls of 6d. per share every three months.

NO CALL SINCE FEB.

With a view to husband our resources, we have not asked you for a single penny since the beginning of Feb. We do not press any shareholder to pay if he gives fair reasons why he should receive a little time and consideration. In such cases we invariably give it, but when it becomes necessary to write five or six times to shareholders, that costs a great deal in postage and stationery, and when, without avail, these intimations have been made, I think it is time to take other steps. (Cheers.)

Mr. CARSON: You said the surplus funds were put out to interest, but I do not see any item here under that heading.

The CHAIRMAN: The money deposited has been in 1891, and will be shown in the next balance-sheet.

Mr. CARSON: I think the accounts should be presented more promptly. We cannot discuss these as they are too old.

DIRECTORS IN DAILY ATTENDANCE.

The CHAIRMAN: It was our intention to hold half-yearly meetings, but as they cost about 50%, and as that is a consideration to us, we have saved it, but eagerly courted the visit of large shareholders to the offices where Mr. Jenkins and I can be seen between the hours of 10.30 and 1 o'clock every day except an occasional Saturday. (Cheers.)

Mr. CARSON: Who is sponsor for this lump of ore coming from the Phoenix Mine?

The CHAIRMAN: Mr. Miller, our mine manager, who superintends the treatment of the stone, was so struck with it that he went to the Phoenix to ascertain whether there was much of it. He saw the vein was particularly narrow, and suggested that before any negotiations should be entered upon they should allow those people to sink a little further. Between that time and last month we have completed the purchase, and Mr. Miller and our general manager satisfied themselves that they were on mundic stone, which, treated by our own assayer, gave 5 ozs. to the ton.

Mr. HALLETT: Why did they sell the mine?

The CHAIRMAN: Because I believe they were without capital to fulfil the ordinary Government conditions, and because they could not treat mundic ore.

A SHAREHOLDER: It is a mere bagatelle we have paid for the mine in any case. (Hear, hear.)

A SHAREHOLDER: Will you be wanting another call immediately?

The CHAIRMAN: We have made no call since the early part of Feb., but shall issue notices of one for 6d. per share to-night. The average monthly expenditure is from 300l. to 350l., but we must spend more money in order to get to the profitable points as quickly as possible. The resolution was carried unanimously.

The CHAIRMAN proposed, and Mr. JENKINS seconded, the re-election of the two retiring directors, Mr. Wightman and Mr. Figgess. The motion was carried unanimously.

The auditors, Messrs. Kemp, Ford and Co., were also unanimously re-elected.

Mr. FIGGESS returned thanks, and said he had been associated with the company from the commencement and was on the original committee of investigation. The hearts of the directors were in their work, and as to the fees, he could assure his hearers that what he received did not pay his expenses in coming to the board meetings.

Major DE WINTON proposed a hearty vote of thanks to the chairman for the manner in which he had elucidated the position. He had come out of the "heckling" to which he had been submitted in a very creditable manner to himself. (Cheers.)

Mr. SPILLMAN seconded the motion, which was carried by acclamation.

The CHAIRMAN: On behalf of my colleagues and myself I thank you. Your compliment will act as a stimulus to us to pursue the good work which we are determined to carry to a successful issue if it be possible to do so.

THE ELMORE GOLD, LIMITED.

SHAREHOLDERS UNANIMOUSLY DECIDE TO DEEPEN THE SHAFT, AND TO PROVIDE FUNDS FOR THE PURPOSE.

AN extraordinary general meeting was held at the Guildhall Tavern, Gresham Street, on Tuesday, "for the purpose of considering the present position and future prospects of the company, and, if deemed advisable, to pass a special resolution for the voluntary liquidation of the company."

Mr. J. R. Armitage

(chairman of the company) presided.

Mr. C. HARRISON SMITH (secretary) read the notice of meeting.

A PLEDGE FULFILLED.

The CHAIRMAN: Gentlemen, this meeting has been called in accordance with the pledge I gave at the first meeting after the re-construction of this company that no further call than 6d. should be made without the shareholders being consulted as to the position and prospects of the company. I will first draw attention to the fact that this is not necessarily a meeting for winding up—(hear, hear)—but as expressed in the circular sent along with the notice, notice was given to prevent the consequent delay and expense if it were your wish that nothing more should be done. In the first instance, I will tell you what we have done during the past six months, or a little more, since the re-construction. We have had, as you are aware, the call of 6d. per share, amounting to 7,500l. We have a balance remaining from that of a little over 700l., less the month's remittance to the mine. We have remitted to the mines during the period of which I speak, 5,779l.; the re-construction expenses, liquidation and re-registration, amounted to 574l.; the London expenses are 433l., which includes office and travelling expenses, directors' fees, printing, and the Western Union Co. for telegrams. We have, as I told you, just about sufficient for the demand that will be, or is made, by wire upon us for the month's remittance to the mine. We have at the mines as nearly as we can estimate, not having received the returns for Sept., 18,000 in stores.

I HAVE BEEN TO AMERICA,

as you have been informed, and went as far as Chicago to meet the manager of the company, where I had a long and serious talk with him about the present position and prospects of the mine. This resulted in the circular that has been sent to you. I may say that the manager has sent a telegram, in which he says that there is low grade ore in abundance in sight, but it is not sufficient in quality to pay for the working, and

HE NOW STRONGLY ADVISES SINKING.

I can only express my regret that he did not strongly advise that six months ago. I have always been of opinion that this mine, to do any good whatever, must go down. For reasons that may have seemed good to the manager (and you must well understand that the board in London is practically in the hands of its manager out there), and doubtless, also, for reasons of economy (for I cannot attribute it to anything else), he thought it advisable to stop sinking at 540 ft. in the main shaft and drive east and west on the lode, and go in quest of what there might be in the way of ore. He found two lodes, the Elmore and Alturas, but not at the point that I have always been anxious to get them—that is, at the point of junction. They are still on the level where we are working some 10 ft. apart, and the Alturas lode is showing a large quantity of low-grade ore, which is lower than the manager had anticipated and than I had hoped, and he has made an effort to get down to the point of junction, but up to the present time has not been able to do so. He is only able to work with hand machinery, and that is little better than scratching the surface with a toothpick. At any rate, he has not reached the junction, so that we do not know what is there. We have had, as most of you are aware, during the last month a return of about 1,500 on the stuff worked, and the secretary has taken out the figures, and estimates the cost of this at something under 1,200. That shows 300, if it were clear profit, which it is not, as the expense

of pumping, hauling, &c., would not be sufficiently met by the balance to warrant us in going on.

THE TWO REAL QUESTIONS.

The only questions are two—whether it is worth while going down further, or whether we should wind up? I think it would be a great pity to entertain the idea of winding up. (Cheers.) I would again wish to impress upon you that this meeting was not called with any view of that kind in my mind, but simply in fulfilment of the pledge alluded to.

MR. ARMITAGE'S VIEW.

I am here prepared to recommend strongly to this meeting that the work of sinking should be continued, in which case I can see a fair prospect of doing considerably better. We have gone through the money in rather less time than I had judged would be the case, even assuming we were not to get into any rock at all. I calculated, and I led you to believe, we should continue pretty well with the funds we had to the end of the present year. Well, there have been causes that have worked against that. The neighbouring company, the Vishnu, which at that time was paying us a fair amount for working up their ores in our mill under a contract, has got into poor ground, and has been unable to continue on the contract, and thereby has not allowed us to realise from them a portion of our expenses on which I calculated. They were getting out something like \$20 rock at the time I spoke of. At the present time they have a considerable quantity of something under \$10 rock available, which they cannot afford to work under the present arrangement, and they are in the same unfortunate position as ourselves—in not having any money in hand with which to work. I have had interviews with the directors of that company, with a view of making a new working arrangement, and think, without going into details, I may venture to say it will be a very good one for this company. We shall be able to work, at any rate, without loss, and with the prospect of a fair margin of profit. It really rests with you to decide what will be done. I do not know that I can enlarge upon what I have said to you. The position is that we have received estimates from the manager as to the cost of sinking the shaft, which we think excessive. We think it can be sunk for a great deal less, but have not yet been able to get an independent report upon that question, and are therefore not able to go fully into it with you. We propose, if you decide to go on, in the first place, to make a call of 3d. per share. We also propose to take an independent opinion as to what can be done with regard to sinking the shaft, and I think we can manage to pretty well pay, or nearly pay, if not altogether, with the arrangement with the Vishnu Co., our expenses in the meantime. The question of the depth of the new shaft will be an important one, and I might just as well say, first, that whilst it ought to go down the depth of 500 or 600 ft., it will be quite beyond the powers of this company and its present working capital to do that, but we may get down a proportion of the distance with the means at our command. If we decide to wind up, the stores, which cost \$18,000, would be to a large extent sacrificed, and there would be a serious loss on them. The prices which are taken are cost prices. I should add further that out of the stores a considerable quantity has lately been purchased by the manager in the expectation that we should go further, and I must give him credit for this that he has bought them quite 10 per cent. cheaper than we paid last year, and he has been gradually year by year getting them at lower prices. I cannot say that there is any decidedly hopeful prospects before us, but there is a fair chance of the mine turning out better, and most of you know who have had to do with mines how suddenly they change from good to bad or bad to good. We have the hope and chance of something coming in the future, and on that chance I, for one, am prepared to go forward with the matter, and would

STRONGLY ADVISE THE SHAREHOLDERS TO ACCEPT MY VIEW.

I have received, only a few moments ago, a letter from, I believe, the largest shareholder in the company (Mr. Bowen), a gentleman holding between 40,000 and 50,000 shares. He writes to say that he is very much disposed, subject, of course, to our opinion, to recommend the adoption of Mr. McCornick's suggestion that the shaft be sunk further, and he goes on to speak as to the question of sufficient capital:—

"If there is sufficient capital, the works should be pressed forward with all vigour. I regret my inability to be at the meeting to-day, but if you think it desirable to make use of this letter you may do so. As you are aware, I am the owner of between 40,000 and 50,000 shares."

It is satisfactory to the board to feel that one having a stake like that is prepared to go on further, and I hope you will have sufficient confidence in us, and sufficient hopefulness in the future of the mine to pass a resolution to that effect. The matter is now before you, and I shall be glad to hear anyone who wishes to speak or move a resolution. Perhaps it will be more in order if a resolution were moved first. (Cheers.)

DISCUSSION.

A SHAREHOLDER: What do you expect to find when you go down 1,000 ft.? We were told if we went down 500 ft. or 600 ft. we should strike the junction of the Elmore and Alturas lodes. Unfortunately I came in late, and you may have explained this before I entered.

The CHAIRMAN: I did say that the shaft was not sunk to the depth originally intended, and that in putting out the cross-cut to find the lodes they found the two lodes separated by about 10 ft., and my opinion is, and has always been, that the only chance for this mine lies below that junction. I am still of that opinion, and am disposed myself, as shareholder in the company, to continue till we get to some reasonable depth below the junction, where, according to all the opinions I have been able to get from experts (I make no profession to be one myself) we have a reasonable chance of finding a much improved quality of ore. The lode is not barren at the present time. The words used by the manager in a telegram only dispatched two days ago are "Quartz in winze 8 ft., with well defined fissure vein. The ore from these workings will not pay. Low grade ore in abundance in sight; is likely to improve with ——" And the word that follows is not to be found in the code book, and we cannot tell what it is, but think it means "in depth." "I advise sinking the shaft." (The code word has since been repeated, and now reads "depth.")

Mr. HODGKINSON: Are the two lodes you speak of—Alturas and

Elmore—going down perpendicularly, or do they converge to one another?

The CHAIRMAN: 100 ft. above the present working they were 25 ft. apart, and they have closed in 15 ft. in 100 ft. of sinking, and the lodes have both straightened—instead of going at a considerable angle as they did at the higher level, they are dipping straighter down.

Mr. GOODALL: This statement says that you are averse to sinking further.

The CHAIRMAN: I was averse to giving any positive instructions. I did not feel I was warranted in doing so with the facts that were before me. I am averse to undertaking on my own responsibility a matter which might land us in a heavy debt.

Mr. GOODALL: Do you think 3d. per share will be sufficient to sink the shaft to the depth you anticipate the junction will be met with?

The CHAIRMAN: Certainly not—that is only for the time being, and even the other 3d. will not take us down 600 ft. I am perfectly satisfied of that, but hope our present funds will enable us to sink a less distance than that and get into fair paying rock, after which we shall be able to do some further sinking. I have pinned my faith time after time to this, that the junction of the lodes is the place where the success of this company will be achieved, and we have not reached that yet. I can only regret that we did not go down persistently in the first instance, but necessarily we were in the hands of the manager for the time being.

A RESOLUTION TO GO ON.

Mr. GOODALL: I would propose, "That the directors be requested to make the call of 3d. per share, and continue the works."

Mr. SYMES: I second that.

A SHAREHOLDER: I should be glad if you will indicate the depth at which the junction may be found.

The CHAIRMAN: It is only an opinion, and I would scarcely advance it as more, but in one of my conversations with Mr. McCornick, he expressed the view that he might be able to reach it in 60 ft. He began sinking a winze, and the latest advice is that he is down 35 ft. He is trying to get down and see what the lode is there. When he has done that, it is only a test, for we should have to take other steps to reach that point in a way in which we can properly work the lode and extract the ore. We have a gentleman present who knows a good deal about these things, and perhaps he will throw a little light on that point.

Mr. HAUGHTON: I must say I strongly support your policy of sinking, and all I regret is that we have been frittering away money in the upper part of the mine which ought resolutely to have been applied to sinking. The manager has been looking for the Confederate Star lode. However, the money is spent and it is no use crying over it. What we have now to do is to get down as quickly as we possibly can, and utilise every penny we have for the purpose. What Mr. McCornick is sinking this winze for I fail to see, for I do not understand clearly how he is going to get the water out except at considerable expense and no benefit. The main thing we have to look forward to is the sinking of the shaft, and I think you ought to be prepared, in case of it being necessary, to put in an auxiliary pump and save any further expenditure until the board determine what price they are going to pay and the manner in which they will give out this contract. I am of opinion that Mr. McCornick must to a greater extent than heretofore be held in check. I am quite sure \$3½ a day is a rate at which a manager, who pays it in wages, would be looked upon as a very good fellow. The whole of the

STOPPING OUGHT TO BE DONE ON TRIBUTE, AND THE SINKING ON CONTRACT.

Again, I think, considering that Mr. McCornick has so far departed from the programme, though he may have done his work very well, yet not being successful, he probably might be induced to become an interested party by taking a portion of his salary out of profits, when we get them. I think he has been paid very well, and that if he gets in the future 60 per cent. or 70 per cent. of his salary paid to him, and takes his risk with the company for the remainder, it will give us a great deal more confidence that he is working with the spirit of economy, because then it thoroughly would be to his own benefit to do so. I was at the office and saw the secretary, and in the course of conversation he told me there was an arrangement, or a proposition, to take the Vishnu on tribute, and that the proposition was something to the effect that the Elmore Co. would pay 25 per cent. to the Vishnu of this tribute. I should like to ask the question if there is anything really in that before going further.

The CHAIRMAN: I do not know that there is anything to answer in your remarks. I chiefly agree with them on the matter of sinking. I am sorry you put this Vishnu matter forward, because it is not the intention of the board to make any such arrangement; certainly not on the principle of "heads they win; tails we lose," which it would be if we got to low grade stuff. As a matter of fact we know there is a quantity of low-grade ore in their mine which you may remember is connected with our shaft, and they have to pay us a considerable price for hauling and crushing what they bring to surface. They pay us even for the waste that is done on the dumps, but have been obliged to abandon a great deal of their low-grade stuff, because it would not pay them to work it under the terms of their contract with us. The board had no intention of making any arrangement of the kind that would enable them to get a profit out of their low-grade ore at the expense of the Elmore Co. Any arrangement that is made by the Elmore board with them will; be one that will secure this company from loss and with a view of reducing our expenses. No member of this board will be a party to an arrangement to take out their low grade stuff and pay them a royalty for taking it out. The matter is not in a sufficiently forward state to speak of openly, and I can only ask that you will give the board your confidence that they will take care not to make such a bargain as will be detrimental to the interests of this company.

Mr. HAUGHTON: I am perfectly satisfied with your explanation. It is necessary that Mr. McCornick should be carefully watched, and that whoever has the taking of the tribute should use discrimination and judgment. That Mr. McCornick has put the thing forward evidently shows that he is more or less either interested in, or influenced towards, Vishnu. I heartily support the policy of continuing the sinking of the shaft, and the calling up of even 6d. a share.

A SHAREHOLDER: What is the salary of Mr. McCornick?

The CHAIRMAN: We pay \$250 a month, and I believe the Vishnu the same.

ECONOMY EXERCISED.

Mr. GRETTON (director): With reference to the remarks of Mr. Haughton about economy, your directors have ever since the beginning done all they could to reduce the expenses at the mine, and Mr. McCornick is receiving a salary a great deal smaller than that paid to Mr. Watson, his predecessor, when the present board came into office. You must not forget that you are here in London and the mine is being worked in America, and that it would be very difficult for us to be able to say what a manager shall take or not take. We are a good deal governed by the question of whether we can get a man to work at the price, and every letter, from the beginning, sent to him has urged him in the strongest terms to use the greatest economy. We have been told again and again that he was doing so. We have also got information, and done all we could, and although I am certain the same course will be pursued in the future, it is a question whether you can get a man to accept your terms, and we are not able to control that matter. You may be certain your directors will do all they can to reduce expenditure where possible. I do not know whether you will be able to secure the services of Mr. McCornick at a smaller salary than he is receiving now, but I think it very doubtful.

Mr. HAUGHTON: My remarks in regard to economy were not made in that spirit, but Mr. McCornick has spent an enormous amount in trying to cut the Confederate Star, and doing a lot of level driving, all which money and energy ought to have been expended solely in sinking. That money has been unwisely spent, but this should be devoted solely to sinking.

WHERE PAST RICHES CAME FROM.

Mr. J. H. A. SMITH: I do not agree quite with the last speaker, for we must remember that the riches which made Alturas famous at the time, the dividends that were paid, and the profits made, were found between the 2nd and 3rd levels, and the question I was going to ask the board before Mr. Haughton spoke was whether there was any possibility of obtaining ground that would be likely at a moderate depth to give us a repetition of Alturas profits. We are agreed that sinking is important, but looking at the absolute uncertainty of the result, it would be advisable if we could get a second string to our bow. Is there any possibility of obtaining land in the shallower levels that would be similar to that of Alturas out of which profits were made?

The CHAIRMAN: I do not think there is. If my information is correct, the ground out of which the dividends were obtained that were paid by Alturas did not extend as far even as our own boundary on the east or west, and did not go to anything above. All that was there was taken out, and Mr. Watson tried further west, and in the 4th level and up as far as he could to the 2nd level, and extracted all that was possible, but so far as my recollection of the reports of that time go, neither east nor west, north nor south was there a prospect of anything of the same character being found as in that particular pocket. It went poor and then varied so much that Mr. Watson, who was practically responsible for the sinking of the new shaft, formed the opinion that on going down to the point of junction we might calculate upon \$8 rock. He expected that the lode would be from 8 to 14 ft. wide, in which case we would have had a good paying mine of a low grade character. One scarcely knows what will pay in the way of low grade ore if you have only plenty of it. I have had my attention drawn recently to one company in America that is working ore that has yielded \$4.12, and they have got \$2.80 profit out of it.

MR. MCCORNICK'S SERVICES.

Mr. GRETTON: I think a word with reference to Mr. McCornick's services will be useful. I do not think he is so much to blame as Mr. Haughton seems to believe. A great deal of this prospecting was done with the view of finding the Confederate Star vein, which everybody thought would be rich. He has found it and come to the conclusion that it is not of the value expected. Beyond that he cross-cutted with the idea of finding the lodes as they go down, hoping to get pay ore for the time being, so that he could have some funds out of the mine, and not draw so much money from this side. In that view, personally, I think he was quite right. We were very anxious to have some returns on the other side, which, added to the funds in hand here, would enable us to go on further. If, for instance, in prospecting he had found a good grade of ore he would have had some funds in hand, and with that money have been able to have done probably without this call. He would then have sunk the shaft with the money obtained from the mine. Personally,

I AM NOT AT ALL DISPOSED TO BLAME HIM.

He has not succeeded, but then we do not succeed in all we try. (Hear, hear.) He has endeavoured to find something in order to be able to increase the funds at his disposal. I think that has been his policy—rightly or wrongly. He may be wrong, and you may not consider him worthy of your confidence, but that you must decide. He is, however, the manager of the mine, and as such you must leave the direction in his hands, or put it in those of someone else. If he is a man worthy of your confidence

GIVE IT TO HIM WITHOUT STINT,

and if not, then supplant him by somebody else. Unless you are prepared to come to the conclusion that he is not worthy of your confidence, I, for one, shall not blame him. (Cheers.)

Mr. MURCK: In supporting the resolution, which I do most heartily, I think all we can do is to sink the shaft, and not dream of swopping horses when we are crossing the stream. It would be fatal even to give Mr. McCornick the idea that we are dissatisfied with him, which we are not. He is our manager, our head, in point of fact (with all respect to the chairman), and therefore we must not quarrel with him. As to the financial question, you intimated about this time last year that a certain sum would be payable by the Vishnu for services rendered. May we consider that a good asset?

VISHNU DEBT.

The CHAIRMAN: 1,500%. Is their indebtedness, but we have not taken that into account in estimating the financial position, as it would be unwise at the moment to press for payment. The Vishnu

directors are disposed to do all that lies in their power to liquidate that debt, and are willing to put things in such a state that they can liquidate it, and at the same time, in all probability, to afford us a respectable bonus for our indulgence. That is the form the negotiations at present are assuming. As a matter of fact, the 1,500*l.* was their contribution towards the sinking of the shaft. They do not get any equivalent except the right to use that shaft for the purposes of their mines.

The motion was carried unanimously amidst cheers; so also was a further resolution, proposed by Mr. HAUGHTON, and seconded by Mr. MURCK, which awarded the cordial thanks of the meeting to Mr. Armitage for presiding.

THE LINARES LEAD MINING CO., LIMITED.

A SATISFACTORY STATEMENT OF THE COMPANY'S PROSPECTS—THE SECRETARY VISITS THE PROPERTY, AND EXPLAINS WHAT HE SAW.

THE half-yearly general meeting of the shareholders of this company was held at the Office, 6, Queen Street Place, E.C., on Thursday, Oct. 8.

Mr. Richard Donagan

(chairman of the company) presided.

Mr. HENRY SWAFFIELD (secretary) read the notice convening the meeting.

The CHAIRMAN: Gentlemen, we do not on this occasion come before you with quite such a glowing account of affairs as it was our pleasure to present on the last three occasions. In Apl., 1890, we met, having just declared a dividend of 10*s.* per share; in Oct. of that year the dividend was 12*s.*, and in Apl. of the present year it was again 12*s.* On this occasion we have to moderate our transports somewhat, inasmuch as we have not been able to achieve a dividend of more than 8*s.*, which, however, is the same amount as the two dividends declared in Apl. and Oct., 1889. The sales of lead and of carbonates have been much the same as in the previous half-year, but the prices which the produce has yielded have been lower. There has not been any period in the half-year during which there has been a spurt in the price—and which, when it does occur, affects favourably the average of the half-year—so that the money received for the produce has been less. Besides which the value of the stock on hand at the close of the half-year was reduced, partly because the raisings from the mines were some 94 tons or so short of those in the previous half-year, and partly because the valuation of the stock on hand had to be put a trifle lower. On the other side, of receipts, and expenditure account, the total cost for the half-year came out at 1,450*l.* more. The consequence of all this is that the resulting profit was 5,836*l.*, which, although a very satisfactory profit in itself, and indeed a surprising profit seeing the price which our produce realises in these days, does not compare favourably with the grand profit of 9,433*l.* made in the previous half-year. As to the increase of the cost, you, doubtless, will not have failed to observe in the reports of our superintendent that in Linares, exploratory works have been kept on "with great energy," and at Quinientos, like works "have been pushed forward in a very expeditious manner," and besides that we have had at Cordova, during the half-year, a slight taste of the drawbacks of what may be called a Castilian version of a strike. The attitude was boldly met by our officers, but some concession had to be made to avert serious interruption to work, and at the same time there were rises in the prices of coal and coke, though, on the other hand, there was a reduction in the charges for cartage, under recent arrangements, which work well. Mr. Taylor will doubtless, as is usual on these occasions, give us his views on the present position of the mines, and to-day we have a new feature to mention. You may perhaps have observed that the notice of this meeting was signed by me, and that the balance-sheet was signed by Mr. W. F. Garland, *pro* secretary, and this was done because at the time that these documents were prepared Mr. Swaffield was absent from this country on a visit to the properties of the three companies, meetings of which are held here to-day. Although not an expert in mining, he has been underground, and as he is an expert in bookkeeping and office routine, he has been bringing his experience to bear in a manner which may be regarded as a modern edition of a kind of Spanish Inquisition—that is to say, not into matters of orthodoxy and morals, but into cash accounts and bank balances—and he will no doubt tell you that he has not had to have any *auto-da-fé*, for lax practices. We may congratulate him upon his safe return, inasmuch as he had a narrow escape from being in the train to which the recent sad accident occurred, and when some Englishmen were killed and others injured. I will now conclude by moving, "That the report now taken as read, together with the accounts and balance-sheet, be received and adopted."

Mr. WILDE seconded the motion.

Mr. JOHN TAYLOR: Gentlemen, the result of the exploratory works during the last six months are not as favourable as we should have liked. At the same time, the reserves are fully maintained, and the outlook at several points is very encouraging. One great work we have in hand is the 145-fm. level east of the Santa Tomas shaft in the old Pozo Ancho Mine. There we have a good lode 6 ft. wide, and very favourable in its character, having quite the appearance the lode has in the upper levels where it was so rich, and now again we have good stones of lead in it, but not in sufficient quantities to pay for the extraction. At the same time it is a part of the mine which we must look to for the future. We must continue these exploratory works, and we are going to continue them in a different direction. There is not the least doubt we had proper grounds for hoping and believing we should meet in this level some of the rich shoots which were worked in this Pozo Ancho Mine up nearer the surface. So far this hope has not been fulfilled. The level has now been driven as far as we think it well to do so. There are several reasons why we do not propose at present to go further, some of which it would not be well to mention in public meeting. Parallel to this great vein there are others, and we are now from the end of the 145-fm. level going to drive a cross-cut to intersect these lodes. Of course, it is a trial which you will watch with very great interest, and in another six months, or more, we shall see the result. In Peill's shaft in the 175-fm. level (the bottom level) an improvement has been noticeable, and it has been turning out very well lately. This gives us great encouragement to sink Peill's engine shaft to a greater depth. You

will notice we say in the report, "At Quinientos the 150-fm. level east of Taylor's shaft is being driven on a valuable lode, worth at present about 2 tons to the fm." I mention this because it is an important point, as there is a

DECIDED IMPROVEMENT ON THE LEVEL ABOVE.

We do not always get that; we get it equally good, but we are not often able to mention an improvement in the lower levels on the levels above. In the 130-fm. level we have been opening out fairly good ground, and a very considerable length of an equal quality is to be anticipated. I do not think there are any more details I need mention. I am anxious you should hear what Mr. Swaffield has to say. He has told me several very interesting things about our property there, and I am sure you will be glad to hear from him his general impressions, and how important the business is we have in hand.

Mr. HENRY SWAFFIELD: Gentlemen, in the course of my recent visit to the company's mines I collected a vast amount of information, which will be very valuable to me. I took the opportunity of my being at Linares to make a general examination of the books of account which are kept there. I also verified the cash balances, both at Linares and Cordova, examined vouchers for payments made, and satisfied myself generally that everything was in order. I do not pretend to have much knowledge of practical mining, but I, nevertheless, went underground, and traversed the various workings, Mr. Tonkin explaining to me the principal points of interest. It was made perfectly plain to me that there is a lot of life in the old mine yet, and that there are still points of good promise, especially in connection with the workings on the north lode. We may hope, too, that when a cross-cut is put out to intersect the side lodes in the 145-fm. level driving east of St. Tomas shaft, some good ore bodies will be opened out. In any case, we shall have a large supply of ore from the tributaries for a long while to come, and on this we get a good profit. I did not go down into the Quinientos Mine, but I learnt that our prospects there are good. Fortunately, our mines are equipped with excellent machinery, and labour is moderate in price, so that we are in a good position to cope with the low prices for lead now prevailing. We have an excellent staff of agents at the mines, and they appear to work very harmoniously together, and with Mr. Tonkin, and to be doing their very best to promote the company's interests. I visited our smelting works at Cordova, and was much pleased with them, for the work there is well and economically done, and the lead which is turned out is of excellent quality. I likewise proceeded to Malaga to see to our shipping arrangements, so that there is no department of our business that I did not look into. I was able in some cases to make suggestions which I believe will help to further the company's interests, but on the whole I am bound to say that our business in Spain is conducted in a most orderly and satisfactory manner. To sum up my impressions, I may say that I think our shareholders may take heart, for my opinion is that the company will continue to make good profits even at the present low price of lead.

The motion for the adoption of the report and accounts was then put to the meeting and carried unanimously.

Mr. J. W. JEPPE, in proposing a vote of thanks to the chairman, directors, managers, and Mr. Swaffield, said: At these meetings part of the regular bill of fare was a speech from Mr. John Taylor, but, at this meeting, they had also been treated to a very interesting report from their secretary, which was much appreciated.

Mr. HALSE seconded the motion, which was carried unanimously.

The proceedings then closed.

THE FORTUNA CO., LIMITED.

THE CHAIRMAN GIVES REASONS FOR THE DECREASED PROFITS—ENCOURAGING FEATURES IN THE MINES—MR. SWAFFIELD'S IMPRESSIONS.

THE half-yearly general meeting of the shareholders of this company was held at the Offices, Queen Street Place, E.C., on Thursday, Oct. 8, to receive the accounts, balance-sheet, and reports of the directors and auditors for the half-year ending June 30.

Mr. Robert Henty

(chairman of the company) presided.

Mr. H. SWAFFIELD (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

UNFORTUNATE CIRCUMSTANCES.

The CHAIRMAN: Gentlemen, the report and accounts are so fairly put before you that it leaves very little for me to say, and those of you who have had an opportunity of presiding at public meetings will know perfectly well how difficult it is to say something about nothing. You have all seen these accounts, and know they are not such as we should have liked to have presented to you. Our dividend has been less, and our profit considerably less, during the past half-year. These have arisen from a combination of circumstances. We all know how much the commercial derangements during the past few months have affected everything, and, consequently, the price of lead has been very low. We have also had a good deal of deadwork to do, and have been in good expectation of finding an improvement in our mines, but, unfortunately, during the last year we cannot record so satisfactory a return as we have had on former occasions. These circumstances combined have reduced our profits, as shown by our accounts, which are before you. Nevertheless, it is never too late to mend, and we have very good reason to think that as further progress has been, and is being, made, in one or two of the levels, we shall find

A LARGER RETURN DURING THIS PRESENT HALF-YEAR,

and in the future, because under about where we are now proceeding to work there has been a very much better return than there is at present. That is only one of the many hopes miners must always have if they are to mine successfully. We have been making a fair percentage on our original investment, although it is poor compared with some of our former dividends.

A DIRECTOR FOR 35 YEARS.

I have been a director of our company for 35 years, and have seen a great many fluctuations during that time, both as regards the price of lead, which I have known as high as 22*l.* to 23*l.*, and as low as 10*l.*,

and also as regards the produce of the mine. Nevertheless, we are paying a moderate dividend, though less than formerly, and I see no reason why we should not continue not only to pay a moderate one, but improving ones in the time to come. There is nothing more I can say that is not already stated in the report, but as regards the details of the work, both Mr. Taylor and Mr. Swaffield (who has lately returned from the mine) will be able to give you more information than I can, and information which will be satisfactory to you more so than the statement of accounts. I now beg to move the adoption of the report and accounts.

Mr. FREDERICK W. BIGGE (director) seconded the motion.

DEVELOPMENT WORK.

Mr. JOHN TAYLOR (manager) said, gentlemen: There is no particular change to notice in any of the workings since these reports were written—about five weeks ago. In the Canada Incosa mine the sinking of O'Shea's engine shaft was completed in April last, and we are now pushing on a cross-cut west as fast as possible to strike the lode on the west side of the large cross-course. Mr. Tonkin hopes to reach this point in about three months, and to find the level productive here as it was above. This cross-cut will be 20 fms. deeper than the level about it, so that it will open up a very large quantity of ore should the lode be found as productive as we hope it will be. In the Salidos the 212-fm. level and the 200 have been rather disappointing. In the 212 the lode appears to be split into branches. Mr. Tonkin writes he is

DRIVING ACROSS THE LODGE,

and hopes to find the best portion of it on the north side. The 200-fm. level, which I have already mentioned, we have to drive a considerable distance before we get under where we hope and expect to find productive ground. The 188-fm. level has opened up a long piece of lode, which is worth $1\frac{1}{2}$ tons per fm., and we have reason to expect this will continue to be productive for some distance. These development works have not been so successful as we should have hoped, but, at the same time, the reserves have been fully maintained, and we may look upon our position as a very sound one.

Mr. HENRY SWAFFIELD: Gentlemen, I have just returned from a visit to this company's mines, and I am pleased to say that I found our various operations there to be going on steadily and well. We have lately been somewhat under a cloud in regard to the mines, because the lodes have not been turning out quite so well as they did, and partly as a result of this our profits have suffered. In mining operations fluctuations of this kind are constantly experienced, and we have had them many times during the 35 years I have been connected with this company, but I think it will be admitted by everybody that our record as a whole has been a good one, so we ought not to be discouraged now. The fact is we have for some time past been doing a lot of dead work in the form of sinking shafts and driving cross-cuts and so forth, but we may reasonably hope to reap the fruit of this by and by. It has been a costly bit of work at the Canada Incosa Mine to put down O'Shea's engine shaft from the 130 to a 150-fm. level. Fortunately this work has now been completed, and I may say that the whole cost of it has come out of revenue. This deep level is now being driven to come under the good lode met with in the level above it. At Los Salidos, too, we have had a lot of outlay on unproductive levels, but we have reason to hope that there is good ore ground ahead of us. We have a first-rate superintendent in Mr. Charles Tonkin, and I need hardly say that his ripe experience, his knowledge of the mines, and his skilful method of dealing with the workmen, are of very great service to the company. He is ably assisted by his son, Capt. Charles Tonkin, jun., who holds the position of rounding agent at the Fortuna Mines, and he seems to be following in his father's footsteps. The other agents are also able and reliable men, who have from time to time been sent out to the mines by our good managers, Messrs. John Taylor and Sons. With skilful managers at home, and a good superintendent and staff in Spain, I can assure you that the mines are worked to the best possible advantage in the shareholders' interest. I made a careful examination of our smelting establishment at the mines, and found everything to be in capital trim, and every care was being taken in the manufacture of our lead. On the whole, I think we may take heart, and if the lead merchants will but give us a reasonable price for our produce, we may soon hope to emerge from this cloud, and to get into prosperous times again. I may say that whilst I was in Spain I looked into our cash accounts at the mines and made a general examination of the books and vouchers, and I am glad to report that I found everything to be correct and in excellent order.

Mr. WILDE: I think I am right in saying that for an immense number of years you have never missed paying a dividend.

The SECRETARY: So long ago that I forget when it was.

The motion was then put to the meeting and carried unanimously.

THANKS.

Mr. WILDE proposed a vote of thanks to the chairman, directors, and secretary, which was carried.

The CHAIRMAN, in replying, said he only wished the shareholders would attend the meetings in a little larger numbers. Their meeting to-day had not been very lively as regards dividends, but it was entirely the fault of circumstances, and by no possibility could any blame be attached to want of management or skill in the working of the mines. (Hear, hear.)

The meeting then closed.

THE ALAMILLOS CO., LIMITED.

IMPORTANT OPERATIONS TO BE UNDERTAKEN AT JUDD'S SHAFT.

THE half-yearly general meeting of the shareholders of this company was held at the Offices, Queen Street Place, E.C., on Thursday, Oct. 8, "to receive the accounts, balance-sheet, and reports of the directors, auditors, superintendents, and mining agents, for the half-year ending June 30.

Mr. Robert Henty

(chairman of the company) presided.

Mr. H. SWAFFIELD read the notice convening the meeting.

THE RESULTS FOR THE HALF-YEAR.

The CHAIRMAN: Gentlemen, if I were to go through what I have just said at the Fortuna meeting it would be really as much as I could say, because what I then said, and the remarks made by the chairman of the Linares Co., apply equally to this. As you see by our report we have made only 2,927*l.* profit during the six months. The difference between this and the profit for the previous six months is to be accounted for by the extremely low price of lead, and on making up the accounts at the end of the half-year the stock in hand has to be valued at the market price, and that tends to diminish or, as it may happen, increase the profits. In this instance it tends to diminish the profits considerably. The mine has been going on in its ordinary course, but there are some points which promise much better. In regard to one or two of those, one especially, where it is reasonably supposed a profitable work may be carried on, though there is a considerable delay required to effect it. Mr. Taylor will much better explain that to you than I can, and, therefore, I will leave it to him. Instead of occupying your time any more I will now move the adoption of the report and accounts.

Mr. FREDERICK H. SIMMONDS seconded the motion.

MR. JOHN TAYLOR'S OPINION OF THE NEW WORK.

Mr. JOHN TAYLOR: There seems a great desire to get away as quickly as possible, and, therefore, I shall not detain you long. There is only one point I need mention, and that is the one which has been alluded to by our chairman. The sinking of Judd's engine shaft was stopped at the 70-fm. level, but the lode at that depth became very much disordered and very irregular in its character, and it became impossible to carry on what would be considered systematic mining work. Now, the 70-fm. level was driven some little distance, and several winzes have been sunk below the level—not the shaft, but winzes. There are three of those sunk to a very considerable depth below that 70-fm. level, and one is down 20 fms. Now, in each of these winzes we have followed the shoots of ore, which have not been very long, but which have been rich, and which is

VERY EVIDENT TO US WILL PAY

if they are attacked in a proper and miner-like way. The only proper and miner-like way is to sink Judd's engine shaft another 30 fms., and drive a 100-fm. level at the proper points. There cannot be a question as to this being a good speculation as the vein is proved, and there can be no doubt the money spent in this way will come back with interest. The cost of this will be roughly 1,000*l.* and it will occupy about six months. It has been suggested (the suggestion does not come from me) that it is too heavy an expense for the mine to bear out of revenue, and that as it is a contingency which has arisen in consequence of the condition of the vein on which we are working, which is a very unusual contingency, it would be a right and proper course to apply a portion of the money put to the reserve fund. It has been suggested that this

1,000*l.* SHOULD BE TAKEN FROM THE RESERVE

and applied to this purpose. Personally, I think it is a very proper cause to apply this money to, and I think you would be doing wisely to instruct the directors to sanction this. I think on full consideration that it is a very proper way of disposing of some of this money for that purpose.

Mr. HENRY SWAFFIELD said: Gentlemen, I think it is a cause for congratulation that for the past half-year, with an extraction of only 238 tons of ore per month, and with lead at a very low price, this company made a profit of 2,927*l.* I learnt the secret of this during my recent visit to the mines, for I found that our work there is done very cheaply and very expeditiously, and although the lodes are seldom rich, we occasionally get into some nice bunches of ore which are opened out very rapidly, so that in the long run we have not much to complain of. We have a sett measuring $2\frac{1}{4}$ miles in length, and I am glad to say that we have still a considerable extent of untried ground. Mr. Taylor has already explained to you that Mr. Tonkin's latest recommendation is that Judd's shaft be sunk from the 70 to a 100-fm. level, so that he may prove some lodes in the Adventurera sett, which have for some time past been turning out a good deal of ore, and Mr. Tonkin now wishes these lodes to be proved at a greater depth, and in this he has the support of our managers, Messrs. John Taylor and Sons. The cost of sinking this shaft will be about 1,000*l.* in all, and this being more than the revenue account can fairly bear, Mr. Tonkin has suggested that this charge be borne by the reserve fund, and the directors have agreed to adopt his recommendation. The sinking of this shaft will, it is hoped, infuse some new life into the company by opening up lodes which are now unworkable because of the water. But for the fact that we have the benefit of railway communication with the coast it would not have been possible to work to advantage such mines as these, some 140 miles away from the nearest shipping port, with lead at such a low price as is now ruling. If, however, we should see a revival in the lead market, we are in an excellent position to take advantage of it, and to make good profits. The mines are supplied with excellent machinery, and are favourably circumstanced in regard to labour. The coal supply too is good, and as the company's credit stands high, the financial arrangements work very smoothly. At Cordova, which I also visited, we have our smelting and desilverising works, under the local management of Mr. William Poole. The lead he turns out does him great credit, for it is excellent in quality, and it is produced at a very moderate cost. We cannot expect to make large profits in these bad times, but we can exercise the most rigid economy in every department, and this our agents are continuing to do, both at Linares and Cordova.

A SUGGESTION.

Mr. WILDE said he was fully alive to the necessity for carrying out the proposed work at Judd's shaft, but suggested that the 1,000*l.* should only be borrowed from the reserve fund, to be paid back in four years.

The SECRETARY pointed out that that arrangement might prove very inconvenient, and he thought the best way was to adhere to the original suggestion.

The CHAIRMAN said the directors were fully alive to the importance of replacing the amount, and keeping a large reserve fund.

The report and accounts were then adopted.

A vote of thanks to the chairman closed the proceedings.

ASSURANCES TRUST CORPORATION, LIMITED.

A SATISFACTORY STATEMENT OF THE COMPANY'S BUSINESS.

THE second general meeting of shareholders was held on Monday, at the City Terminus Hotel, Cannon Street, E.C.

Mr. William J. Barron

presided.

The SECRETARY (Mr. William Olliver) read the notice convening the meeting.

THE CHAIRMAN ABSENT THROUGH ILLNESS.

The CHAIRMAN said: Gentlemen, my colleagues and myself are very pained to know that in consequence of illness our president, the Marquess of Exeter, is unable to be present. He has, however, written me a letter, which our secretary will read to you.

The SECRETARY then read the following letter:—

"Dear Mr. Barron,—I am sorry to say that I am still not well enough for the doctor to allow me to go to London, so must ask you to make my excuses for not being able to attend the general meeting of the shareholders of the Assurances Trust Corporation on the 5th of the present month. As it is the first annual meeting of the corporation, I regret my enforced absence all the more; but I am sure that you and my brother directors know enough of me to feel sure that had it been possible for me to do so, I should certainly have been present as chairman of the corporation.—Yours faithfully,

"EXETER."

RESULT FOR THE FIRST YEAR.

The CHAIRMAN: Gentlemen, as you know, this is the first annual meeting. On the last occasion I had the pleasure of addressing you we dealt with the subject of the prospectus, and the objects for which the company was then formed. We went thoroughly into the different points, and the objects of the company, which, according to the prospectus, were, as you will remember, for "dealing in insurance and other company's stocks and shares, transacting business by way of agency, financing, making advances on approved securities, and carrying on all business appertaining to trust companies." I have just read from the prospectus. Our operations did not begin for some little time, in consequence of various payments on account of subscriptions not having been received, and that, together with formulating our arrangements, occupied the best part of four months; so that in the time covered by the report we really have only had about eight months work. I must say that, in my experience—which is a rather long one—I cannot recollect a time when such extreme stagnation and depression have existed in all finance companies of this character. But I think we have to congratulate ourselves, and I have to congratulate you by telling you that we have steered clear of losses, and that is a great deal in such circumstances. (Applause.)

PROFIT OF 7,000Z.

We have now to deal with a gross profit of nearly 7,000Z. made in the year; the actual amount is 6,760Z. 6s. 5d. Now, we have not had the capital shown in the balance-sheet the whole of the time. Part of it we have only had for a very short time. We have had a calculation made, and from what I can see the profits amount to about 16½ per cent. for the time we have had the money to deal with. But I need not tell you that this 16½ per cent. has not wholly arisen from our investments in insurance companies' shares. Now, considering that this is the first year, and we have had to get into working order, I think the result must be admitted to be a very satisfactory one—(hear, hear)—as it puts us in a position to-day of being able to recommend to you a dividend of 7 per cent., besides carrying forward a certain amount of money and paying off 1,000Z. of our foundation charges. (Applause.) There are a few items in the balance-sheet to which I should like to call your attention. The first is the amount of calls in arrear, which stands at 9,690Z. I may say the reason for this is that instalments were only due in July, and our accounts being made up to the 31st of that month, a large portion had not been paid. As we were not wanting the money, we felt it was not wise to press for it, especially as it bears interest at 5 per cent. per annum. The next item worth mentioning is that referring to contingent liabilities. You notice in the balance-sheet there is a memorandum to the effect that contingent liability arises from subscriptions uncalled on insurance companies' shares. The investments are all in first-class companies, and, therefore, there is no danger. On the other side we have to deal first of all with cash at the bankers, which, as I have already mentioned, is 8,094Z., and then with investments at cost. There is a very satisfactory feature about our investments which may be mentioned, namely, that none of them are at a discount—that is to say, the whole of our investments, if sold at current prices, would produce us a profit. (Applause.) I think, gentlemen, that is a very important statement to be able to make. Now, as to the nature of our business. It being largely made up of profits arising from loans and commissions, it follows of necessity that such transactions are, to a certain extent, of a confidential nature, and I might add that since the date of this balance-sheet and the improved state of the market—for I am very happy to say that it has improved, which gives us hope of doing better in the current year than in the past—very considerable additional profits have been made.

DIRECTORS HAVE A LARGE HOLDING.

I do not know that there is any other feature calling for special remark until we come to deal with the foundation expenses and commissions. These, however, were settled by agreements and contracts mentioned in the prospectus, and, therefore, being bound by the said agreements, we have nothing to say about them. We now come to the revenue account. Our office expenses have not been large, and our legal expenses are very small. On the other side of this account you will notice the principal items, namely, commissions and profits on loans and interest and dividend on investments, &c., amounting to 6,760Z. We propose dealing with that amount by recommending the payment of a dividend on the year of 7 per cent., and carrying forward the balance. It is already said in the report that we hope not only for an increased dividend, but to be able to write off a much larger amount next time of the foundation expenses, which were settled by contract at the formation of the company. In conclusion, I may say that the directors and their own personal friends hold a very large proportion of the shares of this company, and, therefore,

we have one common end to work for, and the very best reasons for endeavouring to make this company a great success. I might add that very important business is now in hand, and several important contracts have been obtained by this company such as to fully warrant us in very large hopes for the future, and I trust that if I am permitted again to meet you I shall be able to report that we have a quotation on the Stock Exchange, and that our shares are standing at a good premium. (Applause.) Now, gentlemen, I have great pleasure in moving the adoption of the report and statement of accounts.

Mr. T. G. H. GLYNN seconded the motion.

DISCUSSION.

Mr. FRY observed that he noticed from the report that the directors had not taken all their fees, and asked what amount of fees the directors had waived.

The CHAIRMAN said he would answer all questions at the same time.

Mr. CLARKE: I should like to know, sir, what portion of the arrears of calls appertain to the first issue, and what to the second?

The CHAIRMAN: In answer to those questions, gentlemen, the directors are entitled, under the articles of association, to the sum of 2,500Z. for their remuneration, and a further 10 per cent. on the net profits after payment of a 10 per cent. dividend. They have waived the balance of 1,327Z. (Cheers.) The amount subscribed of the second issue is about 60,000Z. We did not originally intend to make a call, but such a course was necessary when we, the directors, thought we could profitably use the capital. The commission of 6,250Z. is 10 per cent. upon the amount subscribed, but 2½ per cent. upon the issue of 250,000Z. The subscription fell far below our expectations; but that was owing to the depressed state of the market at that time.

Mr. TANKARD: What amount of the calls in arrear on July 31 last have since been paid?

The CHAIRMAN: There now remains about 4,500Z.—a little less than half the figure at which they stood on July 31. Of that amount 541Z. 10s. belongs to the new issue; but I will repeat that we have not pressed for these arrears of calls; in the first place, because we have not wanted the money, and in the second place, they bear interest at the rate of 5 per cent. per annum. As to the 8,830Z., it is fully set out in the prospectus, and, therefore, we are quite unequal to deal with it. We were bound by that agreement at our last meeting, when it was fully explained. It was 5 per cent. upon the amount subscribed.

Mr. H. J. LAWSON (director) said that the total capital had cost them 6 per cent., which could not be considered an exorbitant sum. (Hear, hear.)

The CHAIRMAN then put the motion for the adoption of the report recommending a 7 per cent. dividend for the year, which was carried unanimously.

Mr. PETERS proposed a hearty vote of thanks to the chairman and directors, which was carried with acclamation.

The CHAIRMAN having suitably replied, the proceedings terminated.

KILLIFRETH MINE.

DIVIDEND OF 3s. PER SHARE.

A SIXTEEN WEEKS' MEETING of shareholders in Killifreth was held on Tuesday.

Mr. John Tregoning

(the purser) presided.

The statement of accounts showed—Labour costs, 1,927Z.; merchants' bills, 878Z.; bank charges (six months), 10Z.; Stannary Court assessment, 4Z.; Kenwyn rates, 40Z. On the other side, the tin sales (77 tons) have realised 4,432Z.; tinstone, 20Z. (less lord's dues 1-40th, 111Z.); extra carriage of tin, 8Z.; old stores, 2Z.; discounts, 32Z.—total credits, 4,384Z.; leaving a profit on the 16 weeks' working of 1,523Z. Out of this 537Z. has been paid on additional plant account for the purchase of an engine, leaving a balance now in hand of 985Z.

The CHAIRMAN remarked that the balance would enable them to pay a dividend of 3s. per share. He would rather declare a dividend of 2s. 6d.; but shareholders liked to have as much as they could; and by paying 3s. they would still carry forward a balance of 85Z.

On the motion of Mr. D. W. BAIN, seconded by Mr. S. RICHARDS, the accounts were adopted.

Capt. H. TREVETHAN said he should have been well satisfied with a dividend of 2s. 6d., had it not been that the mine quite warranted 3s. The appearance of the mine was such that they were quite safe in dividing money as they made it. There was not another mine in the county looking so well whose shares were not worth double as much. He proposed a dividend of 3s. a share.

Capt. BRAY seconded, and it was carried.

THE ZAMBESIA EXPLORING CO., LIMITED.

NEWS OF THE EXPEDITION.

As the directors are desirous of keeping the shareholders informed of the progress of the company's expedition in Mashonaland, I am desired by the board to hand you, on the other side, extract from a letter, dated Fort Victoria, Aug. 9, 1891, from Mr. Robert Williams, M.I.C.E., who is in charge of the expedition.—A. J. MACPHAIL, Secretary.

EXTRACT FROM MR. WILLIAMS' LETTER TO THE COMPANY, DATED FORT VICTORIA, MASHONALAND, AUG. 9, 1891.

"My waggons have now been out-spanned for a week at the foot of Providential Pass to rest the oxen before taking the high veldt. On Monday we start for Fort Salisbury. Lord Randolph Churchill's, Mr. Maund's, and my own party are now all together so that we have all done the same record from Vryburg, as we left there on the same date. Mr. Maund and I rode out to Zimbabwe together yesterday. I found quartz containing visible gold, which Mr. Maund has seen. In conversation with Mr. and Mrs. Bent, we learned they had found crucibles containing buttons of gold at the ruins, and Mr. Maund and I saw several tons of burnt quartz lying in a cave inside the ruins. The country here is one mass of quartz reefs outcropping in slate."

TO TIN MINERS AND DRESSERS.

WANTED, to reside at Mines, three years engagement, good all round PRACTICAL TIN MINER, to take charge under non-resident Consulting Engineer, to remodel or initiate on modern system lode tin mining and dressing operations, erect new machinery, sink shafts, and lay out new underground and surface works, on East Coast, Malay Peninsula. Must have had specialist experience in Tin Mining and Dressing. Passage paid out and home.

ALSO WANTED, FOUR OTHER SUITABLE MEN, one with knowledge of assay, survey, and account work; Two Working Assistants for underground, shaft, timbering, and surface work; also a good Mechanic to erect and work machinery.

Replies only to those who have had experience in tin mines, and giving references, age, salary required, copies of testimonials, full particulars as to experience, and when ready to leave.

Apply by letter only to "T. S.," care of Street and Co., 30, Cornhill, E.C.

REPORTS OF MEETINGS.

NINE REEFS, LIMITED.

RESOLUTIONS CARRIED UNANIMOUSLY — INTERESTING FACTS AS TO THE MINE — OPINION EXPRESSED THAT IT WILL BE SECOND TO NONE IN THE FIELD.

AN extraordinary general meeting of the members of the Nine Reefs, Limited, was held at the Cannon Street Hotel, on Tuesday, for the purpose of submitting the following resolutions:—

"1. That the capital of the company be increased to 125,000*l.* by the creation of 100,000 new shares of 10*s.* each." "2. That the new shares be called preference shares, and that the holders thereof shall be entitled, *pari passu*, to receive the whole of the net profits of the company, until an aggregate amount of 10*s.* shall be paid out of such profits in respect of each of the said preference shares." "3. That when and as soon as an aggregate amount of 10*s.* shall have been paid out of the net profits of the company in respect of each of the said preference shares, the same shares shall cease to have any preference or priority, and to be called preference shares, and the said profits shall thenceforth be divided among all the members of the company, *pari passu*, in proportion to the respective amounts paid up, or deemed to be paid up, upon the shares held by them respectively." "4. That in case the company shall be wound up before an aggregate amount of 10*s.* shall have been paid out of the net profits of the company on each of the new shares to be issued as aforesaid, the surplus assets (if any) of the company shall be applied in the first place, in paying to the holder of each such share such a sum as shall, together with the aggregate amount of nett profits (if any) received in respect of such share make up the sum of 10*s.*, and the residue (if any) of the said surplus assets shall be divided among all the members, in proportion to the nominal amount of capital held by them respectively. But in case the company shall be wound up after an aggregate amount of 10*s.* shall have been paid out of the said profits on each of the said new shares, the holders thereof shall not be entitled to any preference or priority in the distribution of the surplus assets (if any) of the company."

Col. G. B. Malleon, C.S.I.

(chairman of the company), presided.

Mr. W. H. ROWSE (secretary) read the notice of meeting as above.

CARRYING OUT THE SHAREHOLDERS' DECISION.

The CHAIRMAN: Gentlemen, I am not at all surprised at the number of shareholders present this morning (the attendance improved as the meeting went on), because the scheme which you have just heard read is only part of one which the shareholders sanctioned at the meeting on Apl. 22 last. On that occasion the shareholders determined to apply to the Court for a reduction of the capital by reducing the nominal value of the shares from 1*l.* to 10*s.*, and it was then announced to the shareholders that as soon as that could be carried through by the Court, and be registered, the resolutions which the secretary had read would be proposed. The shareholders on that occasion sanctioned the whole of the scheme of which these resolutions form a part. The meeting this morning, therefore, is almost a formal matter. It is necessary in the eye of the law. We only wish you to carry out this scheme, which the shareholders have already sanctioned, and half of which has been confirmed by the Court. I will not occupy any more time by explaining to you the merits of the scheme further than by saying that we are confident we possess

A MINE SECOND TO NONE ON THE COLAR FIELD,

and that it requires the application only of a little more capital to make it a complete success. Gentlemen, you have heard the resolutions which have been read. I am advised by our legal adviser that we can put these resolutions *en bloc* to the meeting, and unless any shareholder in the room should object I will do so. I, therefore, propose that the following resolutions be passed by the shareholders present in the room. (Resolutions as above.)

Major-Genl. BERESFORD (director): I second the motion.

DISCUSSION.

Major HERSCHELL: You said just now that you had the greatest confidence that this mine would be second to none in the Colar field. We have seen nothing in the papers for a great many months about it, and have you now any news to give the shareholders to justify that opinion?

The CHAIRMAN: Since the early part of the year the mine has been shut down, but that opinion has been the result of the workings prior to the shutting down of the mine. We know that we have in the mine the reef which has been so successful in the Mysore Mine, and

we have another reef which promises equally well. It only requires a little further sinking.

A SHAREHOLDER (who refused to give his name) said: For many years we have been buoyed up by the directors who have said we have a mine that was just on the eve of very prosperous development. A good deal of money has been raised on those reports, which have all been worth nothing. I should like to know whether any more reliance is to be placed upon the statements made to-day than they have hitherto justified. There has been a great deal of money spent on this property in the last three or four years, but not one of the anticipations about it has been realised.

VIEWS OF MR. JOHN TAYLOR.

Mr. JOHN TAYLOR: Gentlemen, the whole of the information with regard to this property was placed very fully before you in the notice of meeting held on Apl. 22, accompanied as it was by the reports. Those printed documents were supplemented by what your chairman said at that time, by a most able speech from Mr. Rowse, who had just returned from the mine, as well as by information given you by Capt. McTaggart, and I do not think there is anything more to add, seeing that the mine has been stopped from that time. I cannot suppose that the gentleman who has just spoken can bear in mind the actual facts.

The SHAREHOLDER (interrupting): I have been too well aware of this mine for many years, and know that the predictions of the board have been falsified. I wish to ask whether there is any more valid reason for giving these opinions now than there was three or four years ago.

A QUESTION OF SINKING ONLY.

The CHAIRMAN: At that time it was merely a question of sinking, and it is a question of sinking still. We have not sunk deep enough; that is the whole pith of the story. Unless we sink deep enough we have spent a lot of money in vain. We have sunk to a certain level, but it is not deep enough, though the veins are there, and all we ask you to do now is what a commercial man would do in his own interest—he would spend his money to reach the veins which are below him, and which have not been reached up to the present moment. It is a question of common-sense whether you will throw away what you have already spent, or whether by spending a little more you will gain a rich harvest. I should like to call the attention of the anonymous speaker who has favoured us with his remarks that we on this side of the table are equally interested with him. We have spent our money and we are full of hope as to the future, and are prepared to spend our money further to secure that future. (Cheers.)

The SHAREHOLDER: I remember a meeting held about three years ago (perhaps it was the Dec. meeting) at which it was positively stated by the directors that there was no question about it that we had a mine which in all probability would be dividend-paying within a year.

Mr. JOHN TAYLOR: Had you not better take the question as it comes before you. We had nothing to do with this company three or four years ago, and were not associated with it in any way. Almost the first thing we did when we became connected with it was to request Mr. Rowse, who was going out to India on other business, to examine this property, and with Mr. Rowse we asked Capt. Scantlebury, who has most ably managed one of our mines out there, to also examine and report upon the property. It is upon the result of their joint examination that I base the favourable opinion I hold of this mine. Now,

YOU HAVE SEVERAL STRINGS TO YOUR BOW

in this property. You have the reef which has been principally worked upon, called the Malleon lode, and the works there are about 340 ft. deep. The lode averages about 4 ft. wide, and there is a great quantity of quartz, but it is not of high grade, though almost throughout it contains gold. Now, the question that these gentlemen, Mr. Rowse and Capt. Scantlebury, have left to be solved is whether or not that lode will improve in depth. They think it will, and are strengthened in the belief by this that the lodes have been found to do so in other properties on the field. (Hear, hear.) In order to prove this, it is suggested that the shaft should be sunk another 100 ft., so that the lode may be tested at greater depth. In addition to that we have the Champion reef in Vyvyan's shaft at the north end of the property. That is not so deep as the other, only about 240 ft., and in the bottom we have a well-defined lode, containing, as described in these reports, visible gold, and worth 16 dwts. to the ton. You may surely know, at least those must who have followed with any interest the workings of the Colar companies, that 16 dwts. will pay well when a mine is fully developed. We do not want better quartz than that to make profits, though we hope the lode will be better still as it is developed further. We have also the Balaghat lode more to the east, and you have this fact before you, that Mr. Rowse has described the importance of the old workings, and we now know, from the results of mining on other parts of the field, how rich those lodes are below the points at which they could be worked formerly, and how strongly they hold down below the excavations made many years ago. It is this you have to encourage you in pursuing the operations which have been carried on to a con-

siderable extent, and which have cost a considerable amount of money. The result of the expenditure which has gone on in the past has been the development of the mines to a certain depth, though not to a sufficient depth, to equip your property most admirably with machinery for coping with the water, and to carry the mine on in every way. (Cheers.) You are not wandering in the dark. You have had placed before you a perfectly definite and straightforward policy as to what is going to be done with the money which it is proposed you should provide, viz., to sink these shafts to a greater depth and develop these veins laterally in a much more efficient manner than ever before; and, as I say, you have only to take the results that have been achieved by the Mysore, Ooregum, and Nuudydroog and other mines on the field as your guide where systematic development has been carried on to a very considerable extent. (Cheers.)

SAMPLING OF THE ORES.

Major HERSHELL: Before we proceed, I should like to know whether, if the resolutions be carried, we shall proceed as before, and get fortnightly or monthly reports, showing the assay value of the ore found. Those that came to hand previously varied from fortnight to fortnight in a most extraordinary way, and I took occasion to write to the secretary at the time to ask how the ores were sampled. He was not able to tell me, but said it would be brought before the board. I want to know if you can give any information as to the method by which the ore is assayed by those who do it from practical experience.

Mr. TAYLOR: I do not quite understand the question.

Major HERSHELL: I mean that it is easy to take a piece of ore that looks as if it had gold in it, and assay it, and probably you would get 5 ozs. to the ton. You may take another piece and not get 10 dwts. You may take a great many pieces from different parts of the ground or the stopes and mix them altogether, and take a sample and assay it, and you will get an average of the whole, but it altogether depends on how you sample, and I want to know how you do so, whether it is the average, say, of a particular piece of ore taken from the face of the stope, or a general sample.

HOW THE SAMPLES ARE TAKEN.

Mr. TAYLOR: The endeavour is always to obtain an average by taking a certain number of portions of the vein across its width in any stope, shaft, or level, as the case may be. As to the variations and the samples, we cannot account for them, but can only do our best to obtain as correct an average as possible, and that is what we really do, though sometimes a vein is richer than at other times.

Major HERSHELL: I am not complaining of the work—simply asking for information.

Mr. TAYLOR: All the information I can give is that at certain periods, once a week or once a fortnight as the case may be, the assayer and mining agent chip off or break down portions of the rock from the face upon which they are working, all of which is crushed together. A small portion is then taken and assayed by the assayer in his office. (Hear, hear.)

The resolution was carried unanimously.

The CHAIRMAN: This concludes the business to-day, only these resolutions will have to be confirmed at a subsequent meeting, which will be duly convened. I may tell you I have the best reason for believing that so great is

THE CONFIDENCE OF THE STOCK EXCHANGE

in the mine that we shall have all our capital underwritten. (Hear, hear.)

The proceedings then closed.

THE PORT PHILLIP GOLD CO., LIMITED.

SHAFT CONSIDERABLY DEEPENED, LEVELS DRIVEN, AND TRIBUTERS AT WORK—SHAREHOLDERS AND THEIR CALLS—COMPOSITION OF THE BOARD CRITICISED—REASSURING STATEMENTS BY MR. CORNISH.

THE ordinary general meeting of this company was held at the Guildhall Tavern, Gresham Street, on Monday, for the following purposes:—“To receive the directors’ report and accounts; to elect directors and auditor in place of those retiring; and to transact such other business as may be necessary.”

Mr. C. Dixon

(chairman of the company) presided.

Mr. E. E. WEBB (secretary) read the notice of meeting.

WORK SINCE LAST MEETING.

The CHAIRMAN: Gentlemen, I beg to move the adoption of the report and accounts. As you will see, at the end of the report there is that of the manager, which gives a summary of the work done from Jan., 1890, down to nearly the present date. When the work was re-commenced at the mine on Sept. 6, 1889, the depth of the shaft was 22 ft. below the 15th level. The 16th level was passed in Jan., 1890, and in June, 1890, the 17th level was reached, and we drove cross-cuts east and west. We resumed sinking, and in July, 1891, when we were 1,710 ft. from the surface, our resident director advised that we should continue sinking this shaft until this meeting, instead of driving the cross-cuts from other levels, and by his latest reports we are about 40 ft. below that level. The result, as far as regards the north shaft, is that we have passed through a great number of small quartz veins. As to the cross-cuts east and west, we continued the cross-cut east 188 ft., and the west cross-cut was also continued, and after passing through the diorite dyke met with the indications became much more favourable of the quartz vein being met with, and we are proceeding with the driving of that cross-cut, whilst, at the same time, we are continuing the sinking of the shaft. I do not know whether you have with you the plans sent you in June, 1891, in which we have a section of the north shaft showing the cross-cuts and the work that has been proceeded with. Since we have decided to allow the shaft to be continued on the advice of those on the other side, the reports have been that

THE GROUND IN THE SHAFT IS FULL OF SMALL VEINS, varying in size from 1 to 8 ins. wide, which they take it as confirming

the opinion that they should continue the sinking, at all events, until this meeting. In addition to the work thus described, a considerable amount of work has been carried on in the upper levels, where there are now three tribute parties working. In Nov. last the manager decided to let the ground on tribute instead of working it on our own account. The 6th and 7th levels east of the lode he allowed to be worked thus, and also the 5th level (Robinson’s lode), where they are getting an average of from 7 to 8 dwts., and the last returns show gold 554l., less tributers’ crushing, carting, &c., 434l., so that you will see there is about 25 per cent. profit, even although we are not crushing the quartz at our own mill, but sending it to an adjacent one, because our manager has direction of that mill also, and thinks it is not worth while to start the 80 heads of stamps until we have a sufficient quantity of quartz. However, you will see that even with this small average there is a fair amount of profit. In addition to this drawback, the amount of quartz that can be raised from these upper levels is very much reduced by the fact that the shaft is employed fully by this sinking, so that it is only between the change of shift we can bring ore to surface. There is a considerable amount of good ore in the north shaft that can be raised. There are tribute parties in the Criterion ground, which is our own freehold property apart from the surface rights, and was purchased by Mr. Bland on a favourable opportunity some 10 or 12 years ago. The financial position renders it disappointing that we have not yet come across a sufficient quantity of paying ground. Our friend, Mr. Cornish, will tell you what the opinion is of Mr. Bland and Mr. Hewitson, and we have found by hard fact that the only chance for this concern is to try and discover new makes of stone and fresh bodies of ore by continuing the sinking of the shaft.

MR. CORNISH VISITED THE MINE IN 1889.

He has over 20 years been connected with the Australian goldfields. He consented to become a director only lately, and his opinions he will express himself. I will summarise them thus—that he is quite satisfied with what is being done over there by Mr. Hewitson under the direction of Mr. Bland. As regards finances—I can bring them down to a date a little later than that of the report. The arrears of call were 1,900l., of which sum we have since received 1,123l. Of the last call we have 1,300l. outstanding. All but this balance has really been gained without any legal process whatever, though, in certain cases in regard to the former there was the usual solicitor’s letter addressed to those who have been more than one call in arrear. The time has come when we think it unfair to those who do pay their calls that they should have to carry on the mine for the benefit of those who do not, and after this time in regard to the earlier call we shall, of course, have recourse to legal measures. We shall only do so where we consider the asset a good one, for we have no wish to run up a bill of law costs greater than the calls will produce. Therefore, what we shall do after this notification is to commence legal proceedings in certain cases. We send out first a notice of the call having been made; then a final notice, and

THEN THE SOLICITOR WRITES.

All that means a great deal of work to the company, and a good many shareholders say it is not fair that they should pay their calls without difficulty, and that others should not do the same, because the amount now outstanding comes to over 2,000l., and that would be sufficient to carry on work at the rate we are at present going for three or four months. The balance at the bank on Saturday was 2,521l. The bills drawn by Mr. Bland, in the hands of the Australian Bank, are for 1,000l., and up to this present date we have reckoned the expenditure at the same rate as that previous to the last advices—750l. Deducting the two amounts, we have about 800l. in hand to the present date, taking into consideration these bills and the amount that has been expended. 779l. is the amount of arrears due on the last call but one, and there is 1,300l. due on the last call. The arrears on the former call we do not consider wholly good, but 1,300l. due on the last call may be taken generally as good. We quite consider that we shall receive the greater portion of the last call. There is 6d. a share still uncalled, but we have stated that we shall not ask you for it unless we receive advices from the other side just to satisfy us that that amount should be called up for the purpose of carrying out something which the manager may recommend. That is a matter, of course, that has yet to be determined. We have nearly 900 shareholders, of whom probably three-fourths reside a long way from London. We, therefore, sent a circular to the largest shareholders seeking their advice as to the course to be adopted. Of the number consulted I have letters from only four or five who adopt the tone that it is much better to wind up, whereas the greater portion are of opinion that we should go on. I have letters from others I do not know personally urging us to pursue the course we are doing, and continue the sinking of the shaft and the carrying out of the policy upon which we started. Mr. Cornish will tell you more as regards the mining prospects, and he will second the resolution, after which I will be happy to answer any questions that may be put to me. (Cheers.)

VIEWS OF A DIRECTOR WHO HAS SEEN THE MINE.

Mr. THOMAS CORNISH: Gentlemen, I have much pleasure in seconding the resolution, which I do on the ground of having had considerable experience of Port Phillip Mine—in fact, almost since it started. When I was a youngster in the Australian Colonies I happened to be on this mine at the time it was pegged out originally, but I held no interest in it, because at that period I had no capital, except the labour of my hands, it, therefore, did not suit me to remain there. The consequence was I went to the Ballarat goldfield close at hand. I have watched the result of this mine from that day to this, and have seen Port Phillip one of the leading mines in the world.

WHAT PORT PHILLIP HAS DONE.

It is a mine that has produced over 2,000,000l. sterling, and had it been worked in the present day it would have paid half that amount in dividends, but in those early days labour, machinery, &c., were more expensive, and therefore the e was not so much absolute profit paid, but yet I suppose half a million has been paid out of that mine. The adjoining properties on the Clunes, and the Clunes itself, is what we term a small goldfield, yet one of the best in the Colony. It is a field in a small compass that has

PRODUCED OVER FIVE MILLIONS STERLING, with the adjoining mines north and south of Port Phillip, which was

the pioneer. Out of that you may calculate not less than two millions has been paid in profit. I visited Australia two years ago during the time the company was undergoing re-organisation here, and when the mine was not worked. I went down adjoining mines and saw the nature of the lodes and recommended my friends out there to go on with the working, and also when I returned to London I recommended Port Phillip directors to continue the course they had adopted. Some time since the chairman asked me if I would join the board, and I said I had no objection, and I did. I have every confidence that Port Phillip in the future will be as great a success as it has been in the past. In most of the mining districts we have gone through barren zones of ground, probably between 700 and 1,000 ft., and even up to 1,200 ft. In these cases the ground has been comparatively poor, but we have not stopped on that account. There was a time when everybody was advised to go not deeper than 200 ft., but such a theory has long since been exploded, for though scientific men said that we should never get gold below 200 ft., we are now getting it down to over 2,000 ft. I advise Port Phillip not to discontinue sinking the shaft until it is down at least 2,000 ft. This is the work now going on under Mr. Hewitson, an old miner, Mr. Bland being the general director on the spot. The former is one of the most practical managers in the Clunes district, and he thinks, as I do, that it would be advisable for us to continue the sinking of the shaft while we are exploring the east and west levels, so far as our capital will allow. I have every reason to believe that although we have been passing through poor country, we shall before long strike something good. If so, then the Port Phillip becomes virtually a new concern. Judging from what is being done in Ballarat and many other places, where the mines are at a much greater depth than ours is, there is every reason to believe that the

PROSPECTS OF PORT PHILLIP IN THE FUTURE

may be as good as they were in the past. Mr. Hewitson has been advised in letters since I have been on the board to put on as many tribute men in the upper levels, to work the large quantities of ore yet left there, as he can so as to help to pay the costs of sinking. It would never do to stop sinking the shaft at the depth we are now at (1,800 ft.) because the water has to be drained, and all our expensive appliances have to be kept going. We can work more cheaply if we continue sinking whilst exploring the upper levels. In the adjoining mine that I went down (New North Clunes) I noticed some very valuable bodies of ore, some of which had been idle for 15 or 16 years. The manager was a friend of mine, and I said, "If I had control of this mine I should open on this level, in which there appears to be a good showing of quartz." I am glad to say they did, and they had not advanced many feet before they were in very good ore going to $\frac{1}{2}$ oz. to the ton. Those levels, I repeat, had been left 15 or 16 years, and some of those in Port Phillip have been left 20 years. Now, you must remember that ore that would not pay then will pay well now, because the means of working have been improved. There is plenty of timber, and a railway is close to the mine, whilst every article that we require can be obtained at a cheaper rate, and labour is much lower than it was a quarter of a century ago. Speaking generally of the colonies from the gold-bearing point of view, I say that Clunes is the centre of an enormous auriferous area of country, and in the Ballarat, Maryborough and other districts there is virtually a silurian formation running through them for from 80 to 100 miles of country, all of which has been proved to be highly auriferous, though miles apart. Port Phillip is virtually the centre of this district of Clunes, and may yet continue to be as profitable and as productive as it has been in the past if our operations are continued. To show the profitable nature of mining out there,

LET US TAKE A REVIEW OF THE SITUATION.

Where has the gold come from that has enriched this country so much, except from the Australian colonies? Victoria alone has produced upwards of 225,000,000l. sterling, and at least 200,000,000l. of that has been sent to this country. Of this total Clunes has produced 5,000,000l., and the Port Phillip Co. 2,000,000l. The shareholders of this company are therefore in one of the richest and best proved gold-fields of the world. I have the records in the Government Blue Books showing that over 25,000,000 tons of quartz crushed have averaged over $\frac{1}{2}$ oz. to the ton. Taking it all round as a general average of results, 1l. a ton has paid the cost of mining and milling, and there has been over 20,000,000l. sterling of profit paid out of quartz mining, apart from that which has been yielded by the alluvials which gave a much greater rate of profit. Victoria alone has yielded in profit

100,000,000l. STERLING

out of its mining resources. Therefore, I consider the shareholders in Port Phillip have a great prospect before them provided they continue working as they should do. I may say that I have suggested to Mr. Dixon and one or two of the largest shareholders that I may have a proposition to make to them in regard to Port Phillip later on that may be of very great advantage. I think Port Phillip could be made the nucleus of one of the leading mines, not only of the Australian Colonies, but probably of the world. It has all the surroundings necessary to make it so. All who have looked at the plan and history of the mine will see what our chances are. If we strike a payable lode (and any day we may get a telegram to that effect), what will be the consequence? That your shares that are now standing at a low figure might rise to 1,000 per cent. premium. That is one advantage for those who hold an interest in the mine. The present capital is small. I had nothing to do with the older companies, and never held a share in this one until six or nine months ago. Having satisfied myself that the works had been carried on judiciously by the directors, and knowing well that the local management was sound and able, I made up my mind when asked to join the board to do so, and throw in my lot with the shareholders. I trust we shall realise the great future that seems to lie before us. (Cheers.)

CRITICISM.

Mr. MACKEAND: The seconder of this resolution has done a great deal to raise our hopes concerning the prospects of Port Phillip Mine, but before coming here I looked over the chairman's speech, which he made at the last annual meeting, and if I wished to be condemnatory of the policy of the board I think that that speech would give me sufficient justification for being so. It

will be remembered that at the last meeting a telegram came stating that a crushing had been made, and from this the chairman gave us great encouragement, and painted rather a glowing picture of the future likely to result, particularly if the Criterion ground were properly worked. The chairman's speech of last year was so strong on this point that I wish to ask why comparatively nothing has been done to carry out the promises then made. (The speaker here read numerous quotations from the chairman's speech at the last meeting, and proceeded):—I think that very few shareholders will now be satisfied that the best has been done with regard to the Criterion ground. It covers a space of 8 acres, and it seems to me that if a fair average can be maintained there must be an immense amount of quartz there which will pay to crush now. It may be that the chairman can explain why he has not carried out the promises made to that meeting. We have come to rather a crucial point in our history. Since the last meeting

EACH SHAREHOLDER HAD HAD TO PAY THREE CALLS,

which on a large number of shares is serious. And now only one call remains. If this be expended without showing results the company, I suppose, will have to be wound up. It may be said that the north shaft is the most important, but shareholders would like to know if there is a large body of quartz which will pay to work, or should we go on for another 18 months without anything definite being done? I noticed that two of the directors have retired since the last meeting, but nothing has been said as to the cause. As to the balance-sheet, the expenses have been greatly increased at home, and are now nearly 1,000l. What has caused this increase? As to the directors' fees—they were voted 300l., but was that vote prospective or retrospective? On that point I should like the minute read. The directors formerly gave us details, but now they "lump" large sums, which is not good in principle. If the chairman can explain these points I shall be glad to support his resolution.

Major DE WINTON: It appears to me that directors' fees are very high in comparison with the results. There are only two directors and they get 500l.

Mr. CORNISH: I wish we did.

Mr. JOHNSON: As an old Ballarat gold digger I should like to know how far the nearest property now getting gold is to us.

Mr. CORNISH: The Star of the East, about 20 miles off.

Mr. JOHNSON: I thought it was adjacent.

Mr. CORNISH: It is on the same belt. The Creswick Goldfield lies between, and several mines are working there which are not at the same depth.

CONDITION OF THE MACHINERY.

Mr. JOHNSON: With regard to the machinery, supposing we struck a large body of ore—is it all in fair condition?

Mr. CORNISH: Yes, it is. I am satisfied the mine manager is keeping everything in first-class order. All you require is to keep the machinery well greased. It is capable of being put into immediate operation.

The CHAIRMAN: This time last year we were about 67 ft. below the 16th level, and six weeks later we had reached the 17th level, and then discontinued sinking and commenced to drive out east and west. The lodes run directly north and south, and our shaft happens to be in the middle, so that we have to drive east and west. Mr. Hewitson stopped the sinking of the shaft, and drove out the cross-cuts, which took about eight months. Then he said: "We have been some months driving these cross-cuts, and I strongly advise you to resume sinking." That was in Feb. of this year. We are obliged to be guided in mining matters by those on the spot. It is no use attempting to

DIRECT A MINE LIKE THIS FROM MOORGATE STREET.

They know our financial position, and they recommend us to continue the shaft to the next level. If we had not allowed them to continue sinking you would have said why not. We must, therefore, leave technical matters to them. Of course, you know that simple sinking of the shaft will not discover an ore body—you must drive the levels. As far as the promises I made are concerned, I made them on the basis of what I anticipated would take place, but how could I fly in the face of the opinions that came to me from the other side. We have now the opinion of large shareholders which is in favour of continuing the sinking of the shaft. As to the increasing expenses—those up to the last meeting were for eight months, whilst these are for 12 months, and they have not increased proportionately. As to the directors' fees—decidedly they were retrospective, for the minute I have here says that they are "350l. a year for the period ending Mar. 31, 1890." 500l. or 600l. a year was originally put in the articles, but a few of us working together got the amount reduced, but that did not suppose that for eight months' work we should get nothing. (Hear, hear.) The law costs include the conveyancing (105l.), and if we deduct that you will find that really the expenses have been at the same rate as heretofore. As to the resignation of directors, one of them did not attend the board meetings for three months, and thereby, under the articles, ceased to be a director. If any gentleman wishes to be a director, and has a fair amount of mining knowledge, we shall be happy to place him on the board, but the great trouble is to get a suitable man. We meet weekly, and in addition have also special board meetings. Much of our difficulty is created by shareholders not paying their calls. We must keep up our credit, and do all that is possible without being hard upon the shareholders.

SATISFACTION EXPRESSED.

Major DE WINTON: I am perfectly satisfied with the chairman's explanation.

Mr. MACKEAND: I consider the explanation also satisfactory.

The CHAIRMAN: This is not a company where matters are kept in the dark. You can see all the letters. Shareholders do not like to inquire at the offices generally because they are snubbed, but everything can be seen with us.

The motion was carried unanimously.

The CHAIRMAN proposed the re-election of Mr. Bland, the local director.

Mr. CORNISH, in complimentary terms, seconded the motion, which was carried unanimously.

Mr. CORNISH proposed the re-election of Mr. Dixon, whose acquaintance he had only had for a short time, but whom he had learnt to

esteem as a capable business man. If the machinery were sold up to-morrow it would be found worth more than the selling value of the property on the market to-day.

Mr. JOHNSON seconded the motion, which was carried.

Mr. WHEELER proposed the election, as a director, of Mr. Mackeand who had given attention to the concern. Mr. Cornish had been optimistic in the past, and was so to-day. Now, perhaps, if they introduced a little of the pessimism of Mr. Mackeand, it would be a judicious mixture. He noticed that Mr. Cornish was not a big shareholder.

MR. CORNISH WITH HIS BACK UP.

Mr. CORNISH: If I am qualified, it is quite enough. I think it is a gross piece of impertinence for you to speak of my holding, and as to optimism, I do not know what you mean. (Laughter.) What is in the future no one can tell, but according to my opinion as a miner, and scores of other men agree with me—there is a great future for that district, and as Port Phillip is the centre of it, I think it has the best show of the lot. If we should strike a good payable lode at 1,800 or 2,000 ft. we shall have a grand property, as to the future of which no man can speak.

Mr. HUNTER: I agree with Mr. Cornish that he cannot be expected to hold more than his qualification. He is a practical expert and knows the country he has been talking about, and has worked hard there himself. I do not think we could have any one better on the board. I have every confidence in him, and look upon him as a thoroughly practical man.

Mr. WHEELER: We are nearly at the end of our tether, and one more sixpence will wind the affair up. It seems to me that Mr. Mackeand has pointed out one or two weak places, and he has a large interest in the mine. He has, I believe, 1,000 shares. Since it will be no extra expense I beg to propose that he be elected a director.

Mr. CHARLES HART: I second the motion. If Mr. Mackeand is a large shareholder I am sorry for him, because the fewer shares a man holds in this mine the better. I quite agree with the remark that Mr. Cornish is very optimistic, and certainly it is not bad for shareholders to know what interest directors themselves have in the mine. It seems to me that directors who back this company so strongly ought to give larger evidences of their practical support by their holding of the shares.

The CHAIRMAN: I had 1,520 shares, and Mr. Cornish is qualified with 500 shares, whereas you (to Mr. Hart) have 30 shares. (Laughter.) You should give seven days' notice of your resolution, and I do not think that the three of you hold as many shares together as I have myself. The resolution cannot be put, because it is not in order.

Mr. MACKEAND: The chairman cannot pretend that this matter has been sprung upon him, because I wrote a letter to the secretary in Apl. last, who said the matter was before the board. I have been a shareholder since the re-constitution, and have paid all my calls. It was impossible for me to give the requisite notice, seeing that I only received the report at 10 o'clock on Saturday night week. I called upon the secretary, who said I had better write to the board, which I did, and I think I was justified in putting the matter before the meeting.

THE CHAIRMAN REMINDED.

Mr. J. WALKER: The chairman distinctly said that he would like anyone who showed an interest in the company to join the board, and now because one gentleman, who evidently takes a great interest in it, has been proposed, he tries to overrule us by trivial objections. I think we ought to accept the motion. The board now consists of two members, and supposing they do not see eye to eye, who is to decide. We ought to have three. I support the resolution.

The SOLICITOR: You cannot get over the legal difficulty, as the requisite notice has not been given.

Mr. WALKER: Then I move that it be an instruction to the board.

Mr. HART: I propose "That the shareholders request the directors to proceed with the election of a director at the earliest possible moment."

Mr. WALKER: I accept that and second it.

The CHAIRMAN: It is a matter of whether a few shareholders only should have their way in a meeting. We represent 20,000 shares, and these gentlemen only a few. If the resolution should be carried we shall demand a poll. If we have a new director it must be some one whom we think we can work with.

The motion was put and lost.

The CHAIRMAN proposed, and Mr. CORNISH seconded, the election of Mr. James Grant as auditor at the remuneration of 10%, and this was agreed to.

Major DE WINTON proposed a vote of thanks to the chairman, which was carried, and the meeting ended.

DOLCOATH MINE.

DIVIDEND OF £1 PER SHARE.

A TWELVE-WEEKS' MEETING of adventurers in Dolcoath was held on the mine on Monday.

Mr. M. H. Williams

presided.

The accounts showed a profit on the quarter's working of 4,751%. The costs amounted to 20,365%, and the credits 26,519%, including labour—tutwork, 12,368%, an average of 4,120% per month; tribute, 1,527%; merchants' bills, 6,023%; Camborne rates, 274%; Stannary dues (three months), 28%; water rents (one year), 141%. The tin sold (491 tons) realised 26,519%—an average price of 53% 19s. per ton. They owe to merchants, 5,458%; and for dues, 1,473%. Against this they have a credit at their bankers (Messrs. Bolitho, Williams and Co.) of 16,160%. The lord's dues amounted to 1,473%, and club account 700%.

The dividend declared in July last of 1% per 4,700th share absorbed 4,700%, leaving a balance to be dealt with of 10,632%. Income-tax returned is credited at 290%, and the balance from last account, 10,290%.

Capt. JOSIAH THOMAS observed that there had been returned 290% from the Inland Revenue Office, and that would raise their profit if it had been charged in the account to 5,932%.

The CHAIRMAN moved the adoption of the accounts, and a dividend of 1% per share, carrying forward a balance of 5,932%.

Capt. JOSIAH THOMAS remarked that of the 16,160% at their bankers, no less than 13,431% was in cash. That was a much larger cash credit than they had ever had before, and for the reason that some of the smelters had been paying cash for tin instead of 30 days' bills.

Mr. W. BAILEY seconded the adoption of the accounts and a declaration of a 1% dividend, and the motion was carried. The agents read a good report.

VIEWS OF THE MANAGER.

Capt. JOSIAH THOMAS, in supplementing his report, said: We had, as most of you are aware, a considerable hindrance during a portion of this quarter by the breaking of the main bob of our large pumping engine. That threw the water into two of our deepest levels for between two and four weeks, covering some of the best of our stopes; and had it not been that we had a good lode driving through in the 314, and none of which we had stoped, certainly we should have been some 30 or 40 tons of tin short. But we do not always take away every bit of tin we have in the mine, and we had reserved that piece of ground at the 314 for anything that might happen, and so we simply had to transfer some of the men to that rich ground which was standing. Consequently we nearly kept up our returns to the level of last time, being only a ton or two short, although we were hindered four weeks in the bottom levels. (Applause.) That shows that we have considerable reserves in the mine, or we could not have done so well. The price of tin this time is 7s. per ton less than it was for the former three months. That is only a trifling difference, but, of course, it is a little less. Considering the great hindrance we had with the pumping engine, and also the price of tin being a little less, I myself am well pleased with the result of this three months' working. (Applause.) As far as the mine itself is concerned, I think we are, on the whole, looking better than we were three months since. Last time I said something about the probability of our acquiring new steam stamps, but I can scarcely see my way clear to recommend that yet. But after we get a good lode in the 375 west of Harriet's, I think we shall have to begin about that work. This, however, we may not be hurried about, because, although the cost will be from 2,000% to 3,000%, we have got 6,000% in hand, and if necessary I think we can break a few more tons of tin to pay for it. (Applause.)

Discussion followed, in the course of which Mr. HEARD said he hoped no one would think that he had said anything disparagingly of the mine. He was glad to have elicited from Capt. Josiah Thomas what he had in regard to the eastern ground, and also he was very pleased to hear of the big and important lode Capt. Josiah had in the bottom of the mine. On the whole he thought, considering all things, the report was a most satisfactory one. (Applause.)

A vote of thanks to the chairman concluded the meeting.

CAMBORNE SCHOOL OF MINES.

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for giving instruction in subjects specially applicable to mining students, and in a district where the practice of mining may be observed at the same time.

The subjects taught include Mining, Ore-dressing, Vanning, Assaying, Chemistry, Geology, Mineralogy, Steam, Metallurgy, Plan Drawing, Engineering, &c.

The managers of the principal mines in the neighbourhood will afford facilities to students of the School for studying practical mining.

Prospectuses, and any further information, may be obtained of the PRINCIPAL or SECRETARY.

The Session commenced on Monday,
21st September.

THE ADVERTISERS are in possession of a Group of CONCESSIONS, very favourably situated in North Mexico, and yielding silver and lead ores. They desire to meet with a purchaser, or with a capitalist who will provide the very moderate capital necessary for their development.
Address, Argentum, Messrs. Deacon's, 154, Leadenhall Street.

THE MINING EXCHANGE.

Lists of Members of the Mining Exchange (who are under the control of the Committee, and subject to the Rules and Regulations) may be obtained on application to

W. T. HARGREAVES,
Secretary to the Committee.

The Mining Exchange,
9, Old Broad Street, E.C.

MOLD, FLINTSHIRE.

Highly Important Sale of Valuable Leasehold Mining Property, known as "The Gwernymynydd and Cat Hole" Mines, together with the whole of the Plant and Machinery, &c., &c.

MR. J. E. DAVIES begs to announce his instructions to OFFER for SALE by AUCTION, at the Black Lion Hotel, Mold (about 40 minutes run from Chester, on the Chester, Mold, and Denbigh Railway), on WEDNESDAY, October 14th, 1891, at Four o'clock in the afternoon punctually, in One lot, or such other lots as may be determined upon at the time of Sale, subject to the Conditions of Sale to be then read, the undermentioned Valuable LEASEHOLD MINING PROPERTY, viz., the unexpired term of a lease of 21 years, from the 24th day of June, 1881, of the "Gwernymynydd" and "Cat Hole" Lead Mines, with the Shafts, Sumps, Levels, Drifts, Adits, Air Ways, Water Courses, Washing and Dressing Floors, Engine Houses, Blacksmith's and Joiner's Shops, Weigh Bridges, Store Houses, Offices, and other appurtenances thereto belonging, together with the Mines, Veins, Seams, Beds of Lead and Lead Ore, already opened, found or discovered, or which may be found or discovered, within, under, or out of the land comprised in the lease, situate at Gwernymynydd and Cat Hole, in the parish of Mold, in the County of Flint, and containing by admeasurement 464a. 1r. 28p. or thereabouts, excluding a small plot of ground (etched green in the plan, which will be produced in the sale-room); also the Valuable PLANT and MACHINERY for working the same, comprising—At Gwernymynydd, powerful Pumping Engine, 85-in. cylinder, 10 ft. 6 in. stroke in the house and 9 ft. out, with all the connections built in 1871, by Williams Perran Foundry Co., Cornwall; pair of 14-in. Horizontal Winding Engine, with winding drum, capstan and connections, by Ratcliffe and Sons, Hawarden; Five "Galloway" and "Tubular" Boilers with connections; the 21-in. Lift, together with the Material in shaft to the depth of 166 yds., Pit Head and Pulleys, Wire and Hemp Winding and Capstan Ropes; a 22-in. Lift (not now in use), Four Crab Winches, and sundry other loose material, the contents of Blacksmith's and Joiner's Shops, Storehouses and Offices, &c., &c. At Cat Hole, powerful Pumping Engine, 85-in. cylinder, 10 ft. 6 in. stroke in the house and 9 ft. out, with all the connections, by Williams Perran Foundry Co., Cornwall, built in 1868; 18-in. cylinder Winding Engine, with capstan and connections; One Semi-Portable Winding Engine, 9-in. cylinder, Pit Head, &c.; Four Tubular and other Boilers, with the fittings and connections; Pit Head and Pulley, Wire and Hemp Winding and Capstan Ropes, the Lift and Material in shaft, a number of 22-in. Pumptrees, and other loose material.

Further particulars may be obtained from Messrs. West, King, Adams and Co., Solicitors, 66, Cannon Street, London, E.C.; Messrs. Kelly and Keene, Solicitors, Mold; Capt. Benjamin Williams, Diggle, near Oldham, Lancashire; or from the Auctioneer, 11, Wrexham Street, Mold.

AGENTS FOR

GATES CORNISH ROLLS PULVERISER.

Simple, Durable, Compact, Dustless.

Giving a finished product direct from the machine.

The best Ore Granulator for leaching and concentrating in the world.

SIZE 00 FOR CHEMISTS' SAMPLING, OR THE LABORATORY, £25 COMPLETE.

THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,

MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only effective and durable hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

No. 2 DRILL.

ROBEY & CO.,

GLOBE WORKS, LINCOLN.

ROBEY & CO. LINCOLN
Class D, Horizontal Fixed Engine, fitted with Patent Automatic Expansion Gear

High Speed Engines—Horizontal and Vertical.

"Robey" Winding Engine.

Vertical Engine and Boiler.

THE "ROBEY" PATENT GAS ENGINE

HAS THE FOLLOWING ADVANTAGES:

"Robey" Winding Engine, with Patent Wrought-iron Tank Foundations.

1. Improved design, whereby all working parts can be removed and examined without breaking any joints.

2. Patent Governor, giving perfect regularity of speed.

3. It is fitted with automatic Tube Ignition.

4. Improved Safety Combination to prevent starting backwards.

5. Automatic and absolutely uniform lubrication.

6. Highly economical consumption of gas.

7. Especially adapted for Electric Lighting.

Improved Compound "Robey" Engine.

Improved Stone Breaker.

Portable Engine.

Improved Hoisting Engine.

Compound "Robey" Fixed Engine.

N.B.—Also makers of all descriptions of Pumps, Wrought Iron Pit Head Gears, Mining Plant, and Gold, Silver, Lead, &c., Reduction Machinery.

ROBEY & CO., GLOBE WORKS, LINCOLN.

MINING MACHINERY

ORE DRESSING MACHINERY FOR COPPER, LEAD, TIN AND OTHER ORES.
PATENT ROCK DRILLING AND AIR COMPRESSING MACHINERY.
GOLD AND SILVER ORE REDUCING MACHINERY.
DIAMOND ROCK BORING AND PROSPECTING PLANT.

SOLE LICENSEES

OTTO'S PATENT AERIAL ROPEWAYS.

COMMAN & CO.,

52, GRACECHURCH STREET,

LONDON, E.C

TONITE

IS RECOMMENDED TO CONTRACTORS, MINERS, PIT SINKERS, QUARRYMEN, AND OTHERS, AS BEING THE SAFEST OF ALL EXPLOSIVES.

TONITE is a most efficient and economical blasting agent, and is largely in demand. It does not contain any Nitro-glycerine, and, is, therefore, exempt from the dangers of exudation, or of freezing and its attendant process of thawing.

THE COMPANY MANUFACTURE

PATENT DETONATORS FOR USE WITH TONITE.

Also supply Safety Fuse and Electric Firing Appliances of best description.

Address: **THE COTTON POWDER COMPANY (Limited),**
116, QUEEN VICTORIA STREET, E.C.

WORKS: FAVERSHAM, KENT.

GOLD MEDAL AT THE CRYSTAL PALACE MINING EXHIBITION, 1890, and THE ONLY GOLD MEDAL AWARDED AT THE LEEDS MINING EXHIBITION, 1890
HIGHEST AWARDS:—SILVER MEDAL, SYDNEY, 1879. SILVER MEDAL, PARIS, 1878.
FIRST SILVER MEDAL, MINING INSTITUTE OF CORNWALL, 1881 and 1883.

Awarded the FIRST PRIZE at the ROCK DRILL BORING COMPETITION, at East Pool Mine, Cornwall, Sept., 1883
INVENTIONS EXHIBITION OF 1885; and the GOLD MEDAL AT LIVERPOOL OF 1886 WINNER.
AND ECLIPSING ALL OTHER MACHINES IN THE TRIPOD COMPETITION AT THE MINING EXHIBITION, CRYSTAL PALACE, 1890.

THE PATENT "ECLIPSE" ROCK DRILL and RELIANCE AIR COMPRESSOR

now supplied to the English, Foreign, and Colonial Governments, and are also in use in a number of the large Mines, Railways, Quarries, and Harbour Works in Great Britain and Abroad, and largely used in the United States of America.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

THE MARKET AND THE SETTLEMENT—BROKERS SHORT OF SHARES IN SEVERAL INSTANCES—KAFFIR SHARES RECEDE—BUSINESS GENERALLY DULL.

Is any apology required by our readers for the reason that we have made the present an "Indian Mines" number of the MINING WORLD? If there is, then we tender it in the fullest manner, for our sin is great, having regard to the space we have occupied concerning them. The close of the third quarter of the year appeared to be a suitable time in which to put the position of all the mines clearly before our readers, and we claim to have done so in the article by "One who has studied them," and in the tables, which are the necessary supplement of that production. We also print a most valuable letter from our esteemed correspondent, Sir Charles Lawson, with reference to the Ooregum Mine. Perhaps no person outside the management is entitled to speak with more authority upon this mine than he, and the facts as set forth by him in terse and striking language in his letter cannot fail to emphasise the remark we ourselves made a week ago, that the future returns from Ooregum will astonish all who make themselves acquainted with the facts.

The week, from the point of view of prices, has been what Mr. Muddle would call "precarious and not at all permanent." There have been ups and there have been downs, but like one's experience in life, the downs have predominated. The market occasionally has shown a bold front, but it has quailed in the presence of the bears, and also that fortnightly disorganisation of business known as the settlement. This passed off satisfactorily. Brokers were short of certain stocks, and had, in many cases, to give bigger prices to get them. This shows again how unwise the public are to have any fellowship with carrying over shares, or with any of those other devices for the deferring of payments and the avoiding of inevitable liabilities. The public should take up what they buy and remove their shares at once from the market. If they leave them in the hands of the brokers to be played with they are simply going to the wood for a stick to belabour their own backs.

There has not been much animation in the Kaffir circus. Performers from Hatton Garden and the Viaduct have failed to respond to the voice of the call boy, and have refused to step into

the arena. In consequence, diamonds are down, and so also are land and gold descriptions. The market has piped unto Hatton Garden, but it has not danced; it has mourned unto Holborn Viaduct, but it has not lamented.

There are Oceanas and Silatis for example. Where is Mr. Conybeare? Why, in South Africa sending home glowing reports in extollation of the cooking on board the Cape steamers. Does he even think of what sort of fare his unhappy shareholders are partaking at home. Some people recommend vegetarianism, and the pump for reasons of health, but Oceana and Silati shareholders will presently have no other choice than to abandon fish, flesh, and fowl, as well as those alcoholic compounds which the howling teetotal dervishes denounce as "the distilled decoctions of damnation." While Mr. Conybeare is faring sumptuously every day on the Cape steamer, Oceana and Silati shareholders are witnessing their shares dwindling to next door to nothing. But in justice to that gentleman it must be owned that Kaffir shares all round are in the doleful dumps.

Nor has the Australian market been more lively. All descriptions are down, even Kangarillas on the issue of what is generally considered a favourable report. The sale of Australian Broken Hill shares is now known to be from the other side. We hear excellent accounts of the Australian property known as Mount Zeehan, where large reserves are in sight.

In the Copper market there have been few transactions, but prices close firmer, notwithstanding that the Russian loan has largely absorbed the attention of Paris operators.

In the Indian market, shares have moved fractionally. Nundydroogs continue steadily to rise, and though Ooregums are quoted lower, it must be remembered they are now ex the dividend lately declared.

Golden Gates and Feathers have been the sport of the market, which generally disbelieves in the realisation of the MacLaughlin telegrams, not to say the reports. It is complained that reliable information cannot be obtained from the directors, though we claim last week to have published in this article all that was at that time known on the subject, and to what we then stated there is nothing now to add. These shares have been dubbed "the battledoor and shuttlecock of the market" during the week. Gates have varied between $\frac{1}{2}$ and $\frac{3}{4}$, leaving off at 13s., 13s. 6d., whilst Feathers are, if anything, a shade firmer.

Some attention has been given this week to Colombian shares. The call of 1s. a share on Lomas appears to have disgusted those thus taxed, but a reference to the meeting held in Mar. or Apl. last will show that this and the preceding assessment were clearly foreshadowed. The company has a ditch of 10 miles to construct before it can make satisfactory returns, and a work of this kind cannot be carried out without money. We do not agree with a correspondent, whose letter we publish in another column, in his estimate of the engineering difficulties that will be met with in the construction of this ditch, and of the general impossibility of the task before the management. We have lately consulted one who is qualified to speak on the subject, and whose opinion is that in about 12 months from now Loma will give a very good account of itself. Tesoro shareholders may prepare themselves for a call of 1s., which will presently be made.

Colombian shares have been in some demand, though prices are not in all cases as good as last week. There is, however, an element of intrinsic value about most of them which prevents any moderate fluctuation in price being worth consideration to genuine investors, who may well take advantage at any time of an easing in quotations to buy to hold. Tolima A and B shares continue about as last week, and the same remark applies to Colombian Hydraulics, which look particularly worth attention at present quotations. Colons have been bought, and close firm; it being generally considered that the settlement of the water question announced last week removes all question of doubt as to an early success for the mine. Lomas have been decidedly "off colour" upon the issue of call netices (1s. per share), but the mine is according to our own information among the best of the Colombian mines, and the shares as being cheap may very well be bought by all those who can afford to wait for a short time. Tesoros have been flat in sympathy with

Lomas, and upon selling by some larger holders; but the price is now again at bed-rock and buying has once more set in, so that we shall expect to see higher prices again before long. It is understood the mine will shortly be making returns.

In the General Foreign section, it has been a great surprise to see the steady fall of Yankee Girl shares. Viewed from the standpoint of the speech of Mr. Crowther at the recent meeting, as well as that of the past history of the mine, Yankee Girl shares look miserably below their real value. The sister company, American Belle, is also weaker, although the latest report is by no means unfavourable. Elkhorns have not come scatheless through the fall of prices. In the cheaper class of shares there has been a good deal of selling of Yuruari, Emma, and a few other shares. We have reason to believe that a call of 6d. per share will shortly be made on Emma shares—a miserable result of the numerous assurances that the shareholders have received of better thing during the current season.

Home Mines have been somewhat more lively. Wheal Grenvilles advanced on the satisfactory meeting held on the mine at Camborne. Dolcoath, East Pool, and South Crofty are also up, and generally the position in Cornwall is better than it was a week ago.

It is difficult to forecast the outlook for next week. It is likely to be characterised by a good deal of business, but with no considerable change in prices.

AFRICAN LANDS.

The principal dealings have been in London and South African Exploration, which again show a rise. British South Africa Chartered, Goldfields of South Africa, Sutherland Reefs and Oceana are all slightly lower, to be accounted for by the settlement and the American market. Prices do not close at their worst.

Business:—A rise is shown in Bechuanaland of $\frac{1}{8}$, and London and South African Exploration $\frac{1}{4}$, whilst a fall is noted in British South Africa Chartered, $\frac{1}{8}$; Gold Fields of South Africa, $\frac{1}{4}$; London and Orange Free State, $\frac{1}{4}$; Oceana, $\frac{3}{8}$; Sutherland Reef, $\frac{1}{4}$; Transvaal Estates, 6d.; Transvaal Gold, 6d.; Transvaal Lands, 1s.; and Zoutpansberg, 6d.

DIAMONDS.

There has practically been no business in these shares. Perhaps the settlement has had something to do with it; still there were a few changes at the finish. The only alteration to note is a fall in De Beers, and a rise in North-Eastern Bultfontein.

Business.—A rise is shown in North-Eastern Bultfontein, $\frac{1}{8}$; whilst the only other change is a fall of $\frac{3}{8}$ in De Beers.

Making-up Prices, Oct. 13.	DIAMOND SHARES.	To-night's Prices.
19/	Bultfontein Consolidated ..	19/ — 20/

$1\frac{1}{8}$	Burma Ruby Mines 15s. paid ..	$\frac{5}{8}$ — $\frac{3}{4}$

KAFFIRS.

In this class Jumpers and Robinsons have been best in demand. The settlement found jobbers short of stock, hence the slight rise. On the other hand the chief decline has been in Ferreira, Jubilee, Langlaagtes, and Simmer and Jack. The market closes somewhat firmer.

Business:—A rise is shown in Aurora of $\frac{1}{8}$; Jumpers, $\frac{1}{8}$; May Consolidated, 1s., and Robinsons, $\frac{1}{8}$. Whilst the following have fallen:—Piggs Peak, 6d.; Sheba, 6d.; Bothas Reef, 3d.; Croesus, 6d.; Durban Roodepoort, $\frac{1}{8}$; Ferreira, $\frac{1}{4}$; Geldenhuis, $\frac{1}{8}$; Glencairn, 6d.; Henry Nourse, $\frac{1}{8}$; Heriot, $\frac{1}{8}$; Johannesburg Waterworks, $\frac{1}{8}$; Jubilee, $\frac{1}{4}$; Langlaagte, $\frac{1}{8}$; Ditto Block B, 6d.; Lni-paards Vlei, 6d.; Main Reef, 6d.; Randfontein, 6d.; Simmer and Jack, $\frac{1}{8}$; Spes Bona, 1s. 6d.; Stanhope, $\frac{1}{8}$; and Vogelstruis, 1s.

AUSTRALIANS.

The market in this class has been in anything but a happy state. Prices all round have receded—Broken Hill Proprietary being the chief sufferer, whilst Wentworths, British Broken Hill, and Australian Broken Hill Consols have followed in a lesser degree.

Business.—There is no rise to record, but a fall has taken place in Australian Broken Hill of 3s. 6d.; British Broken Hill of $\frac{3}{8}$; Broken Hill Proprietary, 20s.; Day Dawn P.C., 6d.; Gympie Great Eastern, 3d.; Kangarilla, 1s.; and Wentworth Proprietary, $\frac{1}{8}$.

INDIANS.

Owing to various causes (the settlement amongst others) this market has been somewhat depressed. Ooregums, although marking a fall of 5s., are quoted ex div. of 3s., while, on the other hand, it was found on Tuesday jobbers were short of Nundydroogs, and prices then hardened slightly. There is no other change to call for special attention.

Business.—A rise is shown in Nine Reefs of 3d.; Nundydroog, 2s.; and South-East Mysore, "Pref." 3d.; whilst a fall has taken place in Balaghat of 9d.; Goldfields of Mysore, 1s.; Mysore Haruhalli, 3d.; Mysore Reefs, 6d.; and Ooregum "Pref." $\frac{1}{4}$.

GENERAL FOREIGN SHARES.

There has been a free market in many of these shares, although there are not many rises to call for attention. Frontinos, although showing an advance, do not close at best, transactions having taken place at 21s. 3d. Don Pedros are also firmer, and the market is decidedly short of stock. Golden Gates and Feathers are both lower on purely market operations. Yankee Girls have been forced for sale, but they now appear to have touched bottom and look a good purchase.

Business.—A rise is shown in Colorado, of 6d.; Don Pedro, $\frac{1}{8}$; Frontino, 2s.; and New Gold Hill, 3d.; whilst the following are lower:—American Belle, 9d.; Barretts, 6d.; Colombian Hydraulic 1s.; Colon, 6d.; Dickens Custer, 3d.; El Callao, $\frac{1}{8}$; Elkhorn, $\frac{1}{8}$; Emma, 3d.; Esmeralda, 3d.; Golden Feather, 3s.; Golden Gates, 2s. 6d.; Linares, $\frac{1}{4}$; Montana, 6d.; New California, 3d.; Pahang Corporation, 6d.; Palmarejo, 6d.; Silver Mines of La Luz, 6d.; Spitzkop, 3d.; Tesoro, 6d.; and Yankee Girl, 3s.

COPPER.

The market for Copper shares has been very much neglected, and prices are lower in consequence of no support coming from Paris. In Rio Tintos only has there been much business.

Business.—There is no rise to note, but a fall has taken place in Capes of $\frac{1}{8}$, and Rio Tinto $\frac{3}{8}$. Others remain stationary.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director resident at Broken Hill dated Oct. 9: "Looks like change for the better; 20 tons of ore, 80 ozs. of silver to the ton, 35 per cent. of lead. Await arrival of ship; daily expected."

DAY DAWN BLOCK AND WYNDHAM.—The company has received the following cablegram from the general manager at Charters Towers, giving the result of the crushing for the fortnight ending 10th inst.:—"Tons crushed, 720; yield of gold, 1,047 ozs.; approximate value, 3,610%; fortnight's expenses, 1,240%."

DAY DAWN P.C.—Cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Oct. 10, viz.: "940 tons, 1,093 ozs." (Estimated value, 3,825%). Advices by letter just received show a mistake in the telegram announcing the number of ounces of gold obtained in the fortnight ending Aug. 29. The correct quantity is 1,055 ozs. The total quantity won in 1891, up to Oct. 10, is 21,082 ozs., as against 20,070 ozs. up to the same period in 1890.

KANGARILLA.—Since the date of the balance-sheet a sum of 5,564*l.* has been received on account of the new issue of shares making in all a sum of 12,598*l.* The directors have thus been in a position to provide the necessary funds to develop the Aclare Mine vigorously, to provide the most improved and complete ore-dressing machinery and plant, and to erect the requisite buildings. The company is free from debt, with a substantial cash balance and assets of ore on hand. The report of Mr. Rosewarne on the mine is distinctly encouraging.

MIDAS.—Cable from the mine:—"Yield for week ending Oct. 10 34 ozs."

MILL'S DAY DAWN UNITED.—A cablegram reports:—"Mine cleaned up on Oct. 3 from the previous fortnight's crushing, 1,175 tons, yielding 1,143 ozs. gold; value, 3,900*l.* The usual monthly dividend of 3d. per share was declared. Since that date the manager reports getting 8 ft. of reef at the 1,400-ft. level; heavy gold showing freely. The discovery is the most important event in the history of Queensland mining."

MOUNT ZEEHAN.—The following cablegram has been received, dated Hobart, Oct. 10: "35 tons of first-class ore have been shipped from Hobart to London per s.s. Wilcannia."

MOUNT LEYSHON.—A cablegram dated Oct. 12 from the manager at Charters Towers gives the fortnightly crushing:—"1,450 tons crushed, 370 ozs. gold; 40 stamps mill ran 288 hours."

NEW QUEEN.—Dividends of 6d. per share for each of the quarters ending Sept. 30 and Dec. 31 last have been paid, and since the date of closing the accounts a further dividend of 6d. per share for the half-year ending June 30 last has been paid, making 1s. 6d. per share for the past 12 months.

FOREIGN MINES.

ALASKA TREADWELL.—A cablegram announces the following clean up:—"Shipment of bullion, \$68,700. Tons of ore milled, 20,000. Tons of sulphurets treated, 509. Of bullion there came from sulphurets, \$16,147. Number of days mill ran (about) 30. Gross expenses for period have been \$29,855."

ALMADA AND TIRITO.—Cablegram from the superintendent at the mines:—"Last month's profit was gross \$1,350. Expenditure on capital account, \$4,300. Water very scarce. Fuel is scarce and expensive."

AMERICAN BELLE.—The company have received the following information by cable from Capt. Harvey:—"Shipped from Silver Bell during Sept., 30 cars of ore, about 300 tons; estimated value, \$6,000. Ore-house arrangement completed. Commenced opening out No. 9 level. National Belle: Busy sinking shaft to 4th level."

ANGLO-MEXICAN.—From cable advices received, the superintendent at the mine reports that the Sept. shipment amounts to \$31,089.

DE LAMAR.—The directors have declared a second interim dividend of 9d. per share (free of income tax) for the three months ending Sept. 30. The dividend will be payable to all shareholders registered on the company's books on the 14th inst., and warrants will be posted on the 26th inst.

ELKHORN.—Cable from the mine:—"Bullion produced for week ending Oct. 10, \$8,815."

FRONTINO AND BOLIVIA.—The directors have received advices from the mines for the month of Aug. as follows, viz.:—"Produce, 5,587*l.* 13s. 4d.; cost, 3,806*l.* 2s. 7d.; estimated excess of returns, 1,781*l.* 10s. 9d."

GOLDEN GATE ALLUVIAL.—On 12th inst. the directors of this company cabled Col. Frank McLaughlin, the company's general manager at Oroville, as follows:—"What is the result in sinking up to the present? Rumours here struck pay ore. Reply immediately by telegraph prospects as full as possible;" and next day received the following reply:—"News not reliable, due to newspapers. Struck hard smooth bed-rock in one pit, am drifting from it to reach pay, if it is possible. Another pit, 45 ft. deep, not yet bottomed.—McLAUGHLIN."

GUADALCAZAR.—In a letter received on Thursday from Mr. Robert Mackenzie, the resident engineer at the mines, and dated Sept. 28, the company is informed that the big vein already mentioned is found to be one of the main geyser chambers, and will prove a true bonanza. The find is extending as the mines are still going down on constantly improving ore.

JULIA NITRATE.—Cable advices having been received from the company's manager in Chile that he can now arrange to commence active operations, the directors have ordered him to begin work, and have cabled the necessary funds.

LA PLATA.—The results for Sept. month, as cabled by the manager, are as follows:—"Value of mine output \$1,150; slag dump output, \$432; profit at mines, \$800; mine is looking better. Whitecloud (Red Mountain district): Good progress is being made. Shall commence drifting at depth of 300 ft. Nov. 1."

MAID OF ERIN.—Cablegram from the mines:—"Gross yield for the week ending Oct. 10, 1,500 tons; estimated value, \$32,000."

NEW PIERREFITTE.—The company has sold 150 tons lead ore to Messrs. Nevill, Druce and Co., at 12*l.* 19s. per ton, f.o.b. Bordeaux. The company has also sold to Mr. J. F. Kimmel 250 tons of blende, at 5*l.* 6s. 3d. per ton F.O.B. Bordeaux.

OSCAR.—The manager telegraphs under date Oct. 16: "The quartz in the bottom of the shaft is 7 ins. wide and increasing."

Average assay for free gold for three days, 12 dwts. Anticipate reporting further improvement soon."

OURO PRETO.—The company have received a telegram, dated Oct. 10, giving last month's return of gold as follows:—"3,044 tons of quartz yielded 9,012 oits. (1,031 ozs.)"

SAN LUIS.—A cable, received from the manager at the mines, states:—"Bullion shipped Sept., 2,500l.; 270 tons ore crushed; mill running 27 days."

HOME MINES.

GAWTON.—It was decided at the meeting on Wednesday to raise further capital by means of debentures, and the shareholders will be asked to subscribe 3,500l. *pro rata*. This amount is to be used for paying off liabilities incurred principally in the erection of refining works whereby the company is now able to send to market manufactured arsenic. The mine was stated to be looking better than ever it had done in the past.

LEVANT.—At the meeting on Tuesday a profit was shown of 3,070l. and a balance in favour of the mine of 3,338l. A dividend was declared of 1,875l.—15s. per 2,500th share.

TREGURTHA DOWNS.—Mr. Bischofswerder, of Penzance, informed one of our representatives in Cornwall this week that he had purchased the mine, intended at once to "fork" it, and work it vigorously.

TICKETING FOR TIN ORES.

A tin ticketing took place at Redruth on Tuesday last, when 339 tons were offered, with the following results:—

VALUE OF ORES SOLD FROM EACH MINE.							
Tons.		Cwts.		Per ton.		Value.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

CRÆSUS.—Crushing for Sept. amounted to 350 ozs.

SPITZKOP.—The directors have just received 177 ozs. of gold, which has realised 682l.

GRASKOP.—A cablegram announces the result of the Sept. crushing as follows:—"Crushed 576 tons; yield, 182 ozs.; estimated cost, 430l."

NORTH-EASTERN BULTFONTEIN.—Telegraphic advice for last week announces:—"5,800 loads top blue ground, yielding 1,400 carats of diamonds; five days work."

GRASKOP.—The consignment of gold from the Aug. crushing (191 ozs.) has been sold through Messrs. Johnson, Matthey and Co., Limited, for 728l. 7s., or 3l. 16s. 7d. per oz.

UNITED LANGLAAGTE.—The directors regret that affairs have taken such an unsatisfactory turn, but they have by no means lost confidence in the ultimate payability of the property.

GIE APPANTOO.—The manager cables, under date Oct. 4:—"Prestea Mine, 570 ozs. for Sept. You can rely on 550 ozs. per month from this mine. The shaft at Gie Appantoo is free of water and cross-cut is being driven to intersect lode."

VIRGINIA (TRANSVAAL).—Cablegram from Capt. A. P. D. Hodge, the manager who has recently arrived at the mines:—"From the inspection I have made of this property, the opinion I have been led to form of its value and prospects of success remain unaltered. Prospects are more favourable."

TRANSVAAL MORTGAGE LOAN AND FINANCE.—Cablegram from Johannesburg:—"May Deep Level Gold Mining Co., Limited: 26 ays milling, 540 tons crushed, yielding 410 ozs.; estimated value of concentrates, 360l." The Company has also received a cable from the head office of the Princess Estate and Gold Mining Co., Limited, at Johannesburg, stating that the output for the month of September is 750 ozs. of gold

CROWN REEF.—The crushing for last month during 26½ days of 24 hours was 5,874 tons, which yielded 3,495 ozs. of smelted gold. The revenue for the month was 12,494l. 12s. 6d., and the working expenditure was 7,311l., leaving a balance of 5,183l. 12s. 6d. as profit for the month. The expenditure on capital account for the month was 2,187l., making a total expenditure for the month of 9,498l. The company has declared a dividend of 25 per cent. for the half-year ending Sept. 30.

TEUTONIA.—The South African Gold Trust and Agency Co., Limited, notify that advice has been received by the mail just to hand from the secretary of the Teutonia Gold Mining Co. that the following are the accepted terms of re-construction as tendered for by Mr. Cunliffe:—Capital, 100,000l.; to present holders, 40,000 shares; working capital, 10,000l. for 40,000 shares; reserve, 20,000 shares. Holders of scrip should therefore send in their certificates to the London office for registration without delay.

PIGG'S PEAK ESTATE.—Mine report for week ending Sept. 12.—Devil's reef: Drive 200-ft. level, south end: Drove for the week 100 ft.; total, 402 ft.; going through a body of ironstone. North end: Drove for the week, 25 ft.; total, 235 ft. Durnin's new reef, low level drive: Drove for the week, 13 ft.; total, 170 ft.; rails up to face. England's reef, low level drive: Drove for the week, 8 ft.; total, 132 ft.; cut the lode and commenced driving south; drove, 16 ft. Battery: Mortar blocks are now in place, and battery frames fixed. Dam: All boulders above dam have been blasted away, and now excavating for dam.

CERRO DE PASCO.—The following report has been received from the mine manager, dated Barberton, Sept. 14:—Block F extension: South-east cross-cut has been driven 6 ft.; making total distance, 359 ft.; this cross-cut is still in hard slate. Drive south on 10 ft. reef has been driven 9 ft., making total distance 103 ft.; ore extracted, 18 tons. Drive north on 10 ft. reef has been driven 13 ft., making total distance, 22 ft.; ore extracted, 26 tons; quartz in this drive is heavily charged with pyrites. Air shaft, No. 1 south, has been sunk 9 ft.; making total distance, 24 ft.; this shaft is in sandstone. Block 12: North-east cross-cut has been driven 11 ft., making total distance 218 ft. At 203 ft. we cut a quartz reef 8 ins. wide, which carries gold. This cross-cut is still in mica schist.

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from general manager's advices, dated Sept. 14.—Mining:—Ophir Hill—Theta vein: Ore extracted, 40 tons; assay value, 3 ozs. 10 dwts. per ton, and 26 tons; assay value, 2 ozs. 4 dwts. per ton. Brown's Hill—Nu reef: Ore extracted at No. 1,209, 15 tons; assay value, 5 ozs. 10 dwts. per ton; and at Nos. 1,220 and 1,270, 7 tons; assay value, 1 oz. 14 dwts. per ton. Edin Hill—Rho reef: Ore extracted, 18 tons; assay value, 2 ozs. 2 dwts. per ton. Glinister's (Brown's Hill)—Sigma reef: Ore extracted, 25 tons; assay value, 1 oz. 16 dwts. per ton. A temporary scarcity of native labour had hindered general mining operations. Mill: The battery and pans ran without interruption. The new dry-crushing mill was not yet quite in working order.

HENDERSON AND FORBES.—Mining report for month of Aug.—North-west portion of concession: Road shaft: From bottom of shaft we drove 6 ft., and came on the reef, but stone gave no gold in panning. Northern range: Cross-cut at foot of Krantz: This is now in 155 ft. We have still the pyrites (mentioned in last report) showing in the end, but the stone assayed gave no gold or silver. The cross-cut west is now in 15½ ft.; no change in nature of stone. Kennedy's shaft: Drive west from bottom of shaft is now in 39½ ft.; still no change in the nature of the stone. New shaft: This is now down 37½ ft. on nice looking quartz, but giving no gold in panning. Williams' cross-cut foot of northern range: This drive is now in 200 ft., and the cross-cut east along the vein of quartz in 10 ft., but showing very little gold now. Costean pits: 170 yds. 2 ft. deep have been made on the northern range during the month. All driving and sinking has been stopped since the 22nd inst.—H. W. HALL.

EDWIN BRAY.—Manager's report for week ending Sept. 12:—No. 2 level: Underhand stoping east and west of winze is proceeded with; the quartz is good, and some of the drillings assay as much as 18 dwts. 15 grs. No. 3 level: The quartz extracted from this level has been at least as good as last week, if not better, and especially close to the hanging-wall, where once we had the drillings assaying 1 oz. 15 dwts. 13 grs. Ropeway worked well, but the wear of the hauling rope and rollers is great, and I am very anxious to get the spare hauling wire which has arrived in Durban. The star knots will not have to be changed this month. To provide for the delay it causes, I am making a strong reserve at the mill, and already there is a large stock of good quartz on the mill platform. Mill: I hope to have the 30 stamps at work in about four or five weeks time, the new cams and tappits for the No. 1 and No. 2 batteries being on their way from Durban to Barberton. The new stone breaker will also arrive here at the same time, and will be erected at once. Tailings concentrated to about 25 per cent., assay 1 oz. 0 dwt. 7 grs., representing about 5 dwts. per ton ordinary tailings.

SHEBA.—The general manager reports as follows for the month of Aug.—Mine:—Quarry: Stoping on this level preparatory to sinking winze to No. 1 level; south shoot nearly completed; in fair grade ore. No. 1 level: Have resumed work in the north shoot on this level, storing the ore broken, which is medium quality. Work has also been resumed in the hanging-wall stope, south stope shoot, where some second-class ore is being stoped under hand. Nothing will be done with the back, which is in rich ore, until the winze is connected from the quarry level. No. 2 level: We are still working just below this level, in the back of No. 3 east stope, where we have lately developed some very good ore towards the west end of stope. No. 3 level: The underhand stope on this level is still producing very rich ore, most of the past month's crushing having come from that portion of the mine. No. 4 level: Stoping on this level has been discontinued, as the stopes and shoot passes between this level and the quarry are so blocked with broken ore ready for the mill that we cannot break to advantage until they are cleaned. No. 5 level west has been driven 8 ft., the end being in rich ore. At 100 ft. west of No. 15 winze a windlass plat has been cut, and we have commenced sinking a winze, No. 17, to connect with No. 6 level, which is being driven to connect with the winze. No. 6 level: West end has been driven 7 ft. during the month, thus proving the shoot for a total length of 70 ft. east and west by 36 ft. north and south on this level; in good ore.

No. 7 level: This level has been driven west 7 ft. during the month. No. 15 winze has been sunk 19 ft. 6 ins. during the month, making a total depth, on the incline, of 197 ft. below No. 5 level.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Bank directors have not disturbed the minimum this week, but only at the Stock Exchange was it thought probable, although the market at one time had been very firm at $2\frac{1}{2}$, 3 per cent., on the result of the tenders for 1,500,000*l.* in Treasury Bills, which went at three months' date at $2\frac{1}{2}$ per cent. It is true the Bank lost nearly 300,000*l.* in gold on the *Gazette* week, but the demand was not so pressing, and the Bank return was more favourable than expected, for, although coin to the extent of 180,000*l.* was taken for circulation, the circulation of notes fell off 317,000*l.*, so that the reserve was only 160,000*l.* worse, at 13,760,000*l.*, which compares with 11,194,000*l.* at this time last year, while as the liability under deposits on balance is 100,000*l.* less, the proportion of reserve is merely a fraction lower at 38 per cent. As the money borrowed of the Bank has been all repaid the further distribution of the dividends has gone to swell the private deposits by practically a million. The demand for gold continues in the markets for Germany, the United States, Egypt, and India, but the exchanges are more in our favour. Discount is now easier at $2\frac{1}{2}$, $\frac{1}{2}$ per cent., and money, in spite of the settlement, has not been in much demand, and the quotation was not better than 1 to $1\frac{1}{4}$ at call or for a week.

The Stock Markets have been much less active during the past week, partly under fears of an advance in the Bank rate, the depression on the continent, particularly at Paris, where adverse rumours prevailed as to the success of the new Russian loan, while the tempestuous state of the weather, which interrupted to some extent communication with the south-west, Ireland, and America, coupled with the influence of the settlement, all tended to restrict business and depress prices, so that a decline is generally shown, although there was a partial recovery yesterday on some modification of the adverse causes. There was relief as to the financial position, and a recovery on the Paris Bourse on reports that the new loan had been covered several times over. The weather, however, continued bad, but communication was partially restored. The Funds were strong and have improved $\frac{1}{2}$ on the week, stock being scarce. Foreign Securities show little change, the fall having been recovered; Russian, however, are $\frac{1}{2}$ lower on balance. Argentine are firmer in spite of the rise in the premium on gold to 350 per cent. as the Senate has rejected the *Moratorium* Bill, but Uruguay are lower, although the rising at Monte Video was suppressed. Home Rails are mostly lower except for a rise in Great Northern issues. The Scotch lines were good on the reported conclusion of the negotiations. American Stocks are also lower on realisations, the leading stocks being $\frac{1}{2}$ to 1 worse. Trunks have fallen 1 to 3 per cent. and Mexican issues 2 to 4 per cent.

Money was easy and very abundant to-day at $\frac{1}{4}$ 1 per cent. for a day or longer, while discount rates were still weak at about $2\frac{1}{4}$ for three months bills. Some of the Eastern banks have sold acceptances to arrive of a long date at under $3\frac{1}{2}$. The Bank of England received 63,000*l.* in sovereigns from Australia and Lisbon. It is thought possible that exports to America may now cease for a little while, but rumours of a vague character were current this afternoon that upwards of half-a-million sterling would soon be withdrawn for the River Plate. Bar silver fell to $41\frac{1}{2}$ d. per oz. Rupee paper fell $\frac{1}{4}$, but recovered.

There has been more doing at the Stock Exchange to-day, and with it a pretty general improvement in prices. The Funds were again $\frac{1}{2}$ firmer, Consols closing $94\frac{1}{2}$, $95\frac{1}{2}$ for money and $95\frac{1}{2}$ for account. The $2\frac{1}{2}$ per cent. together with India Stocks improved $\frac{1}{2}$ and Colonial was steadier. Foreign "International" Stocks were scarcely so good, the Bourses being rather dull. French were $\frac{1}{2}$ better, but Italian, Spanish, Portuguese, and Russian receded $\frac{1}{4}$ to $\frac{1}{2}$. The chief feature, however, was the renewed strength of Argentine Securities, notwithstanding the further advance in the Gold premium to 353 per cent. as it is expected that a large export of gold, hence will be made to the River Plate, in payment for the wool and other crops which would relieve the stringency. The 1886 and Funding Bonds have risen 3 and $2\frac{1}{2}$ respectively, and the other issues, together with the National and Provincial Cédulas, $\frac{1}{4}$ to $1\frac{1}{4}$. Uruguay have also recovered 1, and Brazilian are 1 to $1\frac{1}{2}$ better. Home Rails improved; Caledonian and North British Deferred rising to $42\frac{1}{2}$ and 42 respectively, but relapsed, as the joint meeting has been adjourned, and the latter left off $\frac{1}{2}$ worse, with $\frac{1}{4}$ in the Preferred. The Southern Deferred and heavy lines were mostly $\frac{1}{2}$ to $\frac{3}{4}$ higher. American Stocks were very firm, and closed at the best, Union Pacific leading in the street at $42\frac{1}{2}$, and prices are quite $\frac{1}{2}$ to 1 per cent. higher. Trunk and Mexican Issues have sympathised, but other securities have been uncertain and featureless.

Annexed are the final quotations to-day:—Consols Account, 95, 99; Egyptian Preference, 88, 88 $\frac{1}{2}$ x d.; Egyptian Unified, 96, 96 $\frac{1}{2}$; French Four-and-a-Half per Cents., 104, 104 $\frac{1}{2}$; Hungarian, 89, 89 $\frac{1}{2}$; Italian, 89, 89 $\frac{1}{2}$; Mexican, 85, 85 $\frac{1}{2}$; Peru Five per Cents., 9, 10; Peru Six per Cents., 27, 27 $\frac{1}{2}$; Russian 1873, 95, 95 $\frac{1}{2}$; Portuguese, 36, 37; Spanish, 67, 68; Turkish 1871, 92, 92 $\frac{1}{2}$; Turkish Defence, 88, 88 $\frac{1}{2}$; Caledonian Railway, 117, 117 $\frac{1}{2}$; Great Eastern, 87, 87 $\frac{1}{2}$; Great Western, 156, 157; Brighton "A," 145, 145 $\frac{1}{2}$; North Western, 169, 169 $\frac{1}{2}$; Metropolitan, 84, 84 $\frac{1}{2}$; Metropolitan District, 29, 29 $\frac{1}{2}$; Midland, 160, 160 $\frac{1}{2}$; North British, 40, 41; North Eastern, 154, 154 $\frac{1}{2}$; South Eastern "A," 84, 84 $\frac{1}{2}$; Mexican Ordinary, 31, 32; Grand Trunk, 10, 10 $\frac{1}{2}$; Grand Trunk First Preference, 69, 69 $\frac{1}{2}$; Grand Trunk Second, 48, 49; Grand Trunk Third, 26, 27; Canadian Pacific, 91, 91 $\frac{1}{2}$; Denver Preference, 49, 49 $\frac{1}{2}$; Erie, 31, 31 $\frac{1}{2}$; Milwaukee, 76, 76 $\frac{1}{2}$; Lake Shore, 127, 127 $\frac{1}{2}$; Louisville, 81, 81 $\frac{1}{2}$; Atlantic First, 39, 39 $\frac{1}{2}$; Ontario, 20, 21; Ohio, 24, 25; Norfolk and Western, 55, 55 $\frac{1}{2}$ x d.; Reading, 21, 21 $\frac{1}{2}$; Reading Bonds, 84, 85; Union Pacific, 41, 42; Wabash Preference, 30, 31; Ottoman Bank, 11, 11 $\frac{1}{2}$; Anglo-Telegraph, 48, 49 x d.; National Telephone, 4, 4 $\frac{1}{2}$; Hudson's Bay, 16, 16 $\frac{1}{2}$; Suez Canal, 113, 114 $\frac{1}{2}$;

Guinness, 314, 316; Allsopp's Ordinary, 23, 25; Bryant and May, 13, 14; Eastmans Ordinary, 4, 4 $\frac{1}{2}$; Elmore Copper, 3, 3 $\frac{1}{2}$; Salt Union, 4, 4 $\frac{1}{2}$.

WAIHI GOLD MINING CO.

(From the *New Zealand Herald* of Sept. 11, 1891.)

WITHIN the last month the local board of this company has received very satisfactory information from the management at Waihi respecting the result of a trial test of five tons of ore taken from their ordinary workings in the Martha lode, and sent to the Waitekauri battery for the purpose of ascertaining whether it could be treated by the wet crushing process. The Waitekauri battery, belonging to Mr. T. H. Russell, is constructed for the purpose of reducing ore upon the wet crushing principle, through an extremely fine mesh of 3,600 holes to the square inch (the ordinary mesh in use at the Thames being 200 holes). The crushed ore is lifted by means of bucket elevators to an elevation, from thence it flows into and over a series of tanks, and the water is eventually returned again into the stamper boxes. By this means the fine float gold is saved, and the ore is afterwards treated by pan amalgamation. The Waihi Co., whose process is one of dry crushing, entailing roasting or calcining the ore previous to crushing, being desirous of ascertaining whether the wet process would suit their ore, made an arrangement with Mr. Russell to test a parcel of their ore at his battery, and 5 tons were accordingly sent. The test was made under the supervision of Mr. Napier, metallurgist to the Waihi Co., who reports as follows:—"Trial parcel, 5 tons, Waitekauri battery; 83 per cent. of gold and 56 per cent. of silver." This result will be received by the shareholders of this company with the liveliest satisfaction, for it means that with an alteration of the present battery from dry to wet crushing, a very large saving, equal to 30 per cent. of the whole cost of mining and milling can be made, whilst 75 per cent. more ore can be crushed. When this alteration is made, and the extra 30 head of stampers (which are now well forward) are completed, the battery will work 60 head, and will be capable of reducing 2,500 tons per month; and if anything like the percentage saved by the Waitekauri mill is accomplished, there is a brilliant future for this company, as there is an almost unlimited supply of ore in the great Martha and Britannia lodes, which traverse this company's ground. Competent judges estimate that, without resorting to sinking, there is ore sufficient to employ 60 head of stampers for the next 10 years, and the ore below water level will not be exhausted within the lifetime of any of the present shareholders. It is anticipated that the company will have the full force of 60 stampers at work within two months. It will be interesting to note that the Waihi mine has produced bullion which has been sold for the sum of 36,844*l.* The return for the past month is one of the best produced, the bullion being valued at 2,741*l.* 15s.

COMMERCIAL NOTES.

METALS.

COPPER has been irregular. A large business done in G.M.B. warrants from 50*l.* 15s. to 51*l.* cash, and then down again to 50*l.* cash and 50*l.* 15s. three months, at which it closed yesterday with buyers over. To-day prices are easier, 49*l.* 17s. 6d. to 49*l.* 15s. cash, and 50*l.* 12s. 6d. to 50*l.* 10s. three months. Arrivals in Liverpool and Swansea for the fortnight, 3,848 tons; delivery, 3,028 tons. We quote English tough, 53*l.* 10s. to 54*l.* 10s.; best selected, 54*l.* 10s. to 55*l.* 10s.; strong sheets, 64*l.* to 65*l.*; India sheets, 59*l.* to 60*l.*; yellow metal, 5*l.* 6d. to 6*l.*; ore, 9s. 3d. to 10s. 6d.

TIN has been steady. A moderate business done in Straits at from 92*l.* to 91*l.* 12s. 6d. cash, and 92*l.* 10s. three months. To-day's prices are 91*l.* 12s. 6d. cash, and 92*l.* 7s. 6d. three months, one parcel done at 92*l.* 5s. Australian spot about 93*l.* 10s. The Straits shipment for the fortnight have been 1,510 tons, viz., London, 800 tons; America, 600 tons; Continent, 110 tons; stock in warehouse here, 2,328 tons. Delivery ex warehouse for fortnight about 600 tons. The Dutch market is firm. Banca, fl.55 $\frac{1}{2}$; Billiton, fl.55 $\frac{3}{4}$; English ingots, 94*l.* 10s. to 95*l.*

TINPLATES firm at 13s. 3d. to 13s. 6d. for ordinary coke Liverpool, and feeling among the trade is hopeful.

SPELTER steady, and ordinary brands quoted 23*l.* 12s. 6d. to 23*l.* 15s. ex ship here.

LEAD has been quiet, and quoted Soft Spanish, 12*l.* to 12*l.* 2s. 6d.; soft English, 12*l.* 2s. 6d. to 12*l.* 7s. 6d.; L.B., 12*l.* 15s.; sheets, 13*l.* to 13*l.* 10s.

QUICKSILVER.—Rothschild advanced his price on 13th inst. to 7*l.* 15s.; seconds, 7*l.* 14s.

ANTIMONY firm, 44*l.* to 45*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING OCT. 17.

Aerated Bread	7 $\frac{1}{2}$ per cent.
Alagoas Railway	4 per cent.
British Columbia Land	10 per cent.
Belfast Banking	20 per cent.
Bank of Adelaide	7 per cent.
Crescens, Robinson & Co.	5 per cent.
Crown Accident Insurance	5 per cent.
Direct United States Cable	3 $\frac{1}{2}$ per cent.
Henry Bucknall & Sons, Preference	6 per cent.
Henry Bucknall & Sons, Ordinary	10 per cent.
Hodgson's Kingston Brewery	7 per cent.
Holland and Co.	7 per cent.
Imperial Continental Gas	6 per cent.
London Chartered Bank of Australia	8 per cent.
National Safe Deposit	4 $\frac{1}{2}$ per cent.
Puerta Cabello and Valencia Railway	16s. per share.
Palatine Insurance	5 per cent.
Realisation and Debenture Corp. of Scotland	7 per cent.
Royal Mail Steam	2 <i>l.</i> per share.
San Jorge Nitrate	5s. per share.
United Fire Insurance	5 per cent.
Westgate-on-Sea Hotels	10 per cent.

BRITISH MINING INTELLIGENCE.

EAST GRASSINGTON (Oct. 14).—Report from the mine manager :—Hammond shaft : The 17 west has been extended 3 fms., and stoped 5 fms., giving 8 fms. of ground removed here during the past month ; the lode in the end continues extremely hard and spare for progress, the bearing part carrying three small seams of lead ore, which doubtless will develop into payable ore ground when clear of the nip. The end is within 2 fms. of being parallel with the old underlay shaft. We hope to receive instructions to sink a new permanent perpendicular shaft from surface, to command the western ground, and systematically develop the lode below the present bottoms and the shale measures, where the richest ore bodies are invariably found in this formation. Stope in back of level in a lode 2 ft. wide, yields 18 cwt. of lead ore per fm. No. 3 sump : Drivages east and west have been advanced here 11 fms. 3 ft. upon a lode, averaging 2 ft. wide, and varying in value from 15 cwt. to 22 cwt. of lead ore per fm. ; the lode being porous, we are heavily handicapped by having to pump a considerable stream of water. Harris main engine shaft : We have completed easing, dividing, and fixing ladderway to the 60, and the cross-cut north to reach the lode is now in 6 ft. ; the country rock is highly congenial for the production of mineral. The 47 east is temporarily suspended in consequence of the huge cavity met with in No. 2 stope, and the heavy discharges of mud and water blocks this level just now. No. 1 stope yields 10 cwt. of lead ore per fm. Stope in back of the 37 east yields 12 cwt. of lead ore per fm. Dressing and smelting operations pushed forward with energy. New connections for the engine have arrived from Messrs. Robey and Co., of Lincoln, and will be placed in position at the earliest possible date.

HEXWORTHY.—Mine agent's report for four weeks ending Oct. 10.—Low's adit level has been extended 3 fms. 2 ft. 6 ins. by two and six men. The lode has been 2 ft. wide, and very good for tin the greater part of the month, but is rather disordered in the end now. This level is 31 fms. 4 ft. 6 ins. south of Low's engine shaft. Low's engine shaft : We have 12 men driving and stoping south of the shaft. The lode is 1 ft. 6 ins. wide, and still very good for tin, and is making down and southward. We shall commence driving the bottom end north from the shaft on Monday next. We had some good tin ground in the driving of the adit above, so we hope to open up some good paying ground in the driving of this 12-fm. level under adit. Taylor's engine shaft and adit level : In our last monthly report we spoke of an improvement which had taken place in the cross-cut driven south of the adit level, and that we had seen a part of the lode for 4 ft. wide. We are now very pleased to say that we have intersected the footwall, and find it is over 3 fms. wide, and yielding tin in paying quantities throughout. Unfortunately, there is no ground above the adit to be taken away, owing to the ancient miners getting down 13 fms. after the lode from surface. Taylor's shaft is 13 fms. below the adit, so we shall now push the driving of the southern cross-cut to try and intersect the tin ground in the level below. We have commenced work for an incline tramway from Low's engine shaft to the stamps. Our stuff still looks very good on the floors. We ticket for 8 tons of tin on Tuesday, the 13th inst.

LEADHILLS (Oct. 12).—Brown's vein : The stope above the 145 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 35 cwt. of ore per fm. No. 5 winze below the 130 north of Jeffrey's shaft is in a vein 3 ft. wide ; worth 20 cwt. of ore per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 5 and 30 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 5 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows an enticing vein above 4 ft. wide, charged with a fine rib of spar and ore worth 35 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a strong vein, above 4 ft. wide, mixed with quartz, but only stones of ore not to value. The drift below the 100 south of Wilson's shaft is worth 15 cwt. of ore per fm. The stope above the 85 north of Jeffrey's shaft is worth 5 cwt. of ore per fm. The 70-fm. level south of Wilson's shaft is in a vein above 1 ft. wide, mixed with quartz too dried for producing ore. The two stopes above the 35 south of Flat Rod shaft are worth 15 and 60 cwt. of ore per fm. respectively. Sarrowcole vein : Gripp's adit north of George's Roust vein is in a vein 4 ft. wide, charged with spar and ore ; worth 25 cwt. per fm.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Oct 9 :—The 275-yd. level : No. 2 rise and stope east of No. 1 rise, stoping will be resumed next week. Rise west of No. 1, up 11 yds. ; lode 4 ft. wide, worth 2 tons blende per fm. The 295-yd. level : Driving west, fallen off in value within last few days ; now worth 2 tons blende per fm. Driving east, men engaged cutting out sides ; lode very wide, worth 3 tons blende and 1 ton lead ore per fm. A driving north across the run of the lode has been started from the stope west of the No. 2 winze, and is not yet through to the hanging side ; the lode is very wide, and estimated for the portion opened to be worth 10 tons blende per fm. The 315-yd. level : in 46 yds. from the winze ; lode worth 5 tons blende per fm. ; the two stopes also keep up in value. Dressing : 731 tons blende and 263 tons lead ore have been dressed and sold since the commencement, 158 tons in Sept.

PHOENIX UNITED (Oct. 13).—Setting report : We have at various points 17 pitches, at tributes varying from 6s. to 13s. in the £ for tin.

PRINCE OF WALES (Oct. 14).—We purpose blasting down the lode in the 180-fm. level west in the course of a day or two, and we have reason so believe we shall find it a very good one. In the 180 east the men, after cross-cutting north in order to ascertain if any part of the main lode could be found in that direction, have resumed drilage on the hookan lode with a view of getting through the disturbance caused by it. We shall commence to-morrow to take down the lode in the 166 west, which, so far as seen at present, looks very promising for productiveness. There is but little change to notice in the cross-cut south at this level for the last fortnight.—J. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Oct. 10).—The 155 on Main lode is driven 26½ fms. This forebreast is now going forward between the hanging and footwall divisions of the vein, but will intersect the latter very shortly, when a further improvement may be expected. The 155 on Caunter lode is driven 23 fms. ; there is still a very wide and promising-looking vein in the forebreast, producing about 1½ tons of blende and a mixture of rich-looking lead ore to the fm. The 140 on this lode is driven 29 fms., vein in present forebreast producing

about 1½ tons of lead ore to the fm. The two stopes in back of this level are each worth 2½ tons per fm. We purpose next week to commence a winze in the level above (the 125) to come down upon this bunch. The 125 south on main lode is still worth about 1½ tons per fm., and the remaining points throughout the mine are just as last reported. We have sampled 50 tons of lead ore to-day for sale on Thursday next, and have sold 20 tons of blende realising 135l. 10s.—A. WATERS and SON.

SOUTH CONDURROW (Oct. 14).—The lode now in the 138 cross-cut north of Marshall's is letting out water freely. We have cut into it about 10 ft., and have still lode in the end intermixed with the cross-course ; it carries a little tin, but not enough to value. In the level above this lode is not more than 3 ft. wide. The stopes in the back and bottom of the 123 east are of the same value as reported on last week. Three stopes in the back of the 40 are worth 10l. per fm. each.—W. RICH, W. THOMAS.

SOUTH DAKREN (Oct. 15).—The 154-fm. level has been driven about as far as we intend to drive till we get the skip-road down ; it is worth 12 to 15 cwt. of silver-lead ore per fm. The west end in this level is not so good, being worth 10 cwt. of silver-lead ore per fm. In cutting the ledge we found another branch of the lode in the north side. There is 5 ft. between the two branches, and the one just cut seems to be much the strongest. It has not been cut through, nor much of it discovered, but so far as seen it shows a lode worth 1 ton of silver-lead ore per fm. This, no doubt, goes on in both ends ; it also goes up behind the shaft as well as down. In the bottom, where, in addition to the outside branch, worth 1½ tons of silver-lead ore, it will leave a very good lode in the bottom of the shaft. This being the deepest shaft in the county, looks encouraging for deeper sinking in the district. The stope in the 142 west is worth 1 ton of silver-lead ore per fm. The winze in the 130 west continues to improve ; there is a nice bunch of lead and copper in it now.—J. MITCHELL.

WEARDALE.—Report on Weardale for week ending Oct. 10 :—Ore raised for week, 45 tons ; ore dressed for week, 97 tons ; ore, slag, and fume smelted for week, 123 tons, producing 62 tons of pig lead.

WHEAL CREBOR (Oct. 13).—Work in the mine during the past month has been regularly carried on, and fair progress has been made in driving the different ends. The 156 east was driven 4 fms. 5 ft. 3 ins. The part of the lode carried in that drilage has turned out 3 tons of arsenical mundic per fm. The end is now 11 fms. east of where the lode was last cut through. This last week we have been cross-cutting the lode as near the present end as it can be done. The 156 west has been re-started so far with two men only. In a week or 10 days we shall be in a position to increase the number to four, and set them a contract to drive the end 10 fms. The 132 driving west on the south part of the lode is progressing favourably towards the object we have in view, viz., the holing to tributaries' workings and putting a section of tribute ground laying between the 132 and 120 in such shape that it may be taken away at a greater profit. The parcel of copper ore we have for sale on the 22nd inst., computed 60 tons, which assays 6½ per cent., will not weigh off as much by 6 or 7 tons owing to excessive rains. We were not able to dress in time for the sampling all the ore brought up out of the mine by 10 tons. This 10 tons is now dressed and ready to be carried to the quay. The ore is of good quality, and had it been got into the parcel would have brought the produce up to 7 per cent. So far the increase of water in the mine, caused by the heavy rains, has not given us much trouble. The following points in the mine are now in operation :—Six men cross-cutting the lode at the 156 east of shaft, at 8l. per fm. The part of the lode through which the cross-cut has gone will yield a little mundic, but not enough to be of any value. The breast of the cross-cut is now in killas, but we expect to find more lode south. Two men driving the 156 west of shaft, at 7l. per fm. ; lode 4 ft. 6 ins. wide, yielding about 3 tons of good quality mundic per fm. Two men driving the 132 west on the south part of the lode, at 5l. 10s. per fm. ; lode worth 3 tons of mundic and a little copper ore per fm. Four men stoping the bottom of the 144 east of winze, at 3l. per fm. ; lode worth 1 ton of copper ore and 5 tons of mundic per fm. Four men stoping the back of the 144 west of cross-cut, at 3l. per fm. ; lode worth 3 tons of copper ore and 4 tons of mundic per fm. In the upper levels we have 14 men working on tribute from 12s. to 13s. 4d. in the £.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Oct. 14).—There is no material change to notice in the 27 end since my last report ; the lode still contains kindly signs of mundic, the like of which we have never seen before. The Flow is producing its usual quantity of tin. Blue Bridge section is now in fair working order, and I am hoping to work this department forthwith at a good profit. We are preparing a parcel of tin for sale at the end of the week.—S. P. CURTIS.

WHEAL UNY (Oct. 14).—The cutting down of shaft, with every other point, is going on as fast as possible. No change in any other part of the mine since last reported.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR (Oct. 3).—Ara Dere : There is some fair lead east from the winze, upon which we shall now drive. Chief mine : The men cross-cutting in Hamburg have been put to stope away a small arch of ground, where some good lead is left standing. In cutting through the lode from winze in intermediate Hamburg some promising stuff, with a good sprinkling of lead, has been met with. The intermediate air shaft end west still carries lead in the back, worth about 18 or 19 cwt. per fm. In the winze in the bottom there is some exceedingly good lead, worth 25 to 30 cwt. The end east from No. 4 stope is worth 20 cwt., and the end east from stopes in Michael is also worth 20 cwt. The stopes, with the exception of those east of Savalan Pass, which are rapidly being worked out, are about the same as last reported. Production to Oct. 3 : 10,357 tons crushed, yielding 758½ tons silver-lead ore.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Sept. 3.—Engine shaft : The 280 level west driven 31 ft. ; total, 508 ft. ; lode improving in size and making more water. The 280 level east : Have laid rails preparatory to opening out on shoot of ore in this level. Intermediate level west from rise driven 26 ft. ; total, 106 ft. No change. Intermediate level No. 2 west from rise driven 12 ft. ; total, 12 ft. This level has been started to intersect a vein of chloride and iodide of silver showing in the level below. During the fortnight a small quantity of rich

ores of this class has been broken, associated with sulphide of silver and rich ironstone. The 180 level stopes: Stopping has been continued and good lead-ore broken in addition to a little rich canary ore and chloride of silver. Incline sunk 14 ft.; total, 150½ ft. Sinking was resumed at beginning of fortnight. The formation continues to get more compact, with better defined walls; the lode is composed of calcite and carbonate of iron, containing a little fahlerz and galena. Water continues strong. Intermediate level No. 2 east from incline sunk 21½ ft.; total, 45½ ft.; lode compact and continues to wear a most promising appearance, some fahlerz and galena occasionally showing.

AVALA.—Report for Sept.—Re-commenced sinking George shaft; boiler chamber finished; Shuplia Stena, 153.8 cubic metres stuff excavated; 164 tons ore produced; driven, 248 metres; reduction works treated 267 tons of ore.—W. E. FRANKS.

CORTEZ.—Report from the superintendent, Sept. 26: Work at mines for the week: South cross-cut, No. 1 east, advanced 4 ft.; No. 2 tunnel west, stoped 2 tons of ore; north-east raise, stoped 25 tons of ore; north-west raise, stoped 190 tons of ore; ore run out into ore house, 212 tons; ore trammed to the mill, 204 tons; ore worked at mill, 147 tons; average assay for the week, 65 91-100 ozs. silver per ton.

BRATSBERG.—Report for week ending Oct. 3.—Hoffnung Mine.—No. 2 adit level is now worth 1 ton per fm., and Nos. 1 and 2 rises in the back are worth ½ and 1 ton per fm. respectively. No. 3 adit level continues promising, but without value. The rise here is yielding fully 1 ton per fm. No. 4 level is yielding saving stuff. At Murchison's section we have holed through the arch of ground, and are proceeding with the trial level east, where the lode is worth about ½ ton per fm. Johannes Mine: The western level on Howard lode is looking better again, worth about ½ ton per fm. The main rise in the back is producing 1½ ton per fm., a very fine lode. The eastern level and rise in the back are both worth about 1 ton per fm. Surface work and remarks: Dressing work is progressing fairly well, and we have started fixing the steam pipes for heating the dressing houses, &c. Nothing worthy of remark elsewhere.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Oct. 3:—There is nothing new to report this week, everything having gone as usual, of late, perfectly satisfactorily. Smelting was continued throughout the week, and 269 perfect anodes, suitable for electro deposition, were obtained, and 280 plates conductivity copper of the net weight of 3,974½ kilogrammes (equal to about 3 tons 18 cwt. 1 qr.), and one barrel of battery mud were despatched to you, and another batch will follow this week. Smelting operations will be stopped now for the present, in order to let a stock of ore accumulate, we having exhausted the stocks in the ore-house. Lime burning will be resumed this week, and mixing of the slime and flue dust in bricks proceeded with. Electro deposition is proceeding smoothly, and there is nothing to report here.—T. F. SMITH.

DAY DAWN P.C.—Report for fortnight ending Aug. 29:—The output of quartz is 953 trucks. Sent to the Excelsior mill 1,032 tons. No. 13 level has been extended a further distance of 12 ft., making a total distance of 101 ft.; the formation is 15 ft. wide, carrying 3 ft. of stone on the footwall and 3 ft. on the hanging-wall, of good quality, the remainder being a horse of mullock. The leading stope over this level is carrying 4 ft. of stone, of fair quality. No. 12 level has been extended an additional 15 ft., making a total distance of 424 ft. from the shaft; the formation is about 11 ft. wide, carrying 4 ft. of stone of good quality. The leading stope over this level, which I have stoped for the present, is carrying 5 ft. of very good stone. No. 2 stope is carrying 6 ft. of stone of good quality. In the leading stope over the hanging-wall drive we have about 2 ft. of stone of medium quality. No. 11 level: The leading stope over this level is carrying 2 ft. of fair quality stone; in the No. 6 stope we have 6 ft. of good stone; and in the Nos. 5 and 4 stopes the reef will average 3 ft., of very good quality. In the Nos. 2 and 3 stopes the reef will average 6 ft. In the No. 1 we have 4 ft. of stone, all of which is good quality. The leading stope over the hanging-wall drive is carrying 2 ft. of very good stone, and in the No. 1 stope we have about 1 ft. 6 ins. of stone of fair quality. No. 10 level: The stope going west over the hanging-wall drive is carrying 2 ft. of fair quality stone, but in the stope going east we have only about 4 ins. of medium quality stone. I have done nothing in the 240-ft. level this fortnight. The number of trucks of quartz hauled for the fortnight from each level is as follows:—No. 13 level, 104 trucks; No. 12 level, 329 trucks; Nos. 10 and 11 levels, 450 trucks; No. 2 shaft, stope under No. 5 west level, 29 trucks; No. 3 winze on No. 4 level, 41 trucks; total, 953 trucks. No. 2 Underlie shaft—No. 5 level west: I have started another stope back at the cross-cut; this stope brings us up level with the bottom of the cross-cut; this is carrying about 1 ft. 6 ins. of stone of medium quality. The cross-cut at No. 4 level on the east side of shaft has been driven 25 ft. through very hard granite. The No. 3 winze on the west side has been sunk a further depth of 14 ft., making a total depth of 30 ft.; the stone is about 2 ft. thick on the east side and 3 ft. on the west side, of medium quality. No. 3 straight shaft.—The brace and everything connected therewith has been completed. The drive from the well towards the main shaft has been extended a further distance of 20 ft., making a total distance of 25 ft., and holed through to the main shaft; we have yet to sink about 8 ft. for a well hole. Lease 1,230: The mouth of the eastern drive has been secured up to the face, and have driven 3 ft.; making the total distance from shaft 18 ft. The leader I mentioned in my last report has pinched out; the formation is big but very hard. The western drive has been extended 7 ft., making the total length of same 25 ft. The leader has also cut out in this drive; otherwise there is no change to report.—T. LESTER.

DON PEDRO (Sept. 15).—Half-monthly letter:—Maquina Mine—General remarks: Since our last operations have been carried on very satisfactorily throughout both in mine and at surface, the excavation for new gear work at entrance of shaft being well advanced. Gordon's shaft: This has been sunk another 6 ft., and secured with timber, making a total distance under the 40 of 7 fms. 2 ft. 5 ins. The ground remains hard for excavating, and is composed of hard sandstone. The rise towards this has been risen since last report 6 ft., making a total of 10 ft. We hope to communicate this with Gordon's shaft in the course of the month. New adit: We are making good progress here; the ground is very favourable for excavating. Driven since last report and timbered 51 ft. 4 ins.; total driven and timbered, 87 ft. 4 ins. New lobby: This has been continued through hard rock, which we have to blast; driven for the month 20 ft.; total driven, 175 ft. Watercourses: We have a small force making drains to carry the storm-water into the new lobby when holed. This

work is being done to protect new reduction house. Running work: Some repairs have been done towards Gordon's shaft where required. The capstan, which was at the entrance of Gordon's shaft, has been moved and fixed into another place to hoist up timbers from timber yard to entrance of shaft, and all other work in connection with the mine and surface has been kept on.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Sept. 3:—Main engine shaft: Sunk 13 ft.; total, 93 ft.; the lode underlying a little steeper; collar of shaft has been timbered. Engines have been working satisfactorily. Erection of engine and boiler houses well forward. The connection of shaft with permanent brace has been completed. South engine shaft: Sunk 16 ft. 6 ins.; total, 153 ft. 6 ins.; country very hard, without change; water increasing. Old galena shaft: A small quantity of galena has been broken, but as the ore has become silicious stopping has been discontinued here for the present.

EMMA (Oct. 1).—I now hand you report of progress the past 10 days or since my letter of the 21st ult. On the Bay City tunnel level, No. 3 fissure south-easterly, worked two men; advanced 14 ft.; total, 47 ft.; the rock here is still very hard, with no change from report of 21st. On this same No. 3 fissure drifting north-westerly, we worked one man; advanced 8 ft.; total, 12 ft.; this drift shows considerable improvement, and steadily improves as we advance. The fissure is widening, now 3 to 4 ins., filled with iron pyrites, oxidised iron, and mineral-stained ledge matter, carrying a trace of silver. The surrounding rock is seamy, much broken, and strongly saturated with mineral; besides the seams all carry iron pyrites, which may be accepted as most favourable. The No. 3 level south-easterly, we worked one man; advanced 8 ft.; total, 25 ft. The face of this level continues in most favourable ground for ore. The rock shows evidence of much disturbance, is very much crushed, and broken, with irregular seams throughout, and many small vugs or caves appear quite frequently, filled with iron and talc, and carrying a trace of silver. I have great hopes of cutting ore in this level and in this vicinity. Were we not troubled so much with bad air, I would push this level faster; at present we can work but one man. On the Emma tunnel level on the hanging-wall side of the vein, we worked nine men, stoping and timbering, besides three carmen running low grade ore and waste rock to surface. We stoped about 100 tons low grade or concentrating ore, which has been put through the mill, producing about 9 tons concentrates, worth from \$80 to \$90 per ton. The shaft from footwall drift, worked two men; sunk 10 ft.; total 37 ft. We still have a strong vein here, but as yet is ledge matter only, but gives great encouragement. On the Illinois tunnel level we worked 4 men, drifting and raising, and following the ledge of iron; 20 ft. of work done here; the vein shows improvement, small stringers of galena ore are coming in through the iron, and during the last few days quite a number of these stringers have appeared and disappeared, and then appear again, so that we have every reason for anticipating a body of paying ore almost daily. We have some 12 tons concentrates now en route to sampling mill, which will be sampled, assayed, and sold within a very few days; value of this ore about \$80 per ton.—H. C. WALLACE.

GLENROCK.—Premier Mine (New Zealand).—Extracts from letters received in London Oct. 16:—All work is progressing in a very satisfactory manner, and the prospects quite up to anticipations. We have finished timbering the upper level, and are now stoping on the quartz in No. 1 reef, 653 ft. from the hauling shaft. The reef is about 3 ft. thick, and carries good gold, and we will now be able to fill the paddock for the spring crushing. The gold is visible here and there, even in the country rock. The reef is about 3 ft. thick in some places, and runs as far as 4 ft. At present we have got enough stone in sight to crush through the coming season from the upper level, and we are expecting to reach reefs in the lower level in a month or so. Lower level: This level is being driven from both ends, and we are now driving inside again, or as you might say from three ends. The new contractors have driven 14 ft., and we expect to get a reef in about 100 ft., and when this is driven we shall be able to get at the stone overhead. The contractors driving out to open the tunnel are now 102 ft. from the shaft, or 32 ft. since my last report. Indications of quartz are again making, and we ought to strike the reef in another 50 ft. to 60 ft. The rock is better to blast, though hard to drill.

HARRIETVILLE (Sept. 4).—Fortnightly report.—Mons Meg Mine: Shaft on main shoot below tunnel J advanced 8 ft.; total, 58 ft.; the lode, which for several feet has been underlying west, has assumed its original easterly underlie, and on turning back shows a small vein of rich ore carrying coarse gold. In consequence of this irregularity in the underlie of the lode some alterations are necessary in the timbering of the shaft near the bottom, so that a week will elapse ere we can resume sinking and further develop the auriferous vein which, in my opinion, will soon widen and assume its original size and quality. This development should be looked upon as most encouraging in that it shows that the Mons Meg main shoot continues to hold its own, and relieves any doubts which may have been originated by the recent change in the underlie and the diminutive size and poor quality of the lode, although only a few feet below tunnel J, where it was so large and comparatively rich. The 100-ft. level north above tunnel J has advanced 18 ft.; total, 218 ft.; the lode is 3 ft. wide, and payable. Drive north of tunnel K has been extended 24 ft.; total, 420 ft.; this drive is being advanced towards the rise on the new shoot north of tunnel J, and the ground broken being poor is utilised for filling the stopes. Guerdon Mine: Drive north of tunnel J on Guerdon lode advanced 11 ft.; total, 212 ft.; lode 6 ft. wide, of which 4 ft. is payable stone. The south drive has been extended 8 ft.; total, 140 ft.; a portion only of the lode is being saved, the total width being 6 ft. The north rise has advanced 11 ft.; total, 33 ft.; lode 4 ft. wide and payable, a portion showing fair gold. South rise extended 14 ft.; total, 57 ft.; the lode is 2 ft. wide, but although payable, poorer than when last reported. Tunnel K has been extended 22 ft. towards Guerdon lode; total, 97 ft. from No. 2 Mons Meg lode. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has advanced 28 ft.; total, 1,278 ft.; the lode has widened to 4 ft., 2 ft. of which is payable, some of the stone showing fair gold; the influx of water continues to increase. The rise at the back of tunnel B on new shoot has advanced 7 ft.; total, 47 ft.; the lode is 8 ft. wide, gold being occasionally visible over a width of 3 ft. on the western side. With the exception of the drive towards Mons Meg and the rise referred to, all prospecting in

this mine has been temporarily suspended, as the recent developments on the Mons Meg and Guerdon lodes are most encouraging, and should claim our whole attention for the time being. The whole of the company's machinery is working satisfactorily.—T. G. DAVEY.

IDAHO (Oct. 15).—Report from the mines:—We beg to enclose report on operations for past fortnight. The ground in the Crown Point drive has become very hard, but the men have worked well, and good progress has been made. Mineral exists throughout the rock, but not sufficient to value, averaging 2½ ozs. per ton; this should improve as depth is attained, and, considering the great width of the ledge and the favourable nature of the rock with mineral all through, this is the best-looking strike made on this mountain. We cannot expect to find much until a considerable distance has been driven. In the Julia and Overland the good ore was always found in small pipes, or shoots, but here it is more generally diffused throughout the ledge.

MAID OF ERIN (Oct. 2).—We are opening up some new ground in the Adams, both in the sulphide bodies and in the carbonates, that promises good returns, and have every right to expect a long continuous output of equal value to the past. I could, if necessary, increase the output, but do not think it advisable for the best interests of the property. I am building an addition to our machine shop, our present room not being sufficient for the increasing demands of our business. I have made new contracts for the mill concentrates for six months from the 1st inst., on better and more satisfactory terms than the old one. Our sulphide contract expires Dec. 1, but I have no doubt but that I can renew it on even better terms than the present. We are now making up the statements for the month of Sept., and will forward them to you as soon as complete.—E. SMITH.

MAMMOTH.—The manager cables as follows:—"Connection has been made with working winze 4th level drift now in ore, averaging \$12 gold per ton, 5½ ozs. silver per ton. 360 ft. north: Gold, \$6, 4 ozs. silver per ton; varying in width from 12 to 18 ft." A later cablegram states "That the winze from 4th level is down 65 ft. Ore improving in value, \$18 in gold."

MOUNT ZEEHAN.—Manager's report for week ending Aug. 21:—Argent section, No. 1 shaft—72-ft. level: North drive, on No. 4 lode, extended 12 ft. by contractors; total distance from cross-cut, 42 ft. Remarks: Lode formation 6 ft. wide, composed of first and second class ore mixed with siderite, with well defined walls. 4 tons of first-class ore have been raised and bagged, and 12 tons of second-class ore raised. South drive has been extended 10 ft.; total distance from cross-cut, 22 ft. Remarks: Lode formation 18 ins. wide, composed of very good first and second-class ore, mixed with siderite, but well defined and running a straight course. First-class ore raised, and bagged, 2 tons; second-class ore raised, 8 tons. Air shaft: This has been discontinued, water not having been drained off. North drive will have to be extended before it can be drained. Taking everything into consideration, the prospect of the Argent is very good. Queen Extended section, No. 1 shaft, 110-ft. level: The drive was discontinued last Friday, 14th inst., and all the steel rails taken out of that drive, and preparations made to sink main engine shaft. The sump or well has been cleaned out, and a length of pump put on; cap-tan made ready to lower the lift, door hung at surface brace, to make everything secure, and men started, on contract, on 20th inst. Depth of shaft from plat, 10 ft. 6 ins. Montana section: Level north on course of No. 2 lode extended 12 ft.; total distance from cross-cut 226 ft. Remarks: Lode formation 4 ft. wide, about 1 ft. of which is solid ore, the remainder second-class ore, with siderite. This lode is very much improved since last week; 4 tons 4 cwt. of first-class ore have been raised and bagged, and 6 tons second-class.

—Manager's report for week ending Aug. 28:—Argent section, No. 1 shaft, 72-ft. level: Contractors have driven north drive a further distance of 15 ft., making total distance from cross-cut 57 ft. Remarks: Lode formation 8 ft. wide, but at this point, although so wide, it is very much broken, there being a horse of graphite slate between the footwall and hanging-wall, and what galena there is is on the two walls; 4 tons of first-class ore have been raised and bagged, and 10 tons of second-class ore raised. In my opinion the lode will improve in a shift or two. South drive has been extended by contractors a further distance of 9 ft.; total distance from cross-cut, 31 ft. Remarks: Lode formation 2 ft. wide, composed of first and second-class ores, mixed with siderite. I am of opinion that this end will improve in quality and size within a few feet of present face; 2 tons 12 cwt. first-class ore have been raised and bagged during the week, and 7 tons second-class ore raised. Queen Extended section: During the past week contractors have sunk the main engine shaft 4 ft. more; total depth from plat, 14 ft. 6 ins.; total from surface brace, 124 ft. 6 ins. Remarks: Country rock in bottom of shaft hard graphite slate. Montana section: Level north on course of No. 2 lode has been extended 9 ft.; total distance from cross-cut, 235 ft. Remarks: Lode formation 1 ft. wide, of first and second-class ores, mixed with siderite; 4 tons of first-class ore have been raised and bagged; 6 tons of second-class ore raised; lode vertical.

MYSORE (Sept. 23).—Mining report for the fortnight ending Sept. 17.—The work done with the rock-drills during this time has been satisfactory, and very good progress has been made in the various other bargains throughout the mines. We have just commenced to drive the 890-ft. level south of the winze sunk in the bottom of the 780 north of Rowse's shaft; the lode in the present end is 3 ft. wide, and assaying 4 ozs. 11 dwts. 11 grs. The 620 south of incline shaft on the west lode has been driven 22 ft. 6 ins.; total distance, 170 ft. 6 ins.; the lode is 2½ ft. wide, and assaying 2 dwts. The 550 south of incline shaft on the west lode has been driven 27 ft. 6 ins.; total distance, 217 ft. 6 ins.; the lode is 2 ft. 6 ins. wide, and assaying 15 grs. Glen shaft: The 250 north of shaft has been driven 43 ft.; total distance, 457 ft. 10 ins.; the lode is 2 ft. wide, and yielding quartz of low quality. Tennant's shaft: The 360 north of shaft has been driven 14 ft. 5 ins.; total, 670 ft. 5 ins.; the lode is 1½ ft. wide, and estimated to be worth 5 dwts. The 360 south of shaft has been driven 8 ft. 6 ins.; total, 150 ft.; the lode is 1 ft. wide, but unproductive. The 290 north of the shaft has been driven 23 ft. 6 ins.; total distance, 941 ft. 6 ins.; at this point the level came into contact with ancient workings, and for the present is suspended. I should say this is the deepest and most extensive old workings ever met with on the field, and clearly indicates that the ancients pursued a very rich lode, which I have no doubt we shall find equally good in the deeper levels. We have commenced to drive the 290 south of cross-

cut north of shaft in a lode 2½ ft. wide, and assaying 4 dwts.; this is on the main part of the lode, and about 850 ft. north of shaft. We have cleared 18 ft. 6 ins. through the old workings recently met with in the 235 north of winze, north of shaft, and find a good deal of quartz of low quality left standing in the sides, which will pay for taking away when Gilbert's shaft is down to this level. Schaw's shaft: The 450 north of shaft has been driven 28 ft.; total distance, 510 ft.; the lode is 1 ft. wide, yielding a little quartz, but not sufficient to value; we have begun to cross-cut east at this level to intersect the run of quartz that was driven through in the 160 level north and south of McTaggart's shaft, but which has not been seen below that point. The 450 south of shaft has been driven 6 ft.; total distance, 125 ft.; the lode is 1 ft. wide, and assaying 15 grs. The 320 north of shaft has been driven 2 ft. 6 ins.; total distance, 191 ft. 6 ins.; the lode is 1 ft. wide, but unproductive. The 320 south of shaft has been driven 4 ft. 6 ins.; total distance, 258 ft. 6 ins.; the lode is 9 ins. wide, and assaying 3 dwts. 16 grs. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 2½ ft. wide, and assaying 5 ozs. 6 dwts. 8 grs. The lode in back of the 780 north of shaft, on the fold, is 2 ft. wide, and assaying 4 ozs. 3 dwts. 6 grs. The lode in stope in back of the 700 north of shaft is 2½ ft. wide, and assaying 3 ozs. 0 dwts. 11 grs. The lode in No. 2 stope in back of the 700 north of shaft is 3 ft. wide, and assaying 1 oz. 0 dwts. 5 grs. The lode in No. 3 stope in back of the 700 north of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 4 dwts. 8 grs. The lode in stope in bottom of the 700 south of incline shaft is 2½ ft. wide, and assaying 1 dwt. 7 grs. The lode in stope in back of this level, south of incline shaft, is 3 ft. wide, and assaying 1 oz. 1 dwt. 13 grs. The lode in stope in back of the 620 south of Rowse's shaft is 2 ft. wide, and assaying 2 dwts. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. wide, and assaying 3 ozs. 4 dwts. 2 grs. The lode in stope in back of the 550, near incline shaft, is 2 ft. wide, and assaying 18 dwts. 16 grs. The lode in stope in back of the 550 south of incline shaft, on the west lode, is 2½ ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 550 north of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 16 dwts. The lode in stope in back of the 466 north of Taylor's is 3 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 400 north of Rowse's is 3 ft. wide, and assaying 13 dwts. 16 grs. The lode in stope in bottom of the 400 north of Taylor's is 2 ft. wide, and assaying 4 dwts. 21 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. wide, and assaying 2 dwts. 12 grs. The lode in No. 2 stope in back of the 360 south of Plummer's is 3 ft. wide, and assaying 5 dwts. 21 grs. The lode in stope in back of the 296 north of Rowse's is 2½ ft. wide, and assaying 9 dwts. 18 grs. The lode in stope in back of this level, south of shaft, is 3 ft. wide, and assaying 4 dwts. 13 grs. The lode in stope in back of the 296 north of Plummer's is 2 ft. wide, and assaying 7 dwts. 3 grs. The lode in stope in back of the 236 north of Rowse's is 3 ft. wide, and assaying 4 dwts. The lode in No. 2 stope in back of this level is 2½ ft. wide, and assaying 15 grs. The lode in stope in back of the 360 north of Tennant's shaft is 1 ft. wide, and estimated to be worth 1 oz. 10 dwts. The lode in stope in back of the 290 north of shaft is 3 ft. wide, and assaying 1 oz. 12 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2½ ft. wide, and assaying 1 oz. 17 dwts. 19 grs. The lode in stope in back of the 180 north of shaft is 3 ft. wide, and assaying 1 oz. 8 dwts. 17 grs. The lode in No. 2 stope in back of this level is 5 ft. wide, and assaying 12 dwts. 6 grs. Sinking: Rowse's shaft has been sunk 14 ft.; total distance, 40 ft. below the 890 level; the ground is still hard, but we are making very fair speed in sinking. The winze in the bottom of the 890, on the branches near the dyke, has been sunk 12 ft. 4 ins.; the ground continues mineralised, and carries a good footwall, but so far nothing to value. The winze in the bottom of the 780 north of Rowse's shaft has been sunk 15 ft. 2 ins.; total distance, 66 ft., but since the date of this report we have sunk 4 ft. further, and commenced to drive south from the bottom of the winze. The lode all the way in this winze has averaged 3½ ft. wide, and assayed 5 ozs. The winze in the bottom of the 290 south of Tennant's shaft has been sunk 9 ft.; total distance, 21 ft. 6 ins.; the lode is 1 ft. wide, and assaying 2 ozs. 0 dwts. 11 grs. Gilbert's shaft has been sunk 9 ft.; total distance, 179 ft.; at this point it came into contact with old men's workings; since then we have communicated with the 180 north of Tennant's and the men are now engaged sinking under this level through these old workings. We have also commenced to sink this shaft below the 290 in a lode 2 ft. wide, and assaying 4 dwts. I regret to say we have had no rain yet, and in consequence of this our tailings machinery has been idle nearly all the month, but we have sufficient water to keep on both mills. The north-west monsoon is beginning to set in, and our great hope is that it will give us plenty of rain to carry on all our operations. Mill samples: New mill quartz, 2 ozs. 18 dwts. 3 grs.; old mill quartz, 1 oz. 19 dwts. 6 grs.; tailings, 6 dwts. 20 grs.—J. GILBERT.

MYSORE REEFS (Sept. 23).—Fortnightly report—Harvey's shaft: The cross-cut east of the 520-ft. level north has been advanced 11 ft.; now 21 ft. 3 ins. from level. In the present end of cross-cut there is still a little quartz; a sample of same gave 13 dwts. 1 gr. of gold to the ton. We have not been able to do anything in the bottom levels since last Wednesday, owing to water. We cut a large stream in the 400-ft. level north, which overpowered the pumping engine and rose to the 460-ft. level. I am pleased to say it is now abated, and I hope to have the mine in fork by to-morrow morning. The 520-ft. level south has been extended 9 ft.; now 62 ft. 6 ins. from cross-cut; the lode is of greater width than the drivage, composed of quartz and ribs of black rock; the quartz is of low grade worth from 2 to 3 dwts. of gold per ton. Winze below the 460-ft. level has been sunk 2 ft.; now 34 ft. below the level; the lode is of great width, composed chiefly of quartz assaying 1 dwt. 23 grs. of gold to the ton. The 400-ft. level south has been advanced 10 ft. 6 ins.; now 202 ft. 6 ins. from shaft; the lode is 4 ft. wide, composed of quartz, with ribs of black rock and pyrites, assaying 2 dwts. 14 grs. of gold to the ton. The 400-ft. level north has been extended 12 ft. 6 ins.; now 261 ft. 7 ins. from shaft; we have passed through the hard run of ground and found the lode, which is showing a good hanging-wall and leaving out a large stream of water; at present there are a few stringers of quartz containing a little gold, but I am in hopes that in a few feet we shall see a decided improvement.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—The mining manager reports, by mail, for the fortnight ended Sept. 23:—Tank Mine—North shaft: This shaft has been sunk 6 ft. 3 ins., making a total depth of 197 ft. 9 ins. from surface. There is no change; the

rock continues very hard; the windbore was broken during the last week, and we are now sinking with a hose. I hope the shaft will be deep enough in another fortnight for a cistern to be fixed. In the 173 level I have had some coolies during a part of the time working by hand, and they are now working regularly. The 173 level south has been advanced 3 ft. 6 ins., making a total distance of 15 ft. 6 ins. south of the cross-cut. There is very little quartz in the end at present. North of the cross-cut the level has been enlarged and timbered, and a winze has been commenced to follow down the quartz we had here. I have had some coolies breaking and squaring down the ground west of the plat, in order to start a cross-cut west; the ground is very hard, and little progress has been made. South shaft: The bottom of the shaft was enlarged for cistern, and hitches cut for bearers before sinking was resumed. The shaft has been sunk during the past week 2 ft., making a total depth of 120 ft. 6 ins. from surface. I hope to make better speed here now with two rock-drills running. The air compressor and other machinery is running satisfactorily.

NAMAQUA.—Abstract of superintendent's report for Aug., 1891.—**Twefontein Mine.**—Shaft below the 73-fm. level: This shaft is now down 85 fms. The distance to cut the lode in a southerly direction will probably be about 3 fms. Shaft below the 73-fm. level east: No change has taken place here. Shaft below the 73-fm. level west: The lode is looking promising, and is now yielding a little good quality ore. The rock contains a great many small veins of rich copper, which will most likely converge into copper as progress is made, and result in a valuable lode. The underlie of the lode has changed from about 2 ft. in the fm. to almost perpendicular, which in the past has always been a favourable feature. Shaft below the 58-fm. level west: There is nothing of value at this point. Shaft below the 43-fm. level north-east: There is nothing of importance here, but it is hoped that some ore ground will be reached in the north stope. Stopes: 53 east: There is no change to report here; worth 6 tons of ore per fm. The 43 east: The quality of the ore in this stope is not at all so good as for some time past; worth 6 tons of ore per fm. The 43 west: This stope has become poor, and has been suspended. The 33 west: The ground here is hard, but at the extreme west end there is a little improvement; worth 4 tons of ore per fm. The 33 east: There is some fairly good ground on the north side of this level; worth 6 tons of ore per fm. **Wheal Julia Mine:** There is no further change in the character of the ground at this mine. Shipping: The Matabele (steamer) left Fort Nolloth for Swansea on Sept. 19, with about 1,700 tons of ore. Output for July: 293 tons of 27½ per cent.

NEW DEVALA-MOYAR.—Mine manager's report for the week ending Sept. 17:—The 186-ft. level—Drive west: Driven 5 ft.; total, 70½ ft. The 186-ft. level—Drive east: Driven 2½ ft.; total, 23 ft. The 116-ft. level—No. 4 winze: Sunk 3½ ft.; total, 38 ft. The clean-up this week has yielded 91½ ozs. bar gold.

NEW EBERHARDT (Sept. 20).—The mine manager reports as follows:—Eberhardt: Drift north from No. 2 upraise: Advanced for the week 4 ft.; total length, 39 ft.; the face of this drift is showing more quartz, and the ground is a little softer; the quartz is as yet low grade. Drift south from No. 2 upraise: No report for past week; men have not been working. Cross-cut east from No. 3 upraise: Advanced for the week 6 ft.; total length, 65 ft. The face of this drift remains unchanged; we still have some considerable low-grade quartz in this drift, which I hope will eventually lead us to something better, but, as you are aware, it is impossible to foretell what the result will be. No. 3 cross-cut west: Advanced for the week 10 ft.; total length, 51 ft.; the face of this drift is still in promising ground, showing some fair stringers of quartz and black spar, which is certainly favourable, to say the least. I am pressing forward as fast as possible with our work in this direction, trusting that our efforts will be rewarded. No. 4 cross-cut west: Advanced for the week, 4 ft.; total length, 18 ft. The face of this drift has not changed since my last letter to you, the same being still in very hard lime. Beecher cross-cut: Advanced for the week, 6 ft.; total length, 53 ft. The spar break, mention of which was made in my previous letter, has nearly left us. The ground, after passing the break, seems a little softer, but is nearly all lime.

NEW HOOVER HILL.—Report for Sept.—Briol's shaft: Driving south at the 130 advanced for the month 13 ft.; the ground is very hard and showing a good deal of quartz, but poor. Sinking south of Provost shaft the vein is looking better, but it is very small. The mill ran for the month eight days, crushed 197 tons of ore, yielding 40.603 ozs. of bullion, which I am shipping you.

THE LOMA GOLD MINES, LIMITED.

OBJECT OF THE CALL AND PROGRESS OF THE WORKS.

Oct. 13.—My directors desire me to state that the present call is made to provide for the instalments of 2,000*l.* falling due each month on the contract to lay the water on to the mines for the sum of 24,000*l.*, which contract was unanimously sanctioned by the shareholders at the general meeting held in Apl. last. The four letters last received from the mines are attached, they sufficiently show both the value set upon the company's mine by its superintendent, Mr. Prender, and that the water necessary for their working by the hydraulic process is being carried out by Mr. Welton with all possible despatch. The superintendent had anticipated being able to make a fair profit by sluicing even before the contract water was laid on; in his last letter he explains that his expectation has not been fulfilled owing to the extraordinary drought which has affected all alluvial mines in Colombia this summer. I am authorised to add that the directors, while regretting this unlooked-for drought, consider that the proprietors have every cause for satisfaction with the progress of the contract-work and the development of the mines, as well as solid grounds for expecting substantial results on the completion of the ditch in the coming year.—H. P. CREASEY, Secretary.

REPORTS.

Aug. 17.—It is most difficult to write you in words to give expression of our present situation as regards water; in fact, I may say we have none, and were it not for the superior class of ground we have at the mine, we would stand no chance of getting out what we have. To give the mine its due it is necessary to see the manner in which it is being worked for want of water, and then make a comparison with any other mine in the neighbourhood, and see what an

account it renders of itself, which, to say the very least of, is satisfactory. I enclose a short general report on the mine, &c., should you consider it necessary as an explanation of our position to the shareholders. On my part no pains will be spared to push on and get 300 or 400 ins. of water to the mine as soon as possible. With this small supply returns would be such that all concerned would be anxious to invest in obtaining a greater water supply.—H. J. PRENDER, Superintendent.

Aug. 17.—It has occurred to me that a short report on our progress at the above mines may not at present prove out of place, but may be of some interest to many concerned in same. At the present moment we have a bank of gravel to work on as good as ever we uncovered in the Tablazo Mines, and as we enter the ground the height of bank is increasing, and as far as prospecting with a pan can be depended on the gravel is becoming richer, and gold is such in appearance that we look on it as almost certain to be found throughout the deposit now uncovered, and not in small patches, as often happens in mines about here. To make this bank of gravel render a most profitable account it is only a matter of getting on at least a part of the new supply of water. The bank ought to produce fair profits, with a small supply of 300 ins. of water. If Mr. Welton continues to push on work as has been done during the past few months we will soon have the above supply at the mines. So far, the ground over which the ditch is passing is first class, and apt to give no trouble after it is concluded. This, to us, is a matter of the greatest importance for the future success of the mines. As regards the produce of the mines since the formation of this company, seeing the amount of gravel that has been moved, the gold obtained speaks well for the quality of gravel we have in reserve. Our present supply of water is almost nil, and the work of all importance is the ditch, which, apart from your wants at Tablazo, is an enterprise well deserving the expenditure of any sum within reason.—H. J. PRENDER, Superintendent.

Aug. 20.—Works: We have now five divisions of men at work, and two miles of full-sized cutting 12 ft. wide have been finished. The weather continues favourable for the work, and labourers are abundant. We are now putting up camp, as lodgings for the men are getting scarce. During this month men will be placed at Guarumo to work down to the men going up.—W. S. WELTON.

Aug. 27.—Mine: We are suffering from a very dry season, and it is so bad that Medina, which as a rule carries all water wanted at Oritá and Colombian Hydraulic Mines with a surplus of 2,000 ins., is to-day with barely enough to run one mine. However, we have the advantage of really good weather for work on ditch, which I am going over to-morrow, and will report on by next mail.—H. J. PRENDER, Superintendent.

THE NEW GUSTON CO., LIMITED.

ESTIMATED RETURN FOR SEPT. MONTH.

The mine superintendent cables to the following effect:—Ore shipped, 1,500 tons; value, 20,660*l.*; mine expenses and supplies, 3,512*l.*; railway freight, 93*l.*—4,442*l.* Profit for the month, 16,218*l.*—A. HEBDEN, Secretary, *pro tem.*

YANKEE GIRL SILVER MINES, LIMITED.

PROGRESS REPORT.

CABLE information has been received from Capt. Harvey to following effect:—Ore shipped, 560 tons; estimated value, \$18,000; working expenses, \$19,500. Expenses will be considerably reduced during Oct. Stope on south-west ore body in No. 9 level looking well. The ore shipments have been affected by the underground repairs.—T. NEAL, Secretary (*pro tem.*)

AMERICAN BELLE MINES, LIMITED.

MANAGER SANGUINE AS TO A BETTER CLASS OF ORE.

CAPT. HARVEY reports as follows:—National Belle Mine.—Shaft: Sinking of the main shaft was re-commenced by the contractors on Sept. 12; depth sunk, 31 ft.; total depth below base of No. 3 station, 45 ft. Silver Bell mine:—No. 1 or adit level, south drift, No. 1 stope: Length of stope, 70 ft.; height over back of level, 18 ft. 6 ins. North portion of stope ore, 2 ft. wide for 8 ft. in length. South part of stope, width of ore 4 ft. for 12 ft. in length. Value of ore from 20 ozs. to 130 ozs. silver per ton. No. 6 level:—South east drift: Drift extended 20 ft.; total distance driven, 343 ft. There is no change of importance to mention. No. 7 level—South drift—No. 1 stope: Length of stope, 70 ft.; height over back of level, 60 ft.; width of ore in the north-west part of stope, 5 ft. for 30 ft. in length. South-east portion of stope: Width of ore, 7 ft. for 10 ft. in length; value of ore, from 20 ozs. to 60 ozs. silver per ton. No. 8 level—South drift—No. 1 stope: Height of stope over back of level, 41 ft.; length, 31 ft.; width of ore, 3 ft. for 12 ft. in length. Remainder part of stope: Ore broken in appearance; value of ore, from 17 ozs. to 40 ozs. silver per ton. South drift—No. 2 stope: Height of stope over back of level, 15 ft. for 35 ft. in length. Remaining portion of stope: Height, 10 ft. for 25 ft. in length; ore in masses and scattered throughout the stone; value, from 17 ozs. to 35 ozs. silver per ton. The appearance of stope is favourable for large quantities of ore. I am sanguine as we get up a better grade of ore will be met with. Pumps: The station pump has been received and placed in position at No. 8 station. I am pleased to say it works admirably. We shall also put the small pump in position on Wednesday 30th, and commence drawing the water from below No. 8 station to bottom of sump. Surface: The erection of tressle timbers from shaft to the ore house has been completed and track laid. We are now using the ore-house for sorting the ore, and loading into railway cars.—T. NEAL, Secretary (*pro tem.*)

AMADOR GOLD MINE.—The following paragraph is from *The San Francisco News Letter* of Sept. 19, 1891:—"Many of our readers will be interested in knowing that the affairs of the Amador Consolidated have at last been settled, and that money enough has been raised to pay off all outstanding obligations, and to start up again on a substantial basis. The agents of the company in this city have been aware of the fact, but for some reason best known to themselves they have not considered it worth while to make the general public acquainted with the new and more satisfactory condition of affairs."

House, Old Broad Street, London, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Haymarket.—Yes. Hold.
Corn (Durham).—Sell by all means.
Expectant.—We think you should keep them for better prices.
J. B. R. (Penzance).—There is a good chance of making a profit.
Arizona.—You are certainly not liable, seeing that the shares have been sold.
Student.—Yes. There is now a special settlement fixed.
Landonner.—They cannot possibly go to the price you paid for them within the
time you mention. In fact we believe they will be worthless then.
B. Wyre (Holbeach).—The reports are very encouraging, and the low-grade
ores will we think pay expenses, and possibly leave a small profit. Do not sell
your shares.
Pioneer.—Safe to hold. The mine has very good prospects.
Finchley.—It will, possibly, be completed in about six months' time. Not more
than expected. Hold your shares.
Pepper Corn.—They will go much better. Not likely to fall lower.
"Mac".—If they go lower we advise a further purchase. We hardly think
they will, however.
Darkness.—Sell, and cut your loss.
J. Field (Tamworth).—Both shares will we think improve very soon.
Castle.—Take your profit.
Donald S..—Very speculative, and, all things considered, we do not advise a
purchase.
Smithson (Cork).—There is no rise expected just yet. Hold those you have,
but do not purchase more; at least, for the present.
Lilian (Southport).—You are entitled to the dividend, as the shares were only
dealt in "ex div." for the coming account.
Sceptic.—A very undesirable investment. Do not part with your cash to the
parties named.
G. K. D. S..—Increase your holding now the price is so low. The shares are
worth double the present figure on the merits of the mine.
Juggler.—You should have taken the good profit as we suggested. We hardly
know what to advise you to do now. Perhaps it will be best to wait until the
next report arrives.
Critic.—See article on Indian Mines. The outlook for the moment is gloomy.
As to the other, we really think you are too despondent—of course, under the
influence of the call.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.
Sir CHARLES METCALFE, Bart. | Major J. W. M. COTTON.
L. BALFOUR BURNS, Esq. | RICHARD SMITH, Esq.
Sir STUART S. HOGG. | EDWARD DICEY, Esq., C.B.
HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS,

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

TRANSVAAL LANDS.

TO GOLD MINING AND LAND COMPANIES, CAPITALISTS,
AND OTHERS.

FOR SALE, by order of the Liquidator of the Cape
Commercial Bank and Executors, TWENTY-ONE FARMS,
varying in size from 3,000 acres to 8,000 acres each, situate in some of
the best districts of the Transvaal.

Address:

Charles Broad, Esq., Solicitor, 37, Walbrook, London.

The Mining World.

LONDON: SATURDAY, OCT. 17, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

QUEENSLAND MINES.

THAT Queensland mining shares have held their ground recently,
while Kaffir and other shares have generally given way, seems to us
an indication that the existing holders of the former descriptions are
quite satisfied with the position and prospects of the properties in
which they are interested. And if they were not, we should say they
were very hard to please, for all the information that has lately come
to hand from the Colouy concerning the properties to which we have
drawn attention in recent issues is of a decidedly reassuring
character. From the Day Dawn Block and Wyndham Co., the
fortnightly crushing return shows a yield of 1,047 ozs. of gold from
720 tons of quartz, with a profit of 2,370*l.* for the fortnight, or at the
rate of nearly 57,000*l.* a year. This is certainly an excellent
showing for a company that has had its full share of delays and
disappointments. The profit represents a return of well over 10 per
cent. on the capital, or of 20 per cent. on the current market value of
the shares. The Day Dawn P.C. cablegram also shows that the effects
of the temporary breakdown in the machinery have disappeared, for
the tonnage treated in the last fortnight amounted to 940 tons, against
740 tons for the first fortnight in Sept., and the yield was 1,093 ozs.
During the current year the company has obtained 21,082 ozs. of gold,
against 20,070 ozs. in the corresponding period of last year, so that
the shareholders need have no fear about the continuance of the divi-
dends they have received so steadily. The chances are, indeed, that
the distribution of profits will take place more frequently in the future,
for the mine is opening out very satisfactorily. The neighbouring mine,
Mosman, is coming to the front in a very agreeable manner, and it is
not likely to keep for long outside the dividend list. New Queen is

another Queensland mine of which we have often spoken hopefully, and the latest cablegram shows that our favourable views were not formed upon insufficient data. A crushing of 370 tons in the fortnight, with a yield of 620 ozs. of gold, is distinctly encouraging, as is also the information that "the stopes are looking better towards Kelly block." Then, if we turn to the Gympie Great Eastern Co., the annual meeting of which has been held this week, we find that the transition period has been successfully passed through. The Great Eastern reef, for the purpose of working which the company was formed, has been gradually worked out, or very nearly so; but the second string to the company's bow, the Orient reef, is being opened out in a very satisfactory manner. The Orient reef practically constitutes a new mine lying to the east of the old one, and the accuracy with which the workings were extended to intersect this reef, proves that the interests of the company could not be in better hands than in those of the present management. The Gympie Great Eastern Co. is in a thoroughly sound financial position, with a cash reserve of 15,000*l.*, and we fully anticipate that the shareholders will continue to receive handsome dividends upon their investments in it. The Queensland mining industry, in short, appears to be steadily improving, and we have no doubt that ere long the quotations of the principal shares will reflect the improvement.

GOLD MINING IN THE COLAR FIELD OF MYSORE, INDIA.

BY ONE WHO HAS STUDIED IT.

ALTHOUGH I have not written on this subject since last year, it has given me much pleasure to watch the steady progress gold mining in this field is making. By a study of the annexed tables, I., II., and III., this will, I feel sure, be duly appreciated. It will be seen that the half-year's gold returns ending Dec. 31, 1884 (the period in which productive crushings were first regularly commenced), only a sum of about 4,000*l.* was recorded, whereas the return for the half-year ending June 30, 1891, shows no less a yield than over 237,000*l.*, or at the rate of *over half a million per annum.*

By examining tables I. and II. it will be observed that the total yield per month from the mines has sprung from about 33,000*l.* for Jan., 1890, to about 44,000*l.* for Sept. last, and as the stamping power of the four principal mines is likely to be increased by no fewer than 80 heads before the end of the year, the yield of gold for the last quarter of 1891 will probably show a considerable gain over any of its predecessors, and I venture to prophesy, in face of the great increase in stamping power, that the yield for 1892 will eclipse that of any other year, and show the magnificent production of *over a million sterling*, and probably considerably more. To demonstrate the probability of this prophecy being fulfilled, I must refer my readers to the late reports from the captains in charge of the various mines in the Colar Field, from which I gather the developments of the mines are being rapidly pushed forward, the Mysore Mine having its principal shaft at a depth of 916 ft. from the surface, or 26 ft. deeper than its lowest level, which is at 890 ft., and in which level the manager is now exploring with every prospect of brilliant results. In the 780 ft., the level above, very rich ore has been met with, worth over 5 ozs. of gold to the ton, and a winze has been sunk 50 ft. below this level, in quartz $3\frac{1}{2}$ ft. wide, and worth all the way, on an average, 5 ozs. of gold to the ton. The portion of the mine round and about Rowse's shaft in its different levels above the 780 ft., it is almost superfluous to allude to, as the character of the quartz extracted from its levels is well known to have been very rich, and we have only to refer to table III. to demonstrate this, from which it will be found that from 143,756 tons 834,123*l.* worth of gold has been won. Not only about Rowse's shaft is the mine opening up well, but also the portion about Tennant's shaft (over 3,000 ft. to the north) is doing remarkably well, and yielding very valuable stone for the mill, running in places to between 2 and 3 ozs. of gold to the ton. Then, between Rowse's and Tennant's shafts, Glen shaft has been sunk to over a depth of 250 ft. and a level driven at that point some 450 ft. north, which has passed through a quantity of low quality ore. This, however, is likely to improve in value on a deeper level being driven, with a further prospect of its increasing in richness as progress is made northwards in its present level. At a depth of 250 ft. a level has also been driven over 167 ft. in an easterly direction, where it is passing through ground mixed with patches of quartz, but as yet nothing regular or defined. Shaw's shaft, some 2,000 ft. to the south of Rowse's shaft and close to the southern boundary of the property, has been sunk over 450 ft., and at that depth a level has been driven north (about 480 ft.) and south (about 120 ft.), and in the end of the latter the quartz is 2 ft. wide, assaying 5 dwts. of gold to the ton. This, though not rich, may at any moment improve greatly in value, as pockets of great wealth have been met with in a higher level in this shaft. The fortunate shareholders in the Mysore Mining Co., with its capital of 225,000*l.*, have received in dividends no less than 406,352*l.* For each of the past two years a dividend of 75 per cent. in cash has been distributed on the paid-up capital of the company, and a large bonus in shares, equal to another 50 per cent., was distributed among the shareholders for the year 1889, so that practically for that year a dividend of 125 per cent. was paid. On referring to table II.

it will be seen that the mine is now regularly yielding over 20,000*l.* worth of gold monthly, whilst its average per ton is improving. The total yield for the month of Sept. shows a falling off compared with the former months of the year, in consequence of the drought which has, recently been experienced at the mines, and diminished the water supply which is necessary for the working of the tailings machinery. From this source 204 ozs. only were obtained for the month of Sept., against 706 ozs. for that of Aug. On and off during the last two months the mines in the Colar field have had to contend with two serious obstacles—drought and cholera, but happily by the last news to hand these have both disappeared. As the stamping power of the Mysore Mine will shortly be increased from 60 to 90 heads of stamps, and as the developments of the mine are of such a highly promising and progressive nature, the monthly output bids fair to shortly yield over 30,000*l.* worth of gold, and on more shafts being sunk and levels driven, this yield, magnificent as it is, will be vastly surpassed, for, be it remembered, that this mine has no less a run than about 7,895 ft. on the great Champion lode, about 1,200 ft. of which only have been worked upon, and this, at the deepest part, only to a depth of 780 ft., showing what inexhaustible resources the mine, for generations to come, possesses. Perhaps it would be as well to add that this mine has no less than 13 shafts, and that the gold that has been obtained from it so far has been produced from the various levels driven from only four of its shafts—viz., Plummer's, Taylor's, Rowse's and Tennant's.

The Ooregum Mine, which is immediately north of, and adjoining, the Mysore Mine, will probably in the very near future rival its neighbour. At present very rich ore is being obtained from three out of its seven shafts, viz., Probyn's, Low's and Wallroth's, being worth from 1 oz. to 3 ozs. of gold per ton in many of its levels, and in a winze, sunk 7 ft. from the 450 level in Probyn's shaft, the quartz is $3\frac{1}{2}$ ft. wide, and worth nearly 6 ozs. per ton. Again, in Wallroth's shaft at a depth of 422 ft. the lode is $2\frac{1}{2}$ ft. wide, and worth $3\frac{1}{2}$ ozs. At the 280 ft. in this shaft the quartz is 7 ft. wide, and worth over 5 ozs. per ton. Again, in the 360-ft. level the quartz is $2\frac{1}{2}$ ft. wide, and worth close upon $6\frac{1}{2}$ ozs. to the ton. This mine has a lineal run of 3,369 ft. on the great Champion lode, of which only about 900 ft. have been to any extent worked upon, leaving south of Wallroth's shaft a run of about 1,400 ft. on the lode unexplored. So it will be seen that the mine has probably inexhaustible resources. The capital of the company amounts in all to 265,000*l.*, having recently paid off all its debentures, and on this capital 52,000*l.* has been distributed amongst its shareholders in dividends. At the commencement of last year it was yielding over 6,000*l.* worth of gold per month, and the return for Sept. last gives a yield of over 12,000*l.* With the prospect of the stamping power being shortly increased from 30 to 50 heads of stamps, and, further, with a large increase from the treatment of the tailings, this yield should shortly increase to about 20,000*l.* of gold per month. Altogether the prospects of this mine are most brilliant.

The Nundydroog Mine adjoins the Ooregum immediately on the north, and possesses a lineal run of about 3,400 ft. on the Champion lode, of which at present only about 900 ft. have to any extent been worked upon, and from this about 176,000*l.* worth of gold has been extracted—levels driven from two out of its three shafts, viz., Taylor's and Webb's, producing this amount. In this mine also the quartz from the 370, 450, 520 and 600-ft. levels is on an average about 4 ft. wide, and worth from 2 to 3 ozs. of gold per ton. At its lowest level (600 ft.) the quartz is no less than 8 ft. wide, and worth 2 ozs. 11 dwts. The shafts are close to the southern boundary, and the exceedingly rich quartz in Probyn's shaft in the Ooregum property will in all probability be found to dip into it as these shafts are sunk deeper. At about 1,000 ft. to the north of Taylor's shaft, Kennedy's shaft has been sunk to a depth of 171 ft., and at a level driven at 160 ft. ore has been met with, worth about 1 oz. to the ton, on a continuous run of about 100 ft. This part of the mine promises in the near future to develop great wealth also. The monthly output of gold from this mine has crept up gradually from about 4,000*l.* in Jan., 1890, to over 9,000*l.* in Sept. last, and as the stamping power will shortly be doubled, and the mine may soon expect a considerable return from its tailings, this yield will probably be doubled in a few months. The shareholders have altogether had over 66,000*l.* distributed amongst them in dividends, but this is, I am confident, not a tithe of what will be distributed amongst them within the next few years, so rich and masterly are its lodes.

The Mysore West Mining Co. and the Mysore Wynaad Co. have their Tank block (consisting of 164 acres) immediately to the north of the property of the Nundydroog and adjoining it, and have a lineal run on the great Champion lode of 2,200 ft., upon which they have two shafts sunk, viz., the north and south respectively, to depths of 191 and 118 ft. From the former, at a depth of 175 ft., a level has been driven, and has cut the cap of the great Champion lode, which at this point has variable assays, to as high as 10 dwts. of gold per ton. It was at just about this depth from surface that the Mysore Mine began getting their riches, and this coincidence, we trust, will prove a happy omen for the welfare of these companies, which have only been at work on their Tank block for about a year, and should they continue to develop it in the future as rapidly as they have done in the past they will very probably commence making regular

monthly returns of gold, as, from a mining point of view, it is almost a certainty that the Champion lode (which these companies undoubtedly possess) will prove itself to be very rich in this property. It is situated between the Nundydroog and Balaghat-Mysore, which mines have produced respectively over 162,000*l.* and 52,000*l.* worth of gold. In the meantime the shares of both these companies are ridiculously low, the Mysore-Wynaad selling at about 2*s.* and the Mysore West at about 3*s.* per share, the capital of the former at these prices selling for about 22,500*l.*, and that of the latter for about 19,000*l.* This is, even when they are financially sound, with a reserve (in calls and cash at bankers) of about 18,000*l.*—a sum amply sufficient for all their requirements for at least two years to come, whilst long before that time a very rich mine should be opened up on this property. I cannot but agree with the remarks made by Lieut.-Col. Hamilton on the Mysore West Co.'s shares, which appeared in the MINING WORLD of Oct. 10 last, when he wrote—"I consider these the cheapest shares in the market; they ought to be nearer 10*s.* than 5*s.*" The Rajah of Mysore is interested in all the gold mines in the Colar field, receiving a royalty on the gold raised from them, but he is more interested in the property of the Tank block than in any on the field, as by the terms of its purchase he was constituted a shareholder in the concern to the extent of 5,000*l.*, in fully paid-up shares of 1*l.* each.

The Champion Reefs Mining Co. possesses three blocks in the Colar field. One of these, the Coromandel, is situated immediately to the north of the Tank block, belonging to the two foregoing companies just reviewed. This has a run on the great Champion lode of about 1,830 ft., and has on this portion of its property two shafts sunk, one of which, viz., the Prospect, is down to a depth of 380 ft. In various levels driven from this shaft rich gold-bearing quartz has been met with, some carrying as much as 2 ozs. of gold to the ton. This company possesses another block to the west just adjoining, which has not been opened up much yet. It further possesses a third block, situated between the Ooregum and the Mysore properties. There it has a run on the great Champion lode of about 3,660 ft., and upon this three shafts, viz., Ribblesdale, Garland, and Dalyell, have been sunk. In the former a lode has been met with at a depth of 245 ft., which is 2 ft. wide, and assays over 1½ ozs. of gold per ton. In the Garland, at a depth of 256 ft., the quartz at the present time is about 2 ft. wide, and assays 1 oz. 3 dwts. per ton. In December last it was yielding as high as 3 ozs. per ton. In the spring of the coming year this mine will have stamps erected and at work, and probably commence regular monthly crushings on very rich quartz, which is likely within a year or two to place it on as sound a basis as perhaps any on the field.

To the north, and immediately adjoining the Coromandel Block, lies the property of the Balaghat-Mysore Co. This has a lineal run of about 2,000 ft. on the Champion lode. Nine shafts, in all, have been sunk upon the same, only two of which, viz., the north engine and Haines', have been sunk to any depth, the former to 600 ft. and the latter is completed to about 400 ft. The north engine shaft is the only one from which levels have been driven, and from these the total produce, viz., over 52,000*l.* worth of gold, has been obtained. The quartz in this mine is very richly impregnated with gold, but the veins are very narrow, and as at present it is only being attacked from one shaft, the produce per month is consequently low. This will be remedied in the immediate future, on the striking out of a level in Haines' shaft at a depth of 500 ft. By about the same time, the stamping power will be increased from 15 to 25 heads of stamps. The quartz in this mine by latest accounts is increasing considerably in width in the deeper levels, and should this continue, and the richness be maintained, the monthly output of gold, instead of being about 2,000*l.*, will probably be in the near future double this amount. In this mine at about the depth of 600 ft., quartz is worth over 4 ozs. of gold to the ton; and in a winze about 43 ft. below the 410 ft. level the quartz is about 1 ft. wide, and worth over 6 ozs. of gold per ton.

Nine Reefs Mining Co. has a portion of its property situated immediately to the north, and adjoining a portion of the Balaghat-Mysore. It has a lineal run of about 2,500 ft. on the Champion lode, upon which, however, as yet only one shaft has been sunk, viz., Vyvyan's, and this to no considerable depth. However, in various points of it there have been found very rich specimens of quartz, and in this part of the mine the company appears to have a happy future. In the other portions of the property lying to the west of that in which is Vyvyan's shaft, eight shafts have been sunk to various depths the deepest, viz., the main shaft, to a depth of 340 ft. All the gold, viz., about 9,700*l.* worth, that has been produced from this mine has been obtained from this portion of the property.

The Indian Consolidated Mining Co. has two blocks of property in the Colar Field, one of which, viz., the Colar, is situated immediately to the south and adjoining the Mysore Mine, and has a lineal run of about 3,900 ft. on the Champion lode. Upon this about seven shafts have been sunk, the deepest of these, viz., No. 5, is down to 475 ft., and the levels have produced about 16,000*l.* worth of gold, which is the total yield from this mine to the present date. Two of the other shafts, Nos. 1 and 2, have been sunk by the advice of Capt. Plummer, and are each down about 250 ft., where they have met with quartz in the Champion lode, but up to the present of low quality. It is thought, however, the ore will improve in depth, and yield

abundant riches for the shareholders of the company. It is supposed that No. 5 shaft is not on the Champion lode, but on one parallel to it. Even this has yielded stone assaying in places considerably over 1 oz. of gold per ton. The other block, viz., the Great Southern Mysore, is situated immediately to the south and adjoining the property of the Mysore Reefs Mine, and has a lineal run of about 3,900 ft. on the Champion lode, but upon this no work has been done. On the Mysore Reefs Mine becoming successful, the value of this block will be greatly enhanced, and were it to be sold then by the company it should bring a very considerable sum into its coffers. This would enable the Colar block to be developed on a much larger scale without the company having recourse to the increase of its capital. This company has a further asset, which may prove to be very valuable, as it possesses many thousands of shares in the Colar Central Co.

The Colar Central Mining Co.'s property consists of two blocks, one of which is situated immediately to the south and adjoining the Colar block belonging to the Indian Consolidated Co., and has a lineal run of about 3,000 ft. on the Champion lode. Several shafts have been sunk on this block to over 200 ft., but so far without any success worth mentioning, and operations are for the time being almost suspended, but should success attend either of the neighbouring mines it is probable that mining on this block will be resumed with vigour. Its other block is on the Eastern lode and at present is giving fairer prospects of success.

Mysore Reefs Mining Co. has its property immediately to the south, and adjoining that block of the Colar Central which is on the Champion lode, and is itself on the Champion lode, having a lineal run upon it of about 3,300 ft. Nine shafts have been sunk, the deepest of which is now about 520 ft. The lodes met with in this mine have been found to be, in two or three cases, large and massive, but yielding poor quality ore, and until greater depths are reached it appears unlikely rich ore will be met with. Up to the present time the mine has produced about 2,200*l.* worth of gold.

The South-East Mysore Mining Co. has its property on the Eastern lode, upon which it has a lineal run of about 4,000 ft., and has 12 shafts sunk thereon, the deepest of which is about 540 ft. In a recent report it is stated that in a winze 67 ft. 6 ins. below the 500-ft. level the lode at present is a little pinched, and the quartz intermixed with black rock, thus reducing its value to 7 dwts. The lode before this was reported 1 ft. wide, assaying 17 dwts. 14 grs., and at an earlier period, 2 ft. wide, assaying 16 dwts. per ton of gold. This mine appears to be on the eve of prosperity. At present it cannot boast of having produced more than about 680*l.* worth of gold.

The Goldfields of Mysore Co. has property about and around that of the aforesaid companies, possessing in all about 8,000 acres, but of this large acreage there is not left, after the recent sales, more than about a lineal run in all of 6,000 ft. upon the Champion lode. Should, however, the mines situated on the Champion lode that have not as yet proved productive of gold to any extent eventually become so, they will have to come to this company to acquire more land on their western boundaries, as the productive mines have recently done. In addition to this the company has very possibly many valuable properties on lodes to the east and west of the Champion lode. These may be proved in the not far distant future by its own workings, as well as by those being pursued by the Colar Central, Mysore West and Mysore Wynaad, and also by the South-East Mysore Co.

Should other mines than the four principal ones, viz., Mysore, Nundydroog, Ooregum and Balaghat-Mysore, add in any considerable extent to the yield of gold in this field during the coming year, the forecast that I have already made for the production of 1892 will, consequently, be, in proportion, augmented. Now, as three additional companies, viz., the Champion Reefs, Mysore West, and Mysore Wynaad, are likely to turn out a considerable amount of gold from their properties in the coming year, 1892 will, in all probability, exceed the production that I have already ventured to forecast for it. The time has apparently now arrived, considering the excellent developments that are taking place on so many properties in the Colar Field for the introduction of greater activity into the workings of the properties, in which it is very evident, from a mining point of view, that immense wealth is only awaiting extraction, and this can be best and quickest done by sinking more shafts and driving levels from them. This driving should be done by the aid of rock-drills wherever it is possible to work them, as by their use we know that five times the amount of labour can be done in a given time as compared with hand labour. The mines in the Transvaal district of South Africa are yielding collectively monthly much larger returns than those collectively in the Colar Field, but instead of improving in richness in depth, as is the case with the Colar mines, those of the Transvaal seem to show a falling off; and taking into consideration the vast area over which those mines extend, the yield from the Colar Field, considering its very limited area, gives a much better return of gold per month. In conclusion, the Colar Field has many advantages over the Transvaal Field, in so far as it is under British rule, has excellent transport at its doors, in the form of a railway not distant further than about 4 miles from any of the mines. In addition to this, labour is far less costly and the water supply less subject to diminution.

TABLE I.

Showing the tons crushed and gold produced by the Mining Companies in the Colar Goldfield of Mysore for the year 1890, together with the total value of the output for each consecutive month.

PROGRESS OF WHEAL GRENVILLE.

FOLLOWING the practice that has proved so useful in former years, the directors of Wheal Grenville met the shareholders on the mine at Camborne last Wednesday, and in another column will be found a *verbatim* report of the proceedings. Wheal Grenville mine, when the management was taken over by the present directors, Mr. Goold, Mr. Lane, and Mr. Bellingham (who has since been joined by Mr. Doré), was described by the chairman himself as a wreck. To-day it is a vast, well-organised, admirably-managed and profitable enterprise. Indeed, in the opinion of many persons, it is not without promise of becoming the premier mine of Cornwall. Proofs of good management abound on every side. The ocular demonstration of them is alike to be found on an inspection of the mine, and a scrutiny of the accounts. As regards the former it well repays the time and small expense any shareholder may incur to visit the property, and, as regards the latter, the position is reassuring to a degree. For example, it was mentioned at the meeting that although Dolcoath produces a much larger quantity of tin Wheal Grenville makes a greater profit per ton sold, and puts it on the market at a lesser cost. This result is not achieved by any parsimonious dealing with the officials and work people, or by what the chairman called "reckless" economy, but by judicious expenditure, particularly upon machinic appliances, so that for a lesser sum of money a larger result may in every way be produced. The mine has been paying dividends now for many years, but to understand the possibilities and probabilities that are before it our full report of the meeting should be read with care.

It is now some years since the minds of the directors became considerably exercised as to what they should do with the Eastern Section of the sett, the value of which, from all the evidence that could be gathered, is believed to be quite as great as that of the Western Part which is now being so profitably worked. Some 18 months ago the directors felt that the time had come when definite action should be taken. They first of all approached the ground landlord (Col. Fortescue) who has since died, and he consented to forego his dues for 2½ years—an act of kindness that has since been confirmed by his successor. Calls were made upon the shareholders to the extent of 25,000*l.* for the working of the Eastern Section and now for more than a year, under the experienced and energetic direction of Capt. Bishop, the work has been proceeding with a rapidity to which it is not unfair to say Cornwall has not generally been accustomed. Almost the whole of the speaking at Wednesday's meeting was directed to an exposition of what has been done in the Eastern Section, which may be expected to come into bearing in about another 18 months, or, it may be, two years. Then, and then only, the shareholders will know by the pleasing evidence of dividends the way by which they have been led, and then, and then only, will they be brought to understand the real nature of the property they have in Wheal Grenville. Even as it is the production of tin is being increased without any help from the Eastern Section, and the output of the last quarter was greater than it has ever been before, whilst the reassuring statement was made that as the mine goes down it improves in value. Mr. Goold, in his exhaustive speech towards the close, mentioned four encouraging facts which we desire to impress, as he did, upon the minds of the shareholders: First, that the returns are increasing; next, that the price obtained for them is also increasing; thirdly, that the costs are decreasing; and lastly, that the profits per ton are becoming larger. Wheal Grenville is evidently a mine which is alike profitable to the shareholders and creditable to the management.

THE MIDDLESBOROUGH TOWN CO.

THE experience of the Middlesborough Town Co. is a striking exemplification of the wisdom of Burns's dictum that "the best laid schemes o' mice an' men gang aft a-glee." From all that we have been able to ascertain, not only from the opinions of American experts, but from the more sober views expressed by authorities such as Sir James Kitson and the members of the British Iron and Steel Institute, Middlesborough, Kentucky, is destined to become one of the greatest industrial centres of the Southern States. The iron, coal and limestone deposits of the surrounding districts have been thoroughly proved; the town itself has been admirably placed, and no pains have been spared to perfect the transport facilities between Middlesborough and the outer world. Timber and water exist in abundance, and, in short, the town possesses all the qualifications which have made its prototype in the old country so famous. But, partly owing to the wave of depression from which the United States is now emerging, and partly owing to the injudicious financial arrangements made by the late general manager of the company, the cash resources of the undertaking have run short. On paper, the balance is largely in the company's favour; but much of that balance is represented by instalments on land purchases, for the payment of which time has to be given, and by advances to the subsidiary concerns which are not yet able to walk alone. Mr. Powers, who has succeeded Mr. Arthur as general manager, anticipates, however, that with careful nursing the assets of the company will realise well over 1,100,000*l.* on the most moderate estimate, and without allowing much for the prospective development of the district. Meanwhile the shareholders are asked to make some temporary

sacrifices. It is proposed to write the capital down from 5*l.* to 2*l.* a share, or from 600,000*l.* to 240,000*l.*; and secondly, the shareholders are asked to subscribe a further 240,000*l.* in 2*l.* shares, leaving of the nominal capital of 600,000*l.* about 120,000*l.* as a reserve against future contingencies. The amount asked for is small in view of the importance of the interests involved, and we should advise those who hold shares to give their practical support to the scheme of reconstruction that has been submitted to them.

SIERRA BUTTES.

WHEN Sierra Buttes directors meet their shareholders the latter are accustomed to rely upon one thing—that they will hear the truth. The story that is told is sure to be a plain and unvarnished one, and the inferences drawn from facts will not be stretched to a greater point than they can bear. The position of this company, which the shareholders were reminded, has already made a return to the proprietors of 873,984*l.*, may be briefly described. Sierra Buttes is by no means looking well, and Plumas Eureka is hardly in a convalescent state. Uncle Sam, however (who has been in this case, as in the old comedies, the rich uncle who has come home with bags of money) has almost atoned for the deficiencies of the other two. When Mr. Tendron was speaking of Sierra Buttes and Plumas Eureka his oration was of the funeral order, and his face was arranged for the occasion. When, however, he turned to Uncle Sam, "eyes did smile to eyes that smiled again, and all was merry as a marriage bell." The appearances in this mine are of the most favourable kind. It has already produced an equivalent of 43,000*l.*, whilst it has 100,000 tons in reserve, estimated at a profit of 1*l.* per ton. Of course, contrasting the Sierra Buttes of to-day with that of bygone years it suffers by the comparison, but, even as it is, it is able to pay fairly good dividends, and is in a far more favourable position than the great majority of its contemporaries.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, Sept. 21, 1891.

THE SHARE MARKET.

AFTER an interregnum of at least six months our share market is showing symptoms of revival, and, in fact, last week it was quite lively, consequent on orders not only from different parts of the country, but from England. Some people go so far as to say that we have reached the turning in the long lane of depression. Certainly there can be no doubt of one thing, and that is that business is settling down on a firm basis at Johannesburg, and the revival bids fair to be of a permanent character.

THE ZOUTPANSBERG GOLDFIELDS.

During the last 18 months little or nothing has been heard about these fields, which are situated on the north-eastern boundary of the Transvaal. Now and again I have heard that something good would turn up there some day, but we are so in the habit of hearing tales of that kind every day that very little notice is taken of them. However, I have at last something worth while reading, and I send it you with only some unimportant items taken out:—"It is not perhaps generally known that we have in this district goldfields which in a short time will, in my opinion, eclipse any other goldfield in South Africa, and I guess you will think this tall-talk, but it is correct. The fields in question are the Klein-Letaba, about 110 miles from Pietersburg, the capital of Zoutpansberg. There is a splendid waggon road all the way from Pietersburg. Prospecting has been going on here for the last four years, but it was not until last year that any good work was done. The principal company, that is to say the property on which the most work has been done, is the Birthday Co., which was recently floated in Pretoria for 150,000*l.* This mine has been tested to a depth of 107 ft., where the reef is 4½ ft. wide, showing visible gold throughout. A 10-stamp battery has been erected, and crushing will be commenced sometime this month. The trial crushing shows 4 ozs. to the ton. An engineer and amalgamator has just arrived. Next comes the Ellerton Syndicate, a Cape Town property, situate about 25 miles from the Birthday. This syndicate has three distinct reefs close to and running parallel with each other. The property was handed over to some Randt capitalists, less than six weeks ago, for development and flotation, and to-day the machinery is on the road. The Concordia Syndicate has also acquired a good bit of ground near the Birthday. Owing to the illness of the manager the work has been suspended, but another manager is soon to be appointed, and work will be resumed. The Cheviot, owned by Mr. J. R. Blencowe, is one of the richest strikes that has been made in this district. The stone is so rich that nuggets weighing from 1 to 4 dwts. are easily taken out without the trouble of crushing. This wonderfully rich stuff has been found to a depth of 25 ft., at which depth the reef is 4 ft. wide. Mr. A. L. Ross, who represents the Wildgoose Syndicate of Pietersburg, has also acquired a good property for his syndicate, and the shares are already at a premium. Alluvial has been found in small quantities in some of the creeks, and I am convinced that big alluvial diggings will soon be opened in this district. Proceeding some 6 miles from the Klein-Letaba River we come to the Tsama River, where Warren has pegged off some ground which he calls the Tsama reef. He is doing a lot of work on the property, and the pannings are as good as are to

be seen in the district. He has sunk about 20 ft., and the reef is 4 ft. wide. The rock assays 20 ozs. at this depth. The property is under offer to a Johannesburg firm of capitalists. The facilities for working the different properties are wonderfully good, and there is an abundant supply of wood and water. Several Randt and Pretoria speculators have been looking about here for the last three months, and are much taken with our prospects." The writer of this letter is well-known here, and he has promised to send us some more information shortly.

THE ORANGE RIVER ASBESTOS CO.—AN EXPOSÉ.

I fancy the directors of this company are not having a very happy time of it just now. The story I have to tell is a fair sample of the style of doing business here in the halcyon times now gone by. Some three years ago the Volharding Syndicate was established here for the purpose of working a certain property on which it was alleged there was a bed of asbestos. Mr. Herman Hirsche was elected chairman, and Mr. Schumacher secretary. Some 18 months ago the business was taken over by the Orange River Asbestos Co., the same gentlemen retaining their respective positions. We will now jump over a period of some months and come to Mar. last. Two events then happened. Mr. Hirsche just then returned from a year's holiday in Europe, and before he reached Kimberley Mr. Schumacher was *non est*. Finding this to be the case Mr. Hirsche called the directors together, an investigation was made, and as everything connected with the business of the company was found to be in confusion the matter was handed over to an accountant. Six months were allowed to elapse, and then last Tuesday the shareholders were called together to hear read three reports; one from the directors, another from the accountant, and a third from the auditors. These reports revealed a pretty state of affairs. No minute book, ledger, or cash book had been kept, or at all events were not forthcoming; the secretary, with or without the knowledge of the directors—it does not appear which—had kept the money in his own private account, notwithstanding the instructions of the directors to open a separate account; two cheques were found to be drawn for 89% for the same purpose, the counterfoil of one remaining in the cheque book, but the counterfoil of the other had been carefully taken out, but curiously enough subsequently found in some private papers, both cheques being now in the Standard Bank signed by four different directors, and there was an ascertained deficiency of 1,489%. When these reports were read the shareholders sat upon the directors properly, the chairman's only excuse was that they all had the utmost confidence in Mr. Schumacher, and had not the least idea that anything was wrong. The result of a hot discussion was that the meeting was adjourned for a week.

THE PRINCE ALBERT GOLDFIELDS.

Although it is early days to write with anything like absolute certainty, the accounts from these goldfields are weekly, almost daily, of a most promising nature. Nothing like a really alluvial goldfield has yet been found, but there is no doubt about one thing, and that is that small nuggets have been turned out in larger quantities, and over a wider area of ground than anything in this country since the early days of the De Kaap fields. In fact, these indications are so promising that experts feel confident that a rich alluvial goldfield will be discovered somewhere in the neighbourhood. Prospecting is going on all over the district, and reports come in every now and then to the effect that reefs have been discovered quite equal to anything on the Randt. People in Cape Town are getting into quite a state of excitement over these fields, the distance not being more than 200 miles by rail, and syndicates have been formed for the purpose of keeping up large prospecting staffs and securing claims. Nothing has yet been done in the way of sending up crushing machinery, but I expect to be able to report that something has been done in that way in a week or two.

GRAND CENTRAL SILVER MINES, LIMITED.

THE property which this company has been established to acquire has merits which will not escape the attention of those who carefully read its prospectus. The document is couched in the language of moderation, but loses none of its effect from that cause. The tale told is one that is substantiated by the reports of experts of repute, and by all the evidence that in such a case may reasonably be demanded. Two at least of the directors are accustomed to the management of mines—we refer to Mr. Samuel Crowder and Mr. Alfred E. Ann, who may be relied upon not to endorse statements as to which they have not previously made the fullest inquiry. The property itself consists of nine claims, comprised within 180 acres, and is in the Black Range, New Mexico, which is coming into notoriety as a silver-producing centre. The deposit which the company is formed to work is one of silver, lead and zinc ore, which is said to have been proved already 2,000 ft. long along the surface by means of small trial shafts and the other operations familiar in prospecting. The statements of engineers selected from this country and the United States go further, and say that whilst the property may be worked as an open quarry, the ore can be sold at a net profit of 2% 15s. 6d. per ton. These experts also state that the claims are in a newly-located mining district, which has only been worked for about 2 years, that the climate is good; that

there is an abundance of wood on the property; that there is ample water power, and that the profits from the mill alone (*vide* the report of Mr. Robson) taking 300 working days in the year, should be 70,000% apart from that derived from ore sold direct to the smelters without treatment at the mines. The directors refrain from making any calculation of profits until the property is more developed, but quote the report of Mr. Mitchell who, it must be remembered, made his examination on behalf of the vendor. He says that "the quantity in sight is 400,000 tons, and I estimate a clear net profit of 4% per ton, which would be equivalent to 1,600,000% net profit in sight on an assay value of 37 ozs. silver per ton, and 18 per cent. in lead." A general average of the ore sampled by Messrs. Johnson and Son gave the satisfactory result of 53 ozs. of silver, and 13.80 per cent. of lead, and 16.05 per cent. of zinc of lead. The company is not without a rich neighbour. The Silver Mining Co. of Lake Valley, New Mexico, has paid 70,000% in dividends, and the Sierra Grande Co. paid from the same property (which is only 300 ft. deep), 172,000%. The capital of the company is 200,000% divided into 25,000 prior dividend shares and 175,000 ordinary shares. It is the prior dividend shares that are offered for subscription at par (1%), of which 10,000 are already applied for. It is important for subscribers to these prior dividend shares to remember that they will receive the first profits of the enterprise up to 100 per cent. in dividends, after which all shares will be placed upon a common basis. The profits from silver mining deposits are known to be enormous, and the present enterprise seems to offer every prospect of a successful result.

THE UNITED STEAM MILLERS' CO., LIMITED.

THIS company has been formed to amalgamate a number of important corn mills and biscuit factories, comprising something like 20 firms mostly of very old standing. It is stated that the result of the amalgamation will be to increase the profits, not only by additional trade, but also by a considerable saving in working expenses. The situation of the mills appears to be favourable for the business of the companies, some of them being in the fine wheat growing districts of Yorkshire, and others at the ports of Hull, Grimsby and Goole, where a very large amount of imported grain is landed. The company will, therefore, be in a position to prepare for market not only home grown produce, but also that of Foreign countries on which this country mainly relies. It is proposed to put the mills as far as possible under the management of their present owners, though the general control will be in the hands of managing directors. The biscuit factories to be taken over situated in Hull, are mostly engaged in supplying ship-biscuits at that port, for which there is a large and increasing demand. Messrs. W. H. Pannell and Co., chartered accountants have certified as to the profits of the businesses, and Messrs. Baker and Sons as to the value of the freehold and leasehold premises. The directors, however, have had an independent valuation made by Mr. H. Jameson Davis of Mark Lane, and on this gentleman's valuation, which is 34,500% below that of Messrs. Baker and Sons, the purchase-money has been fixed. The total amount payable to the vendor for the freehold and leasehold properties with plant, machinery and goodwill is 1,163,500%, the vendor paying preliminary expenses up to the first general allotment of shares. The share capital is 700,000% divided into 80,000 7 per cent. cumulative preference shares of 5% each, and 60,000 ordinary shares of 5% each, and there will also be 800,000% in debentures of 100% each, bearing interest at the rate of 5 per cent., and redeemable at the expiration of 10 years, at the option of the directors at 110%. The subscription list will open on Monday, 19th inst., and close on Wednesday 21st for London, and Thursday 22nd for the country.

THE PALMAREJO MINING CO., LIMITED.

QUARTERLY REPORT OF DIRECTORS.

THE 50,000% which it was decided to raise for the purpose of completing all the works has been subscribed, and no interruption has taken place in the company's operations. At the meeting in July the chairman gave full details as to the position of matters at the mine, and the board have now to add that the reports since to hand are of a satisfactory character, inasmuch as the works are being carried on in a thoroughly efficient manner. The progress made may be summed up in the words of the following telegram received from the manager at Palmarejo on the 23rd ult.:—"Mill has been completed; waiting for water; supplies ordered; 4th level rise connected; will commence immediately filling Palmarejo ore bins." The chairman had not intended to revisit Palmarejo until a later date, but in compliance with the urgent request of many of the shareholders, he will proceed to Mexico on Oct. 17, with the object of forwarding the completion of works and making arrangements for the organisation of the business of the company generally. On the invitation of the directors Mr. V. W. Chemery has joined the board of the company. The directors acknowledge the cordial assistance they have received from the Advisory Committee.—R. J. SCRIVEN, Secretary.

CANADIAN PACIFIC RAILWAY.—Messrs. George Gregory and Co., of 4, Tokenhouse Buildings, Lothbury, have issued the best map of the Canadian Pacific Railway we have yet seen. He describes it "The world's highway to the Orient." It is divided into two sections. The first shows the Canadian Pacific Railway and its connections, and the second is the map of its eastern lines and connections. These maps show this to be "the most direct route to all points in Ontario, Quebec, Maritime Provinces, Canadian North-West and Western States. In public offices the map will prove invaluable for purposes of reference."

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

THE OREGUM MINE.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—In your issue of the 10th inst. you have hazarded the remark that a re-reading of the late reports from the Ooregum Mine has led you to the conclusion that the property "will astonish the mining community within the next 12 months." You have always been so sympathetic towards the mining industry at Colar, especially in the days of small things and evil reports, that some of your readers may suppose that on the present occasion your imagination has for once got the better of your judgment, and landed you in serious miscalculation. They can test the value of your conjecture by referring to the fortnightly reports from the mine; but they will be saved some trouble if you will permit me to sketch the progress which the mine has made since Jan. 31 last, the date of the conclusion of the 12 months alluded to in the statements of the superintendent and chief mine captain, that were published with the directors' annual report for 1890.

Wallroth's shaft had been sunk to a depth of 327 ft. on Jan. 31 and between 280 and 327 the lode had an average width of 2 ft. 4 ins., and the assays averaged 6 ozs. 10 dwts. of gold per ton of ore. On the 14th ult. (according to the report that you published on Saturday), the total depth was 422 ft., so that the shaft was sunk nearly 100 ft. in the interval of seven and a half months. The lode at 422 ft. was 2 ft. 6 ins. wide, and assayed 3 ozs. 10 dwts. per ton. The average width of the lode from 327 to 422 ft. was 3 ft. 3 ins., and the average of the assays was 4 ozs. 8 dwts.

The 280-ft. level south had been advanced 525 ft. on Jan. 31, of which 203 ft. was through a rather poor section of the lode, but at the southern extremity the lode was 1 ft. wide, and assayed 2 ozs. 3 dwts. In the ensuing 7½ months the level was driven a further 256 ft.; and, on the 14th ult., the lode in the end, or at 781 ft. from the shaft, was 7 ft. wide, and was worth 5 ozs. 8 dwts. The acting superintendent added that "for the last 143 ft. the lode here averages 5 ft. wide, worth over 3 ozs. per ton." For the whole of the 256 ft. driven since Jan. 31 the lode has an average width of 3 ft., and an average value of 2 ozs. 1 dwt. of gold per ton of stone.

The 360-ft. level south has been commenced since Jan. 31, and has been driven 93 ft. It has averaged 2 ft. 4 ins. in width, and 4 ozs. 2 dwts. in value for this distance, and, on the 14th ult., it was at the southern end 2 ft. 6 ins. wide, and it assayed 6 ozs. 9 dwts.

The southern end of the 280-ft. level was, on the 14th ult., 710 ft. from the south boundary of the property (or from the north boundary of the Mysore section of the Champion Reefs property, which is giving excellent promise); and a new shaft is to be sunk immediately between Wallroth's shaft and this boundary, in order to facilitate the thorough development of this exceedingly valuable part of the block belonging to the Ooregum Co.

Low's shaft: In consequence of difficulties arising from the present epidemic of cholera, this shaft has had to wait until the more urgent demands of Wallroth's and Probyn's are overtaken; but, as showing the character of the intermediate part of the mine, it may be mentioned, that there are two winzes in the bottom of the 350-ft. level (the deepest workings) in which the lode has an average width of 3 ft., and an average value of 2½ ozs.

Probyn's shaft had been sunk from 466 ft. on Jan. 31 to 571 ft. on the 14th ult., or a distance of 105 ft. in the seven and half months. The lode had averaged 3 ft. 8 ins. in width, and 3 ozs. 11 dwts. in value, between 423 ft. (where it had been recovered after a floor of country rock, 27 ft. thick, had been penetrated), and 466 ft. In the additional 105 ft., the lode was found to have an average width of 4 ft. 2 ins., and an average value of 2 ozs. 14 dwts. At the bottom of the shaft, or at a depth of 571 ft., the lode was, on the 14th ult., 8 ft. wide, and assayed 2 ozs. 3 dwts.

The 550-ft. levels have been commenced since Jan. 31. The southern level was driven 60 ft. through a lode that averaged 5 ft. 8 ins. in width, and 2 ozs. 8 dwts. in value for the whole distance; and, on the 14th ult., the lode in this end was 7 ft. wide, worth 2 ozs. 5 dwts. The northern level was driven 30 ft. through a lode averaging 5 ft. in width, and 1 oz. 6 dwts. in value.

The 450-ft. levels had been driven 67 ft. south and 14 ft. north on Jan. 31, on a lode averaging 2 ft. 6 ins. in width, and 2 ozs. 19 dwts. in value in the former, and 3 ft. 6 ins. in width, and 4 ozs. 9 dwts. in value in the latter. The southern level was driven a further distance of 262 ft. between Jan. 31 and the 14th ult. in a lode of an average width of 3 ft., and an average value of 2 ozs. 17 dwts.; and, on the latter date, the lode at 329 ft. from the shaft was 1 ft. wide, and assayed 2 ozs. 5 dwts. The northern level has been driven through rich ore to the north boundary, 58 ft. from the shaft. This is the south boundary of the Nundydroog Mine, which is almost phenomenally rich at this point. The lode in Probyn's shaft is dipping north, and will at depth be cut in the Nundydroog workings. There is a large store of highly auriferous rock at this part of the field; and the deeper Probyn's shaft in Ooregum and Taylor's shaft in Nundydroog are sunk the richer does the ore become.

It is not necessary to enter into particulars as to other levels, or as to winzes and stopes; for the fortnightly reports speak for themselves to persons who study them with open minds. The milling power will be increased from 30 to 50 heads of stamps in February or March next, and, if all goes well, the tailings machinery will commence before the close of the year to deal with the present accumulation of about 35,000 tons of tailings, which are expected by the superintendent to yield 8s. per ton profit "after paying working expenditure." Air compressors and rock-drills have been sent out for the development of the southern part of the property, and it may be assumed that more will follow as occasion may require. The advantage which the mine has derived from the efforts that were made about 10 months ago by Mr. Malcolm Low, M.P., the chairman of the com-

pany, to familiarise himself on the spot with its executive, its prospects, and its requirements can hardly be over-estimated; and the gratifying progress in development that has been made since his return to England may be in some measure attributable to his practical knowledge of the conditions of gold mining in India.

Unfortunately, those conditions include the risk of epidemic disease. In 1890 work at the Ooregum Mine was seriously interrupted by influenza and cholera; and in the present year the latter malady has been very prevalent, owing to the abnormal character of the season. Yet in the year 1890 the bar gold produced amounted to 27,351 ozs., which realised 104,000l.; and in the first nine months of 1891 the production was 25,383 ozs. of bar gold, worth about 95,000l., or at the rate of about 125,000l. for a year. The average yield was 2 ozs. 2 dwts. per ton of ore in 1890; and this year it has been 2 ozs. 4 dwts. The working expenditure was about 55,000l. in 1890, exclusive of machinery; in the present year an important reduction in the cost of fuel (the charge for which was 11,933l. in 1890) may be expected.

The above figures show that the opinion expressed by the directors in their report for 1891 that the mine is an "extremely rich one" with a "brilliant future," has received much confirmation in the current year. They also strengthen the impression that I have formed during frequent visits to the mine, that the company is fortunate in its executive as well as in its property.

13th Oct.

CHARLES LAWSON.

THE TOLIMA MINES AND THEIR MANAGEMENT.

SIR,—Mr. James G. Green, in his discourse to the shareholders at the general meeting of the Tolima Mining Co., Limited, held in London on July 2 last, is reported to have said, in your issue of July 4, that when he arrived at Frias to take the management of the mine he found "its administration in a state of chaos, and its mine in a condition of ruin. Not only were the underground works in a wretched condition, but even had there been any considerable output of ore, the machinery at surface was inadequate to deal with it." Further, that "there was practically no mineral ground opened up and in reserve, the machinery and plant were in a ruinous state, and totally inadequate for the purposes of the mine, and, in short, there was a general appearance of bankruptcy about the whole establishment."

Now, as manager in chief of the Tolima Co.'s mining properties in Colombia during the eight or nine years previous and up to 1886, and to within a few months of Mr. Green's taking charge on my resigning the appointment, I am compelled to notice and correct these damaging assertions. I trust, therefore, that, although unavoidably somewhat late after the event, you, Sir, will permit me space to show that Mr. Green's aspersions could only be intended to produce the requisite amount of shade to throw into more prominent relief his own somewhat tardy achievements in Colombia.

It may facilitate explanations if I commence by saying that when I, at the close of 1877, entered upon the management of the Frias Mine the engine shaft was only 40 fms. deep. The vein in the bottom of this shaft was then entirely poor, but the ends of some of the drives, and in places the "soles" also yielded a little mineral. The only remuneratively exportable ore in sight was being extracted from above the 30-fm. level east, and the available funds were derived from what the mine itself produced in mineral, the monthly output at that time being 17 tons of export ore, its previous averages since 1871. The pit-work and pumps to the above depth, the pumping and hauling-wheels and some other machinery I found fixed and running. Some new crushing and concentrating machinery, which, together with the iron work of the pumping-wheel, had been supplied by Mr. Geo. Green, was in course of erection by a mechanic from his foundry. These are a few of my experiences during the two succeeding years. First, one of the gudgeons of the pumping-wheel broke; then a second one; then the crusher caused trouble; this was followed by the pumping crank working loose repeatedly on its shaft; then the hauling wheel broke down, followed by the failure of another gudgeon; and, finally, the iron axle of the pumping wheel itself (on which the very mine itself depended) collapsed, and had to be replaced by an entirely new and stronger one, which, with the new crank and gudgeons, I fortunately sent home for in anticipation of such an emergency. These "accidents" were the cause of frequent stoppages and delays, as well as great expense to the mine, and much additional worry and anxiety to myself. Little by little, however, progress was made, the engine shaft was got down, the known veins were developed, and new discoveries made. As the returns increased, so were more modern and powerful appliances introduced and augmented. Pumping, hauling, and ore concentrating machinery was constantly being erected to meet the increasing requirements of the mine. New water wheels were built, and capacious aqueducts, leagues in length, were constructed (embracing the present "Santa Rosa" scheme, which is an extension, on my surveys, of the "Claros" aqueduct) bringing in with a 350 ft. "head" new and additional supplies of water. The entrance to the engine shaft was made secure from collapse for all future time, solid brickwork to 100 ft. in depth being substituted for the old ill-constructed and constantly failing timbering. Not only was the machinery actually erected on the mine capable of treating the monthly output approximating the 200 tons of concentrated export silver ore, to which the shipments for the month of Feb., 1884, had been increased (showing a profit for that month of 6,998l. 4s. 7d., the maximum working profit on any subsequent single month's output being from 8,000l. to 9,000l.), but in order to provide for every possible future contingency, a still further equipment of entirely new hydraulic, pumping, hauling, crushing, classifying, concentrating, and rock-boring machinery, with turbine, pressure-columns, air-compressors, &c., &c., was ordered, and largely from Mr. Geo. Green, whilst as accessories there were supplied electrical, blasting and other appliances, as also telephones in operation (abandoned since 1886), and an electric light instalment of 2,000 candle power.

Further, Mr. William Green, a brother of Mr. Green, and who had been employed for some time as chief mechanic at Frias, was furnished with a staff of skilled English and native workmen, provided with every requisite tool and implement, for the express purpose of maintaining the older machinery in efficient working order, and to erect the new as rapidly as it could be delivered on to

the works. The chief mechanic had been so engaged up to the period of Mr. Green's taking charge, yet notwithstanding the fact that his father supplied most of it, and that his brother was responsible, under me, for its efficient working condition, Mr. Green asserts that "the machinery and plant were in a ruinous state, and totally inadequate for the purposes of the mine." I think further comment on this head superfluous, yet if his assertions be correct, it might be pertinent to ask what happened to the machinery I left actively running, and which I again saw in full operation in Mar., 1887, and to the brand new supply delivered on to the mine, and in course of or awaiting erection; also to the large and valuable outfit of special engineering tools, with new slide and other lathes, saw-mills, &c., without mentioning the great stock of mining tools and stores, &c., in reserve for every possible requirement, all of which, classed by Mr. Green as "ruinous" and "bankrupt" and "inadequate," were considered excellent and adequate up to Apr., 1886, when, in accordance with the directions of the board, I handed over the works to the care of Mr. F. G. Mills, who was succeeded a few months later by his friend and colleague, Mr. James G. Green?

And now a few words concerning the underground state of the Frias Mine. In the eight or nine years previous to 1886 the engine shaft had been deepened by 50 fms.—i.e., from the 40-fm. down to within a short distance from the 90-fm. level, and had it not been for the revolution of 1884-5, which carried off our miners and "requisitioned" our powder, it would have been at the supremely rich ore in the 100 by that year. This shaft was provided with double skip-roads, and the usual hauling gear; with ample, and almost new, plunger-columns and pumping lifts, all working efficiently, and the pit-work generally was as strong and substantial as the most experienced of Cornish pitmen could fix and maintain this class of work. The main deep extraction galleries driven on the vein at 10 to 11 fms. intervals, some of them spacious enough for a horse to travel along, were well ventilated, and laid with iron bridge rails, whilst ample supplies of the very best description of tools and materials existed in every department. Yet Mr. Green characterised all this as a "wretched" and "ruinous" condition of affairs. In reference to the output, the mine had never failed in making regular monthly invoices (even throughout the revolution, just then safely tided over, an average of from 28 to 30 tons a month had been maintained), although from its being essentially "bonanza" in character, these fluctuated considerably both in quality and quantity. Notwithstanding that one of my richest discoveries at Frias (which within a compass of 20 fms. in height above the roof of the 70-fm. level, and some 20 to 25 fms. in length, yielded over 150,000 lbs. worth of mineral) somewhat suddenly "cut out" at that level, whilst the course of ore again forming and driven over at the 80 was as yet of too low a grade in quality to pay for extraction, nevertheless other portions of the mine were producing comparatively rich ore to the day I left, and our shafts and levels were being driven as rapidly as possible towards fresh deposits of mineral. The underground development and ore extraction "stations" in various parts of the mine had been, and were capable of employing at least 200 miners in each shift, and I repeat that when I left it, and presumably when Mr. Green took it over, the Frias Mine was in as perfect a working and workable condition as ever it was, and, in many respects, much better.

Now, Mr. Green has been nearly five years in charge, and what has been done since?

During the first half of that time were any serious operations carried on in depth beyond those of extracting or winning ore from previously known deposits from the 60 or 70-fm. levels upwards? After a long delay, and by an effort, the engine shaft was sunk the 10 or 12 fms. it merely required to be sunk to reach the 100, and the extremely rich body of mineral there met with, and to some 30 or 40 ft. below that level, the total depth of the mine to 1890, as stated by Mr. Green to the meeting. Well, better late than never; but surely it was not in the best of taste for Mr. Green to boast so loudly after this performance. The feat was to get that shaft down to the depth at which he found it, and had it been made to go deeper a little sooner, the expectant Tolima proprietary might have had the opportunity of rejoicing over the present repetition of their former "brilliant successes" somewhat earlier.

In regard to the "general appearance of bankruptcy" which Mr. Green asserts existed when he took charge, this is merely a slight error of date on his part, for I at once admit that subsequently to the year 1886 the mining establishment did decline to a most deplorable financial position. But, whilst admitting this state of things concerning the mine, it is only fair to add that meanwhile the Frias "shop" (a prosperous, energetically conducted mercantile establishment of no little importance) attained a well-known reputation as a flourishing commercial business house.

And now, in conclusion, one word to my old friends the directors of the Tolima Mining Co. (and I say it more in sorrow than in anger). Would it not have been an act, graceful in itself, towards their former superintendent, who spent so many of the best years of his life in their service, and who, apart from all egotism, claims some little share of the credit for having made the Frias Mine what it became, and now is, to have pulled at Mr. Green's coat-tail, when on lofty pedestal, and in boastful tones, he posed himself before the shareholders at the meeting—if not out of kindness to him, from some feeling of consideration towards Sir, yours obediently,

EDWARD GLEDHILL,
Late Manager Tolima Mines.

Carolina Hacienda,
Honda, Republic of Colombia,
South America.
Sept. 3, 1891.

DE BEERS.

SIR,—The shares of this company, which are now a little above 13½, stood last year at about the same time at 20½, and in 1889 at 23½. The position of the company has never been so strong and so prosperous, for after writing off an enormous sum for depreciation, and paying a 20s. dividend, they carry forward the huge sum of 717,829½, against 465,416½ the year before, and there are probabilities (as stated at the last meeting) that they will pay 30 per cent. next year. In my humble opinion their value now is at least 20½.—I am, &c.,

CONSTANT READER.

Oct. 16.

GOLDEN GATE AND GOLDEN FEATHER.

SIR,—Can you enlighten your readers, by means of an editorial note, as to the extraordinary fluctuations in the prices of Golden Gates. A few weeks ago some of us bought at about 30s. on the strength of the Colonel's telegrams. Since then the dealers have delighted to put the shares down to 12s. 6d., and up again to 16s. 3d., or even 17s. 6d., in the course of a few hours. It would seem to be a mere freak, otherwise Golden Feathers would not be so steady, seeing that the position and prospects of the two companies are almost identical.—I am, &c.,

CONSTANT READER.

YURUARI.

SIR,—No doubt you are almost as weary of Yuruari as are the unfortunate victims who hold shares; and I only trouble you now with one or two questions because it is useless to expect reliable information from the office.

I hear rumours that yet another re-construction of this wretched company is imminent. Can you enlighten me upon this point? Also when the annual meeting will probably be held? And whether the chairman is still in receipt of 1,000% a year for what is facetiously called his "management" of the mine?—I am, &c.,

HOPE ABANDONED.

INDIAN CONSOLIDATED AND LOMA.

SIR,—When are the long-suffering shareholders in the above-named mines to have any benefit from their shares? For 10 weary years the Indian Consolidated has disappointed its shareholders, and their patience must throw Job into the shade if they still have hope. For my part I think there is no payable rock in the mine, and it is only throwing away good money re-constructing this company as the directors have done. It is now 15 months since the re-construction, which was to do so much for the mine. Shareholders were told they were on the very cap of the Champion lode, and then—well, what wonders would be done. The next thing we heard was that the lode was cut but had turned out poor. The management certainly attacked the mine from every quarter, and it is not their fault that there is no payable rock in it, but let them face that fact boldly and do not throw away shareholders' money, as it leads people to believe that they are only after fees. The present price of the shares is 3s., but I would consider them dear at 1s. in the face of the statement in the MINING WORLD of 10th inst., "The outlook for the mine is, however, not so good as it was judged to be a little while ago." This from such strenuous supporters of this mine seems to me to speak volumes against it, and you, Sir, I am afraid, can only "damn it with faint praise." Now, to come to Lomas. When, oh! when, will shareholders ever have a dividend from it? Well, perhaps the grandchildren of the present shareholders may. Let Loma shareholders look facts in the face.

Before the company can get the necessary water to wash their stone they have a ditch to make, 11½ miles long, through solid rock a great portion of the way (some 8,102 ft.), five bridges to build, a syphon to make, 4,200 ft. long (26 ins. in diameter, and weighs 60 tons), and two other syphons of about 5,000 ft. The expense is estimated at 24,000%, but what do we usually find with estimates of this kind; are they usually below or above the mark? I need not say to your readers which. Assuming, however, that the expense is limited to the estimate (which I, however, cannot believe, considering the rough nature of the country and want of proper transport), what is the total uncalled capital of the company? The uncalled capital is 2s. per share, which, with 300,000 shares, gives a capital sum of 30,000%, or, after paying for the ditch, leaves 6,000% of working capital. Assuming that this work is completed in 10 years, and from what I have heard of the mountainous nature of the country I do not believe it possible to accomplish the work in that time, it leaves an average of 600% a year to pay expenses both in London and at the mine. I think the shareholders, if they could get their shares taken off their hands for nothing, would be better off than by holding them, as I, for one, do not think the work will ever be completed. Although the shareholders re-construct and re-construct again, it is a hopeless, useless venture in my opinion.—I am, &c.,

Oct. 14.

CRITIC.

NEW RUSSELL (Sept. 30).—Amalgam: I had 130½ ozs., which, retorted, produced 39½ ozs. of bullion. This has been sent to the Mint at Charlotte, and you will, without the slightest doubt, see every creditor paid and money remitted you. The mine is looking well, and the ore is good, but our tools and materials require renewing, which drains the surplus stock obtained to pay creditors. Mr. Bailey is working hard on the furnace which had to be stopped a few days, but I hope it will be set working again this afternoon. Two dams are now nearly full, and another will have to be made. So far, I cannot see that you should have any fear of theore giving out for years to come, and, with the furnace to calcine the sulphurets, a great success is in store.

RUBY.—Report upon the mines for the week ending Sept. 26:—Dunderberg: We have two tributaries at work here. Above the 800-ft. level we have nearly cleaned out an old chamber, about 6 ft. wide, 10 ft. deep, and 20 ft. long, from which I should judge good ore has been extracted, and from the looks of the ground I see no reason why we should not be able to find more ore. We have about a foot of fair ore, making down at one side of the chamber, and I am in hopes that the ore will make over flat. Lord Byron: We have eight tributaries at work. No change to report, as we have been cleaning the debris over the ore, and which will take a few days more. Bullwhacker: We have five men at work here. No change to note.—A. FRASER.

—Telegram from Eureka:—"30 tons tribute ore shipped and smelted, producing to company \$113."

SOUTH-EAST MYSORE (Sept. 23).—Fortnightly report:—Winze below the 500 level north has during the past two weeks been sunk 10 ft. 3 ins., which now makes a depth of 77 ft. 9 ins. below the level. We have been hindered for a day or two through changing and cleansing the boilers. The lode is now very flat, but the quartz is again widening, being now 1 ft. 6 ins. in the bottom. A sample taken a few days hence, you will observe from the enclosed certificate, assayed 7 dwts. 19 grs.; but one I tried yesterday was much better, nearly 15 dwts. of gold to the ton. The machinery throughout the mine is working well, and everything going on in a satisfactory manner.—M. SCANTLEBURY.

REPORTS OF MEETINGS.

ST. AUGUSTINE, LIMITED.

RE-CONSTRUCTION SCHEME AGREED TO—HOPEFUL PROSPECTS
HELD OUT—VIEWS OF A MINER WHO HAS WORKED ON THE
PROPERTY.

AN extraordinary general meeting of the shareholders of this company was held on Wednesday, at the Cannon Street Hotel, London, E.C., for the purpose of receiving the re-construction scheme drawn up by the directors, in accordance with the resolution passed at a meeting of the shareholders on Sept. 30.

Col. G. B. Malleson, C.S.I.,
presided.

The scheme provided that a new company be formed under the name of the St. Augustine Mine, Limited, with a capital of 500,000*l.*, in 500,000 shares of 1*l.* each, of which 461,980 shares should be shares having 18*s.* per share considered and treated as paid up; that every shareholder in the present company be entitled to receive one share in the new company for every share now held in the old company on application being made to the liquidator within 21 days after the date of the resolution confirming the resolution for winding up the old company, together with a remittance of 3*d.* per share.

The SECRETARY having read the notice convening the meeting,

The CHAIRMAN said: Gentlemen, on Sept. 30 last a very large number of the shareholders of the St. Augustine Mine, Limited, assembled in one of the rooms of this hotel to consider the condition of the company and the advisability, or otherwise, of re-construction. On that occasion I put before the shareholders a statement of all that had been done on the mine since the re-construction of the company two years ago, and I pointed out to the shareholders that the mine was

WITHIN A VERY SHORT DISTANCE OF BEING IN A PAYING
CONDITION.

There was a considerable discussion on that occasion, and I think I may say that the whole subject was thoroughly thrashed out, and it was decided by a very large majority of the shareholders present in the room that we should re-construct on the basis of issuing shares 18*s.* paid in a new company. Since that meeting, gentlemen, I have had the satisfaction of seeing a large number of the largest shareholders who were unable to be there, and I have the greatest satisfaction in telling you that without one single exception they have expressed their adhesion to the scheme of re-construction, and what is more, a great many have written to say they are willing to take up more shares than they hold in the present company. (Hear, hear.) This being the case, I think I may safely appeal to you this morning to pass the first resolution.

A SHAREHOLDER: What are the names of the gentlemen?

The CHAIRMAN: I cannot tell you, but I will read you a telegram I received this morning:—

"As holder of one thousand shares, do agree with contents of notice dated 5th inst., and vote for the actual board to continue as in the past, without being interfered with by any committee whatsoever in the discharge of their duties to the best of their ability, and in the interest of all concerned."

I may tell the shareholders I do not know that gentleman. It is merely a spontaneous expression of the confidence in the board which was expressed at the last meeting.

THE SUCCESS OF THE RE-CONSTRUCTION ASSURED.

The success of this re-construction is already assured. If you pass this resolution the success of the re-construction is as sure a fact as that I am standing here at this moment, and from information that has reached me, I am quite confident that before the end of next year the mine will be in a condition which will gladden the heart of every shareholder here now, and those who may hereafter take shares in the company. The chairman concluded by moving: "That the company be re-constructed, and that the scheme of re-construction be approved."

Mr. BLUMENTHAL seconded the motion, and said, as one of the largest shareholders in the company, he felt that re-construction was the only saviour before them.

A SHAREHOLDER'S CRITICISM.

Mr. DUNN said the assurances of the chairman had been so often repeated that they were not likely to make a lasting impression. In the face of these assurances, which had not been fulfilled, they were asked now to contribute 2*s.* more, and he hoped the shareholders would not submit to it. The chairman had stated that he devoted five days a week to the affairs of this company; but how about his other duties? He was chairman of about six other companies. (Order, order.)

The CHAIRMAN: I should like to explain to the shareholders that what the gentleman states may have been true at the beginning of this year, but since that time I have given up five of my companies in order that I might devote more time to this.

Mr. DUNN (continuing) said, why were they asked to pay 2*s.* more when 20,000*l.* could be raised by debentures? There was a certain clique of people who were always in favour of re-constructions. (Hear, hear.) They lived by re-constructions at the expense of the shareholders. (Oh!) There was an old saying that "Where the carcass is, there will the eagles be gathered together." As to the chairman's personal holding of 1,200 shares, a great many of them, he believed, were recently acquired at a cheap rate, and that gentleman would not lose by the transaction anyhow. With regard to the mine itself, there were plenty of shrewd people on the spot who would not see the shares at the present price if the mine was a valuable one. As regards the meeting, a fortnight ago the chairman had spoken of it being almost unanimous, but he (the speaker) would remind the shareholders that there were about 100 present, and only 43 voted for the re-construction, and eight against it, so that the greater part must have been neutral. Under the circumstances he would oppose the resolution.

THE CHAIRMAN REPLIES.

The CHAIRMAN said the shareholders who were present at the meeting on Sept. 30 would be aware that the question submitted on that occasion was whether the money should be raised by re-construction or by debentures. That question was decisively settled against debentures, and the shareholders present decided to re-construct, and it was in pursuance of the mandate of the shareholders assembled on Sept. 30 that the meeting had been called this morning to carry out the scheme they proposed. The gentleman who had just sat down had spoken about the eagles being gathered together about the carcass, but even that was far better than that they should listen to the

CROAKINGS OF A BIRD OF ILL-OMEN,

who had not a single good word to say about the property in which he had invested his money, and who was prepared to sacrifice it now, when they were within reasonable distance of obtaining success. It might be said he had spoken in that strain before, but he would remind the shareholders that he could only speak to the shareholders on the strength of the reports which came from the mine at the time he made those sanguine statements to which the gentleman had referred. At that time there was every reason to believe that they would win the blue, because at the 503 level Mr. Hartley came upon a large pocket of blue, and he cabled in such terms that the directors had every right to tell the shareholders that they thought the company was on the point of immediate success. But on this occasion he did not ask the shareholders to take his word, for he had not been in South Africa, nor had he seen the St. Augustine Mine, but there was present at this meeting

ONE OF THE MINERS,

who had worked for the last two years on the St. Augustine Diamond Mine. This miner, when he heard they were about to shut down, hurried over to England in order to induce the shareholders not for the sake of a few thousand pounds to give up a mine which was on the eve of success. He had come over at his own expense, and he (the chairman) had seen him for the first time this morning. Therefore, instead of listening to the croakings of the gentleman who had just sat down, who was likewise a stranger to the mine, he would ask them to listen to the words of this miner, who had every day for over two years gone down to the bottom of the mine and worked at it. (Hear, hear.)

A SHAREHOLDER asked on what terms it was proposed to buy out the dissentient shareholders.

The CHAIRMAN said that would be a matter for the liquidator to settle. He would dispose of their shares to the best advantage.

Mr. BOYDELL said, to his mind, the re-construction was inevitable, and the only question was as to carrying it out on the best terms. He thought they might rely on the shares being taken up by the shareholders without having to pay 3*d.* per share on the whole capital for underwriting. After the representations that had been made to them by Col. Malleson he thought they ought to

RAISE THE MONEY ON BETTER TERMS.

Did the directors intend to go to the committee of the Stock Exchange for a quotation if the company was successfully re-constructed?

The CHAIRMAN: Yes.

Mr. BOYDELL, continuing, said he intimated at the last meeting that he did not think they could get a quotation on the Stock Exchange with the present articles of association. The directors were named, but no qualification. A suggestion was made at the last meeting that the board should be increased. If an increase in the board would strengthen the company, it should be considered. Then the solicitor was named, a gentleman in Leeds, and the auditor was also named (Mr. Lakeman). This gentleman was liquidator of the old company, auditor of the present company, and was named also as liquidator now, at a fee of 210*l.* He thought they might appoint their secretary as liquidator, and thereby save a large portion of the expense. Mr. Lakeman, no doubt, was a good man, but, in his opinion, they did not require his services.

The CHAIRMAN, in replying, said he quite saw the force of the gentleman's remarks with regard to the 3*d.* a share, but he was afraid it was absolutely necessary. There were about 80,000 shares which belonged to the estate of the late Col. McMurdo, and between 20,000 and 30,000 shares belonging to a gentleman who was unable to take them up. The directors had made a calculation that probably

250,000 SHARES WOULD BE TAKEN UP,

and there would be a remainder of about 200,000, which would not be taken by the shareholders, and, therefore, to ensure the success of the re-construction, it was absolutely necessary to have the whole underwritten. Considering the state of the market and the price of the shares, he considered they had obtained very favourable terms. With regard to the other remarks, he could assure the honourable gentleman that they would have the fullest attention of the directors. The expenses connected with the company would bear a favourable comparison with the charges usually made. The solicitor was only paid his actual costs, and his name was connected with the company, simply because he had been the original solicitor to the company.

In answer to further questions the CHAIRMAN said he did not believe the legal charges in the present instance would be a single farthing.

VIEWS OF THE MINER.

Mr. WILLIAM NEWBY: Mr. Chairman and Gentlemen, I have just returned from your mines where I have been working for the past two years, and will endeavour to give you an account of the work being done there. We sunk the shaft to 503 ft., and then drove out and found a pocket of blue something like 18 ins. wide. We then sunk a winze a little over 200 ft. in the hard blue and tunnelled out both ways, but found nothing. If, however, they had only gone about 40 ft. further they would have struck the main body of the blue. We came back and started the shaft, and sunk it down to 595 ft., and then drove out, when we struck a body of blue 16 ft. wide, and the rock falls back 3 in 7. This shaft, if sunk 100 ft. further, will put you into a good body of blue, as good and promising a blue as there is in Kimberley. (Cheers.)

SOME IMPORTANT QUESTIONS AND SATISFACTORY ANSWERS.

A SHAREHOLDER: How far is that blue down the shaft?

Mr. NEWBY: We have struck it at 20 ft. from the 595. You are at the top of the blue, and the further you go down the more it opens out. If you go down another 100 ft., it will be 100 ft. wide instead of 16 ft.

A SHAREHOLDER: Is there any doubt about the existence of the blue lower down?

Mr. NEWBY: I have seen the 16 ft. seam; the rock is continuous and widens out as you go through it.

A SHAREHOLDER: Are there any diamonds in the blue?

Mr. NEWBY: You cannot see them, but neither can you see them at the Central, the De Beers, or the Bultfontein.

A SHAREHOLDER: You think it advisable to go down 100 ft.?

Mr. NEWBY: Yes. I came on purpose to keep you all together. I have worked two years for you, and have every

CONFIDENCE IN THE PROPERTY.

A SHAREHOLDER: It has been reported that some diamonds that were sent over did not come from the St. Augustine Mine at all—is that so?

Mr. NEWBY: Those diamonds that were sent over here were found in your mine. This body of blue is entirely new.

A SHAREHOLDER: You think the blue we have got is equal to that of our neighbours?

Mr. NEWBY: Yes, both at De Beers and Central, for I have worked at both. (Cheers.)

A SHAREHOLDER: When were you last down the mine?

Mr. NEWBY: I was down the latter end of Aug.

Mr. BOYDELL: Was work progressing favourably up to that time?

Mr. NEWBY: Yes.

A SHAREHOLDER: There was a gentleman at the last meeting who said he was at the mine on May 1, and did not see any work going on.

Mr. NEWBY: The mine was working continually during the two years I was there.

A SHAREHOLDER: How long will it take to get down?

Mr. NEWBY: You can get down in three months.

A SHAREHOLDER: Are you still in the employ of the company?

Mr. NEWBY: No; I am not in your service, and am at liberty to go and work anywhere I choose.

The CHAIRMAN: I may say that the speaker is not in our employment, but if you pass these resolutions I shall send him back, if he will go.

The CHAIRMAN then put the resolution, which was carried with three dissentients.

The CHAIRMAN then moved—"That the company be wound up voluntarily, and that Mr. James Lakeman, of 30 and 31, St. Swithin's Lane, in the City of London, chartered accountant, be and he is hereby appointed liquidator for the purpose of such winding up, and that he be and he hereby is authorised and instructed to carry out the foregoing resolution, and shall have all the powers and authorities necessary for that purpose, and may execute and do all such assurances and things as he may consider necessary for carrying the said scheme into effect."

Mr. C. T. GILES, M.P., seconded the motion, which was put to the meeting, and carried with two dissentients.

The CHAIRMAN then moved—"That the remuneration of the liquidator be the sum of 210*l*."

Mr. SHAW (director) seconded the motion, which was carried unanimously.

A vote of thanks was passed to the chairman, directors and Mr. Newby, and the proceedings then closed.

THE GAWTON CO., LIMITED.

ADDITIONAL CAPITAL TO BE RAISED BY DEBENTURES—THE MANAGER'S UNABATED CONFIDENCE IN THE PROPERTY—HOPEFUL OUTLOOK.

A GENERAL MEETING of the shareholders in this company was held at the Offices, Windsor Chambers, Great St. Helens, London, E.C., on Wednesday, Oct. 14.

Mr. Charles Clark

presided. The SECRETARY (Mr. E. F. Colmer) read the notice convening the meeting, and the report and accounts were taken as read.

It was pointed out that, owing to a printer's error in the accounts, the word "soot" had been inserted in the accounts after the word "arsenic." The company had not taken credit for any arsenic soot in stock, but only for the manufactured article.

THE PRESENT POSITION OF THE COMPANY.

The CHAIRMAN: Gentlemen, I beg to propose the adoption of the report and accounts. On the face of them there is little enough to indicate that the establishment of the refinery works has yet brought us much substantial aid. And it is a matter of grievous disappointment to the board that they have again to come before you with a heavy balance on the wrong side of the profit and loss account. But, at the same time, they are convinced that the erection of the refining works was a wise and necessary step to take, and one that has added to the value of the mine as a going business, much more than it has cost us to build and equip them. In beginning a new business—which is what we have actually had to do—one is always apt to meet with unlooked for delays and difficulties and disappointments and expenses, and we have had our full share of all these troubles. But, after all, things are not quite so bad with us as they look, for we have on the mine a very large quantity of arsenic soot, for which no credit whatever has been taken; and you will have observed the memorandum made by the auditors on the balance-sheet, that the cost of the refining works, viz., 2,555*l*., which is, of course, a capital charge, still remains in the revenue account. Of this sum, 626*l*., has been expended during the present year. Since the turn of the last half-year we have succeeded in bringing our costs within manageable compass. We have also succeeded in attaining an average output of nearly 60 tons of refined arsenic per month of four weeks, a quantity which at the present price leaves a very fair profit on the current costs. The effort is being made to reduce these costs still further; and I do not myself think it can be very long before our monthly returns exceed the average of 60 tons. I was at the mine on Saturday and found everything in excellent order. It was virtually a surprise visit; for, although intimation had been

sent to the captain to expect Mr. Bawden and myself, he had gone underground before the letter was delivered, and he remained underground for two hours after our arrival, not knowing that we were there. When he came up he brought from the 82-fm. level the samples of ore-stuff which are now on the table, and he gave us a most cheering account both of that level and of the 95.

LARGE RESERVES.

He considered that we have more reserves laid open at the present time than we have had for many years past. "Thousands and thousands of tons" was his expression to me. There is no fear whatever as to the future of the mine, but our liabilities are very heavy, and we can no longer postpone dealing with them, for the patience of creditors has its limits, and we have strained the forbearance of our merchants almost to breaking point. They are the same firms who have supplied the mine with materials ever since I have known it, and for years before that. They know all about its capabilities and resources, and I fancy they feel pretty sure that they will be paid 20s. in the £, even if the shareholders should allow the mine to pass into other hands. But they will not allow the present state of things to continue—and we cannot wonder at it. It is now for the shareholders finally to decide what is to be done. Of the new debentures for 5,000*l*., which we have been offering you, 1,500*l*. has been placed as collateral security for moneys actually advanced to us to keep the mine going. If the shareholders will take up the remaining 3,500*l*. *pro rata* in proportion to their holdings, it will be a very light burden for them, and it will enable us, not indeed to pay off all our debts at once, but to make such payments as will satisfy the merchants, and also enable us to go on steadily improving our financial position month by month. The security for the debentures is, I believe, undeniable, and if they are to be taken up we think it would be advisable to make a re-arrangement of the capital of the company, reducing it to 20,000*l*. nominal, writing down the nominal value of the present shares to 1*l*. each, and giving the debenture-holders the option of exchanging their debentures for shares at any time during the existence of the debentures.

Mr. M. BAWDEN seconded the motion.

THE MANAGER'S REPORT.

Mr. BAWDEN then read his report as follows:—

Oct. 13.—In submitting to you my report on the various points in operation and the work done between Dec. 31, 1890, and Aug. 31, 1891, I beg to say that we have driven, stoped, risen, and sunk 258 fms. 3 ft. 10 ins. of ground, yielding 5,163 tons of arsenical mundic, or equal to 20 tons per fm. Of those 5,163 tons, 2,067 tons have been burnt in the flat furnaces, and 3,096 tons in the revolving calciner. We have further extended the 105 cross-cut south 5 fms. 5 ft. 10 ins., making the total length of this cross-cut 32 fms. 5 ft. 8 ins. The work here is suspended for the present. The driving of the 95-fm. level west of cross-cut east of engine shaft has resulted in laying open a very productive section of ground, the lode in the end yielding 20 tons of arsenical mundic per fm., and some good stones of copper ore. We have also, during the last few months, driven the 82-fm. level west of cross-cut east of engine shaft 13 fms. through a productive lode for the whole distance, and within the last few days a very important improvement has taken place in this level, the lode at present yielding 20 tons of copper ore and mundic per fm., and should this continue (and we see no reason why it should not) it will materially increase our returns of both refined arsenic and copper ore. This improvement in the 82 speaks well for the lode standing between it and the 95, almost directly under it, and it also speaks well for the lode above it, which is in whole ground to surface, and as soon as we possibly can, a cross-cut must be put out from the 70-fm. level, which, fortunately, is driven east on the north part of the lode far enough for the purpose of a cross-cut, and there will be a distance of from 10 to 12 fms. to drive to cut the south or mundic bearing part of the lode. Although, on account of building, the refining works and quays and the hindrances connected therewith, we have to present a very unfavourable balance-sheet. Still, I have never met the shareholders with such confidence in the value of the mine as I do at this time, and I am persuaded that had capital been subscribed for developing the mine on the ready money principle and erecting the refining works, that good profits would long since have been made.—M. BAWDEN.

Mr. BAWDEN, in supplementing this report, said: I have

NEVER SEEN THE MINE LOOKING BETTER

than it is at this moment, and I have not the shadow of a doubt but that we shall find this lode is rich when we cut it in the 70. Now, in the last balance-sheet you would have noticed there were 3,400*l*. credited for arsenic soot. That is a thing we were compelled to do meeting after meeting for some time, but since the last meeting we have become manufacturers of refined arsenic, and the directors thought it best to take this new departure at this the first meeting after the refining works had been in full swing, and, therefore, you will find that no arsenic soot whatever is credited. Had we credited the whole of the arsenic soot lying about the mine, in the stores and in the flues, we could have shown a very different balance-sheet, but having credited only the actual manufactured article, which is ready to be delivered, or is actually delivered to the merchants who have purchased it, we consider we have done a proper thing. From the first I have had very little money from the shareholders, and we have had not only to erect arsenic works and refining works, but we have had to repair and rearrange the whole of the machinery, both above and underground. All this expense has been pulled out of the mine. Mr. Clark has mentioned about reducing the amount of capital of the company, which I think would be a very wise thing to do, and if it were done taken up, we can go on and show fair profits with even the present output. I do not think the shareholders have any reason to complain, seeing we have had very little from them. I should be very sorry indeed to see the property go out of the hands of the shareholders, but it is very certain the merchants must be paid. I have no hesitation in telling the shareholders, if they give the property up, others will take hold of it instantaneously.

AN OFFER TO TAKE UP DEBENTURES.

I will just read you a letter I have received this morning from Mr. Field, of the Cornwall Arsenic Co. This gentleman says, "I hope the shareholders will take up the debentures to-morrow. The Cornwall Arsenic Co. will take up and pay for 500*l*. of the debentures, provided

the remainder are taken up and paid for by the 30th inst." That, gentlemen, is the offer we have received, and it only remains for the shareholders to fulfil their part.

DISCUSSION.

Mr. GOSLETT: What is the value of the soot you have about the place?

Mr. BAWDEN: If we were to wind up to-morrow we have at least 3,000*l.* worth which we could convert into money.

Mr. LAWMAN: Would it not have been a wiser course to show it?

Mr. BAWDEN: I do not think it would have been. I think, for all our sakes, the course we have adopted now is much the best, as if we were to stop to-morrow and the company were wound-up, we could reduce that balance of 7,000*l.* very considerably. The only interest I have ever had in the mine is the interest of the shareholders, and I have worked harder for Gawton than I have for any concern I have ever been associated with. I inherited a very heavy debt, and I have only had the 3*s.* call from the shareholders. I wiped off those debts, but had to contract other debts to erect, first, the rough works, and then the refining works, and on my word alone, and the faith people have had in the mine, I have been able to get the money required to enable us to complete these works. I am certain that the mine will turn out trumps, and will be a good property, and it is for the benefit of the shareholders really that we have shown this account as it is.

Mr. LAWMAN asked whether the board were prepared to take up their share of the debentures.

The CHAIRMAN said he believed they would take them up, but as Mr. Hunter was not present he could not speak authoritatively on that point.

After some further discussion, the motion was put to the meeting and carried unanimously.

The proceedings then closed.

GYMPIE GREAT EASTERN GOLD MINING CO.

THE MINE UNWATERED—PROSPEROUS TIMES FORESHADOWED—THE ORIENT REEF OPENING OUT SATISFACTORILY.

THE ordinary general meeting of the shareholders in this company was held at Cannon Street Hotel, London E.C., on Wednesday.

Mr. Henry Weld-Blundell

presided.

Mr. JOHN GARLAND (secretary) read the notice convening the meeting.

ADVERSE CIRCUMSTANCES.

The CHAIRMAN: Gentlemen, during the period concluding with June 30, 1891, up to which date our accounts are prepared and placed before you, our success has not been equal to that of former years. I regret to have to point out to you that the yield of stone that has been passed through the mill has been somewhat less than in former years, and the quantity of gold that has been extracted from the stone has also somewhat diminished. But it must be borne in mind that during the past 12 months we have been passing through what I might call a transition period—that is to say, that the old reef, for the purpose of working when the company was first formed, namely, the Great Eastern reef, has, during the past four years, been more or less worked out. Consequently, a certain period had to elapse before we were able to get into full operation upon the eastern portion of our mine, which was formerly known as the Barry reef, but which is now known as the Orient. Hence, a great deal of the stone worked during a considerable portion of last year was somewhat poor in quality, as we were obliged to mix with it a quantity of other stone from some of the more western reefs which barely yielded any profit beyond the cost of working. However, during that interval we were pushing forward the development of the eastern portion of our mine. When the company was first formed, you will remember that we struck away to the eastward from the 500-ft. level, hoping to develop what we knew to be the good line of reef to the east of us before the exhaustion of the Great Eastern reef. The point at which we struck that reef was hardly favourable for successful working, and we found it necessary to sink the shaft about 150 ft., and then cross-cut again to the eastward to strike the reef at a more favourable position for successful working.

A PAYING REEF.

This we did, and it will probably be in your recollection that in the course of last winter we reached the lower portion of the Orient reef. This took some little time to develop, and it was only towards the end of our financial year that we felt that we had a thoroughly paying reef for some time to come. Perhaps it may not be an inopportune moment for me to give you a few figures regarding the western portion of our mine, which, with the exception of a small portion of it, may now be considered as almost worked out. This reef has yielded during the four years 31,150 tons; the total weight of gold being 57,004 ozs., and the total amount realised from that gold has been 201,029*l.* 7*s.* 6*d.*, or an average of about 1 oz. 16 dwts. 14 grs. for every ton of stone crushed. This realised a profit to the company—including a few small sums received for crushing the ore of neighbouring mines and transfer fees, &c.—the total profit to the company during that period has been 139,147*l.* 2*s.* So much for the western portion of our mine. I will leave to Mr. John Taylor, who will, perhaps, address you afterwards, the reference to our prospects in the eastern portion of our mine, which is more particularly the technical part of the mine.

THE FLOOD.

It will be within the recollection of all of you that we, unfortunately, met with a mishap about June last, when our mine was flooded. This mishap was caused by an unusually heavy fall of rain which occurred in our district in Queensland at an unusual period—namely, the middle of winter. Ordinarily, the heavy rains are expected in the summer months. This flood was stated by our local directors at Gympie to have been the heaviest they had seen for many years. The effect of the flood was to raise the water to such an extent that it passed into our mine as well as into the whole series of mines in our country; consequently all mining operations upon that line of reef were stopped—in our case for something like three months. However, news

arrived about a month ago that the mine had been completely unwatered and operations renewed, and we are hoping soon to hear the result of our month's work. In order to guard against a similar mishap in the future—although there may be very little chance of another flood occurring for many years to come—still, to guard against a possible recurrence of it we have done what we can, so far as our local directors are able to manage it, to secure ourselves. But, of course, when a number of mines are altogether along a level it is practically impossible to keep the water out of one mine unless all unite in the same work; and there may be a certain amount of difficulty in inducing our neighbours to join with us in damming back the water from the mouths of the shafts. However, another flood is not likely to occur again—at all events, for many years to come.

ACCOUNTS.

With regard now to the accounts—if you refer to the figures you will see that during the past 12 months the operations of our company have led to a profit of 10,151*l.* 11*s.* 2*d.* This profit, added to the balance carried forward from the year before (7,418*l.* 13*s.* 8*d.*), makes a total of 17,570*l.* 4*s.* 10*d.* A portion of this we distributed amongst the shareholders in a dividend, which was declared on Nov. 15 last, absorbing a sum of 5,503*l.* 15*s.* 9*d.*, and thus we had a balance of 12,066*l.* 9*s.* 1*d.* on June 30. As we had every reason to anticipate that we have now developed the Orient reef sufficiently to feel assured that we could work it with considerable profit, and there seemed to be no likelihood of any cessation in our profits in the future, we deemed it expedient to divide a considerable portion of this amongst our shareholders at once. We accordingly declared 1*s.* dividend, which absorbed 10,500*l.*, leaving a balance of 1,566*l.* This is in addition to the sum of 12,719*l.* 14*s.* which has always been treated by us as reserve—being the amount that was handed over to us by the vendors, 5,000*l.*, and the proceeds of the first crushing, which took place immediately prior to the formation of the company, 7,719*l.* 14*s.* Thus the balance carried forward, after paying the last dividend, with the amount of reserve to which I have just alluded, and sundry small profits made since then, bring up our balance to about 15,000*l.*, which is the amount that we have in hand at the present moment for future operations. (Hear, hear.) I think the various items in the accounts speak for themselves, but if there is any item upon which I can give you further information I shall be pleased to reply to any questions you may address to me. I will, therefore, conclude by moving the usual resolution—"That the report and balance-sheet to June 30, 1891, be received and adopted." (Applause.)

Mr. P. MEADOWS TAYLOR (director) seconded the motion, which was at once carried unanimously.

DIRECTORS RE-ELECTED.

The CHAIRMAN: It is the practice in this company, in accordance with the articles of association, that the directors retire annually at the general meeting; if, therefore, some gentleman in the body of the hall will propose and second that we be re-elected, we will be happy to perform the duties again.

Mr. W. R. MASARON: I propose that the present directors be re-elected.

Mr. CHARLES MARTIN: I have much pleasure in seconding that.

The motion was carried unanimously.

Mr. W. G. GRIFFIN proposed the re-election of Messrs. Cooper Bros. as auditors.

Mr. J. W. ANDERSON seconded the motion, which was carried.

VIEWS OF MR. JOHN TAYLOR.

Mr. JOHN TAYLOR, who was received with cheers, said: The story we have to tell to-day, gentlemen, is a very simple one, but I think all who have read the report we have issued will consider that it is a very satisfactory one. At the meeting a year ago I told you that it was not to the original Gympie Great Eastern reef that we must look for the future prosperity of our company, but to the successful development of a payable reef somewhere else within the company's property. I spoke also at the same time of the high hopes that we had already begun to entertain of the prospect of opening up what would amount to an entirely new mine in the eastern part of our property upon the reef which was being so successfully worked in the No. 1 South Eastern Co.'s property adjoining. The cross-cut was started in Jan. at 730 ft. deep to intersect this reef (pointing to a plan). We knew pretty well where we ought to find it. It took just 11 months to drive that cross-cut, and it was done well within the time that had been estimated. The reef was intersected, and it was given the name of the Orient reef to distinguish it. Since that time a rise has been put up from the level upon the line of the reef, a distance of 157 ft., to communicate with a winze which had been sunk from the 580-ft. level above in order practically to open up that part of the mine, but the principal reason was to permit of ventilation which, is, as you are aware, a very important matter. The levels have been driven now from the end of that cross-cut on the course of the reef, the northern one about 102 ft., and the southern 75 ft.

GOLD-BEARING ROCK

was met with throughout up to the date of the unfortunate flooding of the mine. You will readily understand, therefore, that with this great length of rise and winze, and this length of level, we have already within a very limited period opened up a large body of rock, which will come away, I hope, at a very nice profit. (Hear, hear.) We have, in addition to that, another reef, which was passed through in the cross-cut—a small reef lying about 7 ft. to the west of a large dyke, of which you have previously heard. That reef is small, but it is being worked satisfactorily in an adjoining mine called the North Glamire. It is described as very permanent in its character, and also yielding a satisfactory quantity of gold. That reef will have the attention of your agents out there as soon as we can possibly tackle it. The Orient reef is very peculiar in its character, and, therefore, we ought not, perhaps, to say too much about it yet, because of its unusually flat inclination. So far, however, it has opened up very well, and as it traverses our ground for something like 1,200 ft. laterally, we may, I think, anticipate with very great confidence the opening up of a large body of valuable ore-ground as the development work, which will be vigorously prosecuted, proceeds. (Cheers.)

THANKS.

A SHAREHOLDER: I beg to propose a vote of thanks to the chair-

man and his colleagues, who have carried on our affairs under, I think, very difficult circumstances.

The motion was seconded and carried.

The CHAIRMAN: I will take this opportunity, gentlemen, of thanking you, on behalf of the board, for our re-election. We shall be only too glad to do all we possibly can to promote the interests of the shareholders, and to impart to you whatever information we possess ourselves, so that you may be as fully informed as we are of everything that has taken place in connection with the company. (Hear, hear.)

The meeting then separated.

THE GEMMING AND MINING CO. OF CEYLON, LIMITED.

THE THEFTS OF THE NATIVES INDUCE THE COMPANY TO GIVE UP GEM GROUND WORK AND TO MINE FOR PLUMBAGO ALONE.

The second ordinary general meeting of the shareholders of this company was held at the Offices of the company, 183 and 184, Gresham House, Old Broad Street, on Thursday last, for the following purposes:—To receive and consider the report of the directors and auditors and the statement of accounts and balance-sheet of the company for the 12 months ending Dec. 31, 1890, which will be presented for adoption; to elect directors in the place of Messrs. E. T. Delmege and Charles Schmalz, retiring; to elect auditors for the ensuing year and fix their remuneration; and to transact the ordinary business of the company.

Mr. T. Dickson

presided.

Mr. J. JAMESON TRURAN (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, in moving the adoption of the report and accounts, expressed regret at the small attendance of shareholders. Most of their shareholders were, he said, foreign shareholders, and the present was not the weather to cross the channel. Their representative was, however, present, and knew their wishes. It was a matter of regret to the directors that the report was not more favourable; but, at the same time, he did not think that they need lose heart at all, because every one best qualified to judge held the opinion that they possessed the most valuable gem ground in the Island of Ceylon. No one denied that the ground contained gems; but the natives had proved more than a match for the company, and with their

DUPLICITY AND CUNNING,

got away with the sapphires and other stones which belonged to the company. They had tried every method to prevent this, but without success. The natives were "one too many for them." It was admitted that the Island of Ceylon was rich in gems; indeed, the finest sapphire sold in the Paris market came from their mines. Under all the circumstances, and not being able to get the natives to work honestly, they had decided to abandon the gem-ground work, for the present at any rate, and to confine their operations solely to plumbago, from which they had every prospect of doing a good and profitable business. They had been offered for the lease of one of their gem pits the sum of 120% per annum, and it was a matter for the consideration of the shareholders. Besides the mineral resources of the company's lands, they possessed tea lands, which they leased out, and forest land that could be cleared for tea planting. Ceylon tea sold well at good prices. They might, perhaps, develop this further. He moved the adoption of the report.

Mr. LINTILLAC seconded the motion.

A discussion followed, and in reply to various questions, the CHAIRMAN stated that the new land that they had acquired from the Government had proved rich in plumbago, and the plumbago that they had sent down to Colombo for sale had realised the best price of any sold in the island. They had dispensed with the services of their manager, who had been paid very highly. Before they accepted any offer to lease their pits, they would, by tender or otherwise, obtain the highest possible offers. It was better to accept a low price for a lease than work at a loss.

A SHAREHOLDER advised the directors to act cautiously in the lease of any pits, and not to allow the cunning natives to get the best of the bargain. Perhaps a kind of subsidiary company might be formed.

The report was adopted.

In response to questions, the CHAIRMAN stated that the directors had received no fees for the past six months as their desire was to keep the expenses of the company down as much as possible. He had confidence in the future of the company, and he knew the Island of Ceylon well, having lived there for a great many years, and their gem lands were the best of any.

A SHAREHOLDER thought they might reduce the number of directors.

The CHAIRMAN pointed out that in this matter they were bound by the articles of association.

The formal business in regard to directors' and auditors' election was carried through.

A vote of thanks to the chairman closed the meeting.

LEVANT,

DIVIDEND OF 15s. A SHARE.

A SIXTEEN-WEEKLY MEETING was held on the mine on Tuesday.

Major White

(the purser) presided.

The cost-book showed the following statement of accounts:—Dr.: Labour cost, from June to Aug. (both inclusive), 7,461% ; surgeon and club, 81% ; merchants' bills, 2,023% ; coals (ex ship-board), 700% ; rents, 20% ; interest and commission, 37% ; law costs (Mineral-residues syndicate) 339% , equal to 10,667% . Cr.: 172 tons 4 lbs. of tin sold, from June 13 to Sept. 19 (including James Hosking's leavings 79%), 9,509% (less 336% lords' dues), 9,123% ; copper ore sold—1,405½ tons of stamped copper, 2,308% ; June 13 and Aug. 20, 799½ tons, 1,348% ; less 203% lords' dues ; nett amount, 3,953% ; carriage of copper ore, 266% ; arsenic (390% , less 19% lords' dues), 371% ; discounts on merchants' bills, 25% , equal to 13,733% . Profit, 3,071% . Balance in favour of adventurers last account 1,212% , out of which a dividend of 7s. 6d. was paid, 89% ; profit on this account, 3,071% ; present favourable balance, 3,339% . The general balance-sheet shows:—Dr.:—Surgeon, 43% ; merchants' bills and coal, 2,197% ; lords' dues, 495% ; balance in favour of adventurers, 3,339% , equal to 6,125% . Cr.:—Copper ore and carriage, 935% ; subsist, 8% ; arsenic sold, 371% ; part cargo timber, 32% ; balance at bank, 4,365% , equal to 6,125% .

Dr. QUICK moved, and Mr. MASON seconded, a dividend of 15s. per share.

Mr. PETER OLDS (St. Just) moved an amendment that it be 1% .

Mr. HOLMAN seconded, but the proposition was carried by six votes to five.

Mr. HENRY OLDS contended that instead of a profit of 3,338% they only profited 800% , and that they had already spent 1,000% of the money received for stamped copper.

Mathematical Instrument Manufacturer

To H.M. Government, Council of India, Science and Art Department, Admiralty, &c.

MINING, SURVEYING AND DRAWING INSTRUMENTS

OF EVERY DESCRIPTION, OF THE HIGHEST QUALITY AND FINISH, AT THE MOST MODERATE PRICES.

Price List post free. Engine Divider to the Trade.

Address—Great Turnstile, Holborn, London, W.C.

GOLD MEDAL, Inventions Exhibition, 1885.

GOLD MEDAL, MELBOURNE, 1881.

IRON and STEEL (lap or butt welded) TUBES and FITTINGS for Gas, Steam, Water, Hydraulic, Refrigerating, Compressed Air, and Heating Purposes, Black, Galvanised or White Enamelled Inside Tubes in stock to 8 inches diameter. Water Mains, Well Tubes, Pipe Lines, Telegraph Poles, Heating Coils, Ship Pillars, etc.

JOHN SPENCER, Globe Tube Works, WEDNESBURY ; 14, Great St. Thomas Apostle, London.

THE "HELIOS" GAS MAKING MACHINE.

One Gallon of Benzoline, costing 1/2, produces 1,000 cubic feet of Gas.

This Machine can be used for Lighting, Heating, or Motive Power. If used in connection with a gas engine is unequalled for driving pumping or other machinery. Works automatically.

PRICES FROM £10 10s.

REPORTS OF MEETINGS.

WHEAL GRENVILLE MINING CO.

REMARKABLE PROGRESS WITH THE EASTERN GROUND — INCREASED RETURNS OF TIN—DIVIDEND OF 2s. 6d., AND A SUBSTANTIAL RESERVE SET ASIDE FOR THE NEW WORK—FIGURES AS TO COST OF PRODUCTION, &c.

A GENERAL MEETING of the shareholders in the above company was held at the Account House on the mine (Camborne, Cornwall), on Wednesday, "To pass the accounts; to declare a dividend; and to transact the ordinary general business of the company."

R. W. Goold, Esq.

(chairman of the company), presided.

Mr. A. J. TANGYE (purser of the mine) read the notice of meeting. The agents' report was published in last Saturday's MINING WORLD.

PROGRESS OF THE EASTERN WORK.

The CHAIRMAN: According to the promise I made the shareholders in London at the last meeting, you have had the balance-sheets and agents' report in your hands for some days. I am very glad that has been the case, and hope it will always be so in the future. Will it be your pleasure to take them as read so as to shorten our proceedings? (Taken as read.) Then, gentlemen, it becomes my duty to move the reception and adoption of this report and these accounts. When we met in this room 12 months ago I endeavoured to lay before you, I own it was very feebly done, the plans which the directors, in conjunction with Capt. Bishop, had formed for the immediate future development of Wheal Grenville Mine. I told you at that time it was a great work we were contemplating and about to begin, and am bound to say that the reasons which influenced your committee in advising you to undertake that work have been emphasised immensely at every stage of our proceedings. I then told you that the cost of that work would very probably be 25,000*l.* at the least, and I daresay you, as Cornish adventurers, will not be surprised to hear that every cost-sheet that comes up to us brings us some sort of evidence that the whole of that sum will be expended even before the work is fully accomplished. But, I do not think after all that the estimate we formed with regard to that cost will be very materially increased. Nothing has happened in the meantime, of which I am aware, to alter the plans as laid down by Capt. Bishop, or to disturb his calculations in any material degree; and, therefore, I hope we may find when the work is all completed that we shall not have exceeded the estimate you sanctioned to be raised—at all events very largely, but if the cost should be a trifle more than the 25,000*l.*, it will not matter at all, and I am sure you will say so when I give you the evidence before us of the expansion of the work we have in hand when all is completed. If it should cost us a few thousand pounds more than the 25,000*l.*, we shall know how to find it. I am sure Capt. Bishop's mind must often have been exercised, and he must have felt very anxious many a time since he has been about it. What he has done, I am bound to say, has been done as well and as judiciously as it was possible for any man in the world to have done. (Cheers.) I feel, as a large shareholder in the mine, and I am sure you, as shareholders, will feel the same, that we owe to Capt. Bishop even already a debt of gratitude. But what he has done already is simply nothing compared with what he has to do and what he will do, I am convinced.

ABSURD STATEMENT ATTRIBUTED TO THE CHAIRMAN.

I am represented by a Cornish paper to have said at a subsequent meeting—the last we held here—that we should double the returns from this mine in five or six months. Those of you who know me, I am sure will be convinced that I never could have said anything so ridiculously silly as that. (Cheers.) We knew, and I told you before the work was commenced, that instead of accomplishing it in six months it would take us two and a half-years, and I can only confirm what I then said by again stating that looking to all that has been done, and even to the great speed which Capt. Bishop has made with the work, I am not able to alter that estimate at all.

IT WILL AND MUST TAKE TWO AND A HALF YEARS

from the time we commenced before we get the new portion of our work into thorough order. I do not for a moment intend to say, and should be very sorry to convey to your minds, the idea that in the meanwhile Capt. Bishop will not be able to increase our returns. He will—I am sure he will. (Cheers.) We have already increased them rather considerably, and I look forward with the utmost confidence to a further increase so soon as he is able to draw the stuff from our

three upper levels—the 150, 165, and 178, through the eastern shaft which he is now putting down.

WHAT MAY BE DONE IN SIX MONTHS.

Now, this part of the work, I am under the impression, can be accomplished in six months, but Capt. Bishop will correct me if I am wrong, that is *not* the communication of these three levels with the shaft, for that has been already done, but I am inclined to think he may make his arrangements in that shaft for drawing the stuff from the three upper levels in six months, and I am also inclined to think from the rate of speed already attained at surface that the stamps may be put into work perhaps at the end of six months, and all the other matters be so far completed, that he will be able to add 15 or 20 tons of tin a month to our present returns, and that will mean a great deal to us. Whenever he can get that shaft down (and I see him looking very hard at me just now) to the 220-fm. level, and the three lower levels, the 190, 205 and 220 communicated—when we can draw from those levels through that shaft, my impression is that it will not be long before he shows us an increase of another 15 or 20 tons, and that will in the meanwhile bring up our returns to a very good sum indeed. We must not expect that operations to be completed in less than 18 months from now, even if it does not take a little more time. You see when we last met here the 220 had only been driven 6 fms. east of Goold's shaft. Capt. Bishop has managed to drive since then 69 fms. further east, making in all 105 fms. east of Goold's shaft. Now we have between those two shafts—Goold's and the eastern—240 fms. of ground, so that we have still to drive 135 or 140 fms. in that level before it can be brought up under the shaft, and then, further, that shaft has to be sunk from the 178 to the 228. Now, if he gets all that done in 18 months—at the end of that time I will congratulate him again, and say he has accomplished in Cornwall in our mine that which has

NEVER BEEN BEATEN IN THE RECORDS OF ANY MINING ENTERPRISE.

(Cheers.) We will turn now to the progress of the past quarter. During that time we have sold 204 tons of tin as against 130 in the previous quarter, but I should be unfair not to mention that the past quarter has been one of 16 weeks, whereas the previous quarter consisted only of 12. Therefore to judge fairly of the increase which Capt. Bishop has been able to make in his returns, whilst this other work has been going on, we must take the monthly averages of the returns.

SALES INCREASED.

Now, during the past quarter our average monthly sale of tin has been 51 tons 2 cwt. as against 43 tons in the previous quarter. (Cheers.) That is a very considerable increase. (Cheers.) The price we have obtained for our tin during the past quarter has also been increased. We obtained in the last quarter 55*l.* 3s., whereas for the previous quarter we realised only 54*l.* 6s. 7d. There is another good increase. Altogether we have received during the quarter for our tin 11,257*l.* 11s. 6d., and have expended out of that 5,435*l.* 16s. 6d. upon labour, 3,222*l.* 4s. 1d. for merchants' bills, 81*l.* 8s. 8d. for chief office and secretarial expenses, and 467*l.* 7s. 2d. is the amount of dues which we should have paid, and which Mr. Beville Fortescue would have taken, but for his gracious and liberal conduct to us. Let me remind you that when we last met here I told you what a splendid concession Col. Henry George Fortescue had made to us, and I think

MY FRIEND, MR. LANE, EXPLAINED IN AN AFTER SPEECH

that we ought not to forget that the whole of the dues which had been remitted to us must come out of Col. Fortescue's pocket as an individual; that is to say, he had only a life interest in the estate, and therefore could not bind his successors in any way whatever. Now, Col. Fortescue had been receiving the dues for many years—to my certain knowledge for 16 years. That is about the age of my connection with Wheal Grenville Mine, and very considerable sums had been paid him, so that one would not be so much astonished at his action when it was shown to him that it would be subsequently to his own benefit as well as to ours; but now comes, if possible, an even nobler act than that of Col. Fortescue. When Mr. Beville Fortescue came into the property, we approached him in a quiet way, hoping that he would be so good as to renew, if I may speak the word, the "concession" and the promise which had been given to us by his predecessor. He did it at once without the slightest hesitation in the most handsome manner, and said, through his agent, that he would fulfil his brother's wish and

GIVE US THE TWO AND HALF YEARS' REMISSION.

(Cheers.) That is an instance of which I never heard the like. He has received not a penny-piece, and yet he is willing to, and does, forego his dues, for his benefit it is true, but also for ours. That is noble conduct, and I do not think I ought to come into this county without recording my sense of it, and asking you to send your best thanks to him for it. These expenses, together with the dues, amount to 9,206*l.* 17s. 3d., leaving us with a profit on the working of the mine to the quarter of 2,050*l.* 14s. 3d., out of which

WE SHALL ASK YOU TO PAY A DIVIDEND,

and, perhaps, this may be the fittest time for me to say that, so far as I

am individually concerned as a very large holder—perhaps the largest holder in the mine—if I had only my own wish to consult, and not the wishes of the shareholders, who have always treated me with the greatest respect and courtesy, I should be willing to forego a dividend to-day, but it is not the intention of the committee to ask you to do so. We have talked it over, and I am always perfectly willing to yield wherever I can be agreeable or useful to you in the adoption of your views. We are going to ask you to declare a dividend of 750% out of the profits, and carry to the eastern section account the sum of 1,300% 14s. 3d. My reason for that is this—

I ALWAYS GO IN FOR SPEED.

I think the very essence of success in mining is speed—(cheers)—and am never disposed to allow the grass to grow under my feet if I can possibly help it. Therefore, instantly you had given us permission to do the work which we stated was necessary for the development of the mine, I took upon myself the responsibility of saying, even before I met my brother directors (subsequently asking them to condone what I had done), "Now, Capt. Bishop, we must have this done at a rate of speed seldom, if ever, attempted before, and also with the fullest economy. At the same time we want it well done"—for there is such a thing as "reckless" economy, as I read the other day, and I do not know that it is an injudicious word to use. Hence we have spent a considerable sum out of the 25,000% which you arranged we should raise. At that time I stated that I estimated the amount of dues which would come to us from the lords as between 4,000% or 5,000%, and one great reason for the increased speed which I desired to obtain was this—we made a promise that if the lords would give us two and a half years' dues, calculating in our own mind that we could screw that up to between 4,000% or 5,000%, we would find 15,000% ourselves, and my expression was, "I believe you may safely leave the mine to find all the rest." The mine will do it, I believe; but if the mine is to do it we must, of course, be satisfied not to divide profits up to the hilt. If we set aside this 1,300%, I think we may calculate hereafter we shall be able for some time to set aside to the eastern section account out of profits 500% for each quarter, which will make 2,000% in a year. If we do that there is not the slightest fear that before this work is accomplished our 5,000% will have been found, and more than found; and I am looking forward to the increase in the returns I spoke to you about at the expiration of six months, between that and 18 months, to raise the contribution which Mr. Fortescue has been so gracious as to give us, up to the sum I calculated, namely, 5,000%. If we do that I think we have done more than we promised, and are entitled to congratulate ourselves. I hope presently you will see the force of what I have said, and consent to it. Before I part from these figures, and come to the big expenditure we have incurred, I wish to point out that there are disclosed here, although you may not discover them easily,

FOUR FACTS OF THE MOST SATISFACTORY KIND

you have ever had brought before you in relation to this mine.

FACT NO. 1.

The first of these facts is that, looking backwards, during the whole year Capt. Bishop has steadily increased our returns. In the first quarter's returns the monthly average, as I told you, was 145 tons; in the second quarter it was reduced, through circumstances over which we had no control—the tremendous floods we experienced at the beginning of Mar. which stopped all our operations for about a fortnight—but only to 43 tons, and during the third or last quarter we increased them to 51 tons. That is the first great fact, and a most satisfactory one it is. (Cheers.)

FACT NO. 2.

The second is equally so. He has somehow or other, by using his own judgment and going to public rooms constantly, increased the price we obtained for our tin during each quarter. In the first quarter we obtained 53% 7s. 6d., in the second, 54% 6s. 7d., and in the third, 55% 3s. 11d. I am not going to venture to say much upon the price of tin, but my mind is very easy about it. I am not inclined to be one bit despondent over it. The consumption of tin has been gradually increasing, and will still gradually increase. The stocks of tin, all the world over, have been as steadily decreasing, and they will as steadily increase. They are less at the present time by about 4,000 tons than they were only two years ago, and in the face of such facts as these, although there may be a combination to keep the price down in London, it will never be done. Therefore, I look forward to the next and succeeding quarters of our histories for better prices than we have had for some time.

FACT NO. 3.

The third fact is that the cost of getting our tin has been just as steadily decreasing, as the two other factors have been increasing. In the first quarter our tin cost, per ton sold (which is the only true test), 47% 12s. 10d.; in the second quarter, 45% 14s. 1d., and in the third quarter it has been reduced to 45% 1s.

FACT NO. 4.

Those are three most gratifying and interesting facts, but they result in a further one, which is even more gratifying, and that is that the profits per ton of tin sold during the whole year have been increased in a far greater ratio. For example, the ratio of increase in the returns has been for the whole period between 13 and 14 per cent., but the increase in the profits per ton of tin, which we have got during the same period, has been 100 per cent. (Cheers.) We got in the first quarter of the year a profit of 5% 14s. 8d. per ton of tin sold only; in the second quarter 8% 3s. 1d. per ton nett profit; and in this last quarter we have obtained 10% 2s. 11d.—doubling the profit obtained in the first quarter of the year. Gentlemen, I have told you Capt. Bishop will add 15 or 20 tons to our returns in six months. I have told you I believe in 18 months he will add another 15 or 20 tons to our returns, and I am prepared to say that when the whole of the work he is about now has been completed so that he can produce tin with full vigour, we shall be getting 130 tons in the month. (Laughter.) I am taxing him a little bit, but he is equal to it. (Laughter.) What will that mean to us? A splendid result! We are getting now 10% a ton profit for our tin, which is costing us 45% 1s. Whilst he has only been increasing the returns by these few tons, remember how the ratio of profit per ton of tin has jumped up. (Hear, hear, and cheers.)

If he succeeds (and he will) in giving us 130 tons of tin a month—taking tin only at its present price, it will mean that we shall make a profit on it, without a further 1s. a ton extra, of between 30,000% and 35,000% a year. That will mean to us a net profit in the year of 34,000% odd. I do not think we can ever hope to do much better than that in the meantime. With regard to the work—so soon as we got your sanction for it, the first thing we had to do was to

LOOK ABOUT FOR ENGINES.

We made up our minds, after advising with Capt. Bishop, that we would have nothing less than a 90-in. cylinder engine. No doubt that was a correct conclusion to come to. Hearing there was one to be sold not far away, we examined it, but found the owners very unwilling to let us have the engine and boilers alone. They bargained that we should take the whole lot on the ground or nothing. We felt for sometime that it was rather out of our line to buy machinery so as to sell it again. It was sometime before I could bring myself to think that we were doing the right thing, but I am happy to say it was the right thing. 3,600% was named as the lowest sum that possessors of these engines would take. There were six or seven of them, and after a little negotiation we determined to make the venture, and paid that sum for all that was there. We calculated in this way—there was upon that property at the least, iron and materials of all kinds, which we could either sell by auction, or work in with the old and new works at this mine, that would be worth to us about 1,200%. We have made a great mistake. We have done far better than we thought. (Cheers.) Up to the present moment the figures of that purchase stand at something like this: we have paid 3,600% for whole of the machinery there; we have realised for some, which was sold by auction, 214% 2s. 10d.; we have used upon Wheel Grenville machinery, which, at a careful valuation made by Capt. Bishop, amounts at the present time to 1,200%, which does not appear in the figures because it has been impossible to appropriate one portion to the new section and another to the old, as this can only be done while the full account is used up. Well, we have had, what has cost us, 1,200% removed from there and brought to this mine; we had two other engines for which was asked 400%, but I take it we shall never get that, and therefore set them down as being worth 300%, and we have certain other things, but taking the figures only of what we have actually moved away, we are left with the cost of that engine to us as 1,400%, and the cost of the four boilers (taken at 100% each) 400%, making a total sum of 1,815% for a 90-in. cylinder engine and four boilers, equal to driving it and everything included. If my memory serves me right, that engine, which is a very good one, and which is only an 80-in., cost us the same sum, or as nearly as possible the same. I think we have

CONCLUDED A SPLENDID PURCHASE.

It was not a bad day's work when we did conclude it. We have spent out of the 25,000% on your new section for masonry some 2,000%; engines, 4,000%; drivages, about 2,000%; on sinking the shaft, &c., about 1,500%; and in merchants' bills about 2,000%. We have spent about 2,000% on a water leat 180 fms. long, and all done since we were here last, about 600%; and upon labour costs about 4,800%. That accounts for 16,900% of your 25,000%, all spent for you in nine months, and

WE GLORY IN IT.

That leaves us with a cash balance on the eastern section account of 3,415% 11s. 11d., but if you take our advice to-day and add to it 1,300%, that will bring it up to 4,715%, which we shall have to spend during the next six months, during which we shall have two more quarters of profit I hope. We had an explosion here the other day, which might certainly have prevented our getting any more profit for six months, and we have to be thankful that it was the outer and not the inner boiler that was destroyed, or you would not have had your stamps at work for another month or two. During those two quarters, if you take our advice with regard to the dividend (especially the one to-day), we shall have two quarters profit, out of which we hope to be able to save 500% each time towards the eastern section account. That will give us another 1,000% to-day, and then we have to add to that two quarters more, which will bring 600% or 700%; so that we have for all practical purposes uncalled to go on with our eastern section work nearly 7,000%. I do not think we could have expected to be in a more happy position than that, and I have great pleasure in proposing to you "That the statement of accounts now presented to the meeting, together with the agents' reports, be received and adopted." (Cheers.)

Mr. BELLINGHAM (member of the committee): I second the motion.

RESOLUTIONS.

After a pause, the CHAIRMAN put the motion to the meeting, and it was carried unanimously.

The CHAIRMAN: I hope you will be willing to forego the full dividend you might have had, and I think you will, for I have long had experience of the forbearance of the shareholders and their desire to fall absolutely in with the wishes of the management. The resolution is "That the sum of 1,300% 14s. 3d. be carried from the ordinary account of the mine into the eastern section working account." That takes the money out of our hands, so that it cannot be used in any other way.

Dr. DORE (member of the committee): I second the motion.

Carried unanimously.

DIVIDEND OF 2S. 6D.

The CHAIRMAN: The most pleasant part of my duty comes now, and that is to ask the meeting to sanction a dividend, which will be a small one, but I think it is better than not paying one at all:—"That a dividend of 2s. 6d. per share be and is hereby declared payable forthwith to the shareholders, whose names appear on the register of shareholders this day." Do not forget that that absorbs 750%, and we have laid aside 1,300%. You do not often find shareholders willing to forego dividends actually earned for the sake of prospectively larger benefits. Most shareholders are anxious for big dividends, and ours will be big enough for the greediest when we get this work done. Let us do that first of all and divide afterwards. (Cheers.)

Mr. SYDNEY W. JACKSON (accountant, of Union Court, Old Broad Street) seconded the motion, which was carried unanimously.

THANKS.

The CHAIRMAN: I will ask you now gentlemen to allow me to propose "That the best thanks of this meeting be given to Mr. Beville Fortescue for his kind consideration in renewing the concession made by his predecessor, by foregoing the dues from Wheal Grenville Mine for two and a half years." I am sure there is not one of you who will not heartily sanction a vote of thanks being sent to Mr. Fortescue for his great generosity.

Mr. FRANK HARVEY (of the firm of Harvey and Co., Limited, of Hayle) seconded the motion, which was carried by acclamation.

The CHAIRMAN: I have still a pleasing duty to perform. I have told you the obligation we are under to Capt. Bishop for the way in which he has worked with us. After all is said and done, I know perfectly well I am a bit of a theorist. I try to furnish my head-piece with as much information as I can, but, whenever here, I suck the brains of Capt. Bishop to the utmost possible extent. He has wrought with us in the most amiable manner, and put an amount of vigour and effort into his work, which has most thoroughly satisfied us with his management, and I am sure I shall have your sanction in tendering to him a vote of thanks. I am sure, also, we are grateful to him for what he has done, and will even be more so when he attains to the output of tin I have already foreshadowed. That he will do so I fully believe, if it pleases God to spare his life.

Mr. FRANCIS G. LANE (member of the committee): I should like to hear from Capt. Bishop whether he confirms all that our chairman has said. I believe every word the chairman has uttered, but still I should like to have it confirmed. (Cheers and laughter.)

VIEWS OF THE MANAGER.

Capt. BISHOP, who was heartily received, said: My highly esteemed friend, Mr. Goold—I will not say he is too sanguine, but he has put the matter before you in very glowing terms. I know full well, although we have a most excellent property here, that following the course I generally pursue I must not be too sanguine, or say that I shall do too much in the future. I very seldom, in my general routine, make great promises as to what will be done in the future, although many times I have had similar questions put to me in meetings characterised by great prosperity, as for example, at East Pool; but I will say this much—the possibilities of the mine are great, according to my way of looking at them. I believe that the course we are now pursuing will commend itself to all shareholders acquainted with mining, and I am sure every man who views mining in the light the chairman has just put before him ought to acquiesce in everything that has been done last year upon Wheal Grenville Mine. (Cheers.) When you consider that you have a sett of something like 700 fms. long upon Wheal Grenville Mine, and that you have possibilities in that sett of sinking at least to $\frac{1}{2}$ mile in depth, you may know that you are sure to work on the best basis, and, let me add, you must work vigorously. It is no use our having one shaft and tramping the stuff 500 or 600 fms. The moment I came here I saw that that was a mistake, although you had started the new shaft previous to my coming. It was then down, I believe, 7 fms., but not complete at that. I came to the mine in Sept., 1889, and

SAW A GREAT WORK BEFORE ME,

which I must say for a moment seemed to be of a stupendous nature. We had to sink your shaft about 125 fms. in perpendicular form, without means of communication anywhere, and with the possibility of having a great amount of water in that sinking—I repeat, it was a job of no ordinary character. However, some of the committee said to me "that will take you two years to do," but you know very well we put it down a small part of the way and rose against the shaft something like 48 fms., all in 11½ months, and communicated from the surface with the 150-fm. level. We have had a great deal to do in drivages. We have driven, as the chairman has just said, a considerable distance in the bottom levels. We are now within 35 fms. of the new eastern shaft in our 205-fm. level. Since the last meeting we have communicated a winze and rise from the 205 to the 220, and hope, in about four months' driving at the 205, to put up a rise from that level towards a winze which we shall be sinking—in fact, which we are sinking—from the 178, thus bringing the new shaft down in small size to the 205-fm. level. We shall have to remain there a time, because the 220-fm. level will be some distance behind. I suppose in all probability we shall have our pitwork in the shaft before that level (the 220) is up to communicate with the new shaft.

A SHAREHOLDER: You hope to do it in less than 16 or 18 months?

Capt. BISHOP: I do not think we can. When we reach the 205-fm. level with our shaft, and we have cut the shaft from the 178 to the 205, we shall then be in a position to work our eastern ground to far greater advantage than we can to-day. We have put in our double skip-road from the surface to the 150-fm. level, and I do not know but what the chairman is correct in saying we shall be in a position to draw from these upper levels in six months time. Now comes the other part, which to me is rather more important—whether or not you get those 15 tons of tin a month extra when we have those levels ready. I am very pleased to hear the chairman say that the committee are satisfied with the progress we have made. We have done our utmost against great difficulties, and increased our returns, and I do hope, when we get that shaft in position we shall increase them still—I will not say to 15 tons, but I will say to 15 tons if it be possible. (Cheers.) In driving through those levels (this is rather an important fact) there has been

NO FALLING OFF IN THE PRODUCTIVENESS OF OUR LODE.

(Hear, hear.) I consider that our 205-fm. level has been fully equal so far as driven to the 178, which you will remember is the next level above, because we were driving that level at the 190 from Goold's shaft, which we discontinued, because it would not come into proper position for us for drawing from the new shaft. Consequently, we shall start a level, if necessary, at the 190 from the new shaft, not from Goold's, but west and east, but we shall certainly drive one east. I am now speaking of the ground between Goold's and the new shaft. Possibly, we shall drive the 190 from the new shaft, but not drive it any further from Goold's shaft.

The CHAIRMAN: In the meantime, is there any hope of getting tinstuff from the 190 without tramping it all the way?

Capt. BISHOP: I was coming to that. The level, as far as productiveness goes in the 205, is quite equal to what was seen in the 178. We made a communication a few months ago by rise and winze from the 205 to the 178, which will be a distance on the line of the lode of 26 fms. When we get the 205 under the eastern shaft to start a rise from the 205 to meet the winze now sinking from the 178 there will be those two communications of 26 fms. from the 205 to the 178. That ground will be available for stoping to be brought from the eastern shaft. We have not brought away, and do not intend to, all the tin, and tramped it a considerable distance to Goold's shaft, when by waiting we can bring it at less cost and greater advantage in every way to the eastern shaft. If you take the winze we have recently communicated from the 205 to the 178, it is only 80 fms. to the west of the eastern shaft, and if so it would be 190 fms. east of Goold's shaft, making the distance between the two 270 fms. We shall preserve all the ground possible there to draw to the eastern section. We shall be pushing on this with boring machinery and all possible speed. Our disadvantage for the moment for drawing at the eastern shaft is that we are building the engine-house for the 90-in. pumping engine, and the ground is strewn with rocks of granite, so that we cannot lay out the floors until the completion of the new house. When that is done we shall be able to get our skips in order; in fact, our whim is all ready, the skips are made, but we must wait until the house is completed in order to lay out our floors. We purposely have to work as cheaply as possible, and to do so shall require two stone-breakers. We have an engine on the ground to work them, and calculate to have a big hopper and ore receptacle for the stuff, so that we shall bring down our tram waggons over the incline from the new stamps, shoot them under the hopper, and fill them immediately.

SAVING IN OUTLAY.

There is no doubt from the favourable position of the eastern section that we shall be able to work more automatically than heretofore, and dress as much tin for 50% as we can dress in the old stamps for 100%. (Cheers.) My friend rushed away in a flight of imagination that we were going up to 130 tons a month, but I never conceived such an altitude before. I think he wants to pull me out further than I am willing to go. I do not say he is wrong, but I will not say he is right. I will "confirm" him in every possible way as a "bishop" if he will receive his confirmation from me in my own way, and will allow me simply to proceed as far as my judgment will lead me. (Laughter.) You have a great mine here, and you are going to a great expenditure upon it, but everyone I talk with who has a knowledge of mining has said "you are doing the right thing." If time be money, then it is especially so in mining, and I think when the work is completed, when all is thoroughly under control, you will never repent having laid out your money to put up those parts of machinery, and to do the new work in the eastern section that has been now described. As you look at that valley (pointing to the prospect outside the account house) and see the position of your eastern shaft, all gentlemen who are conversant with the geological situation of the valley will thoroughly acquiesce in the remark that

THERE IS NO BETTER GROUND TO BE FOUND IN THE COUNTY OF CORNWALL.

You will remember that the main cross-course that has made so much tin in the immediate vicinity of Dolcoath is the same cross-course as is coming through that valley. At Dolcoath they had a tremendous bunch of tin when their two lodes formed a junction near that cross-course, and we have several lodes to form a junction with ours just in a similar manner near that cross-course. We have the great flat lode and the old Grenville lode coming down upon it, and are not far from it. There are several lodes to the south of the old Grenville lode, which must fall into our flat lode, and all of you who know the flat lode and the great deposits of tin made upon it will know they were made in connection with those junctions. Now, that valley looks to me like

THE ESSENCE OF PRODUCTIVENESS,

and you will remember that our boundary will admit of our going something like 150 fms. to the east of our eastern shaft right into the valley near the cross-course. I think that when you look at the prospects of the mine you will see with me that they are of a very cheering character. As the chairman has said, we have had many difficulties, but have managed to sell more tin than ever before, in the history of Grenville, since it has been working—of course, within the same period. (Cheers.) I think if you search your books you will find that when you gave 22s. 6d. per share dividends, you sold 202 tons some cwt. for those 16 weeks, as your highest sale, and this time the sale has been 204 tons. (Cheers.) I think you will be proud if we had 304 tons to sell, but I am putting this as a fact. I am sure of one thing, that

AS WE GO DOWN THE MINE DOES NOT SHOW ANY FALLING OFF, and when we have our big stamps at work fully we must return a large quantity of tin, and if it is of anything like the average of the past then your hopes will be partly if not fully realised. We shall undoubtedly, with those stamps, get the four 16-head axles in position, and work these first, and add to them as we proceed. The great thing is to start your engine with a part of the stamps, and you can add to them afterwards. We shall be able to drive with the stamping engine we have there now, 136 heads. We did think of pumping the water (we shall pump a portion of it) and draw the stuff on the incline by the stamping engine, but I have shown the chairman and committee that it would not be wise, as we could put up a little engine to pump the water with a double plunger, which will pump it all apart from the big engine, because the time is coming when we shall be able to stop that engine and throw the whole of that water on the 90 engine. We must pump it with a big engine, or put the little engine to pump it. We have gone into the matter, and think by putting a little engine there we can pump all the water, draw up the stuff by the incline, and by so doing it will be equal to 136 heads of stamps. All the working parts are as good as new. All I can say, in conclusion, is that I will confirm what the chairman has said as far as possible, and I am much obliged to you for your courteous attention. (Cheers.)

Mr. GULLICK seconded the motion of thanks to Capt. Bishop and the staff, and it was carried by acclamation.

CAPT. BISHOP DESCRIBED.

The CHAIRMAN: Capt. Bishop's admirable speech has struck me very much. He is a cautious cool man, and does not say his best. He is a modest man who does not come very much out of the shell, and, therefore, I am exceedingly glad he has gone so far as he has done to-day. He is a splendid "bishop," and if ever I receive "confirmation" from anyone it will be from him. (Laughter.) There were one or two points in his speech I was not thoroughly acquainted with before, which I have now grasped. The underground working of the mine I generally leave to him. He has told us a great deal about it, especially as regards the eastern section, although he has said little about the western sinking, but we shall have that out of him next time.

Capt. BISHOP returned thanks, and assured the shareholders of the best services of all the staff.

A SHAREHOLDER: When will the present boiler be ready to aid the stamps in doing the work properly, as before; and what has been the cost of the explosion?

Capt. BISHOP: We have put the middle boiler to work, and drove 60 heads, leaving only 21 idle. I immediately purchased a boiler, which we have on the ground. My estimate of the cost is about 200*l*.

Mr. GULLICK suggested, with the approval of those present, that the meeting should take place somewhat earlier in the year, and the chairman promised that the committee would give this suggestion their best consideration.

Mr. JEFFERY proposed a cordial vote of thanks to the chairman and committee, who, according to all the information, had laid out the money entrusted to them with much judiciousness.

Mr. GULLICK seconded the motion, and, referring to a remark the chairman had made, said that as he had attended 56 meetings he hoped he would have the pleasure of being at 56 others. (Cheers.)

Mr. W. H. RULE, in the course of his speech, said: No one knows the anxieties the committee have had for the last 15 years. I shall never forget the remark the chairman made when he first visited the property. He said he had never seen such a wreck in his life, and that if he had seen it before he would never have put any money into it. From that day to this what a change. It had been made patent to all the shareholders to-day. (Cheers.) Mr. Rule went on to speak of the great richness of the surrounding mines, and said: In the eastern part of this sett close up to the boundary there is one of the finest bunches of tin ever worked. That is now being exploited by West Frances, and is within a few yards of Wheal Grenville boundary. West Frances is at this moment getting the bulk of its tin from that point—that is, from within a few fathoms of Wheal Grenville boundary, and instead of 130 tons of tin a month he ventured to say that later on the production would be 230 tons. This would be a second Dolcoath.

COMPARISON INVITED.

The CHAIRMAN, in replying said: Mr. Rule has said that possibly Wheal Grenville may be a second Dolcoath, but whether that be so or no, I will ask you to compare their figures for the past quarter with ours, and you will find two remarkable facts—first that we have made a bigger profit per ton than they have; and second, that we have produced our tin at a lesser cost. (Cheers.)

NEW HORNACHOS SILVER MINES, LIMITED.

THE POSITION AND PROSPECTS—DIFFICULTIES OF THE PAST YEAR—HOPES UNDER THE NEW ARRANGEMENTS AT THE MINE—THE MATILLA CONCESSION.

The third ordinary general meeting of the shareholders of this company was held at the Offices of the company, 11, Poultry, on Tuesday, 13th inst., for the purpose of receiving and adopting the directors' report and accounts to June 30, 1891.

Mr. James Goddard

presided.

Mr. HENRY RICHARDS (the secretary) read the notice calling the meeting.

The CHAIRMAN: Gentlemen, we do not have a very large attendance at these meetings. I presume it is on account of things not being particularly satisfactory. We have purposely made the report as full as possible, so as to give you as much information as we can, and, therefore, I presume I may just go through it, and amplify it, and then we shall be glad to answer any questions that may be put, after I have moved its adoption. Well, first of all we say that the directors beg to submit, duly audited, the balance-sheet and accounts for the year ended June 30 last. From these it will be seen that the amount received from mineral has been considerable, although the quality was not up to the average of the previous year. The amount was 5,730*l*. 0*s*. 10*d*. The raising and working of the mineral was mainly confined to the first six months. This is quite correct; still, there was also a certain portion in the second six months' about 91 tons. The working expenditure at the mine, the repair and renewal of the machinery, the repair of the buildings on the property, also the ladder way down the mine, are all fully included in the debit figures of the revenue account and are heavy. The incessant working of the first six months made repairs and renewals necessary; these could not be carried on during the working of the machinery. After frequent repairs, the hoisting cable finally and rather unexpectedly broke on Mar. 23. I say unexpectedly, because after it had been overhauled and inspected and repaired our manager gave us the idea that it was thoroughly well repaired, and would work for a long time, and although the new cables were sent from here with the greatest possible despatch, they were only in position on May 18.

THE RAISING OF NEARLY 5,000 TONS OF WATER

from the mine had then to be faced, and this was safely accomplished in 11 days, but all anticipations were upset by this unfortunate incident. The raising of 5,000 tons of water was a very difficult and a very expensive thing. The forced stoppage of all mining work for so long a period was taken advantage of, as previously mentioned, for repairs and renewals; most of the machinery, as per manager's report (which may be seen at the company's offices), is in fair work-

ing order, the head-stocks (hoisting stage), however, are very old and worn, and still need repair; considerable strain on the old machinery of the dressing floors has had its effect, and many parts require repair and renewal. The quantity of crude ore fed through the mill amounted to 3,488 tons, producing 281 tons of mineral (and 7½ tons of picked ore). The quality was considerably inferior to that of the previous six months. I may mention here, perhaps, that on the average it

ONLY REALISED 20*l*. PER TON.

It was comparatively poor in both silver and lead. Previously it had been realising 23*l*. and 24*l*. per ton.

A SHAREHOLDER: It is about 18*l*. now, I think.

The CHAIRMAN: I will come to that presently, sir, and I think that we can tell you something better than that. Well, gentlemen, two reasons are assigned; first, the worn condition of part of the mill; secondly, that the greater part of the crude ore was drawn from the north end of the mine, where the mineral has never been of such a rich quality as in the south, and is far more difficult to treat, without the loss of silver. The chairman here indicated the workings on a plan, and continuing said: This is the part we are now working, viz., the south portion. Some re-adjustment of the agency at the mine has been accomplished by sending out an experienced English miner. A considerable departure from the old way of proceeding is resulting beneficially in greater economy, by only sending to surface picked mineral and permitting a lower percentage of lead, thus saving much labour, and wear and tear of machinery, but probably increasing cost of transit. Formerly we were sending away ore from different parts of the mine, and the average yield, as I told you just now, only realised 20*l*. per ton, and that was arrived at by an average price of silver of 47½*d*. per oz., but, perhaps, I had better finish the report now and state afterwards what has occurred since. We go on to say the outlook at the mine is at present somewhat better, the parts being now stopped in the south are reported and found to be rich, in what has gone to market. Well, gentlemen,

OUR NEW UNDERGROUND AGENT

out there, Capt. James, has altered the way of working—of mining—altogether. He now only takes out that portion of the mineral which pays, and one parcel we were very greatly surprised at; for when it was taken to the smelters we were paid for 123½ ozs., which even at the low price at which silver ruled realised 28*l*. 9*s*. 4*d*. I mention this, because I think probably we have got to a good portion of the mine, and that it is really richer than anything that we have had before. (Applause.) It is the highest price we have ever received for one 10-ton parcel of mineral. The next parcel perhaps will not realise more than 20*l*.

THE VEIN IS VERY FINE, AND SOMETIMES VERY VARIABLE.

One day it looks as if it would give in altogether, and the next day it is very rich. It is impossible for us to tell when it is going better and when it is not. I can only tell you that last parcel of 10 tons cost us less to get than anything we have taken out before, and realised more than anything we have sold before. (Cheers.) Well, now as to

THE MATILLA CONCESSION.

The Matilla concession has been prospected by our new mining agent to a small extent, and at a trifling expense. The directors are of opinion that it had better be worked by a separate subsidiary company, and they would consider the terms upon which a lease might be granted to a syndicate. We should be very glad if any of the shareholders were disposed to take a risk in this new syndicate, and if so we shall be happy to show them the reports we have got—the report of Capt. Kitto and the report of Mr. Charlwood. You have already seen these reports, which, however, we can show you again; also the new reports that we have got from Mr. James and Mr. Hill. Mr. Charlwood is present and can answer any questions. Mr. Charlwood has seen the mine, and can speak about it. On one occasion Mr. Charlwood said to Mr. Kitto, "What do you think of the lode, Mr. Kitto?" and Mr. Kitto replied that he had never seen anything like it except in the Devon Great Consols. You will see that two directors retire from the board at this meeting. One of them, Mr. S. R. Pattison, has permanently withdrawn from the board in consequence of failing health. The other retiring director, Mr. Arthur Southard, being eligible, offers himself for re-election, but I am sorry to say that since the report was written and circulated, Mr. T. Steven, another member of the board, has sent in his resignation. He tells us he has so many irons in the fire (if I may so), and his physicians have distinctly ordered him to give up many of them. Although he was very useful to us in giving advice at times, he was not able to attend very often, and he, unfortunately, finds himself precluded on account of his health, and acting under the orders of his physicians, from continuing longer with us. As provided by the company's articles of association, the auditors for the ensuing year will be appointed at the meeting. I really do not know that there is much more that I need say. Before I move the adoption of the report and accounts to June 30, 1891, I shall, of course, be glad to answer any questions that anyone desires to ask, and I can only say that we sincerely hope that, although we have gone through very bad times, as are shown by the accounts, and have had exceptional expenses, that we shall get a better price for silver in the future, and we have the advantage now that our ore is so much better in its quality. (Applause.) We have been (indicating on the map) stopping in the 650-ft. level.

The SECRETARY: That is between the 6th and 7th levels.

The CHAIRMAN: Our latest accounts from the mine received this week state that they are beginning to stoppe freely and profitably in the 8th level. We have so far liquidated matters that we have reduced the 400*l*. odd owing in June to 97*l*. at Sept. 30. I now beg, gentlemen, to move "That the report of the directors and the accounts to June 30, 1891, be and they are hereby adopted."

Mr. A. SOUTHARD seconded the motion.

The CHAIRMAN invited

DISCUSSION.

Mr. MACIVOR: Exclusive of extraordinary expenses caused by accident to the machinery, what is the average monthly cost to carry on the mine just now?

The CHAIRMAN: It varies: one month it was 317%.
 Mr. MACIVOR: Between 300% and 400%, then?
 The SECRETARY: Yes at present with the new system.
 The CHAIRMAN: One month I think it was under 300%—about 250%—another 317%, and another about 360%. Of course, we are doing different work now, only taking the pay ore.
 Mr. MACIVOR: Yes, but that

CUTS BOTH WAYS,

because you "pick out the eyes" of the mine, and not develop the mine.

The CHAIRMAN: We do develop the mine.
 The SECRETARY: We explore between the levels and we stope, and are doing well just now in the southern portion.

A SHAREHOLDER: In making a loss of 3,624*l.* 19*s.* 9*d.*, was it made between Jan. and June, 1891, or June, 1890, and Jan., 1891?

The CHAIRMAN: Nearly all of it has been made between Jan. 1 and June 30, 1891.

The SECRETARY having given some further particulars on this subject,

Mr. SKINNER asked if Capt. James was their manager or agent?

The CHAIRMAN: Underground manager.

Mr. MACIVOR: Mr. Hill is manager. Mr. James has charge of the mine underground?

The CHAIRMAN: Yes.

Mr. CHARLWOOD: Mr. Hill is an English engineer.

A SHAREHOLDER: This debenture capital, 6,000*l.*—was it issued since the last annual meeting?

The CHAIRMAN: Some of it was issued before; some was formerly at 6 per cent., but now it is all 10 per cent.

Mr. SKINNER: Since the constitution of the present company?

The CHAIRMAN: Yes.

Mr. CHARLWOOD: It is debenture stock.

After a few remarks from Mr. HOPKINS on the question of the poor quality of the ore,

The resolution was put to the meeting, and carried.

A TRIBUTE OF PRAISE.

The CHAIRMAN said that the next resolution was "That Mr. S. R. Pattison's resignation of the position of a director of the company be placed on record with the regret of that meeting." He had to admit in proposing this resolution that Mr. Pattison had been of very great assistance to that company. He had been of great service to them as a lawyer. They were sorry to lose him, but ill-health and advancing age had necessitated Mr. Pattison taking this step.

Mr. MACIVOR seconded the motion, and said they all appreciated how much they were indebted to Mr. Pattison for his services. Mr. Pattison had afforded them a great deal of assistance in connection with the formation of the new company, and other matters—(hear, hear)—and, indeed, he thought he might say that the whole of the directors had worked very hard and sacrificed themselves on many occasions in the interests of the company. (Cheers.)

The CHAIRMAN said that he was very much obliged to Mr. MacIvor for his remarks. What that gentleman said was perfectly true; there had been

VERY LARGE SACRIFICES MADE

by them all. They had stuck hard to the ship, and he did not believe there had ever been a board meeting where they had not had a quorum.

The motion was carried.

The CHAIRMAN said that the next resolution was, "That Mr. Arthur Southard, who retired, should be re-elected a director of the company." Mr. Southard had worked very hard indeed in the interests of the company, and had devoted a great deal of time and attention to furthering its affairs, and he (the chairman) had to thank him most cordially for the spirited support that he had always given him.

A SHAREHOLDER seconded the motion.

Mr. MACIVOR supported the resolution, and attributed the fact that the company was still in existence, and had promise of success, to the energy and ability of Mr. Southard. (Applause.)

The CHAIRMAN: That is quite so.

The motion was carried.

A LONG LANE, BUT A TURNING IN SIGHT.

Mr. A. SOUTHARD, in reply, said that he had to thank the meeting for his re-election, and for the flattering words that had been spoken of him. He made the resolve when he first came upon that board to do his very best in the interests of the company, and within his feeble ability he had done his best—(hear, hear)—but the best would have been of very little consequence had he not been supported by their indomitable and energetic chairman—(hear, hear)—who had stuck to the thing right through, and very often looked at things in a brighter light than his colleagues could do. He (the speaker) sincerely trusted that the time was coming when things would, for this company, assume a brighter and more cheerful aspect than had been the case in the past. They had a difficult vein, a "fitful bunch;" there was no certainty or continuity. The reports from the property, and especially in regard to the Matilla Concession, were so much more encouraging, that he really thought they had some grounds for entertaining favourable anticipations from that and for this company. There was no doubt that things were brighter at the present time. It was a long lane, but even the longest lanes had a turning at last, and he hoped that they were at last beginning to get in sight of the turning themselves.

The SECRETARY: I should think it would be opportune, Mr. Chairman, at this point to read

CAPT. JAMES'S OPINION ON THE MATILLA CONCESSION.

The CHAIRMAN: If you please.
 The SECRETARY: It is in the second letter, and he says:—
 "I have formed this opinion—taking into consideration the extreme regularity of the lode, coupled with the fact that the whole extent of the lode, some 375 metres, gives assays from the surface to a depth of 40 ft.—that it is bound to develop into a large body of mineral at no great depth from the surface."

CORROBORATION.

Mr. CHARLWOOD wished to say that from his knowledge of the property he quite concurred with what had just been read.

Mr. MACIVOR said that he would be very loth to offer any suggestion that should tend to increasing the London expenses of the company, because, one way and another, they totalled up, but he thought there ought, if possible, to be appended to the report a report from the manager, engineer, or responsible man in charge, as to the condition of the property, the various workings, the machinery, and his view as to the prospects, &c. Such a statement would be useful and satisfactory to the shareholders, and they might like to have it equally whether the news contained therein was good or bad. (Hear, hear.) He presumed that the only reason they had not such a statement was the desire of the directors to avoid a larger printer's bill.

The CHAIRMAN: The only reason we did not send such round was to save expense. We have such documents, and as we say in the report, "The forced stoppage of all mining work for so long a period was taken advantage of, as previously mentioned, for repairs and renewals; most of the machinery, as per manager's report (which may be seen at the company's offices), is in fair working order," &c.

Mr. MACIVOR said that was the answer he expected under the present circumstances.

Replying to remarks from various other shareholders,

The CHAIRMAN said that the disadvantage that this company had always suffered under had been that they had always been owing money, and the directors had, in many instances, to become personally responsible in order that affairs might be continued: for instance, in the matter of the new cable, which was very essential, the manufacturers would not proceed with it until they had the assurance of the directors that the money would be forthcoming on the bill of lading before it was shipped. That money came out of the directors' pockets as it had done time after time. They had been owing money, and the directors had kept the concern's head above water—believing in it, and hoping for better times. The manager stated that the cable was working well now, but he was a bit anxious about it, and wanted the directors to send out a new one in case of accidents.

A SHAREHOLDER: As an extra cable?

The CHAIRMAN: Yes; so that if anything happened to the present one it could be used while it was being thoroughly repaired.

A SHAREHOLDER: What is the cost of a cable?

The CHAIRMAN: 150*l.*; that is for one up and one down, but then there is the cost of getting it out, and I think, as that is considerable, the cost altogether would be about 200*l.*

The SECRETARY: 200*l.* would about clear it.

A SHAREHOLDER said that perhaps half a cable (one way) would do in case of a break.

The CHAIRMAN said that that was what their manager wanted—two in use and a spare one.

Mr. MACIVOR thought an extra one was very essential.

The CHAIRMAN concurred in this view.

After some further conversational discussion,

The CHAIRMAN said that the next resolution that he had to propose was "That Mr. T. Steven's resignation as a director of the company be placed on record with the regret of this meeting."

A SHAREHOLDER said that he had always had such a strong opinion of the advantage of a good strong Scotchman like Mr. Steven on the board, that he thought the directors might try and get Mr. Steven to reconsider his decision. He specially liked those "strong canny northerners" when they had a little money at their backs. He really hoped that the board had done their best to keep him, and he must express the hope that they would yet try and get him to reconsider his decision in the matter.

The resolution was seconded by Mr. SKINNER.

Another SHAREHOLDER spoke in a similar strain, alluding to the past services of Mr. Steven, and expressing the hope that they would be continued.

Mr. SKINNER said that he himself knew that it was the desire of Mr. Steven's physicians that he should, as much as possible, sever his connection with public companies and take rest. He had been of great service to the company, but he feared it was useless to urge him to stay. They could however try.

A SHAREHOLDER: He lives in Glasgow, and the board meetings are held here.

Another SHAREHOLDER expressed the wish that he would remain, and remarked that it would give confidence to the Scotch shareholders.

Mr. SOUTHARD: We have done all we can to induce him to stay, but when health stands in the way we cannot insist, and no doubt, under present circumstances, it might not be to his own advantage in face of his doctor's views. (Hear, hear.)

The resolution was then carried.

The CHAIRMAN said that the next resolution was for the re-appointment of the auditors, Messrs. Welton, Jones and Co., but it must come from a shareholder.

Mr. MACIVOR moved the re-appointment of this firm as auditors of the company, at a fee of 10*l.* 10*s.*

The motion was seconded by Mr. SKINNER, and carried.

A GENEROUS SECRETARY.

The CHAIRMAN said that there was one point he omitted to refer to when alluding to the subject of economies, and he would like to be allowed to revert to it now. He wished to point out—to show how much they all had at heart the interest of the company—that the secretary had voluntarily reduced his salary from 300*l.* to 200*l.* per annum—(loud cheers)—and he (the chairman) took this public opportunity of thanking him for his kindness in so doing.

Mr. SKINNER: I am sure we are very much obliged to him—(hear, hear)—and we can only hope that we shall be able to reinstate the old condition of things when the mine becomes, as we hope it will, very prosperous.

The SECRETARY: I thank you very much, Mr. Chairman and gentlemen, for your kind expressions. I have never lost faith in the property as a whole. (Cheers.)

A SHAREHOLDER: How many directors are there now?

The CHAIRMAN: Three.

A VOICE: Is that sufficient under the articles?

The SECRETARY: Yes; not less than three, or more than nine.

The CHAIRMAN said that Mr. Southard wished to offer a few words in regard to the Matilla concession. (Hear, hear.)

A SCHEME.

Mr. SOUTHARD said that the idea was shadowed forth in the

directors' report to make this a separate company or syndicate, and to prove its worth. The general idea was that a capital of 5,000% should be raised, of which 3,000% should be raised by founders to have certain privileges therefor, and 2,000% to be held by this company, and that the profits, after certain fixed payments to ordinary shareholders, would go in the ratio of three-fifths to the founders, and two-fifths to this company. He spoke of this to find out whether any of the shareholders present (or those who might read the report in the MINING WORLD) would like to contribute to the testing of this property. One gentleman had seemed disposed to place in money to the tune of about 1,000% if he (the speaker) would do the same, so that the company would not want much further help. He believed success would be achieved, and that the whole concern might become a dividend-paying one. He commended the idea to the consideration and support of the general body of shareholders.

A SHAREHOLDER said that he presumed that the Matilla property would not be worked by this company.

The SECRETARY said no, but by a syndicate in which this company would have a holding; such was the rough idea.

The CHAIRMAN pointed out that he should not put money in it himself—not from want of faith or confidence—but that he felt he could look after and protect the interests of this company better, and, perhaps, he might even accept a seat upon the board in the capacity of a director looking after the interests of the Hornachos Co. (Cheers.)

After some further conversation in which the general principles of the scheme were discussed, and seemed to meet with approbation,

THANKS.

Cordial votes of thanks were accorded to the chairman and directors (past and present), which brought the proceedings to a close.

SIERRA BUTTES GOLD MINING CO., LIMITED.

MINES THAT HAVE PAID IN DIVIDENDS £873,984—£100,000 IN SIGHT IN UNCLE SAM—PLUMAS AND BUTTES LOOKING POORLY.

THE forty-third ordinary general meeting was held at the Cannon Street Hotel, on Thursday, "To receive the reports of the directors on the Sierra Buttes, Plumas Eureka, and Uncle Sam Mines, to declare a dividend on Plumas Eureka Mine shares, and to transact any general business of the company."

Mr. Frederick Tendron

(chairman of the company) presided.

Mr. JOHN SAUL (secretary) read the notice of meeting.

BUTTES.

The CHAIRMAN: Gentlemen, there is but little to state on the subject of the Buttes, excepting that the 10-stamp mill to crush the ore on the dumps and any ore that they may yet find in the upper levels of the North Cliff vein of the Buttes has been successfully started, and, as you have seen by the circular sent to you, the first month's working of this ore was as satisfactory as we could anticipate. The total expense for repairing the flume and putting up this mill has only been between 1,300% and 1,400%, and I suppose in a few months we shall not only get the money back, but be able to add something to the cash reserves of the Buttes Mine. We are very anxious, indeed, to see those cash reserves brought up to at least 10,000%, and they have the hope, and we share it, that in taking out the ore from the upper levels they may possibly discover something that will, as Mr. Johns forcibly puts it, "lengthen the life of the old mine."

EUREKA.

With regard to the Eureka, everything has gone on quietly there without any discoveries of value. The ore crushed only amounted to 20,227 tons, against an average of between 27,000 and 28,000 tons, which is the usual amount crushed during a half-year, and of these 20,227 tons, 15,550 tons came from the Mohawk flat vein and from the outside mines—the Hosking vein almost entirely. The Eureka Mine as far as we see at present, and as you have been told at preceding meetings, is pretty well worked out. At all events we do not know where to find fresh bodies of ore, and it is out of the question that our money should go from London for the purpose of endeavouring to find further bodies when the mine has been as thoroughly explored as it has been now for so many years. We were disappointed in the Mohawk flat vein. It has been a good vein in point of size and signs of lasting, but the quality of the ore is so poor that it barely pays for extraction, and yet from indications they fully believed they were coming to better ore, more easily mined and containing more gold. It was so for a few days, but, unfortunately, it has gone back to its old stereotyped condition of being very hard and only worth \$4 or \$5. The same may be said of the Hosking vein. All the further developments in that vein have been of the same discouraging kind. In fact, the last weekly report in six development operations of the Hosking and Mohawk veins, and in 10 stopes, conveyed hardly an encouraging passage, except for the quantity of the ore, but not for the quality. It is all of \$3, \$4, \$5, and in a few places \$6 and \$7 ore (in rare cases only the latter), but they are able to work up an average of the whole, and show a small monthly profit. So long as that goes on, so long we are satisfied that they should continue those works, because at any time there may be a change, and we can only hope for it. The average of the ore was \$5.78 against \$6.43 last year, and the cost was \$4.69, mainly because with a smaller quantity milled and extracted, the other charges become heavier.

A CIRCULAR HAS BEEN ISSUED

of which I have not had a copy, but some gentlemen in the meeting may have received one, as certainly some of our directors have. If the circular could only be borne out by the telegrams we would be delighted, but the telegram this morning is that there is no change in Plumas Eureka Mine. This circular deals with some statement I made at a former meeting. It is a complimentary circular, and I have always a kindlier feeling for those who try to get up prices than those who try to put them down. I do not, therefore

want to make any disagreeable remark, but I do object to a single passage of what I say being taken out of the context and a considerable portion of the circular being built upon it. (Cheers.) I said plainly enough that if things went on as we thought they would in Uncle Sam, and if the Hosking vein gave a new life to the Eureka, that the Buttes shares were well worth 10s. and the Eureka shares 17. I said that in a time of great depression to give comfort to the shareholders, and I gave good reasons for what I said; but there were those two important conditions very plainly put to the meeting, and it does not at all follow that because I said such a thing as that 12 months ago a man is to take that and issue it now, and declare, without qualification, that the shares are worth, at the present time, 10s. and 20s. respectively. And then, again, since that time we have drawn upon your reserve to the extent of 8,000% to maintain the shilling "dividend," as we call it; but I object strongly to the term, because money taken out of reserve when your property is being exhausted is no dividend in the proper sense at all, but so long as you understand it, well and good. It is, however, not right that a man who presumably wishes to benefit his fellow shareholders, and presumably also the public (because that is the way it is put), should ignore such patent facts as these, and seemingly show that he does not like to have such a good thing all to himself.

A SHAREHOLDER: Is it signed by a shareholder?

The CHAIRMAN: We are simply told to read it. It is not a dealer's circular. These attempts to unduly put up the price of the shares do the company no good, and I do not hesitate to ask you to pay no attention to it. If their issue comes near the general meeting I do not mind answering them, but I do not like to write a contradiction. We are well satisfied that our shareholders have no desire to exchange their shares at fancy prices to other persons who are not fully acquainted with the facts. (Hear, hear.) A better body of shareholders than ours cannot be conceived, and you would not wish me to make any statement at this meeting that does not rest on a perfectly secure and truthful foundation. (Cheers.) I tried to make you understand the position of the Buttes when it was on the road to being worked out, and I have tried to make you understand the position of Eureka, and though very delicately done last time Prof. Lambert said it was "a funeral oration," but there is nothing to alter that position to-day. We will go on as long as we are making profits. Mr. Johns has adopted the view I expressed at the last meeting when I said that everything must be turned into cash, and that we must not have any undue expenditure of any kind out there for either permanent plant or development. I do not know what Prof. Lambert will describe my oration to-day as, but having passed over everything that is unpleasant,

LET ME TURN TO UNCLE SAM,

which certainly presents a much more cheerful feature. At the last meeting I told you the James tunnel had just reached the shoot, that it was poor at its point of intersection, but that they had said positively that it would improve, and I was sure they would not have made that statement at the time without something to guide them. In fact, they must have gone ahead and seen that there was an improvement, and, as a matter of fact, that shoot has turned out in the most satisfactory manner. (The chairman here indicated on a map the position of the James tunnel and the western shoot.) The latter, he said, has a westerly direction. In the second level the vein is about 200 ft. long in very good ore. In the third level for 250 ft., instead of 200, they had a good vein. Then came 50 ft. of poor and broken material, and now they are in another shoot about 70 ft., and a telegram yesterday states that it is 9 ft. wide with \$7-ore. It is possible that, even in the broken ground, when they have the hanging vein there they may find some ore, but at all events in the remarks I am going to address to you now as to your position and prospects I am only going to deal with the western shoot on a basis of 250 ft. in length, and to assume that it runs pretty regularly the whole distance up to the No. 2 level, and allowing for its shortening from the 250 to the 200 ft. by the other ore that is already laid open in the shoot we are now entering upon, and not taking into consideration in any way the shoots in the eastern portion of the mine below the second level—I repeat what you have heard at other meetings that in the eastern portion of the mine there is, first, a shoot of about 140 ft. long, of very good quality and size; then a small shoot of about 40 ft. long; and then a magnificent shoot of about 140 to 145 ft., of good size and quality, in which they have made a rise right away to the surface—a distance of 313 ft. They then went through more or less poor vein and disturbed ground, when another shoot of about 100 ft. long was struck, but not equal to either of the others. In the first shoot a winze is being sunk, in which they are down 30 ft., and all the way it has

PRESENTED A MAGNIFICENT APPEARANCE.

It is 9 or 10 ft. wide, and worth \$12 to \$15—a good \$15. In a letter received this morning we have the satisfaction of knowing that in the third level, in consequence of a movement in the vein that threw it more into the footwall, they have gone on in their explorations, and found it has been thrown back in the footwall. That is the first eastern shoot they expected to find. The ground is broken and irregular, just as in No. 2 level. It has been a case of disappointment following disappointment. There is a clay cross-course of which nobody is inclined to speak positively, but perhaps you will excuse me for hazarding an opinion: my idea of a clay cross-course is that where the whole of the mass of rock has been thrown forward from one cause or another, the walls are crushed more or less by the movement, and become irregular, and in these irregularities the water oozes through the rock, bringing the decomposed matter with it, and gradually fills it up with clay. Now, if the vein stuff happens to be in the crushed ground, it may get crushed up and broken, and you may not get the gold. If this large body of ore has a certain dip, and is as far from the clay cross-course in the third level as it was in the second level, we may yet have a good body of ore forming in No. 3 level. If it is broken, we have still hope for the other ore shoots. We do not know what nature has left us at that depth. The latest news is that

THEY HAVE THE VEIN IN THE THIRD LEVEL,

that it is 6 ft. wide, but poor, and they say we look for an early improvement. Well, we will all look for it, and when it takes place you shall know of it in the monthly circular. But let us see what we have to go upon in the way of positive facts. We have this un-

mistakable fact at the outset, that since we commenced milling in Feb., 1889, we have crushed 21,228 tons. We have not made a waste heap, and therefore the whole of the ore has been consumed, and has produced a yield equal to \$10 per ton—the English money being equivalent to

SOMETHING LIKE 43,000Z.

(Cheers.) What have we done with that? A very large proportion has been absorbed in new works, and a portion in exploration and development—not new work. New work is charged to capital—the exploration and ordinary development of the mine (dead work) all goes to revenue. What is the nett profit you have had out of this 43,000Z? The nett profit is a little over 14,000Z, of which we have used 10,000Z for putting up the 20-stamp mill and all the buildings about the place, driving the James tunnel, and doing all the new work essential to the better opening out of the mine; but prospecting and dead work have all gone into the costs; and as at one time there were only 10 stamps at work, and, therefore, only 500 to 600 tons crushed monthly, the working costs would necessarily be very heavy, and not a criterion of what they are going to be in the future. The whole working costs, including San Francisco and other expenses, work out at 6.75, but what are we going to do in the future! Last half-year the cost was brought down (including extraordinary expenses) to \$6 in San Francisco and London. I shall not be content, when once we have 30 stamps instead of 20 going, and when we are able to crush 1,500 to 1,600 tons a month, if we do not get the whole of the costs down to \$5 a ton; so that whatever the ore is worth over \$5 should mean profit, and I divide that expense of \$5 into \$4.25, at which cost I fully expect Capt. James can work and develop the mine, and I allow the other 75 cents. for taxes, Californian and London expenses. Now, in accounting for the proportion of London expenses, it is only right now that Uncle Sam should relieve Plumas by bearing one-half the expense instead of one-quarter, as before, and should prosperity come to the Buttes it will have to contribute in the same ratio—the new ratio for Uncle Sam commencing from July 1. What is that likely to give you in return for the 30,000Z. you paid for Uncle Sam and the 10,000Z. out of your profits for developing it?

100,000 TONS IN RESERVE.

The most moderate estimate of the reserves of ore laid open at present, not dealing at all with any of the lower shoots, is 100,000 tons, and if you are going to have an average of \$10, and a working cost of \$5, it means 1Z. a ton profit, which means again 100,000Z., you may say, almost in sight. If you think I am rather too buoyant on this occasion you may discount it and put it down as 80,000Z., as the most moderate estimate of the present value of Uncle Sam as justified by its actual development. (Cheers.)

A SHAREHOLDER: You say it does not include the third level?

The CHAIRMAN: I say it does not include any of the eastern shoots below the second level, but of course it includes the western where the mine is laid open. I think that goes some distance towards atoning for the unpleasant communications I have had to make about Eureka. We have had two strong pieces of good fortune, one important, and the other well—we do not know how to speak of it. It was quite a question with the managers whether they would drive for the eastern or the western shoot. Now, we have laid open this fine body of ore sooner than we should have done if they had driven for the eastern shoot. They are making a rise into it, and are up 40 to 50 ft., and where the rise is going the ore is estimated at \$8 per ton, and is 10 ft. wide. The other piece of good fortune is that we have bought the Vannoy extension. The western shoot will go into it. It would have been of no use to the owner, but it is to us. I will close with a few figures which the public may read for their information even if it should not be news to the shareholders. Our report of Buttes and Plumas Eureka has been rather doleful of late, but we wish to deal with the shareholders and also with the public with constant truthfulness, and are not grateful to people who try to write up the property unduly. Taking the reserves and our whole interests in Uncle Sam at their cost value, and the dividends paid by these mines, they have actually

MADE A RETURN TO THE PROPRIETORS OF \$73,984Z.

(Loud cheers.) I will now move the adoption of the report and balance-sheet.

Mr. WRIGHT (director) seconded the motion, which was carried.

The CHAIRMAN proposed "That a dividend of 1s. per share, free of income tax, be and is hereby declared on Plumas Eureka Mine shares, payable on the 16th inst." I hope it will not be necessary to come down to a dividend of 9d. instead of 1s., but I am afraid it will, as you will bear in mind what I have already said on the subject.

Capt. DE HOGHTON seconded the motion, which was carried unanimously.

STAFF REMEMBERED.

The CHAIRMAN, in proposing a vote of thanks to Mr. Johns and the officers of the mine, and the secretary and officers at home, said that this company had always been admirably served by its staff. That, he concluded, would be carried unanimously—(cheers)—so that the business of the meeting was now closed.

A cordial vote of thanks to the chairman and directors was carried by acclamation.

SHAREHOLDERS CAN RELY ON MR. TENDRON'S STATEMENTS.

Capt. DE HOGHTON, in supporting it, said: I am a shareholder in many companies, but in this one I feel that in every word that falls from the chairman, directors, secretary, or mine captains, implicit reliance can be placed. Too often you have to sift the truth from a mass of misrepresentation, but the remark I have made about this company, I feel sure that every shareholder will endorse.

Prof. LAMBERT: I, too, wish to say that I am struck always by the straightforward character of the statements made at these meetings. I have said so before, because it is quite unique in my experience of mining undertakings. Here we do not get any extravagant promises and, shortly afterwards, equally extravagant disappointments. We are told on each occasion the exact state of affairs. Mr. Tendron never promises us anything but what he is perfectly sure he can perform, and I must say that I regard the value of my shares as somewhat more than the market value, because whilst I put down a certain proportion of value to the credit of returns of gold, I put an additional propor-

tion of value on account of the pleasure I feel in coming here and finding that I am in the hands of honest men. (Cheers.)

GREAT LAXEY MINING CO.

PROSPECTS OF THE MINE—A DIVIDEND DECLARED—ENCOURAGING STATEMENTS.

THE annual general meeting of the shareholders of the Great LaxeY Mining Co., Limited, was held at St. James' Hall, Douglas, on Wednesday.

Major Spittall

(chairman of directors) presided, and the other members of the board present were Capt. Penketh, H.K., Mr. W. B. Stevenson, J.P., and Col. P. Paget Moseley. Mr. J. D. Rogers, the secretary, was in attendance; as also were Capts. F. Reddcliffe and W. H. Rowe, the managers of the company's mine.

A ROUGH PASSAGE.

The CHAIRMAN: You will have observed that we have one director short—absent. I am sorry to inform you that Major Tempest has been exceedingly unwell, and is, consequently, unable to attend the meeting. Perhaps it is as well, considering the delicate state of his health, that he did not attempt the passage yesterday, when we consider the experience of his colleague Col. Moseley. (Laughter.) I think he is much better at home. Now, as to the general business of the company, the accounts disclose the fact that Great LaxeY, during the past half-year, has not come up to her usual form. Owing to the circumstances detailed in the directors' report, there has been a falling off in the produce of the mine. These circumstances were quite beyond the control of the management. There has been, as you will see, a decrease in the output of lead of 200 tons—which is very considerable. The decrease in the amount of blende raised is 1,395 tons. The metal market also has been very much against us, and that, with the reduced quantity of ore, leaves us with a deficiency of 3,900Z. It is certainly a very large sum; but we trust that things will improve in the next half-year, and that when we next meet the shareholders we will be able to show a much better return. During the earlier part of the present half-year, on account of the scarcity of water at the surface, we were unable for some time to keep the workings below clear, and consequently we were driven out of the lower levels. They have not, therefore, been worked as they otherwise would have been. Then we have necessarily had a very considerable amount of dead ground to work upon, because, take the 295, which is the lowest level in the mine, we know that we must drive a considerable distance before we can expect to come to anything of a paying description. We know that from the levels above.

HINDRANCES.

Then, again, the want of water at the surface also interfered in the early part of the season with our dressing operations, and we had our rock-drills idle for three weeks, during which time we were replacing the tubing, and also overhauling the compressing machinery. So you will see that we met with a considerable amount of hindrance which we could not anticipate; but, on the whole, the directors deem the accounts very fairly satisfactory. The results certainly are not up to what we shareholders and directors have hitherto been accustomed to; but, as I say, they are fairly satisfactory, and we have every reason to believe from the improved appearances which I will point out shortly, that there will be a very marked improvement in the present half-year. Notwithstanding all these difficulties, we are enabled to declare the usual dividend of 10s. per share, and carry forward a considerable sum without encroaching upon the reserve fund. The reserve fund has been increased by the interest, and now stands at 4,944Z. odd. As I say, we pay the dividend without touching our reserves, and we carry forward to this half-year a substantial balance. But we have not been able to do what we have done upon previous occasions, either increase the dividends or give a bonus. As to the other side of the account, our working expenses have been reduced. The total amount of reduction is close upon a thousand pounds, the exact sum being 979Z. 9s. 7d. It is not all a reduction in labour, because, having sold a less quantity of ore, we have, of course, to pay less royalty. As royalty comes under the heading of working expenses, we have effected a saving in that item of about 500Z. So that, although the result of the half-year's working is disappointing, it is by no means discouraging. (Hear, hear.)

A CHARACTERISTIC OF THE LEVELS.

All those shareholders who have been in the habit of attending our meetings will remember that I have impressed upon them from time to time that some of the levels in Great LaxeY which were the most productive and the most promising were also the most fluctuating. I will refer shortly to the underground parts of the mine. In the 295-fm. level, 45 fms. have been driven from the commencement of the shaft. During the past half year, notwithstanding that the water kept us out for some time, we have driven 33 fms., and we have come upon a lode which gives every indication of being a strong ore-bearing lode. This is the level in which we did not expect to reach ore for a considerable time. This is the level I referred to as having been sunk at 25 fms. below the other level, in order to avoid drivages in what we knew must be dead ground. This level shows all indication of the levels above which have been so productive when they were further advanced. We have every reason, therefore, to believe that the 295 has advanced to the ore-bearing portion of the levels above, and that it will be equally productive. The agents say that it is exactly of the character at this increased depth of several of the levels in succession over it. The 278-fm. level north has been advanced 27 fms. For the first 10 fms. the lode was distributed by a succession of slide joints, in places making small rich pockets of ore; then followed by a more settled run of ore for about 15 fms. in length, varying in value from 12Z. to 25Z. per fm., succeeded by a short run of poor ground to within 2 fms. of the present end. That has considerably improved, and the

PRESENT END IS NOW WORTH 25Z. PER FM.

(Applause.) The 266 is a level which I have always referred to as being the most fluctuating. It has been driven 30 fms., which, however, does not include the cross-cut of 4 fms. at a point where the lode

was thrown by a slide to the east. The first 10 fms. were more or less in a nip. That was part of the dead ground that we had to pass through. The last 20 fms. was in a good lode, varying from 12% to 35% per fm., and averaging about 20% per fm. It will be satisfactory to you to know that in the last 10 days that has opened up to 40% per fm. (Applause.) The 255 last half-year was left in poor ground. That level has been extended only 18 fms. during the half-year, the men having been taken off that and put on to Dumbell's shaft, a work which was of more importance. But a cross-cut was driven from that to the east, and a winze has been sunk in the 255 down to the required depth to the level of the 266. It is 15 fms. in advance of the 266, however, so that they will not be joined for a while. That winze has been in ore worth 25% per fm. When, however, the 266 is driven to join the winze from the 255, we have the assurance that we shall come into the lead which comes down from the 255. (Hear, hear.) At the same time this winze gives us the advantage of ventilation. (Hear, hear.) If we look at the position of the mine at present as reported upon, and compare it with the previous half-year, we shall find that there is a great improvement in all the ends. The 271 at that time was worth 15% per fm. It is now reported at the value of 20%. (Hear, hear.) The 266, which was then poor, and continued so, as I have shown you, for some little time, is now worth 40% per fm. So that, when we compare the position of the ends, and really the ends are the most important parts to look at in the mine, because it is there that we make discoveries, and it is only by making discoveries in the ends that we can make sure of opening out the ground for future supplies—so that, altogether, our prospects are encouraging. The ends, the most important part of the mine, are, let me impress upon you, of more value than they were at the commencement of the last half-year. (Applause.) I do not know that I have anything more of interest to lay before you, and I therefore move that the reports and accounts be received and adopted and printed for circulation amongst the shareholders.

Mr. KILLEY: I second the motion with much pleasure. The report and your statement are very interesting, and, though not so satisfactory as they have been in some years, there is every encouragement that things are improving, and I think we ought to be very well satisfied with the state of affairs. (Applause.)

Mr. CALEY: Does this motion include the dividend?

The CHAIRMAN: Oh, yes. It is stated in the directors' report that the dividend is one of 10s. per share.

Mr. CALEY: Then the motion is all right. (Laughter)

The CHAIRMAN: We will take care for our own sakes that the dividend is all right. (Renewed laughter.)

Mr. CALEY: I endorse the remarks of Mr. Killey, and though we are not in so good a position as we have been in former years, I think, in the course of a short time, we will be able to recover, and perhaps exceed any former years. I hope it may be so. (Hear, hear.) You have referred to the drought in the early part of the year, and said there was a scarcity of water. Is it, I would ask, the intention of the directors to make a large storage? I would also ask what quantity of water can be stored at present?

WATER.

The CHAIRMAN: We have at present two reservoirs—one a very large one and one of a smaller size. The managers will probably be able to give us some rough idea of their capacity. We require a great deal of water. We have not only to keep the big wheel going, but we have to keep all the machinery at work, and to wash the ore also. We have the two reservoirs, and they were made at a very great expense some years ago. We use the water to the best advantage, and, as a rule, the supply is adequate for all our purposes. But there has never, in our experience, been a spring when the drought was so excessive as it was this year, and I do not think we need anticipate anything like it for some time to come. At any rate, we have lately had plenty of rain, and that should keep us going for some time.

ENGLISH DIRECTORS RE-ELECTED.

On the motion of Mr. KILLEY, the two English directors, Col. Moseley and Major Tempest, were "requested to retire," and they were immediately re-elected on the motion of Mr. BARBER, seconded by Mr. BRUCE.

Col. MOSELEY: I am exceedingly obliged to you for re-electing us. Mr. Barber asks why are the English directors always voted out; but so far as my colleague and I are concerned, we are always glad to undergo that ordeal, because we always have the pleasure of being re-elected immediately afterwards. Major Tempest begged me to say how very much disappointed he was at not being able to get here to-day. He had almost made up his mind to come whether he ought or not; but I said to him, "Take your doctor's advice. You have been under him for two and a-half months, and do not now do anything that might interfere with your recovery unless you consult your doctor." He consulted the doctor, and the doctor would not hear of it. But Major Tempest asked me to write him or see him when I got back, and tell him of all that took place, and he hoped his old friends whom he always met at the meetings here were well and in their places. (Applause.) I again thank you; and let me assure you that we will always do in the future, as we have in the past, the very best we can in the interests of the shareholders. (Applause.)

The auditors were re-elected.

Mr. KILLEY: I beg to propose a vote of thanks to the managers of the mine. They had great difficulties to contend with this year, greater than in ordinary years, on account of the scarcity of water. They must have had great anxiety, and the way they have managed is a credit to them. (Applause.) They deserve the hearty thanks of the shareholders. (Applause.)

Mr. BARBER seconded the motion, which was carried with applause.

Capt. REDDCLIFFE and Capt. ROWE returned thanks.

Mr. KILLEY: I beg to propose that our secretary, Mr. Rogers, have the best thanks of the company for the work he has done so well. He has paid great attention to the affairs of the company. He is very often on the road working for our advantage, and seeing what is going on, and we should give him hearty thanks for his exertions. (Applause.)

Mr. CALEY: I have much pleasure in seconding that. No person in the room is more highly deserving of the thanks of the company than Mr. Rogers. On every occasion when people call upon him he is most courteous and obliging, and he gives them every information. (Applause.)

The CHAIRMAN: No resolution will be put from the chairman to-day which so highly meets with the approval of the directors. We appreciate the services of Mr. Rogers as secretary, and we are much indebted to him for what he does for the mine; and I am glad to see that the shareholders recognise that. (Applause.)

The motion was agreed to with a round of applause.

VIEWS OF AN OLD OFFICER OF THE COMPANY.

The SECRETARY, responding, said: I am very greatly indebted to you for this endorsement of what is now a very old character. I am very glad to find that each endorsement confirms the good opinion which you have of me. I have been 20 years connected with the Great Laxey Mines, and so long as I and the other officers have been connected with the mine our utmost endeavours and sole interest have been bound up in the interests of the Great Laxey Company. (Hear, hear.) I regret that the times have not been so good as in the former half-year. I assure you that has been a source of considerable anxiety to the managers and to myself, but there is no improvement which we can devise for the benefit of the concern that we have not carefully turned over and considered. We shall endeavour to do in the future as we have done in the past, and I hope in the future we shall not only deserve the best thanks of the shareholders, but also promote the better success of the company. (Hear, hear.)

Mr. CALEY: I am sure we should not part without offering our best thanks to the directors for their able services.

Mr. CORKILL: I have very much pleasure in seconding the resolution.

Motion carried unanimously, and with applause.

The CHAIRMAN, in response, said: I am sure it is very satisfactory to the directors to find that their efforts on behalf of the mine are appreciated. There is no doubt that during the past year we have had a very trying time, not only on account of the uncertainty in the market as to what we should receive for our ore, but also on account of the knowledge that we were not raising the amount which we had raised previously. We also had impediments thrown in our way by the want of water, and by the renewal of the compressors and tubes. These were all matters of anxiety, and it is very satisfactory to find that notwithstanding all these drawbacks we receive the thanks of the shareholders, and a renewal of their confidence. I hope that next half-year we shall be in a position that we shall not have all these drawbacks to meet, but that we shall be able to meet you with a very flourishing account. Before I sit down I must ask, through the Press, to be allowed to thank the absent shareholders who have forwarded

PROXIES REPRESENTING UPWARDS OF 5,000 SHARES,

which shows that the confidence reposed in your directors is not confined to the island merely, but that we also enjoy the confidence of the shareholders on the other side of the water.

MIDDLESBOROUGH TOWN CO., KENTUCKY, U.S.A.

A VALUABLE PROPERTY, WHICH HAS BEEN MANAGED WITH INDISCRETION—A RE-CONSTRUCTION SCHEME APPROVED—THE EXECUTIVE TO BE CHANGED.

A CROWDED MEETING of the English shareholders of the Middlesborough Town Co., Kentucky, U.S.A., was held on Monday, at Winchester House, Old Broad Street, E.C.

Mr. H. F. Pollock

presided.

The SECRETARY read the notice convening the meeting.

POSITION AND PROSPECTS.

The CHAIRMAN said: Gentlemen, you have heard the notice read, and it now becomes my duty to lay before you the position and prospects of the Town Co., concerning which a report is, I trust, by this time in the hands of everybody. After expressing his regret at the absence of Sir Frederick Milner, he proceeded: I shall, in the course of my remarks, have to refer to the subsidiary companies, to which reference is made in that report, and I would therefore say that if anybody in this room is a shareholder in those subsidiary companies, it will be understood that the board, so far as possible, will be prepared to answer any questions which may be addressed to them in the course of this meeting, not only with reference to the Town Co., but with reference to the affairs of the Water Co., the Electric Light Co., the Street Railway Co., and the Hotel Co. It is a matter of regret to the directors to feel that the report has not been in your hands earlier. It would have been a much more convenient thing for the directors personally, and far more satisfactory to them as members of this board, if it had been possible for them to have left the perusal and digestion of that report to you for a longer period. But the urgency of the position made this impossible. Mr. Powers, without whose assistance we could not have prepared a report that would have been satisfactory, only landed in England yesterday week, and, without claiming any particular credit to myself for so doing, I may say that I made it my business to journey some hundreds of miles to meet him on that day simply for the purpose of ascertaining how soon he could put his time at our disposal; and, as I shall have to explain in greater detail in the course of my speech, it is the fact that Mr. Powers was only able to postpone all the claims to which reference is made in the report until Oct. 15, and, therefore, it became imperatively necessary for us, as your directors, to call a meeting at the earliest possible date consistent with the preparation of an intelligible report to you. On Mr. Powers' arrival we asked him whether it would not be possible to postpone this meeting until a later date, and his reply was unqualified in its statement that, having regard to the pledges that he had given in Middlesborough, it was essential that he should be able to send some cable to them as to the views of the English shareholders before the 15th inst.

APPARENT HASTE.

I have mentioned these things because it has been stated to the board that some feeling has been expressed on the part of shareholders that the apparent haste with which the notice has been given and the report circulated is indicative of some desire on the part of the

directors that a full opportunity should not be given you for its due consideration. (Hear, hear.) I have said, and I am bound to repeat it, that so far from this being the case, it would have been matter for sincere satisfaction to your directors, on personal and public grounds, if they could have allowed the interval between the circulation of the report and this meeting to have been more extended. So great, indeed, has been the urgency of the matter that since last Monday the board have had practically to be in continuous session in order that they might, after considering the position, present an intelligible report to you, and be prepared with definite proposals. So far as responsibility is concerned, if there be any responsibility, I desire before going into detail to state that the English directors are prepared to accept whatever responsibility belongs to them. They court the fullest enquiry, they wish to place at the disposal of the shareholders all the information which they possess, and they believe that there is nothing in their conduct of affairs since Jan. last which can be the subject of blame. In this respect I may perhaps refer to the language of our report, which I have felt, for myself, may possibly be thought to have a tendency to cast undue blame on the American directors. If there is the least idea in the mind of any shareholder present that we as members of the English board have desired to excuse ourselves at the expense of our American colleagues, let me at once dismiss the thought; but whilst I say this, let me also remind shareholders that responsibility begins when authority commences, and that our authority commenced on Jan. 12 last. Since that date I think I may say, without fear of contradiction either from America or here in this room, that our duties have been confined to going over the past, and that there has not been one single item of expenditure on new account which can be credited to the inception or origination of the English board. On the other hand, whilst I claim for the English board that we seek the fullest inquiry, I should be doing injustice to our American colleagues if I did not on their behalf state that I believe they are equally prepared to make, and, indeed, have made, the amplest disclosure of the position.

AMERICAN IDEAS.

Situated as we were, English shareholders in an American-managed company, we must, I fear, admit the fact that we were liable to have our money matters and our concerns managed by the light of American ideas rather than by that of London experience. That, I take it, was inseparable from our position. But with the new order of things which we have recommended in the report, I see no reason to suppose that that is a danger to which we shall be open in the future. Before passing to the present report and the present condition of matters, let me say a few words with reference to the statement which was issued in Jan. last. That document, as you have been told, was prepared in London by the light of information furnished from Middlesborough by Mr. Arthur, who, until Jan. 12, possessed the full control, and by the light of a statement of account duly audited by Messrs. Deloitte, Dever, Griffiths and Co. Had the money due to us, as therein described, been paid in full it would, I hope, have been unnecessary for me to have addressed you to-day, but the mistake that has been made in Middlesborough has been that they have assumed it would always be summer with them, and have not had due regard to the fact that days of trouble are pretty sure to overtake any enterprise, however sound. With regard to the money which was then furnished, I may say at once that of that amount 40,000*l.* was, in round figures, distributed by way of dividend. It was quite beyond the possibility of anyone in London to know at that time that the sum appearing to the credit of profit and loss, and which amounted to no less than 156,000*l.*, would for the time be nothing but a profit on paper. Had that sum been realised—I feel satisfied that I shall carry every shareholder in the room with me in this—to pay a dividend of 10 per cent., absorbing, say, 25 per cent. only of the money apparently made, was only to divide a profit amongst the shareholders to which they were properly entitled. It is easy, however, to be wise after the event, and no one can regret more than we do that that dividend was ever distributed. We regret it on the broad ground that had it not been distributed it would have been so much money in the till at the present moment, and we regret it on the additional ground that perhaps we in London, who were daily seeing Mr. Arthur, should have considered and discounted to a greater extent than we did the announcement of actual profit which was made to us by our American colleagues. They were, however, confirmed by the audited balance-sheet, and it has been a matter for later discovery that the funds upon which we drew for that dividend have not been forthcoming.

THE PAPER PROFIT.

If I may pause, I would ask you at this moment to turn with me to Mr. Powers' report, in which he states:—

"I have little doubt but that it is simply a question of time before all these notes will be worth 100*c.* on the dollar, as I am confident enough of the ultimate value of these American Association properties to feel that when once the development is in full swing the aspect of affairs here will be entirely different from that which exists to-day, and the natural consequences, of course, would be a great flow inward of capital which would promote that growth and advancement which seems to-day to be very remote. As to the intrinsic value of these notes, I believe them to be sound—first, because the property they represent is to-day greatly improved, and, consequently, of greater value as compared with values in existence when the notes were drawn; and, secondly, in the lapse of time since the notes were given all properties have relatively increased in value. Thus to my mind the company has a valuable asset which normal times will make easily realisable."

I want you, when you consider the proposition that we have to make to you, to bear in mind that this is the language of a gentleman who has the most recent knowledge of your position in Middlesborough, and who, perhaps, is better qualified than anybody in this room to say what is the true value and the profit which was announced to us in Jan. last. Again, let me pause to refer to a paragraph in the report, in which it is stated that arrangements had been made under which subscriptions for any shares not subscribed for by the shareholders would be forthcoming.

GUARANTEEING THE CAPITAL.

You will remember that such arrangements were made in Dec., 1890, and Jan., 1891, or less than six weeks after the whole financial world

had been shaken to its foundations by the news of Messrs. Baring's practical suspension, and we think we are not exaggerating the position when we say that it needed considerable courage on the part of any financial house in the City of London at a time like Dec. and Jan. last to guarantee a subscription of not less than 300,000*l.* to anything. Under these circumstances we do not think that the amount that was then paid for that guarantee (which in all amounted to some 60,000*l.*) was an excessive sum. Every effort was made to get the guarantee on lower terms, but without that guarantee it is now clear that we must, as a company, have gone to the wall at a time when the financial outlook was so bad that there never could have been a prospect of our resuscitation. Without that guarantee it would have been impossible for us to have carried through, not only the Town Co., but the other concerns in which so much English capital is invested, and with that guarantee we have been able to enormously improve our position and property, to learn its true position, and to come before you to-day with a statement which I do not think, before I sit down, you will regard as unsatisfactory. Of the parties who gave that guarantee we can only say that we believe they have lost heavily by it, and it is only fair to them to add that if we could put them back in the position in which they stood before any such guarantee were given they would gladly accept the alternative at our hands.

THE PRESENT REPORT.

With these remarks, I come to the present report. I hope and believe that you will all concur with me in giving a very hearty vote of thanks, before this meeting closes, to Mr. Powers for the report he has made. Mr. Powers is a gentleman whom I have had the honour of knowing as a colleague for more than 12 months. He is an American by birth, and has had large experience in the City of London, the South American Republics, and the United States. When we resolved to have an investigation we appointed him to undertake the work, and he has done it to our entire satisfaction. (Applause.) The situation, as disclosed in the report, has necessarily been one that has dawned upon us gradually. For myself, I was in Middlesborough in the month of Mar. in the present year, and so little then was the true position apparent from the account of our managers there that I came home prepared to believe and support their statement that the money due to this company in May and June of this year would surely be paid. My visit to Middlesborough involved no particular function on my part to investigate the books. I was asked to look into the manner in which the money had been spent in the past, and the manner in which the money raised in Jan. was to be expended, and this duty, to the best of my ability, during my short stay in the town, I performed; but I was not asked, and it was not part of my duty, to make any such investigations as Mr. Powers conducted, and I frankly confess that I had no reason to suppose that the wave of depression which since my visit to Middlesborough has passed over the Southern States would have existed with the intensity which has since supervened. Whilst, therefore, the report as rendered to you in Jan. last conveyed an account of the position of the company as it was then understood, it has been a matter of deep regret to the board to have discovered since that date how many obligations had been incurred by the company, which, owing to default and delay in payment by those who are debtors to the company, have since matured without the means of payment. That this was the true position of the case became evident, as the report states in July last, and your directors lost no time in asking Mr. Powers to make the investigation which he has since so ably conducted. He lost no time in leaving for Middlesborough, and we, as I have already explained, lost no time in presenting matters to you. The facts are, gentlemen, that if we can have the courage and the

PLUCK TO STAY BY OUR PROPERTY

we have an estate which will be second to none in the annals of America or her investments. On the other hand, the position to-day, owing to the general depression, has been so acute that, except for the personal efforts of your directors who amongst them raised the amount necessary to enable you so far to "hold the fort"—if I may use that expression—until the 15th inst., creditors would have commenced proceedings and seized your properties. I think it is greatly to Mr. Powers' credit that with that money he staved off all trouble. I am not here to waste time in blaming the American management; that must speak for itself. I do not believe, at a time like the present, in wasting valuable moments over recriminations. I cannot believe that we shall ever find that anything on the part of your American directors has been conceived in wrong or carried out dishonourably. The position of the American directors to-day is—and this Mr. Powers confirms—that they have invested their savings and their fortunes in the future of Middlesborough, and if we fail, we are sure that they will fail also. This is no case of our managers getting rich at the expense of their shareholders. We have been told that the enterprise is a swindle. (Hear, hear, and applause.) We have been told that speculation and dishonesty have been rife amongst our executive; but I come before you to-day with a knowledge gained from personal experience, from personal inspection, and from Mr. Powers' personal report, and I say that, at least, the scheme of Middlesborough and of the surrounding companies has been no swindle, and beyond the condemnation that it has been placed under too ambitious management, there is nothing that can be urged in dishonour of our enterprise. We, however, and they in America must have realised that if such mismanagement has been in the past, you, as shareholders, would claim of us that it should not be repeated in the future. Accordingly, we have insisted that the whole of the American executive should resign, and they have in this, as in other matters, promptly and loyally responded to our demand. You are, therefore, to-day in the position of being offered as from this moment the control of your own property under English methods. Mr. Powers, whose birth as an American and whose experience as an Englishman justifies his accepting the office, is willing to accept the presidency and managing directorship of your company, and not only of this company, but also of the companies with which it is closely interested, viz., the Electric Light, the Street Railway, the Hotel and the Water Co.; and when Mr. Powers is thus in the saddle a complete revision of the office staff and expenditure, not only in America but here, will be made—(hear, hear)—and I believe I may say, as your chairman on this occasion, that the total expenditure

which these enterprises will, as a whole, be run at will be much less than that which it has been in the past.

THE SCHEME.

Finally, I come to the scheme which we have to recommend to your notice. As usual in matters of this kind, your directors have had many proposals put before them, and many suggestions made. I do not believe that you, as shareholders, would have sympathies with any scheme, which, by issuing debentures, would have prejudiced your own position. Upon the question of preference shares and upon the question of assessing the existing shares we have been carefully advised by our lawyers at Middlesborough, and we are told that both would be illegal in Kentucky. Thus it came to be a question with your directors how they could pay due regard to those who, like you, have borne the heat and burden of the day, and make the scheme attractive to those who may be willing to assist you to see this enterprise to its due completion. We think the scheme we have is the most successful one that could have been devised, and I believe, from the support that the directors have received, that the shareholders may be relied upon in large numbers to subscribe the funds they are asked for, and that at the price at which the new company will hold its property we shall soon see a public demand for our 12. shares, which certainly during the past three months has seemed a long way off, and more than was possible to hope for. The scheme is of a very simple nature. Your capital to-day is 600,000*l.* in 120,000 shares of 5*l.* each. We propose to sell our enterprise—stock, lock and barrel—to a new company, if possible, with the same name, and with a capital of 600,000*l.*, in 600,000 shares of 1*l.* We have taken the market value of the shares, and we have come to the conclusion that the middle price is as nearly as possible 2*l.* (A VOICE: 1*l.*.) If it is 1*l.*, it is so much the better for the shareholders. (Oh, oh!) I am only speaking so far as the scheme is concerned. The scheme, as I have ventured to unfold to you, will be that for every 5*l.* share thus held in the old company two fully-paid 1*l.* shares will be issued and allotted. That will absorb 240,000*l.* We shall then invite the shareholders to subscribe for two additional shares of 1*l.* each, and that if subscribed will absorb a further 240,000*l.* We have endeavoured to make the subscription of that capital payable only commensurately and contemporaneously with our own indebtedness. If all that money is found it will be more than enough to put us out of all difficulty, and I believe it will be the last demand that will be made for English capital in Middlesborough. That will leave us with 120,000*l.* of shares unissued, and with ample working capital. So far as the value of the properties is concerned, I shall ask Mr. Powers, who is here, to say a few words. He will tell you that he considers his

VALUATION OF THE ASSETS

most conservative and moderate, and even he shows you a surplus above all liabilities of upwards of 1,165,000*l.* The best indication I have had as to the value of our property is that if we do not preserve it for ourselves there are persons in New York who are prepared to step in and take it from us. (A VOICE: At what price?) You will, I think, ask me

UNDER WHOSE MANAGEMENT

all this future is to be assured. As we stand, our board consists of 10 persons. As we shall be, it will only consist of six, and it is proposed that the board shall be recruited from the ranks of the shareholders who have the largest stake and who have taken the greatest interest in this concern. (Cheers.) I hope the board in the future may consist of the following gentlemen:—Old directors, Messrs. Powers, Hatch, and Pollock; and new directors, Messrs. Matheson and John Higson. For myself, I have no desire to stay on the direction of this company one hour longer than the shareholders may demand my services. I should not wish to retire until the concern is in smooth water. For that end I have worked hard in the past and will work in the future. Before I sit down, let me express our conviction that we have a property in America which every man who has visited has declared to be second to none, and it is, if I may say so, a town property situated amidst surroundings of natural wealth which have never been surpassed, and the money which we now ask you for shall be expended with due regard to economy. In conclusion, he formally moved the following resolutions:—“(1.) That this meeting of English shareholders of the Middlesborough Town Co. do hereby adopt the recommendations of the English directors for the sale of the company's undertaking upon the terms set forth in the directors' report, as submitted to the meeting, and do authorise the board to take all such steps, on behalf of the company, as may be necessary for carrying such recommendations into effect, and for the purpose of effecting the sale of all the company's property on the terms therein mentioned, and the dissolution of the present company.” “(2.) That, with the view to effect the above object, all English shareholders are requested to sign and forward to the directors proxies for carrying the requisite resolutions at the formal extraordinary meeting of the company, which will soon be held at Middlesborough, Kentucky.”

Mr. JACOB HICKSON: I beg to second the resolutions that have been proposed by Mr. Pollock. He has travelled over the ground so admirably that it needs no further comment on my part. I have never wavered in my faith as to the merits of our property in Middlesborough. If the management has proved faulty, that is no reason why the property should be condemned wholesale. (Hear, hear.) It still remains as good as ever it was.

VIEWS OF MR. POWERS.

Mr. E. F. POWERS, who was cheered on rising, said: Mr. Pollock has in the course of his address referred to me in very gracious terms, and I wish now to make one or two observations relative to the work I have done for you in the United States, and my very careful and exhaustive examination of your property. I went to Middlesborough with the sole object of investigating the position of affairs in connection with the Middlesborough Town Co., but I had not been there long before I saw that I must take off my coat and set to work if I were to save not only that company, but its kindred interests, in the shape of the subsidiary companies. I think it right to say here that during all my efforts I received every courtesy and attention at the hands of the American management. In my examination I tried to be as exhaustive and as thorough as possible, knowing that you would require

me to render a full account of my mission. I was glad of the opportunity of going out there, for I have learned somewhat of the origin of these towns. On account of the great enthusiasm and the sanguine temperament of your president, it has been, and is to-day, the laughing-stock of the northern and more settled parts of the United States. Every new town should have natural and legitimate reasons for its existence, and in Middlesborough you undoubtedly have the assembled forces of nature in close proximity to one another—coal, iron, limestone and timber; but, unfortunately, you had a president with an exuberance of spirit. Your property, in my opinion, is

SECOND TO NONE IN THE UNITED STATES,

and if your president had logically sat down and considered what was essential for the development of the town, I am bound to say, with the money at his command, there would have been no necessity for my friends to have appealed to me last summer to undertake this investigation. You have the natural resources in such wonderful profusion and so easy of development, that it is simply a question of doing your business properly, and the money you have invested will be returned to you. In justice to Mr. Arthur, I must say that I do not think either he or his friends have made one single dollar beyond their legitimate salaries; but in the handling of your money he has been lavish and wasteful to an extent that I have never seen before. There was a little too much land speculation—too much “land booming.” Mr. Arthur was eminently successful in finding the right spot for the town site—as near to the coal and iron and timber and limestone as could be found. After that the land sales took place—and here let me say that I cannot recommend you to adopt the principle that has been adopted in the past, which brought in anybody to buy whether they possessed money or not. After the lands were sold the management undertook to draw in manufacturing industries. Most of them are brick-yards and planing mills, and, perhaps, one or two timber concerns. I do not believe in subsidising manufacturers, and especially in the manner in which these subsidies have been given, but in that Mr. Arthur did not depart from a principle which is very common.

ASSETS.

With regard to Mr. Pollock's remarks in reference to the notes—while many were bought on the basis of speculation, I have no doubt that they will yet become valuable, because so soon as the iron ore is converted into bar iron, and the bar iron is made into ingots of steel, and the ingots of steel into all that ranges between an anchor and a needle, people will have money at command; therefore if you decide to carry this scheme through now you have the right to believe that every dollar of those notes will be worth 100*c.* In adopting this scheme you immediately take over an asset which, in course of time, will become a liquid asset. You should take care of what you have got, because in the lands of the American Association you have natural resources such as exist in no other part of the United States—coal, iron, timber, limestone, and mineral paint. The coal is plentiful and of a very superior quality, and I have seen from 65,000 to 70,000 tons of iron on the blast ready to go on the dumps. I have also ridden on horseback into the virgin forests, and seen thousands of acres well wooded. This concern, I say, has simply to be handled in a business-like manner, and you will have a possession of which you will be proud. You have the Louisville and Nashville Railroad in one direction and the East Tennessee and Georgia in the other direction; and besides this, you have to bear in mind that the United States is the largest consumer of iron in the world.

FAITH IN THE PROPERTY.

At present I have not a dollar in this concern, but if this scheme is carried through, I propose to take some shares, because I believe there is money in it. I have been asked by the board to associate myself with this scheme of re-organisation. The offer has come to me, and it is satisfactory, and, as a business man, I accept it; but I want all the encouragement that you can give me, for the position is a difficult and responsible one. If you are all with me, and you give me a unanimous vote, I will be with you, and I will come up every 12 months and give you an account of the position of affairs, and some money, too, I hope, but I will promise nothing as regards that. American capitalists have hitherto kept out of this property, regarding it as belonging to an English company, but all through the south a great deal of American capital is invested in possessions that cannot hold a candle to Middlesborough as it is to-day. If you cannot keep it in your hands, the receiver will be approached by parties in New York, and it will be sold to them, at a great loss to you. I myself was approached upon that point while there, but I declined, stating that I would stand by the English people who had embarked in the enterprise. (Applause.)

QUESTIONS.

Mr. BACHELOR: By dismissing the American board, and thereby more decidedly impressing this enterprise with its English character, do we place ourselves at any disadvantage? What attitude will Mr. Arthur himself take towards us in the future? There have been rumours that he is promoting rival schemes—for instance, a town called “Arthur.” On page 28 of his report Mr. Powers states that he was “about to visit the southern localities.” Perhaps he would tell us wherein we have differed in the course of our career from those eminently successful towns.

Mr. COLLIER: Will the new board dismiss the gentleman they call their agent; and will there be a new secretary to the new company?

Mr. DIXON: I think that in the new company the shareholders should have a voice in the election of directors and auditors, which they have not hitherto had.

Mr. EARL: Who are the two independent gentlemen who accompanied Mr. Powers referred to in the report? I should also like to hear something about the South Boston Iron Co. (Hear, hear.)

A SHAREHOLDER: What are the liabilities in London, referred to on page 30?

THE CHAIRMAN REPLIES.

The CHAIRMAN: In answer to Mr. Bachelor, it is a fact that at the present time on the other side of the town of Middlesborough there is a small village, or hamlet, of the name of “Arthur,” which has been managed by a brother of Mr. Allen Arthur, our late president. That town has sprung up, not through

any effort of Mr. Arthur's, but just as at Cumberland Gap there has sprung up a town; so that I do not think that we have any need to fear the competition of the town of "Arthur." My colleagues and I entirely sympathise with Mr. Dixon's remarks. We cannot convert this into an English company, but, at least, we can undertake that it shall be conducted on the lines of an English company—we can meet you once a year and render you a report and carry out any recommendations you may make; and it will be the pleasure and duty of your directors to invite you to select your own auditors. With reference to the London staff—they have put themselves entirely in our hands. They have been perfectly willing that the concern should be re-organised, and I should be sorry if it were to go forth from the board that we in London have discovered anything on the part of our staff that demands their dismissal. We feel, however, that it is important that a separate office, and a separate agent and secretary, should be employed. As to the London liabilities, I believe they are practically *nil*. Your directors, since they learned the position of matters, have not taken any fees, and they do not propose to do so. As to the South Boston Iron Works, the position is this: We are under an obligation by Mr. Arthur's signature to a contract to subscribe 60,000*l.* to the industry of the South Boston Iron Works. It will, however, be a matter for Mr. Powers to deal with; at any rate, in the scheme now before you we have provided for that.

Mr. POWERS said, in reply to Mr. Bachelor, that his time was so limited that he could get no farther south than Chattanooga, but he was convinced that the coal of Middlesborough was far superior to that of Birmingham.

INDEPENDENT TESTIMONY.

Mr. MAJOR said he had been in correspondence with a member of the Iron and Steel Institute, who visited the Southern States last year. Speaking of the resources of Middlesborough, this gentleman wrote, under date of Sept. 15 last, that "one of the great advantages in the Middlesborough district was the close proximity of the coal to the iron;" and he further added that Middlesborough compared very favourably with Birmingham (Alabama)—or, at all events, would do so when sufficient factories were established for working up the iron produce. The supply of iron ore seemed to be unlimited.

A SHAREHOLDER said he did not believe in the policy of subsidising companies. They had

TOO MANY IRONS IN THE FIRE

as it was, and were suffering in consequence.

The CHAIRMAN said he had no intention of subsidising industries to come to Middlesborough in future; he was only urging them to protect those that were there. An amendment had been put into his hands to the following effect:—"That every member of the old company should receive five *l.* shares in the new company for every two shares of 5*l.* each held in the old company." They were not, however, in a position to carry that out.

The resolutions were put and declared "fully and completely carried."

Votes of thanks to Mr. Pollock and Mr. Powers were then passed, and the proceedings terminated.

DICKENS CUSTER MINES.

PROGRESS OF THE MINES FULLY EXPLAINED.

THE third ordinary general meeting of the above company was held on Wednesday, at Winchester House, Old Broad Street, E.C.

Mr. H. C. Master

presided.

Mr. G. B. BENTHAM (secretary) read the notice convening the meeting, and also the minutes of the previous meeting, which were confirmed.

The CHAIRMAN: Gentlemen, in asking you to adopt the report, and pass the accounts which you have had laid before you, I am going to detain you only a very few moments, as my friend and colleague, Dr. Ball, has kindly volunteered to give an account of the mining operations. This has taken a great onus off my shoulders, and you will get the benefit of having a thoroughly scientific statement of what has been going on at the mine during the last year, its present condition, and a practical plan of what we propose in the future.

CHANGES ON THE BOARD.

I regret very much to have to inform you that since we last met the board have experienced a great loss in the retirement of our late chairman, Mr. Ed. Wolesley, and Col. Robinson. Mr. Wolesley had, as you know, been connected with the company since 1887, was intimately acquainted with our property out in Idaho, and looked after all the detail work in the office. You will, I am sure, therefore endorse the expressions of regret that were made by the board when they found that his resignation was final. At the suggestion of several large and influential shareholders, we invited Mr. T. Allen to join our board. He, as you are aware, has been out to our mines, and has satisfied himself that there is such a property as the Dickens Custer Mines, Limited. I shall, therefore, ask you to confirm his election as a director, as the board think he is in every way an acquisition.

GOOD RESULTS FOLLOW A WISE POLICY.

Our late chairman on Oct. 13 last told you that our policy for the future was going to be "the exploration and working of our own claims at the very lowest expense." From what Dr. Ball will tell you, this policy has been carried out to the very letter. I think you will agree, with very good results, and I must say the highest praise is due to our managing director, Mr. Axford, resident at the mine. He, knowing well the position of the company, has cheerfully grasped the situation, and worked hard, producing good results, while using the strictest economy. This, I think, is a somewhat novel experience to old Dickens Custer shareholders. I may also state that since the last meeting Mr. Axford has got our property

ENTIRELY UNDER OUR CONTROL.

I mean by that it is no longer in the name of an American citizen. With reference to our balance-sheet, I must remind you that it is

taken out only up to Mar. 31, which means there had been more than six months of deadwork. For this reason we thought it only due to the shareholders and fair to the board to send out a short statement of receipts and expenditure up to the latest date possible. This you see completely alters the complexion of our financial position. At the present moment we have our property entirely in our own hands, our mill in good working order, our boarding houses in good repair, over 6,000*l.* at our bankers, and we absolutely

DO NOT OWE A FARTHING.

We can carry on the work at the mines for over a year, even if we do not take a cent out of them, which I hardly think is likely. This being the present financial state of the company, and it being the opinion of several experts that we are likely to come at any moment on rich ore, I fail to see that the value of our shares should be only 1*s.* 6*d.* (Applause.)

IMPORTANT STATEMENT.

Dr. E. J. BALL, who was cheered on rising, said: I told you, gentlemen, when I last had the pleasure of meeting you, that our claims might be divided into three main groups. On the one hand, there was the Charles Dickens low down on the Yankee-fork River, and higher up the river was the mill; and on the other side there were the claims of the Dickens Custer. Further up the valley were the Atlantic and Continental claims, and away at the back the Lucky Boy claims. I told you that this old Charles Dickens at the time I reached the mine was shut down, the shaft being full of water; and there was absolutely no work at all being done on the property, because our late manager, Mr. Robinson, had left us, and the gentleman who had been sent out to take over our financial duties had taken over the mining duties also, and the whole thing was in a transition state. We had the Charles Dickens pumped out, and we examined it. There were two veins there—a wide and a small one, the latter being the richer. The wide vein had been worked on in places, and stopped on considerably; but the little vein as it went deep was said to be lost. Mr. Axford and I, however, succeeded in finding it. The two veins are almost parallel, and the hope was originally that the little vein would form a junction with the larger one, and then ore in considerable quantities would be likely to be met with. A level was driven, and also a cross-cut, but they lost the little vein either for the reason that it had thinned out or else that they did not drive far enough. I told you last year that this Charles Dickens Mine was small, and it was not the mine we were led to believe it was originally; but I also said that neither was it the bad mine which our latest reports seemed to indicate. It was something between the two; and although I could not look forward to its yielding you a dividend, yet I thought it might be possible to gather together some ore from the old stopes, which would place the company in the position I am happy to say it is in to-day.

FINANCIAL TROUBLES OVER.

At the meeting in Oct., 1890, a shareholder asked how long could we go on spending money at the rate we were doing then—losing 18,000*l.* a year. Your directors at that time had grown cautious, and the question was passed over. We certainly did not anticipate being able to tell you to-day that our financial troubles were behind us, and that we are in the position of having 6,000*l.* at the bank with which to go on exploring the workings on the old Custer Mine, which are likely to yield a dividend. (Hear, hear.) From the old Custer workings undoubtedly large returns were obtained. There is the old story about millions of dollars. (Laughter.) Of that I know nothing, but I do believe that the stopes there must have yielded upwards of \$100,000 of ore. The lode, however, was lost. We intend to start at the point where it was lost and try to find it. We have not done any work on the Custer claims this year beyond taking some hundreds of tons of ore from the upper part for our mill. Of course we have been gathering ore from every source we could. On the Continental, too, there was a small shoot of ore, which was worked on the tribute system. On that property they made a small "strike," but it was not anything much, and we do not intend to examine further into it at present, because with the sum of money in our possession now we hope to be able to prove the two points of interest on the Custer claim. I will now ask Mr. Bentham to read you a letter which I addressed to Mr. Axford, and which will show you what we propose to do in the immediate future. (Cheers.)

PROGRAMME OF OPERATIONS.

Mr. BENTHAM here read the following letter:—

With regard to the future working of our own claims, the long cross-cut tunnel you suggest is a financial impossibility. In any case, however, it would, from a mining point of view, be extremely risky, as the question of the Custer vein going to the dip has not yet been settled, and the other existing veins are of no present value. But veins, too, might be barren where struck by the cross-cut (as in the case of the Summit claim), although ore shoots might exist at no great distance on either hand. To prove a vein you must drift on it, and this would not be done if the cross-cut should, as is probable, not strike anything. I see you have come back to the opinion of our property that you held at the time of my visit, but I think that as the most hopeful points of attack have not yet been touched, we have no need to despair. The Charles Dickens working was only a temporary matter from the beginning, to give us a help over the stile; and this it has done. The Summit vein is not by any means of necessity barren because it happens to be so at the two points where we have cross-cut it, and, as it was, we had \$5 assay on one occasion. The Continental vein has scarcely been touched. You did, indeed, find a small pocket, which is a good indication. The last portion of that vein, where it has been thrown by the cross-course, will have to be looked for by and by, as it often happens that veins which are poor or barren on one side of the cross-course which has caused the throw become rich on the other side. Next as to the Custer workings. Directly you shut down the mill please start the following exploration work (I write on behalf of the board):—Firstly, to find the continuation of the Custer vein beyond the point where it was lost along its course on the Summit claim. My opinion is that it has been thrown by the Summit vein. To find it we must (a) either drive on the course of the Custer, with short cross-cuts at intervals in the direction of its junction with the Summit vein, which is probably just on the

crest of the hill, under the roadway leading towards the Lucky Boy; or (b) we must continue the short drift in the same direction on the Summit ledge, which was started during my visit. Then, when at 100 ft. or 150 ft. in, if nothing has been seen of the Custer vein by that time, a cross-cut should be put in towards the Custer ledge and driven until something is seen of it. Of these two courses select the former one if possible. You may remember that Macguire took me along the level on the Custer vein to show me the face of the level where the lode was lost. A sort of underhand stope had been started on the floor of this level, and, progress being difficult, I did not get to the faces. Good ore was found here—so I was told by one of those who had worked at this spot, and that is the reason why we select it instead of the drift on the Summit claim. It is, too, at a greater depth which is a very considerable advantage should anything be struck. I think, too, that it would be easier to get at in winter time. There is a good deal to be said in favour of each of these two courses, but consult Macguire and select whichever he deems best. Secondly, to find the continuation of the Custer vein to the dip. To do this start again (at the same time) the winze below that big stope on the Custer ledge; I mean the winze into which I fell. I do not expect that you will have much difficulty with the water—it was filled with surface water. "I think the Vigus tunnel and the other one still higher up will probably take off most of the water. Take this winze down on the vein whatever direction this may have, and if you should find the vein to be thrown, put in a short cross-cut either way until you strike it. Directly, in such a case, you have ascertained its new direction, we could start a cross-cut from the Vigus tunnel. This work could go on through the winter, as the men could reach the place through the mine housing them on the Unknown. Thirdly, to ascertain, by clearing the end of the level from water, whether the Vigus (or Tonk) tunnel has really struck a large lode as stated. We could not examine this, as a fall of rain has banked back the water at the end of the level, where it takes the turn towards the Summit. Should you select to drive on the Custer vein and not on the Summit, I half expect that you may find some slight break or cross-course throwing the Custer lode to one side, probably away from the Summit lode. In this case, find the lode again by a cross-cut before running the drift, as the drift must be on lode matter—even if the Summit lode has to be taken—and not in the country. All our future work must be on, and not off the lodes, as it was to so large an extent in the time of your predecessors."

THE NEW BOARD.

Rev. Mr. KELLY took exception to the way in which Mr. Allen had been elected to fill the vacancy on the board caused by the retirement of Col. Robinson. He thought the appointment should have been left to the shareholders. He would like to propose that Mr. Bull, the chairman of the re-construction committee, be elected to fill the vacancy. The speaker went on to say that in their new chairman, Mr. Master, they were particularly fortunate, for the shareholders all had the greatest confidence in that gentleman, because of his honesty of purpose. (Hear, hear.)

A SHAREHOLDER seconded Mr. Kelly's proposal.

THE CHAIRMAN: According to the articles of association, any casual vacancy in the number of directors may be filled up by the directors; but it is provided that such appointment shall be submitted to the next general meeting for confirmation or otherwise, and any person so elected shall retain office so long only as the vacating director would have retained it. I may tell you that Mr. Allen represents a great number of shares, and the wish was expressed that he should come on the board. We welcomed him because we thought his knowledge of the mine would be beneficial to us, and we still think so.

A SHAREHOLDER: Has Mr. Allen been out to the mine?

THE CHAIRMAN: Yes.

Rev. Mr. KELLY: I would like Mr. Bull to be appointed, not in the place of Mr. Allen, but in the place of Col. Robinson. Would the board undertake to nominate him?

THE CHAIRMAN: If it is the wish of the shareholders. (Hear, hear.) Our only object in not proposing another director was that we thought we could at present do with four directors, and save the company the extra 100% per annum.

A SHAREHOLDER thought that Mr. Bull had rendered yeoman service to the company, and deserved a seat on the board.

THE CHAIRMAN said it would be more in order to pass the report and accounts, and then the question of the director could be raised. He moved that the report and accounts be adopted.

Dr. BALL seconded the motion, which was carried.

The appointment of Mr. Allen to fill one of the vacancies on the directorate was then confirmed.

AN INDEPENDENT VISIT TO THE MINES.

Mr. T. ALLEN: I did not want to be a director of the Dickens Custer Co. I was pressed for a long time to allow myself to be put on the board. I had shares in the company, and I went out to America and visited the mine at my own expense. Everyone out there speaks well of the probabilities and chances of the company's property. I found a magnificent mill, capable of doing the milling business for all the smaller mines in the region round about. The directors did a wise thing in sending out Mr. Axford, who has effected economies, and gathered around him an excellent staff. I came to the conclusion that if we will only have patience we will derive very great advantages from our property. If you should ever desire to sell the mill to the smaller enterprising miners in the locality, you can get what will, at any rate, amount to 4s. or 5s. per share upon the total capital. I may tell you that I represent the holders of 35,000 shares. I am much obliged to you for confirming my election. (Cheers.)

After some further discussion it was resolved that the directors be recommended to consider the advisability of electing Mr. Bull to a seat on the board.

Mr. BULL: I do not believe in speechifying, but in doing; and if I were elected a director of this company, I would do my best for your interests. I hope, ere long, we shall see the shares at a much better price. I am a "bull." (Laughter.)

THE LUCKY BOY.

THE CHAIRMAN: Gentlemen, the Lucky Boy question has been raised again—this time by our managing director, Mr. Axford, of whom we have very high ideas. He has got an offer from Mr. Treweek of

the property for \$30,000. (A VOICE: Let him keep it.) Some years ago it was offered to us for \$250,000; then we were recommended to buy it at \$225,000; we took a lease of it, and paid a royalty of \$70,000, and then we gave it up. Now it is offered to us for \$30,000. I think it only fair that I should read Mr. Axford's letter to you. The letter was accordingly read, the substance of it being as follows:—

WHAT MR. AXFORD SAYS.

"There are two plans of action, one of which, in my humble judgment, should be carried out. The first is to buy the Lucky Boy Mine if they can get it, and can see their way clear to manage the finances for the purchase and working of it after. The other plan would be to shut down the Dickens Mine, and with a staff of 10 or 12 miners do some prospecting work in the old Custer Mine workings; also a little more work on the Unknown. I favour the Lucky Boy scheme, for this reason: In the Lucky Boy you have ore in sight, and should we be lucky enough to find the ore going down it would mean a big thing. We know what the mine has done, and for my own part I cannot see why the ore body should decrease and give out entirely in the deep. Of course, it is a speculation; if it were a certainty you would not have the mine offered for \$30,000. So is the other scheme I have pointed out, only I think more risky. In the Lucky Boy you are playing for a much bigger prize. I look upon matters thus: Here we are, come to the last chance of raising cash, and two proposals are before us—prospecting the Custer working, with nothing in sight, on one hand, and buying the Lucky Boy Mine, with ore in sight, on the other. Of course in carrying out the Custer working scheme we may strike a good body of ore, but I believe our chance of success is much greater in the Lucky Boy. Should the board decide in favour of the Lucky Boy scheme, and make up their minds to offer what they can afford under the \$30,000 to Treweek for the same, I hope they will cable me as quickly as possible the price they wish to give. My opinion is (under the circumstances) the mine is worth, as a speculation to the company, from \$20,000 to \$25,000. If it can be got for less so much the better. Don't think there is that amount in sight; there is a good bit in sight, and the remainder of the purchase price and a good profit besides is worth, I think, the company speculating on."

A CABLE.

The following is a copy of a cable received from Mr. Axford on Sept. 22:—"I estimate the amount of ore in sight at Lucky Boy \$50,000. Conservative measurements. Good ore is still being found 30 ft. deep in winze No. 2 below the lowest level. Send by telegraph offer. I advise buying."

Dr. BALL said that he had recommended the purchase of the Lucky Boy for \$8,000, and at that time he might have felt inclined to go to \$10,000; but since then it was stated that a certain ore-shoot which was supposed to have given out was still going down, and that increased its value according to the quantity of ore in sight. The board still thought, however, that \$10,000 was sufficient, and would not recommend giving any more.

A SHAREHOLDER: The purchase of this property would involve us in a call. Why should we throw our money away to these Yankee speculators? (Hear, hear.)

DISPUTED POSSESSION.

Mr. DUSSELDORF read a long statement containing some serious charges affecting the previous management in America and the Lucky Boy property. He contended that the company had already paid for the Lucky Boy, and they had only to go and take it. There was no necessity for exposing one's hand; let them give him the authority and he would secure the property for the company.

THE CHAIRMAN said that they had heard that the company had a right to the Lucky Boy, but it would involve them in a long fight, and they were advised that it would be a difficult and almost impossible thing to prove. With only 6,000% in hand, he thought it would be injudicious to risk a costly litigation. He would be only too pleased to talk the matter over with Mr. Dusseldorf, but it was out of place to discuss the question here.

The auditor, Mr. Gerard van de Linde, was re-appointed.

The meeting closed with votes of thanks to the chairman and directors.

FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING CO., LIMITED.

PROFIT OF 1,781%.

THE directors have received advices from the mines, dated Aug. 22 and Sept. 6, also a letter from Messrs. Restrepo, dated Aug. 12. The statement for the month of Aug. is as follows:—1,427 tons of ore produced—bar gold, 2,186 ozs.; tributary gold produced—bar gold, 197 ozs.; bar gold, 2,383 ozs.; also 4,800 lbs. of sulphurets, valued at 523% 11s. 9d. Estimated value of the gold and sulphurets, 5,587% 13s. 4d.; cost at the mines, Medellin, and in London, and paid for gold bought of tributary, 3,806% 2s. 7d.; estimated excess of returns, 1,781% 10s. 9d.—J. J. TRURAN, Secretary.

MEXICAN MINERAL RAILWAY CO.—Viscount Grimston has joined the board of directors of this company. The plan of the railway, showing progress of works to date, has been received from Mexico, and is on view at the company's offices.

HOLLOWAY'S PILLS.—Pure blood.—When the blood is pure, its circulation calm and equable, and the nerves well strung, we are well. These Pills possess a marvellous power in securing these essentials of health by purifying, regulating, and strengthening the fluids and solids. Holloway's Pills can be confidently recommended to all persons suffering from disordered digestion, or worried by nervous fancies, or neuralgic pains. They correct acidity and heartburn, dispel sick headache, quicken the action of the liver, and act as alteratives and gentle aperients. The weak and delicate may take them without fear. Holloway's Pills are eminently serviceable to invalids of irritable constitution, as they raise the action of every organ to its natural standard, and universally exercise a calming and sedative influence.

The Lists of Subscription will Open on Monday, 19th inst., and close on Wednesday, 21st inst. for London, and Thursday, 22nd inst., at 12 o'clock, for Country Applications.

The object of this company is to amalgamate the businesses referred to in this Prospectus—which, as certified herein, show Net Profits for the year 1890 of £109,224—and by this means still further increase the profits by general economy from centralised management

The Manchester and Liverpool District Banking Company, Limited, are authorised by the Directors to receive applications for the undermentioned Capital. Subscriptions may also be paid into any of the Banks mentioned below.

THE UNITED STEAM MILLERS COMPANY, LIMITED.

Incorporated under the Companies' Acts, 1862 to 1891, which limits the liability of Shareholders to the amount of their Shares.

SHARE CAPITAL, £700,000, divided into 80,000 Seven per cent. Cumulative Preference Shares of £5 each, £400,000; 60,000 Ordinary Shares of £5 each, £300,000.

DEBENTURE CAPITAL, £800,000, in 8,000 Debentures of £100 each.

The preference shares are entitled to a cumulative preferential dividend of 7 per cent. per annum, and to priority in return of capital. The debentures will be issued in bonds of £100 each, bearing interest at the rate of 5 per cent. per annum, payable half-yearly, and are redeemable at the expiration of any ten years at the directors' option, on payment of £110 per debenture. These debentures will be secured by a first mortgage on the real property of the Company, and also by a floating charge on the remainder of its assets. The shares, whether preference or ordinary, are payable as follows:—10s. per share on application; £2 per share on allotment; £1 5s. one month after allotment; £1 5s. two months after allotment.

The debentures are payable as follows:—£10 per debenture on application; £40 per debenture on allotment; £25 one month after allotment; £25 two months after allotment. Taking the net profits of the amalgamated businesses (as per accountants' report) at £109,224 and applying the same as follows, viz.:—Interest on £800,000 debentures at 5 per cent., £40,000; dividend on £400,000 preference shares at 7 per cent., £28,000; dividend on £300,000 ordinary shares at 10 per cent., £30,000—98,000—there will be left to meet directors' fees, office expenses, &c., a surplus of £11,224. As the vendors feel confident that this Company, through the saving of expenses and the trading advantages to be obtained by means of this amalgamation, will secure much larger profits than those above referred to, it is arranged that the directors shall have power (due regard being had to an increased dividend on the ordinary shares), out of such surplus profits, to give periodical bonuses to customers and employees of the Company. The mill owners will take £300,000 in debentures and shares as part payment for their properties, and a large number of applications have already been received from their customers and friends.

TRUSTEES FOR THE DEBENTURE-HOLDERS.

ABRIDGED PROSPECTUS.

The object of this Company is to amalgamate the profitable corn-milling businesses now being carried on by the following old-established firms, whose mills, as will be seen, have mostly been established for very long periods, extending back to the seventeenth century, and are mostly fitted up with modern roller plant of the most recent improvements for labour saving and obtaining flour of the highest quality.

Name of Firm.	Estab-lished.	Address.	Freehold or Leasehold.	Date of Con-tract with Ernest Cutler.
Messrs. Reynolds and Haslegrave ...	1851	Thornes Lane Roller Mills, Wakefield ...	Freehold	Mar. 4, 1891.
" Wright Bros. ...	1825	King's Mill, Wakefield ...	Leasehold	" "
" John T. and S. Fairweather ...	1791	The Fletland Roller Mills, Leeds...	Leasehold	Feb. 24, 1891.

" John Close ...	1841	Biscuit Manufac-turers, Hull ...	Freehold & Leasehold	Feb. 18, 1891.

Whilst the whole of the mills will be under the general control of managing directors, as far as possible each mill will be managed by the present owner, except in the case of Messrs. Ingleby and Sons, who retire from business.

The biscuit factories taken over by this Company, situated in Hull, are largely engaged in supplying the great demand for ship-biscuits from the vessels of this port, whose population is large and increasing with great rapidity, thus creating a continued and constantly augmented demand for their output.

The certificates of Messrs. W. H. Pannell and Co., chartered accountants, as to the profits of the businesses, and of Messrs. Baker and Sons as to the value of the freehold and leasehold premises, plant, machinery, and goodwill, accompany this prospectus. These have been obtained by the vendor to the Company, and the directors have received an independent valuation from Mr. H. Jameson Davis, of Mark Lane, the well-known milling expert, which is enclosed, from which it will be seen that his valuation is £31,500 less than that of Messrs. Baker and Sons; the price originally proposed to be paid to the various mill owners has consequently been reduced by that sum.

The terms on which the Company is to acquire the various properties are set forth in the before-mentioned contracts, which have been made between the several firms and Ernest Cutler, and in a contract of October 13, 1891, between the said Ernest Cutler, the vendor, and the Company. The total amount payable under this contract is £1,163,500, which includes the purchase consideration for the valuable freehold and leasehold properties, with plant, machinery and goodwill, as going concerns, as included in the valuations of Messrs. Baker and Sons, and Mr. H. Jameson Davis, which are respectively £1,216,900 and £1,182,400, Mr. Cutler paying the underwriting and other commissions, brokerages, printing,

Continued on following page.

THE UNITED STEAM MILLERS COMPANY, LIMITED.

Continued from previous page.

advertising, and other preliminary expenses attending his negotiations for the purchase of the properties and the formation of the Company up to the first general allotment of shares.

The above-mentioned businesses will be taken over as soon as possible after allotment, and profits will accrue to the Company from the date of the transfer of the said businesses to the Company.

The present issue of capital will provide, after paying for the properties, a sum of £336,500 for working capital, an amount which, considering the fact that the mills are mostly old established concerns, with their trade in full operation, and with their agents, customers and connections, and all the facilities of their business in full working order, is deemed amply sufficient.

In addition to the before-mentioned contracts, agreements have necessarily been entered into by the said Ernest Cutler as to the above expenses and the issue of the capital now offered, to none of which the Company is a party. There are also trade contracts, leases, agreements, including those between Mr. Shipden Sheridan and the various milling firms, by which he is to receive from them 3 per cent. upon their respective purchase-moneys for services rendered in and about the various negotiations, and also engagements connected with the various properties and businesses to be taken over too numerous to specify. Applicants for shares must be deemed to have notice of these and to have waived all right to any particulars thereof, whether under Section 38 of the Companies' Act, 1867, or otherwise.

As an illustration of the advantages to be derived from an amalgamation of corn milling businesses the published balance sheet of the company known as Spillers, Bakers and Co., Cardiff, having Bristol, Gloucester and Birmingham branches, declared dividends for the years 1888-9 and 1889-90 of 17½ per cent. each year on the ordinary shares of the company, which are quoted £18 per £9 paid share, equal to 100 per cent. premium.

As will be seen by the actual profits of the businesses acquired, a sufficient amount is shown to provide a dividend of 10 per cent. on the ordinary shares, and the directors look forward with confidence to the results of the amalgamation permitting increased dividends approximating to that above mentioned.

It is intended to make application in due course for a Stock Exchange quotation.

The memorandum and articles of association, and copies of the above-mentioned contracts may be seen at the offices of the solicitors of the company.

Applications for shares or debentures must be made on the accompanying forms, and be forwarded to any of the bankers of the Company, with the amount of the deposit payable. If no allotment is made, the deposit will be returned in full, and where the number of shares or debentures allotted is less than that applied for, the balance will be applied towards the payment due on allotment, and any excess returned to the applicant.

Prospectuses and forms of application can be obtained from the bankers, solicitors, and brokers, and at the offices of the Company.

REMINGTON STANDARD TYPEWRITER. A WORD TO BUSINESS MEN.

You cannot afford to do your writing in the old way. The work of our machines is plain and business-like, obviating all mistakes in reading. Several copies can be made at one writing by the use of carbon paper. Excellent letterpress copies can be taken.

Our New Model Machine has been adopted in all the Departments of the Government service, and is being very generally introduced by all leading business houses. Does not this argue that the Typewriter should be worth something to you? The machine can be furnished with special keyboards to suit any purchaser's line of business. Write for full information.

ABRIDGED PROSPECTUS.

THIS Company has been formed for the purpose of acquiring and working a large deposit of silver, lead and zinc ore, the extent of which has so far been proved to be about 2,000 ft. long on the surface. This has been done by the sinking of several shafts, and also by numerous open cuts, all of which show that ore of the same character exists throughout, and of great width with rich patches of pure galena at various places. The engineers state that wagons or tramcars can be loaded direct from the deposit, and the ore at once sold to the smelters at a net profit of £2 15s. 6d. per ton.

If a concentrating mill is erected, the estimated profit is £4 14s. per ton, and if furnaces are erected the profit will be probably increased to £6 per ton.

The profits from the mill alone are estimated at £70,000 per annum, apart from the profit to be derived from the sale of zinc and from ore sold direct to the smelters without treatment at the mines.

The property consists of nine claims, situated in the Black Range, about 12 miles south-west of Kingston, New Mexico, U.S.A., and about 16 miles from Lake Valley, the nearest station on a branch line of the Atchison Topeka and Santa Fe Railroad, one of the main lines from New York to San Francisco. These claims embrace an area of about 180 acres.

Reports have been made on behalf of the directors and on behalf of the vendor. Both engineers state that there is a large body of ore in sight, workable as an open quarry.

The directors do not think it advisable to make any calculation of profits until the property is more developed. Mr. A. J. Mitchell, however, who reports for the vendor, gives the quantity in sight as 400,000 tons, and estimates a clear net profit of £4 per ton, which

would be equivalent to £1,600,000 net profit in sight on an assay value of 37 ozs. silver per ton, and 18 per cent. in lead.

The result of assay of a general average sample of the ore made by Messrs. Johnson & Son, Assayers to the Bank of England, shows 53 ozs. silver, 13.80 per cent. lead, and 16.05 per cent. zinc per ton.

The Silver Mining Company of Lake Valley, New Mexico, has paid £70,000 in dividends since they purchased the mines from the Sierra Grande Company, and the latter company paid £172,000 dividends previously, making £242,000 paid in dividends by a couple of mines only 16 miles east of the Grand Central property.

As an evidence of the profit that can be made from silver-lead ore, yielding an average of about 40 ozs. silver to the ton of ore treated, the Broken Hill Proprietary Company, in their report just issued, states that the shareholders have received over five million pounds sterling in five years, upon a total outlay of £368,000.

The price to be paid for the lease of the mines with all rights thereto is £170,000 in fully-paid ordinary shares and £16,000 in cash.

Prospectuses and forms of application for shares can be had from the bankers, solicitors, auditors, and at the Offices of the Company.

Applications for shares may be made by letter to the Mines Contract Company, Limited, 63 and 64, New Broad Street, London, E.C.

Applications can also be sent direct to the Company and to its bankers.

By the method adopted for providing the working capital of the Company the subscribers to this issue receive in dividends the whole of the money they invest before the vendor takes any dividend on the ordinary shares.

ROBEY & CO., Globe Works, LINCOLN.

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBNEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

MR. W. TREGELLAS, 40, BISHOPSGATE STREET WITHIN, E.C.,

DEALS in all descriptions of STOCKS and SHARES at close market prices.

SPECIAL BUSINESS in Macate Gold (Peru). Strongly advises immediate purchase of shares.

THE ALLIANCE BANK, Limited.

HEAD OFFICE,

BARTHOLOMEW LANE, LONDON, E.C.

Capital, £2,000,000.

Paid-up Capital - - - £800,000.

Reserve Fund, £280,000.

Deposits of £10 and upwards received on current terms, and otherwise according to arrangement.

Every facility afforded for the transmission of money between London, Liverpool, Manchester, SCOTLAND AND DUBLIN, &c., &c.

Circular Notes and Letters of Credit issued, and every other description of Banking business transacted.

R. O. YEATS,
General Manager

CAMBORNE SCHOOL OF MINES.

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for giving instruction in subjects specially applicable to mining students, and in a district where the practice of mining may be observed at the same time.

The subjects taught include Mining, Ore-dressing, Vanning, Assaying, Chemistry, Geology, Mineralogy, Steam, Metallurgy, Plan Drawing, Engineering, &c.

The managers of the principal mines in the neighbourhood will afford facilities to students of the School for studying practical mining.

Prospectuses, and any further information, may be obtained of the PRINCIPAL or SECRETARY.

The Session commenced on Monday,
21st September.

STAMP BATTERY.

MAKERS OF ALL KINDS OF
MINING MACHINERY

Send for Catalogue, and enquire for Particulars of

KROM ROLLS

FOR FINE CRUSHING.

They crush more economically than any other system; produce a more even sample; require less power, less attendance, less wear and tear, and fewer renewals, and are moderate in prime cost. Can be seen at work in London.

KROM ROLLS.

BOWES-SCOTT & WESTERN,

Sampling Works and Laboratory:—

PHOENIX WHARF, CHURCH ROAD, BATTERSEA.

**THE INGERSOLL-SERGEANT DRILL CO.
OF AMERICA,**

114a, Queen Victoria Street, London, E.C.

Telegraph Address: "ENYAM, LONDON."

Chief Office: 10, Park Place, New York.

Cable Address: "IRONCHAIN, NEW YORK."

INGERSOLL AND SERGEANT ROCK DRILLS, AIR COMPRESSORS, COAL MINING
MACHINES, AND STONE CHANNELLING MACHINES.

Section of Ingersoll-Sergeant Rock Drill.

The Only Drill in the Market with Positive Valve Motion and Variable Stroke for Steam or Air.

Equip your mines with "Sergeant" Rock Drills and Air Compressors. Follow the American method of machine mining, and reduce your cost of mining by from 25 to 50 per cent. below the cost of hand labour. Full information given of the system on application.

Duplicates of Sergeant Drills are kept in stock, and can be shipped at a minute's notice.

On View at the Offices of the Company as above, where Catalogues, Estimates, and all Particulars may be obtained.

**GOLD MEDAL AT THE CRYSTAL PALACE MINING EXHIBITION, 1890, and
THE ONLY GOLD MEDAL AWARDED AT THE LEEDS MINING EXHIBITION, 1890**

HIGHEST AWARDS:—SILVER MEDAL, SYDNEY, 1879. SILVER MEDAL, PARIS, 1878.

FIRST SILVER MEDAL, MINING INSTITUTE OF CORNWALL, 1881 and 1883.

Awarded the FIRST PRIZE at the ROCK DRILL BORING COMPETITION, at East Pool Mine, Cornwall, Sept., 1883

INVENTIONS EXHIBITION OF 1885; and the GOLD MEDAL AT LIVERPOOL OF 1886 WINNER.

AND ECLIPSING ALL OTHER MACHINES IN THE TRIPOD COMPETITION AT THE MINING EXHIBITION, CRYSTAL PALACE, 1890.

THE PATENT "ECLIPSE" ROCK DRILL and RELIANCE AIR COMPRESSOR

now supplied to the English, Foreign, and Colonial Governments, and are also in use in a number of the large Mines, Railways, Quarries, and Harbour Works in Great Britain and Abroad, and largely used in the United States of America.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A WEEK OF RAIN—GIPSY HABITS OF THE MINING FRATERNITY—THE DIFFERENCE BETWEEN INSIDE AND OUTSIDE BROKERS—A GOOD WEEK FOR INDIAN SHARES—A SO-SO WEEK FOR ALL OTHERS.

THE weather has, in more senses than one, damped the ardour of the Mining Market. Getting under an umbrella to do business is not calculated to promote extensive dealings or liberal prices. As it was in the days of Noah, so it has been this week—the rains descended and the winds blew, only the family gingham has been found but a poor substitute for the friendly Ark.

But why do not the brokers go into their Mining Exchange and leave the Philistines from the "big house over the way" (the Stock Exchange) to come to them? Well, the truth of the matter seems to be that mining dealers never seem quite to have overcome the nomadic habits they contracted before Mr. Thomas Thompson found them a local habitation at No. 9, Old Broad Street. They seem even yet to be more happy doing business gipsy fashion than sitting down under their own vine and fig tree in the Old Broad Street basement. They prefer "doing a deal" *a la promenade* to fixing a bargain in a dignified sit-at-ease posture. The freedom of the streets is more to their tastes than the recesses of the cavern, which at present does duty as their Exchange.

But Mr. Thomas Thompson and his committee need not despair. Rome was not built in a day, and the Romany Ryes of the Mining Market cannot be transformed or reformed, as by a magician's wand, for the Mahatmas have not yet got to work. Disraeli educated his party through a long course of years, until he made them "dish" the Whigs, and Mr. Thompson and his committee, with careful scholastic training, may ultimately educate their following until the Mining Market may "dish" the Stock Exchange.

By the bye, this reminds us of a riddle we heard put the other day. "What is the difference between a member of the Stock Exchange and an outside mining broker?" Answer: The former goes a buster for thousands and leaves his client in the lurch—the latter makes good delivery or pays him." It should be added that it was an outside broker who proposed the riddle, and not one of his hearers could give him the answer! There is truth in the answer nevertheless, for an investigation of the

facts would prove that the public have suffered infinitely, more by the inside members of the Stock Exchange, "who are not allowed to advertise," than by outside brokers, and members of the Mining Exchange, who do advertise and carry on their business as best it seemeth them.

With this dissertation on things in general, let us without further preface plunge into the subject matter in hand.

The Indian section continues to justify our favourable prognostications. Champion Reefs, which have so often been mentioned in this column as worthy of attention, have this week risen 5s., and at one time were 27s. 6d. buyers, but close somewhat lower. Far too low in price have we considered Goldfields of Mysore to be for several weeks past, and the public are coming to be of the same opinion; for the shares rose 1s. 6d. on the week. Nundydroog and Ooregum, Ordinary and Preference, are also up, and Mysore West and Wynaad, of whose Tank Block property we continue to hear favourable news, are also fractionally better. South-East Mysore fell on the announcement of the forthcoming meeting.

We understand that the Nundydroog directors have decided to start another shaft about 600 ft. north from the present one, and equidistant from it and Kennedy's. This will be satisfactory news to our correspondent "Anglo Indian," two of whose communications we lately published. An esteemed correspondent has written this week pointing out the relative merits of the Colar and the South African mines. He does not wish to magnify the one or to depreciate the other, but he points out with perfect accuracy that the cost of extracting the precious metal in India is infinitely less than in South Africa, whilst all experience has shown that, as depth is attained, the ore becomes richer in quality. He admits the greater area of the South African goldfields, but urges that this should always be kept in view when comparisons are made. Being in touch, as he undoubtedly is, with a large number of shareholders in Indian mines, he gives it as his opinion that the majority of them are holding their shares as a steady investment, and are not concerned with present quotations, knowing that the mines will be their own best sponsors in the by no means dim or distant future.

In the Kaffir section Diamond shares have been firm, with the exception of De Beers. With regard to the recent meeting of this company, our Kimberley correspondent sends us the fullest details, and the impressions he has gathered from what there passed, as well as from the views generally expressed in the district, may be relied upon. In the Land section the movements have not materially altered prices. There has, however, been a good deal of business in Gold Fields of South Africa, whilst the market read favourably the meeting of Read's Drift. In the Gold section the movements also have been without importance—in fact, nothing more than fractional. The week for Kaffir shares, viewed as a whole, has been uneventful.

Copper shares generally are weaker, and the continental selling and drop in the metal forced Rio Tintos down nearly 2½ on the week.

In the Australian market it is rather strange that the satisfactory telegram from Mosman to-day stating that the shaft is down 1,000 ft., and that the character of the quartz has improved, did not favourably influence prices. We call attention in our leader columns to the improved position of Kangarilla mine. There has been but little business in Australian Broken Hills, but the shares are better, and so also are British Broken Hills, on whose favourable report issued in anticipation of the meeting we comment in another column. Gympie Great Easterns have been firmer, and New Queens would have been firmer but for some decidedly sharp and pointed remarks made at the meeting with reference to the heavy expenses of management in London and on the spot.

In the general market, we understand that the call presently to be made on Emma shares will be 3d. and not 6d. as foreshadowed last week. When the result of the St. John del Rey meeting became known the shares firmed up, but do not close at their best. The market applauds the decision of the shareholders. Palmarejos are also better, but the feeling of confidence in the company has never been so great since the circumstances which led to the retirement of the late Mr. Bladon. Golden Leaf shares have

decidedly risen during the week, and bid fair to become one of the favourite stocks of the Mining Market. We understand that Mr. Stewart Wallace has returned from his visit to the property, where he may be relied upon to have rendered useful service. For the most part, other shares have moved downwards, and in the list is to be included American Belle, Gravel Gold Yankee Girl, New Guston, Pahang Corporation, and Emma. For several days during the week the shares of the latter company have been practically unsaleable at any price whatever. Considering the immense flourish of trumpets with which the working season was opened, and the numerous satisfactory reports that were received on which, of course, the recommendations of the shares were based, it is miserable indeed to see the pass to which this promising enterprise has come. We say "promising enterprise," because several of our correspondents who have seen the property, and others who have heard it spoken of in Salt Lake and elsewhere, declare it to be valuable if only it were decently handled. Some explanation of the position of affairs is due from the directors to the shareholders, and when making the threatened call, we suggest they should send a circular conveying all the information it is in their power to give. Flagstaffs have been bought pretty largely without prices being materially altered. A substantial rise is talked of as quite probable within the next few weeks in these shares.

Big Creek Antimony shares have been in demand at $1\frac{1}{8}$ to $1\frac{3}{8}$, at which figure they seem worth attention. Accounts from the mine are of a satisfactory character, and the steadily improving price for the metal should tell favourably upon the profits. The last dividend was 1s. per share.

Tolima "A" shares have been bought at 10l. to 10½l., and the "B" shares at 6½l. This mine (Tolima) and Colombian Hydraulics, which close at 23s. 6d. to 24s. 6d., are considered to be among the best of the Colombian Mines, and some confidence is expressed that both will see higher prices for their shares. Oritas, Colons and Tesoros are very "short"—a fact which should augur well for an improvement in prices. Colombian Hydraulic announces to-day a return of 1.350% at a cost of 630%, which is satisfactory, seeing that the washing is still being conducted upon the poorer class of ground. The mine will, however, in a month or two resume washing upon the main banks, which may be expected to yield greatly-increased profits. Oritas have been bought at 13s. 6d. to 14s. 6d. Tesoros look cheap at 1s. 0½d. to 1s. 4½d., and are regarded as a good "spec." in view of what the mine has done in the past, and the fact that washing will soon be recommenced. Lomas also look cheap at about 1s. (18s. paid), and doubtless will improve as the recent call becomes a thing of the past. Colons are notoriously over sold. The price closes at 4s. to 4s. 6d. The mine is said to be now again at work, and immediate profits are looked for. Much is made of past returns; and the low rate at which hydraulic washing may be conducted should be remembered when calculating the results looked for from this property.

The week has again been a miserable one for Cornish descriptions. Without an exception shares are down, and there appears to be no animation in them either here or at Redruth. Dolcath led off with a fall of 3l., and West Kitty, Cooks Kitchen, East Pool, Killiffrith, South Crofty, Tincoft, and in fact all the mines in which there have been any dealings whatever, have more or less followed suit. Exit Tregurtha Downs—enter Wheal Helena. As we announced last week, Mr. Bishofswerder of Penzance is the proprietor. He has expressed his intention of working the mine with great vigour. The remark is made anent Wheal Grenville meeting last week that Mr. Goold scarcely mentioned the subject of tin ticketing. Why should he? He has already dealt fully with the question, and there is no reason that he should go on until he has beaten it to shreds. Wait until someone attacks him upon it, and then that worthy gentleman will be up in arms and ready for the fray. Time will prove as to whether Mr. Goold or his critics are right in regard to the "glowing terms" in which the former spoke generally of the prospects of the mine. At all events, Capt. Bishop's speech need not be read through entirely before practical corroboration of what Mr. Goold said is found.

The outlook for next week seems to be more promising than when last we wrote. If the weather will only keep tolerably fine it is possible matters will improve. A favourable indication is already seen in the better prices that come from America, which always favourably influence market dealings.

KAFFIRS.

Remarks.—In this market during the week there have been very few fluctuations; if anything prices are below last week. Such shares as Jubilee, Simmer and Jack, Robinson and Stanhope have fractionally declined; but Heriots and Johannesburg Waterworks show a rise; Vogelstruis are also firmer.

Business.—A rise is shown in Henry Nourse of $\frac{1}{8}$; Heriot, $\frac{1}{8}$; Johannesburg Waterworks, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; Randfontein, 6d.; and Vogelstruis, 1s.; whilst a fall is noted in Bothas Reef, 6d.; Croesus, 1s. 6d.; Durban Roodepoort, $\frac{1}{8}$; Glencairn, 6d.; Jubilee, $\frac{1}{4}$; Kimberley Roodepoort, $\frac{1}{8}$; Langlaagte Block "B," 6d.; Luipaards Vlei, 6l.; Main Reef, 1s.; May Consolidated, 9d.; Robinson's, $\frac{1}{8}$; Simmer and Jack, $\frac{1}{4}$; Stanhope, $\frac{1}{8}$; and Witwatersrandt, 6d.

DIAMONDS.

Remarks.—In this class De Beers have been offered day after day, and close considerably below last week's quotations. They are apparently without support. Burma Rubys are also quoted lower. Considerable dealings have taken place in Griqualand West, New Jagersfontein and North Eastern Bultfontein, which close better.

Business.—A rise is shown in Griqualand West, $\frac{1}{8}$; New Jagersfontein, $\frac{1}{4}$; North Eastern Bultfontein, $\frac{1}{8}$; whilst a fall is noted in De Beers of $\frac{1}{4}$; and Burma Ruby, $\frac{1}{8}$.

AFRICAN LANDS.

Remarks.—There has been very little business in this market with the exception of Goldfields of South Africa. These have been

over 2½, but close lower. Read's Drift improved on the meeting. The new manager leaves for the property to-morrow. The only other change is a slight fall in British South Africa Chartered.

Business.—A rise is shown in Bechuanaland, 1½; Goldfields of South Africa, ½; Oceana, 1½; Read's Drift, ¼; South African Gold Trust, ½; and Sutherland Reef, ¼; whilst a fall is noted in British South Africa Chartered, 1½; Southern Land, 1s.; and Zontpansberg, 6d.

INDIANS.

Remarks.—This market has attracted most attention this week; Champion Reefs have been well bought, and at one time were over 1½, but there ensued the inevitable reaction. They, however, seem firm at to-night's quotations, and probably will improve. Mysore Gold, after being better, close at last week's price. Nundydroogs have come in for a good amount of buying at better prices than to-night's, as also Ooregum Ordinary and Preference. In the lower-priced shares Mysore West and Wynaad show a rise on the week, considerable dealings having taken place in them. South-East Mysore are lower.

Business.—A rise is shown in Champion Reefs of 5s.; Goldfields of Mysore, 1s. 6d.; Mysore West, 6d.; and Wynaad, 6d.; Nine Reefs, 6d.; Nundydroog, 2s.; Ooregum Ordinary, ¼; and Ooregum Preference, ¾. There is no fall to note, if we except South-East Mysore, which is 9d. lower.

AUSTRALIANS.

Remarks.—This market has been fairly steady, and the alterations are of very little importance. Australian Broken Hills have firmed up, and close higher. British Broken Hills have also improved. New Queens found buyers, but an impression is abroad, which found voice at the meeting, that the expenses of management are far too high. Scottish Australians are higher on the announcement of the proposed dividend, whilst Wentworths are quoted lower. Kangarillas were firm after the meeting, but do not close at best.

Business.—A rise has to be recorded in the following:—Australian Broken Hill, 1s.; British Broken Hill, ½; Gympie Great Eastern, 3d.; and Scottish Australian, ½. The only falls that call for attention are in Cumberland of 3d.; Kangarilla, 1s. 6d.; and Wentworth Proprietary, 1½.

COPPER.

Remarks.—Owing to the drop in the price of the metal, shares have fallen all round, with the exception of Libiolas, which have risen on the week, and ought to be quoted higher on their merits. Rio Tintos have seriously fallen on continued selling orders from Paris. Masou and Barry and Tharsis have considerably declined. The market closes very dull.

Business.—The only rise in this class has taken place in Libiola of ½; whilst a fall is to be noted in Mason and Barry of ¼; Namaqua, ½; Rio Tinto, 1½; and Tharsis, ½.

GENERAL.

Remarks.—Dealings have been fairly brisk, but the market has not always responded. Golden Feathers and Gates have changed hands considerably, and on the week show a rise. Golden Leafs have been bought to a very large extent, and are quoted much

higher than last week. St. John del Reys, after being lower, close firm on the meeting. Emmas have been offered very freely in anticipation of a call. Tesoros, American Belle, and Yankee Girl are lower, as also Pahang and New Guston, the latter considerably.

Business.—A rise is shown in Golden Feather of 1s.; Golden Gate, 6d.; Golden Leaf, 1s. 9d.; Palmarejo, 6d.; and St. John del Rey, 6d.; whilst a fall is noted in Almada, of 3d.; American Belle, 1s.; Callao Bis, 3d.; Emma, 6d.; Gravel Gold, 1s.; La Plata, 3d.; Monte del Oro, 6d.; New California, 3d.; New Guston, ¾; Pahang Corporation, 2s.; Tesoro, 6d.; and Yankee Girl, 1s.

The following list shows the principal changes which have taken place:—

	Last Week.	This Week.
Almada	1/6 2/	1/3 1/9
American Bell	7/6 8/	6/6 7/
Anstralian Broken Hill ...	11/ 11/6	12/ 13/

LATEST FROM THE MINES.

INDIAN MINES.

NERBUDDA.—The sales of coal for the month of Sept. amount to 833 tons.

MYSORE NUGAR.—A telegram to-day states:—“Mervyn Smith's report confirmed. Indications show that gold exists in abundance on this property. The season is still unfavourable for cheap working of the Honnahatti alluvial; have discovered on the Gapenhalli side very extensive old workings of alluvial.”

COLONIAL MINES.

BRITISH BROKEN HILL PROPRIETARY.—During the week ending Thursday, 15th inst., the yield from the furnace at the mine was 440 tons of ore treated (including 91 tons of iron ore), yielding 88 tons of lead, containing 4,840 ozs. of silver.

BROKEN HILL PROPRIETARY.—During the week ending Thursday, 15th inst., 5,298 tons of ore were treated, yielding 795 tons lead, containing 238,410 ozs. silver.

DAY DAWN BLOCK.—The warrants for the interim dividend recently declared were posted last evening to 2,581 shareholders.

GYMPIE GREAT EASTERN.—A cablegram from the mine, dated Oct. 17, gives the result obtained during the past month, viz.:—“19 days, 475 tons, 537 ozs., 1,850l. value, 1,050l. profit.”

KAPANGA.—Telegram from the manager, viz.:—“Struck payable gold.” Note.—This is in all probability in the 300-ft. level south on Kapanga lode.

MIDAS.—Cable from the mine:—“Yield for week ending Oct. 17, 28 ozs.”

MOSMAN.—Cablegram from the manager at Charters Towers:—“The Wyndham shaft has now reached a depth of 1,000 ft. The ore in the shaft is improving as it goes down. The reef is fully

4 ft. thick. Have crushed 181 tons of North Australian and Wyndham stone for a yield of 265 ozs. of gold. The approximate value of this crushing is 915%. The estimated depth at which the Wyndham shaft should intersect the 1,000 ft. level Eastward Ho reef is 1,015 ft."

NEW QUEEN.—A cablegram gives result of crushing for the past fortnight:—"300 tons, yielding 630 ozs. gold."

QUEENSLAND SMELTING.—Cable from the manager:—"Have shipped by steamers, Duke of Argyll and Taroba, bullion amounting to 4,400%."

FOREIGN MINES.

CASTILLON (PYRENEES).—The company has sold 50 tons silver-lead ore to Messrs. Nevill, Druce and Co., at 9l. 4s. 6d. per ton, f.o.b. Bordeaux.

COLOMBIAN HYDRAULIC.—A cablegram gives the result of run No. 176:—"We have cleaned up after a run of 41 days, during which time we have washed 740 hours. The gross returns are 1,350%; the nett profit is 720%."

CORTEZ.—Sept. result: Production, 34,940 ozs.; expenses, \$15,495; tons crushed, 603; development expenditure, \$4,185.

ELKHORN.—Cable from the mine:—"Bullion produced for week ending Oct. 17, \$9,245."

EMMA.—The following cablegram has been received:—"First drift above level No. 4 north-west 8 ft. wide, iron with pieces galena scattered through, and 3 ins. seam ore on footwall. Drift from Bay City tunnel level north-west on fissure No. 3, vein stuff 4 ft. wide with much ore. Very promising for ore this week. Strongly confirms Prof. Keye's fissure theory."

FRONTINO AND BOLIVIA.—The following cablegram has been received from the manager, viz.:—"Silencio new mill working very satisfactorily 20 stamps.—EUSTICE."

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Now sluicing debris from above gravels, getting good prospects. Head-dam nearly completed. Everything in first-class order. Weather favourable for operations. Will be a complete success, owing to Miocene water. Everything going all right."

GOLDEN GATE ALLUVIAL SYNDICATE.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville:—"Clearing ground at Turner pit, under great difficulty, but gravel prospects rich. Hope to be sluicing during the week. Am drifting to reach pay at two points, which give good indications. Weather favourable for operations. Everything is going well."

GOLDFIELDS OF URUGUAY.—The directors have sold, through Messrs. Pixley and Abel, the bullion produced during the months of July and Aug., which realised 3,052l. 1s. 7d. nett.

MAID OF ERIN.—Cablegram from the mines:—"Gross yield for the week ending Oct. 17, 1,550 tons; estimated value, \$32,000."

MONTÉ DEL ORO.—After a gallant attempt to make this mine pay the directors have resolved to recommend the shareholders to close it. Their principal reason is that the lodes become poorer in depth.

NEW CALIFORNIA.—Telegram from the manager, Oct. 19:—"September output, 394 tons; yield, 182 ozs. of gold; value, 580%; costs, 660%; expenditure on mine development and exploration account, 100%; 2,000 workings improving. New drainage arrangement satisfactory.—RICKARD."

NEW PIERREFITTE.—The company notifies that dividend warrants for the interim dividend of 10 per cent. have been posted.

NO. 7 NORTH-EAST QUEEN.—The company crushed for the past 12 days 250 tons for 385 ozs. gold, value 1,350%. The usual fortnightly dividend of 6d. per share is declared. Crushing continues.

OSCAR.—The manager telegraphs under date Oct. 23:—"Quartz in bottom of shaft is 9 ins. wide, assaying 9 dwts."

RED MOUNTAIN.—The manager writes, Oct. 10:—"I am very pleased to be able to report the shaft and tunnel are both under way, and our mine development progressing steadily."

SAN LUIS.—Cable from the manager in Nicaragua:—"Bullion shipped Oct. 18, 570l." Note.—10 days only have elapsed since the last shipment of bullion.

ZARUMA.—Telegram from the manager at the mines re Sept. produce:—"Mill working 19 days, crushed 550 tons of quartz, producing 185 ozs. of bullion. The vein continues to look very well below the lowest level." The produce for Aug. has been sold, and realised 620l. 8s. 1d.

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 598 AND 599.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

GELDENHUIS ESTATE.—The annual meeting will be held at Johannesburg on the 26th inst.

NORTH-EASTERN BULTFONTEIN.—Telegraphic advice for last week announces 10,500 loads top blue washed; yield, 2,650 carats of diamonds.

GOLDFIELDS OF SOUTH AFRICA.—Advices from Mashonaland state that payable alluvial has been discovered 35 miles north-east of Fort Salisbury.

SOUTH AFRICAN TRUST AND FINANCE Co.—Mr. Sigmund Neumann of Warnford Court has joined the board of the South African Trust and Finance Co., Limited.

CROWN REEF.—Through the misreading of a cablegram an announcement that the annual general meeting of the Crown Reef Company would be held on the 26th inst. was made in error.

NOTRE DAME DES VICTOIRES.—The directors have received from their manager at Klerksdorp, Transvaal, a telegram to the following effect:—"Intersected the Elandslaagte reef. An assay of sample gave 13 dwts. per ton. Not free milling. It is advisable to continue drive."

EDWIN BRAY.—Manager's report for week ending Sept. 19.—No. 2 level: Underhand stoping east and west of winze. Quartz same quality as last week. No. 3 level: Driving and stoping east of winze; quartz good, especially close to the hanging-wall. The rope-way worked well, but required considerable attention. The wear of the hauling wire and rollers has been greater this week than during the previous one, and I attribute this to the excessive heat we have had, which caused the ropes to lengthen considerably, and increased the friction. Battery: Twenty stamps have been working the whole week.

PIGG'S PEAK ESTATE AND GOLD.—Mine report for week ending Sept. 19. Devil's reef, drive 200 ft. level: Tunnel holed this day; correct in levels, also centre; total length, 733 ft. England's reef, low level drive: Drove on the lode, 18 ft.; total, 34 ft. Work suspended for the present. Durnin's new reef, low level drive: Drove for the week, 20 ft.; total, 190 ft. Battery: Battery frames put up and fitted; cam shaft in place and fitted, and traveller frame for lifting stamper rods put up. Tram-line: Nearly finished cutting from drive to trestle work. Engine: Frame put down and cylinders, crank shaft, &c., fitted. Dam: Excavation nearly finished, only two large boulders now to be taken out.—E. J. MURRAY.

JUMPERS.—The profit and loss account shows the gross profit on the mining operations for the half-year to be 6,174l. 14s. 8d., and from this amount the sum of 5,069l. 2s. 10d. has been written off for depreciation of machinery, buildings, &c., leaving a net balance of 1,105l. 11s. 10d. to be carried forward, to which is added the sum of 523l. 6s. 1d., received from the Sandycroft Foundry Co., as allowance for machinery supplied some time ago. The reason for the small profit is, that when the company was in financial difficulties last year, the development of the mine was practically at a standstill, and during the past six months the only ore available was a limited quantity of low grade, in the intermediate level, the next level not being sufficiently opened up to enable any ore to be taken from it.

CERRO DE PASCO.—The directors have received the following advice, dated Barberton, Sept. 21:—"Block F extension: South-east cross-cut has been driven 8 ft., making total distance, 367 ft.; this cross-cut is still in hard slate. Drive south on 10 ft. reef has been driven 11 ft., making total distance, 114 ft.; ore extracted, 22 tons; the reef at this point is very much intermixed with schist. Drive north on 10 ft. reef has been driven 10 ft., making total distance 32 ft.; ore extracted, 20 tons; the quartz in this drive is still heavily charged with pyrites. Air shaft: No. 1 south has been sunk 8 ft., making total distance, 32 ft.; this shaft still continues in hard sandstone. Block 12: North-east cross-cut has been driven 12 ft., making total distance, 230 ft.; this cross-cut is still in mica schist."

VIRGINIA (TRANSVAAL).—The manager reports, Sept. 21:—"No. 1 adit level: I am very glad to be able to report good progress herein; 11 ft. has been driven, making the total distance driven, 128 ft. The lode seems to have met with a cross-head, which has, I think, thrown it to the left hand. We are proceeding in a straight line towards Watch's shaft and Davis' shaft; the ground through which we are passing is of the most congenial kind for the production of gold ore. Blignaut's shaft: In the back of the 81-ft. level near Blignaut's shaft, the lode in the stope is equal to the value of last report, viz.: 1½ ozs. of gold per ton, in my judgment, from pan washing, a fine-looking lode. Nos. 3 and 4 lodes: As soon as time, &c., admits, these lodes also will be tried by levels, &c., on this course, and there is every reason for believing that they will prove to be of much value."

HORO CONCESSIONS.—Report from the superintendent at the mine dated Sept. 16.—I beg to send you below the report of work done here from the 1st to the end of the 15th of this month:—"No. 1 tunnel: The drives east and west from the cross-cut north from the No. 2 west drive have been advanced for 24 ft. to the east, and joined on the west to the tramway drive to the winze; a length of 54 ft. is timbered for stoping, and we have begun to stope. The 6 ft. of gold-carrying quartz met with in the cross-cut to the south from No. 2 west drive is very hard, and only 9 ft. have been driven on this quartz towards the west. Battery: The bulk of the ore sent to the mill has been taken from the open quarry on the reef between the small prospecting shaft and No. 1 shaft. This mode of working is very cheap, but it prevents sorting of the ore, and a large part of the reef is here very low grade. The 20 stamps have run 11 days and nine hours in the month."

GIPIY QUEEN.—Report for week ending Sept. 22.—Comstock Mine: The drive south-west from the bottom of No. 1 shaft has met with better mineral, gold being visible. In No. 2 shaft the stopes have been giving better mineral lately, and the bottom of the shaft has been timbered and widened, to give room for further sinking. I hope soon to have all ready for sending down quartz from the Idaho mine. In the Beaconsfield there is nothing new to report. In the Gipsy Queen the rise is giving good mineral. The new winze, however, carries but little, though it occasionally gives visible gold. The new winze from the No. 2 level on the upper branch will soon communicate with the junction at a point where quartz was met with. The lode in the winze No. 2, on the upper branch is much disordered, being evidently still influenced by the schist intrusion. Result of Gipsy Queen crushing: 330 tons crushed yielded 259 ozs.; and Comstock, 150 tons, yielded 51 ozs."

CAPE OF GOOD HOPE AND NATAL MAIL SERVICE.—The Union Steam Ship Company's New Twin-Screw Royal Mail Steamer Scot, which left Southampton on Saturday, Oct. 3, with the outward Cape of Good Hope and Natal Mails, arrived at Cape Town at 6.25 a.m. on Oct. 19. The Scot's passage was made in 15 days 4 hours net steaming time.

CORRESPONDENCE.

OOREGUM.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—The valuable letter which you published last week from Sir Charles Lawson, on the subject of the Ooregum Mine, puts in a narrow compass the actual position of this admirable property. As one who has watched the progress of Indian mines almost from the commencement, it confirms the view I have long entertained that Ooregum is the finest property on the Mysore Field. In saying that I, of course, mean plainly to infer that I think the shares are far too low in price, though I attribute this partly to the unsettled lawsuits, which, it is to be hoped, will be finally dealt with in the course of the next month, or, at all events, before the close of the present year.—I am, &c.,

INDIAN.

MEETING OF ST. JOHN DEL REY.

SIR,—As one who attended the St. John Del Rey meeting, but who had no opportunity of addressing those present, I should like to say that I think the decision arrived at by the shareholders most wise. Without entering into the merits of the dispute between Mr. Rogers and his colleagues, I feel that it would have been utterly impossible for these gentlemen to have worked in harmony after what took place at the last two meetings. I think that nothing became Mr. Rogers so well as the graceful manner in which he retired from what he evidently saw was an untenable position. I only hope that we shall hear no more of these disputes, but that the company will be allowed to proceed on the even tenor of its way towards that success which in my opinion without a doubt awaits it.—I am, &c.,

RUSTICUS.

THE TOLIMA MINES AND THEIR MANAGEMENT.

SIR,—Having been connected with the Tolima Mining Co. from 1886 until the spring of the present year, Mr. E. Gledhill's letter in your issue of Oct. 17, under the above heading, interested me not a little.

I believe the letter in question will appear to a disinterested reader to be a straightforward appeal for recognition of valuable services rendered in the past, actuated by feelings such as are often felt by one who has resigned a post owing to circumstances which were not altogether of his own choosing. To one, however, who is able to read between the lines, the letter appears more temperate than would have been expected.

But Mr. Gledhill is too sensitive. Why should he be so affected by the bumptious discourse of one who was evidently carried away by the sense of his own importance on the first occasion at which it had been his privilege to address a meeting of shareholders of a successful company of which he happened to be the manager. Mr. Gledhill admits that he had managed the same mines for a period of seven or eight years, during which time he had brought them to a state of prosperity equalling that of their present state. Moreover, no one, and least of all those who know Mr. James G. Green, will grudge him any fame he may achieve from the management of the Frias Mine, and will quite understand his readiness to crow over the success of this one "ewe lamb" of his flock, in which it must be admitted there have been so far a preponderance of "black sheep."

As to the credit Mr. J. G. Green takes for the erection of the new machinery, it must be borne in mind that the Frias Mine is not by any means the only mine that he has fully equipped with similar machinery during the period under discussion, though the plant at Frias may be a little more efficient than that at the other mines, owing, perhaps, to reasons not altogether attributable to Mr. Green or his family. As a matter of fact, Colombia is dotted over with what are locally known as "loberias del Senor Green" in the shape of mining properties, possessing complete plants of mining machinery supplied by the same Aberystwith firm, and which, so far, have never paid a "red cent" of dividends to the shareholders. Of these it is only necessary to mention such mines as Organos, Silencio, Santa Maria, Calamonte, and last, but not least, Tetuan. The fate of these plants of machinery has been various; in one case Mr. James G. Green was only too glad of an excuse to dismantle the mine, two years after it had started, and to sell the machinery as best he could to partly repay the cost of its erection. Thus it may be that the old adage, "A good mine makes a good manager" applies to a certain extent in the case of the Tolima Mining Co.—I am, &c.,

ERNEST R. WOAKES,
Assoc. R.S.M.,
Late Tolima Mining Co.

MESSRS. R. T. BAYLISS AND ROBINSON.

MESSRS. BAYLISS AND ROBINSON, mining and civil engineers, of London, inform us that they have entered into partnership as mining and civil engineers, having offices at 54, Old Broad Street, London, E.C., and at Helena, Montana, U.S.A., Mr. R. T. Bayliss being resident in London, and Mr. G. H. Robinson in Helena. They intend to conduct a general mining engineering business, and are prepared to examine and report upon mining properties or works, also to act as consulting engineers in the direction, operation or erection of any and all works pertaining to the extraction or reduction of ores, in any part of the world. They will give particular attention to American mining, and their long experience in the conduct of large mining and metallurgical operations in the United States, amongst which may be mentioned their management of the works of the Montana Co., Limited (Drumlammon Mine) for the past seven years; and their connection, prior to 1885, with many of the largest silver-lead mines of the Leadville district, State of Colorado, will enable them to render exceptional services to persons desiring information or advice concerning the value or management of mines on the American Continent, and on any question arising under the United States Mining Statutes.

BRITISH BROKEN HILL PROPRIETARY CO.

DIRECTORS' REPORT.

THE report and statement of accounts of this company to June 30 last have been issued to shareholders. The directors state that sufficient progress has now been made in restoring the collapse of the workings to enable some revenue to be derived from the mine. The new furnace at Broken Hill, to which reference was made in the last report, has been continuously at work since April, and the weekly returns of its produce have been regularly published. A fair sum has likewise been realised by the sale of ore and concentrates in the colony at remunerative prices. The result is that the working account shows a balance to credit of 8,745*l.* 3*s.* 9*d.*, and that the profit and loss account yields a profit of 5,893*l.* 4*s.* 8*d.*, which goes to diminish the loss sustained in the previous half-year. These results seem decidedly encouraging in view of the great difficulties that have had to be encountered, and they afford some better promise of the mine being eventually brought into a paying condition. The mining report states: It is only now that it has become possible to resume regular mining work in the region where the fall of ground took place; and though much timbering will still be required to render the upper portion of the cavity secure, the board look for a steady and continuous supply of mineral being extracted from the fallen mass. The poorest class of carbonate ore has yielded the silver lead produced during the last six months, being that, in fact, which was previously cast aside as having no realisable value. It is reasonable, therefore, to expect that ore richer in silver will be obtained when the former sources of supply are again drawn upon. The parallel branch of carbonate ore alluded to in last report will likewise now be worked and developed. Though veins of ore have lately been met with giving a high silver assay, the quantity is insufficient to warrant much hope of greatly improving the yield of silver formerly procured at Port Pirie. It is, however, expected that a reduction will be shown in the mining cost, and probably that a new method will yet be found of turning the sulphide ores to good account. In regard to smelting, the directors report that the new type of furnace erected by Mr. Howell is working very satisfactorily, so much so that a second furnace of the same kind has been ordered. A market in the colony has been found for a fair quantity of our carbonate ore, which is rich in lead but poor in silver, on terms yielding some profit. It has been considered desirable for smelting purposes to have some material in our furnaces which will help the silver yield of the poor ores, and arrangements have consequently been made with the Proprietary Company and Block 10 Company for supplies of their kaolin ores, which are rich in silver. This system promises so far to be profitable to the company. The re-construction of the concentrating plant is being proceeded with, and when completed the directors believe it will turn out first class work. The manager (Mr. Howell) has intimated his intention of resigning, and Mr. Walter Marsh has received a provisional appointment for six months as assistant general manager, during which time Mr. Howell will remain in the service of the company. The directors will then decide whether Mr. Marsh will be appointed general manager. The manager's report goes very fully into the work being done at the different points, both at the mine and the smelting works. He concludes by saying the starting up of furnaces on the mine, and the early commencement of operations by the concentrating plant, with the necessity for active exploration work underground, particularly in the direction of shaft No. 6, make it evident that the time has arrived when the British Company demands the undivided attention of their manager. This, as you are well aware, I cannot afford owing to the requirements of the Proprietary Company's workings and plants taking some of my time and attention. The latter company are now starting up new and important works, which will require much personal attention, and I am therefore compelled to withdraw from the management of your property. As some of the works, however, are of my own creation, and are not yet completed, and, moreover, may not be fully understood by my successor, it has been arranged that for some little time I shall have a certain amount of supervision over these works, but the active supervision of the British mine is no longer possible for me.

REPORTS OF MEETING.

WEST FRANCES.

CALL OF 3*s.* PER SHARE.

A SIXTEEN-WEEKLY meeting of the adventurers in West Frances was held on the mine, on Thursday,

Mr. Walter Pike, J.P.,

presided.

The accounts showed:—Debits: Labour costs, 4,329*l.*; merchants' bills, 2,043*l.*; Illogan parish rates, 42*l.*; bank charges, 54*l.*; total, 6,470*l.* Credits: Tin sold, 110 tons 6 cwt. 1 qr. 8 lbs., realising 5,788*l.*, less lords' dues (1-24th), 241*l.*—5,546*l.*; extra carriage, 19*l.*; discount on merchants' bills, 49*l.*; total credits, 5,616*l.*, showing a loss on the 16 weeks' working of 854*l.*

Capt. JOSIAH THOMAS, in supplementing the report, said the lode in the 174 east was cut a long time ago at the 60-fm. level, and there produced a little copper. He had no doubt that this was the same lode that they had now cut in the 174. Coals were dear, but he was glad to say that he had been offered some for

1*s.* 9*d.* A TON LESS

than they had been giving. With regard to the price of tin, from the statistics it ought to go up. The main point they were looking at for the future was the piece of ground eastward.

Mr. WICKETT: Have the stopes fallen off during the last fortnight? I see you have not returned so much tin by two or three tons.

Capt. JOSIAH THOMAS: We have sampled 119 tons during the four months, but have only returned 110.

On the motion of Mr. HEARD, seconded by Mr. WICKETT, it was decided to make a call of 3*s.* per share.

BRITISH MINING INTELLIGENCE.

CALLINGTON UNITED (Oct. 13).—Redmoor Mine: In sinking the engine shaft below the 125-fm. level to get down to the junction of Johnson's tin lode and the South tin lode we have just discovered an entirely new tin lode. We intersected it about 2 fms. below the level. It is much flatter than the South tin lode or Johnson's tin lode, and from its present dip south in the shaft it will form a junction with Johnson's tin lode about 10 fms. below the 125-fm. level. We have already sunk into the lode about 5 ft., and are not yet through it. The lode is composed of quartz and tin capel, from which we have broken some very rich stones of tin. I consider this a very important discovery, seeing that all these three lodes, in addition to the numerous rich branches met with in the 125-fm. cross-cut to the South tin lode, will come together in the next 30 fms. sinking.—H. BENNETT.

DEVON GREAT CONSOLS (Oct. 22).—Watson's engine shaft: In the 172-fm. level east the lode is 3 ft. wide, and is producing a little copper and mundie ores. In the 160-fm. level west the lode is 3 ft. wide, yielding saving work of copper and mundie ores. In the 148-fm. level east we have met with a cross-course which is about 2 ft. wide, and the lode on the eastern side thereof is producing some good saving work of copper and mundie ores, and is very promising. In connection with this cross-course in the level below the 160, the lode proved productive for a good distance to the extent of 3 and 4 tons of copper ore per fm. Notwithstanding the constant heavy floods, the surface operations on the dressing floors and at the reduction works have been kept going very satisfactorily.—W. CLEMO.

DEVON UNITED (Oct. 22).—Willesford's shaft: In the 144-fm. level east the lode is 18 ins. wide, containing a little copper and mundie ores. In the 144-fm. level west the lode is 2½ ft. wide, also containing a little copper and mundie ores. The lode in the stopes in the bottom of the 132-fm. level west of the shaft, and east and west of the winze, is looking well, and is yielding 3 tons of good copper ore per fm. In the stope in the back of the 132-fm. level west the lode continues to yield 3 tons of copper and 1 ton of good mundie ores per fm.—W. CLEMO.

DRAKEWALLS (Oct. 22).—I regret to have to inform you that, owing to the continuous floods, we are not making any progress in forking the water from the bottom of the mine. It is at about the same place now as when I last advised you, viz., a little below the back of the 147-fm. level. The engine is kept regularly working from seven to eight strokes per minute. Everything is being done to keep as much water as possible from soaking down through the old workings to the bottom. We are keeping the stamps going by day, so as to get all the tin we possibly can. We have a parcel of arsenic soot ready for sampling.—H. RODDA.

LEADHILLS (Oct. 19).—Brown's vein: The stope above the 145 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 35 cwt. of ore per fm. No. 5 winze below the 130 north of Jeffrey's shaft keeps in a vein 3 ft. wide, mostly spar with ore, worth 20 cwt. per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 10 and 20 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is in a strong quartz vein 6 ft. wide, but only spotted with ore, not to value. The 115-fm. level north of Jeffrey's shaft keeps in a promising vein, above 4 ft. wide, charged with spar and ore; worth 35 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, well mixed with quartz, and spotted with ore, not to value. The drift below the 100 south of Wilson's shaft is worth 20 cwt. of ore per fm. The stope above the 85 north of Jeffrey's shaft is worth 5 cwt. of ore per fm. The 70-fm. level south of Wilson's shaft shows a vein 3 ft. wide, mixed with improved quartz, but still too dried for bearing ore. The two stopes above the 35 south of Flat Rod shaft are worth 60 and 40 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein 2½ ft. wide, wholly of quartz, with the exception of one small spot of ore.—T. NEWBIGGING.

PRINCE OF WALES (Oct. 21).—The men in the 180-fm. level west have blasted down the lode, which maintains its size and value, being about 4 ft. wide, composed of tinny capel, spar, and peach of a splendid character, and worth 35% per fm. Those men will again advance by its side in order to make better progress in going forward. There is no change to notice in this level east. Still driving on the flucan lode to find the main lode beyond the heave caused by it. In the 166 west we have also taken down the lode, which is 3 ft. wide, in very hard tinny capel, mixed with copper ore and tin. A good lode, but we have not yet been able to ascertain its value. The ground in the cross-cut appears to be getting harder and larger; formation similar to that about the Goodluck lode.

ROMAN GRAVELLS (Oct. 22).—The 155-fm. level is driven 28 fms. 2 ft.; the vein in the forebreast is getting wider, but will not, we think, show any material improvement until the hanging-wall portion is again reached. The 155-fm. level on Caunter lode is driven 29 fms. 4 ft., vein in present end in three divisions producing about 1½ tons per fm. The 140 on this lode is also worth 1½ tons per fm., and looks like improving. The stopes in back of this level are without change since last week. The winze in the 140 north on main lode is 5 fms. 2 ft., and the vein looks better to-day than it has done for several days past. Other points throughout the mine are just as reported last week. The 50 tons of lead ore sold to-day realised 425%.—A. WATERS and SON.

SOUTH CONDURROW (Oct. 14).—The shaftsmen at Marshall's are busily engaged cutting trip plat below the 138-fm. level. We are not yet through the lode in the 133-fm. cross-cut, but we have cut into it about 20 ft., it is letting out water freely and carries a little tin. The lode in the bottom of the 123 east is worth 14% per fm., the lode in the back is worth 12% per fm. We expect to hole the winze in a few days below the 60-fm. level east of Kings; this winze has been sunk on the north section of the lode, and as soon as it is communicated with the cross-cut driven north at the 70, it will open good ground for stoping.—W. RICH, W. THOMAS.

SOUTH DARREN (Oct. 22).—The shaftsmen are still engaged cutting lodge at the 151, and opening on the lode in the north side; the lode is strong, worth 15 cwt. of silver-lead ore per fm., with a mixture of copper. The ground here is very hard, and progress is slow. It will require next week to cut out the necessary ground before commencing to fix skip road. The stope in the 142 west is worth 1 ton of silver-lead ore per fm. The winze in the 130 west is worth 10 cwt.

of silver-lead ore per fm., with good copper. On Saturday next we intend to sample 15 tons of silver-lead ore. Owing to very heavy rains we have had to keep the engine pumping nearly all the week.—J. MITCHELL.

VAN (Oct. 22).—The cross-cut at the 150-fm. level going towards the south lode is making fair progress in the same kind of ground as described in recent reports. The three stopes over the 150-fm. level (on the old lode) are each worth 15 cwt. of lead ore per fm. The stope (No. 1) over the 135-fm. level on the south lode is yielding 25 cwt. of ore per fm. We have at present four men driving west in the end of this stope, up 5 fms. from the 135-fm. level, and the lode is worth 20 cwt. of lead ore per fm. The drift east from end of No. 2 stope is spotted with lead, but not to value at present. The stope over the 105-fm. level west of Seaham's shaft, is producing 20 cwt. of lead ore per fm. At the 150-fm. level, about 15 fms. east from Seaham's winze, we are cross-cutting the lode, which is strongly mixed with blende and spots of lead. The lode looks like improving, and is letting out much water. In the dressing department we are progressing favourably towards another parcel of 50 tons of lead ore.—J. PAULL.

WEARDALE.—Report on mines for week ending Oct. 17:—Ore raised for week, 31 tons; ore dressed for week, 82 tons; ore, slag, and fume smelted for week, 141 tons, producing 70 tons of pig lead.

WHEEL CREBOR (Oct. 20).—The cross-cutting at the 156 east has been continued during past week, and we believe the footwall of the lode has been struck, but no mineral of any importance has been found. We think it advisable to continue the cross-cut until the country rock is reached. The width of the lode from wall to wall as now seen is 10 ft.; the first 6 ft. from the hanging-wall is composed mostly of friable spar, capel, and arsenical mundie of good quality to the amount of 3 tons per fm. Then we have 4 ft. of soft dark coloured killas, with strings of mundie running through it. Next to this killas there is a branch of spar and mundie, about 1 in. wide, which lays on what we suppose to be the footwall of the lode. The lode in the 156 west of shaft is worth 3 tons of mundie per fm. The appearance of the lode during the past week has improved. All other points in the mine are the same as reported last week.—P. D. HOLMAN.

WHEEL METAL AND FLOW (Oct. 21).—The lode in the 27 end at present is disordered by a slide; consequently, the lode above it is split up, and below it we have a lode from 2 to 3 ft. wide, composed of capel, mundie, spar, and a little tin and letting out a little water. Our return for the past month has been a good increase on the last.—S. P. CURTIS.

WHEEL UNY (Oct. 21).—The cutting down of south part of shaft with the rise in back of 244 is progressing favourably. The last pile from 244 end west assayed a little better. No other change since last week.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ARGENTELLA (Oct. 15).—No. 2 Marine: The ground in forebreast is a little harder. The heading wall is more upright, and is taking a turn south. This is a good feature, as it will bring us so much nearer the Africana lode. It is at the junction of these two lodes we are to expect good results. The forebreast is full of quartz and pyrites, letting out water freely. Quartz reef, Cross-cut south: We are still cutting through bands of quartz and pyrites. The ground this week is easier for driving. No. 3 Rowe's workings, driving east: The strong south wall is a little broken. This, I think, is only temporary, as we are still cutting through the cross-strings of lead and blende. The breaking of the wall retards our progress a little.—J. B. ROBERTS.

ASIA MINOR (Oct. 10).—Ara Dere: The end east from winze is on an improving lode, 6 ft. wide. Chief mine: The lode in winze from intermediate Hamburg is 9 ft. wide, and carries a strong mixture of silver lead throughout. This looks more promising for opening up a new run of ore in depth. The intermediate air shaft: Winze and stope are producing very good silver lead, and the lode in the rise is improving. We hope this work will open up good stoping ground. We are opening up some very fair stoping ground in the hack of Michael, and further trials are being made. The stopes are about the same as last reported. Work in the western part of the property at Pappa Sawa, Dola Dere, and Kaya Bashi is being carried on for the present on tribute, and is yielding a fair amount of ore for the dressing floors. Dressing floors: Production to Oct. 9:—Tons crushed, 10,610, yielding 780 tons rich silver lead ore.

BALAGHAT-MYSORE (Sept. 30).—North engine shaft: The 600-ft. level north has been driven 32 ft., or 299 ft. from the shaft; the quartz varies from 1 ft. to 1 ft. 6 ins. wide, and assays 1 oz. 8 dwts. 14 grs. of gold per ton. The stopes in the back of this level yield quartz of about 15 ins. wide, and assay on an average 5 ozs. 0 dwts. 18 grs. of gold per ton. The No. 1 winze in the bottom of the 500-ft. level south has been sunk 3 ft. 6 ins., or 41 ft. 6 ins. below the level; the quartz is about 6 ins. wide, and assays 16 dwts. 20 grs. of gold per ton. We have not yet been able to clear the 500-ft. level north: this end is, therefore, idle, but its driving will be resumed as early as possible. The stopes in the hack of this level produce quartz of about 14 ins. wide, and assay on an average 1 oz. 11 dwts. 5 grs. of gold per ton. The mid-level, in the bottom of the 410-ft. level north, has been advanced 3 ft. 3 ins., or 42 ft. from the winze; the quartz is now about 6 ins. wide, and assays 6 dwts. 9 grs., and will, I hope, soon further improve. The winze in the bottom of the 410-ft. level north has been sunk 3 ft. 3 ins., or 54 ft. below the level; the quartz is about 1 ft. wide, and assays 2 ozs. 0 dwts. 8 grs. of gold per ton. The stopes in the hack of the 410-ft. level north yield quartz of about 1 ft. wide, and assay 1 oz. 19 dwts. 1 gr. of gold per ton. The plat stopes in the back of the 330-ft. level north produce quartz of about 9 ins. wide, and assays 1 oz. 5 dwts. 23 grs. of gold per ton. The 270-ft. level south has been driven 9 ft. 6 ins., or 741 ft. 6 ins. from the shaft; the end is poor, and I have suspended the driving for the present, and put the machine to rise in the back of the 270-ft. level north of Haines' shaft, and have risen 8 ft. above the back of the level; the quartz is about 1 ft. wide, and assays 1 oz. 4 dwts. 10 grs. of gold per ton. The stopes in the back of this level (the 270 north) produce quartz of about 1 ft. wide, and assay 1 oz. 5 dwts. 23 grs. of gold per ton. The plat stope also in the back of this level is producing quartz of about 8 ins. wide, but the sample this week is poorer than usual being only worth about 5 dwts. per ton. The stopes in the hack of the 270-ft. level south yield quartz of about 9 ins. wide, and assay 2 ozs. 18 dwts. 19 grs. of gold per ton. Haines' shaft: The men are making a little better progress with the

cutting down and putting in the timber in this shaft. The skip road is also laid to within about 6 ft. of the 410-ft. level, and as soon as the timberman can complete a couple of sets of timber below this level we shall be able to fix the skip road to, and commence drawing from the 410-ft. level; this I expect to do in the course of another day or so. I may say we have just drawn a few skips of dirt from the 270-ft. level, and hope soon to be in a position to hoist regularly from this and the 410-ft. level. In the meantime the timbermen will push on preparing the shaft below the 410-ft. level, so that we may get to the 500-ft. level as quickly as possible. Surface: We are pushing on as fast as possible the completion of the pithead gear at Haines' shaft, and have also carpenters, &c., busily engaged erecting tram-road, &c., to convey the quartz from Haines' shaft to the mills.—J. PRYOR.

BIG CREEK ANTIMONY (Oct. 1).—Report from superintendent at mine:—During last month the west drift on No. 3 level advanced 20 ft., making total length 331 ft. No. 4 (400 ft. below No. 3) has been started, and it was my intention to run this in three shifts per day of eight hours, but at your wish I have put on all available force at the mine in active stoping, so as to get a good output before winter. No. 4 level will then be run. The stopes continue to look first class. On the east side of the winze we have an ore body of 30 ft. in length, and much fine ore is being extracted. The stope has been started on the west side of winze at present disclosing a 2 ft. ledge of rich ore, perfectly free from quartz, and clean taking out—60 ft. Still further west another stope has been opened, and good ore is being taken out of this part of the mine. The aerial tramway is working evenly, and I am well pleased with the appearance of the mine and works.

BONNIE DUNDEE.—Mine manager's report for fortnight ending Aug. 29.—Have continued stoping from the back of No. 7 south-west level. There is no change to report east of winze. We are still stoping back on flat run of stone into the hanging-wall. The reef will average about 10 ins., and there is about the same amount in the face at present. In the stope west of winze we have an average of about 10 ins. of reef on the footwall and improving a little in size in stope at present. This stone shows a little gold, and I think should crush over 1 oz. per ton. Have also continued stoping from western side of winze between No. 7 and 8 south-west level. Have about 15 ins. of stone mixed through about 6 ft. of formation. Some of the stone is carrying a large amount of mineral, and shows a little fine gold; the stope is looking better at present than it has done for some time. Have driven the cross-cut to the footwall from No. 8 south-west level a further distance of 11 ft. with two men, making a total distance from the level 47 ft. There is a change for the better in the ground during the last two or three days. This will enable us to make better headway with the driving, and I hope to intersect the footwall formation in a short time. We have driven No. 5 south-west level a further distance of 13 ft. with two men, making total distance from the shaft 172 ft. There is no change to report yet. There is a little stone on both walls, which may open out to a payable reef at any time. At the commencement of the fortnight it was thought advisable to start a man to drive west towards the old whim shaft on the Queen reef from the Just in Time plat to prospect and open up the ground for working. I think we are almost certain to open up a lot of stone with this level. Have driven a distance of 6 ft.; total distance from shaft, 25 ft. Have also put in some timber to secure the level. There is a good deal of quartz coming out of the level, but as yet not good enough to crush. We have raised 60 tons of quartz for the fortnight, making a total in the hopper of 140 tons.

—Cablegram from the managing director at Charters Towers:—“Have crushed 265 tons of quartz for a yield of 266 ozs. of gold.” The approximate value of this crushing is 900*l*.

BRATSBURG.—Report for week ending Oct. 10.—Hoffnung Mine: No. 2 adit level has fallen off in value lately, now worth $\frac{1}{2}$ ton per fm., but indications favour a speedy improvement again. No. 1 rise in the back of this level continues to open up well, still yielding 1 ton per fm. No. 2 rise is worth $\frac{1}{2}$ ton per fm. No. 3 adit level is looking very promising indeed, but as yet there is no improvement in value. The rise in the back here is yielding 1 ton per fm., and the lode is well formed. The lode at No. 4 level is disappointing for value, but maintains a good appearance. The trial level at Murchison's section is producing about $\frac{3}{4}$ ton per fm. Johannes Mine: There is no change to report here. Surface work and remarks: Operations here are going on as usual. The weather is mild for the season, but unusually wet, and although we have commenced to excavate foundations for the new cottages, we are hindered from making desirable despatch. I have pleasure to report that recently we have had numerous applicants for miners' work, and we have considerably increased the number employed.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Oct. 10:—Smelting department: As stated in the last report, smelting has been stopped, and we have been engaged in burning lime during the past week, but we had first to staunch a leak we discovered in the water-jacket before we could proceed doing so. Bessemerising: The necessary converters have been lined ready for a fresh start again, but until we have fitted in position the daily expected wheels, which are to take the place of those broken, we shall really not be ready for work. The exceedingly heavy rain of late has rendered the transport of clay almost impossible. Electro department: The work here is going on regularly, and a sufficient stock of anodes is accumulated at the smelting department to keep running for a considerable time. A batch of copper and battery mud, or residue, was forwarded on the 10th inst.—J. D. HOLMAN.

CALLAO BIS.—Advices from the mines Sept. 26:—Independiente: Since the 13th inst. the shaft has been continued a further distance of 4 ft., or 8 ft. below the No. 4 cross-cut; total depth from surface, 198 ft.; ground still very hard. The No. 4 cross-cut has been advanced south $6\frac{1}{2}$ ft., or $11\frac{1}{2}$ ft. from shaft; ground very hard. The No. 3 level west has been advanced 12 ft., or 94 ft. from cross-cut; lode 2 ft. wide, of fair value. The level driven from the bottom of the No. 2 winze has been advanced 30 ft.; lode 2 ft. wide, of good value. Raise in the back of this level has been advanced 22 ft.; lode 5 ft. wide, of good value. This will be pushed as fast as possible to communicate to the level above. The No. 2 level west has been advanced 5 ft., or 189 ft. from shaft; lode 6 ft. wide, of fair value. The No. 2 north-east on new discovery: At this point I have followed the footwall met with in the bottom of the winze to prove the continuance of this lode. The lode shows 5 ft. wide, of rich value; still

I am not able to form a correct opinion as to its course. Mill results: 488 tons yielded 645 ozs. bar gold, as already cabled, which results are from the sudden turu which has taken place west, where a splendid piece of stoping ground is opening out in reserve for our 20 stamps.

CANTABRIAN (Oct. 10).—Hastings' engine shaft: the lode in the 25-metre level driving east of shaft is not looking quite as well as when last taken down, it being somewhat disordered for the time, and yielding less mineral; this I look upon as only temporary, and believe when the end is in advance of the present disturbed ground the lode will resume its former value. The strata here is become more favourable for progress. During the past day or two the lode in the 25 forebreast west of shaft has materially improved in ore yield, and now worth 1 ton of rich ore per fm.—a fine-looking lode, which is well defined, and promises to produce copper ore in large quantities, both in exploring this end and when developed below the present workings. The improvement here, and which I prognosticated in my report dated Sept. 26, is really very fine indeed, and I cannot speak too highly of its character and ore yield, which, if it continues as good as at present, a profitable section of stoping ground may reasonably be anticipated. The stopes in the back of this level east of shaft are worth 10 cwt. of ore per fm.—Capt. ROSKILLEY.

CASTILLON (Oct. 12).—Since my last work has been going on without interruption. We sampled on 3rd parcel of lead ore, 53 tons. No time will be lost in getting together another lot of blende, 260 tons. The value of the stopes at per cubic fm. are as follows:—St. Jean level: 5 cwt. silver-lead ore and 40 cwt. blende. St. Barbe: 50 cwt. silver-lead and 40 cwt. blende. St. Eugenie—No. 1 stope: 15 cwt. silver-lead, 65 blende. No. 2 stope: 10 cwt. silver-lead and 50 blende. No. 3 stope: 8 cwt. silver-lead and 30 blende. No. 4 stope: 5 cwt. silver-lead and 30 blende. No. 5 stope: 12 cwt. silver-lead and 35 blende. No. 3 level—No. 1 stope: 8 cwt. silver-lead and 30 blende. No. 2 stope: 10 cwt. silver-lead and 45 blende. St. Victorine—No. 1 stope: 50 cwt. blende. No. 2 stope: 12 cwt. silver-lead and 55 blende. Ezpeleta level—No. 1 stope: 20 cwt. silver-lead and 50 blende. No. 2 stope: 7 cwt. silver-lead and 50 blende. No. 3 stope: 5 cwt. silver-lead and 25 blende. The St. Barbe stope has further improved, and has every appearance of continuing. We have met with a mixture of lead and blende in level, driving west, 20 metres south of St. Barbe stope. Here we intend to put down a winze to test this part and drain the stope. We are also cutting in south from St. Barbe main level, where we have struck blende of promising appearance; this we take to be a continuation west of the lode being worked on. Our machinery is in good order and working well.—Capt. J. EDWARDS.

CHAMPION REEF.—Superintendent's report for fortnight ending Sept. 30:—Mysore section—Carmichael's shaft: Cross-cut No. 1 at the 225-ft. level has been extended 16 ft.; total length, 70 ft. By the appearance of the rock in the end we ought to cut into the lode in the course of a few feet more drive. The south drift at the 225-ft. level has been driven 12 ft. 6 ins.; total drive on the lode, 26 ft. 6 ins. During the past week the lode has improved; it is now 2 ft. 6 ins. of quartz, which assays 3 dwts. per ton. The quartz is making a little to the east, and appears to be getting wider as the drift is advanced. Ribblesdale's shaft: Sinking 3 ft. 6 ins.; total, 251 ft.; the rock is very hard and difficult to break. The 240-ft. level north has been driven 20 ft. 6 ins.; total, 86 ft. 9 ins.; and the 240 end south, 27 ft.; total, 94 ft. 6 ins. The lode in the south end is 2 ft. wide, and composed of quartz, which has an assay value of 1 oz. 19 dwts. 5 grs. per ton. In the north end the lode is about 2 ft. of quartz, but the quality of the ore has fallen off in value a little; the average assays for the week gave 9 dwts. 2 grs. per ton. Garland's shaft: Sinking 4 ft.; total depth, 262 ft. The lode in bottom of shaft is 3 ft. wide, carrying $2\frac{1}{2}$ ft. of quartz, which assays 2 ozs. 10 dwts. per ton. There is a decided improvement in the lode since last reported, in size as well as in value. The cross-cut east from the 240 end north has been driven 15 ft. 6 ins., but as yet nothing of importance has been discovered in this direction. The cross-cut will, however, be extended a few feet further, and if no other portion of the lode is met with, the north end will be continued. The 240 end south has been advanced 13 ft.; total length, 102 ft. The lode during the past week has pinched to about 15 ins. wide, and the last assays were not as good as usual, only giving 7 dwts. 20 grs. per ton. Dalzell's shaft: Sinking 8 ft.; total, 275 ft.; the lode continues very regular, and is composed of about 6 ins. of quartz, which give a trace of gold in assay. The 240 end north has been driven 13 ft. 6 ins.; total length, 135 ft. 4 ins. We are driving on the course of the lode, but still south of the shoot of ore. Trial shaft: Sinking 16 ft.; total depth, 122 ft. 6 ins.; in the north side of shaft the old workings are about 2 ft. wide, and on the south side a portion of the lode has been left by the former workers. The line of old workings is apparently dipping north from shaft. Coromandel section: At Prospect shaft the 380-ft. level north has been driven 4 ft.; total distance from shaft, 45 ft. The lode is 3 ft. wide, carrying 1 ft. 6 ins. of quartz, slightly charged with arsenical and iron pyrites; assays across the width of quartz give 16 dwts. per ton, thus showing an improvement in the quality of the ore. The cross-cut west at the 320-ft. level north has been driven $2\frac{1}{2}$ ft.; total length, 18 ft. 6 ins. The winze below this level has been sunk 2 ft. 3 ins.; result of one week's work only; total depth, 38 ft. 3 ins. The lode is 3 ft. wide, and the assay value of all the width of lode is $\frac{1}{2}$ oz. per ton. Surface work: At Mysore section the poppet heads at Dalzell's shaft are erected, and the new hoisting engine started, and working very satisfactorily. The small pair of 6-in. engines that have been doing the work at this place will not be removed to Trial shaft. At Prospect shaft the old head gear has been re-placed by a strong poppet head, which will facilitate the removal of the rock from collar of shaft. The work in connection with the building of Italian quarters and temporary sheds for coolies is progressing favourably.

COLAR CENTRAL (Sept. 30).—New shaft: 200 north has been driven 6 ft., making a total of 53 ft. 9 ins.; the lode is small and very patchy; it is worth 2 dwts. to the ton. The 200 south has been driven 11 ft., making a total of 45 ft.; the end is in the dyke, and there is nothing to value. Winze: Sunk 8 ft. 3 ins.; total depth, 33 ft.; the lode is right across the winze, but it is not very regular, it is composed of strings of quartz and country. The assay value is 5 dwts. 12 grs.

COLORADO.—The manager's report for fortnight ending Sept. 30 is just to hand.—Terrible Mine—8th level west: Now in 545 ft. from Silver-ore shaft; lode 4 ft. wide; mineral vein 1 to 2 ins.; the ore is very rich. The 1st level: Lode 4 ft. wide; mineral vein 2 to 3 ins.;

The 2nd level : Lode 4 ft. wide ; mineral vein 1 to 2 ins. Coin lode—Rockwell adit level : Now 673 ft. from junction of Brown and Coin lodes ; lode 4 ft. wide ; vein 2 to 3 ins. Brown adit level : Now in 655 ft. from cross-cut No. 2 ; lode fully 4 ft. wide ; mineral vein 2 ins. wide ; the ore is improving in quality. Brown lode—Rockwell adit level : Lode 4 ft. wide ; vein 2 to 3 ins. Brown adit level : Lode 4 to 5 ft. wide ; mineral vein 3 to 4 ins. wide. Brown tunnel level : Lode 4 ft. wide ; mineral vein 2 to 3 ins. Mammoth tunnel level : Lode 4 to 5 ft. wide ; vein 3 ins. Silver-ore tunnel level : Two stopes, with mineral veins, 3 ins. and 2 to 3 ins. wide ; lode 4 ft. wide. W. H. Brown lode—Brown tunnel level : Lode fully 4½ ft. wide ; mineral vein on footwall about 2 ins. wide. As soon as convenient sinking will be commenced, and it is expected some good mineral will be encountered. West Terrible Mine : Lode 4 ft. wide ; mineral vein 2 ins. wide, composed of quartz, carrying considerable solid ore. There are 17 points of working, and during the fortnight the various drifts have been advanced 28 ft. The ore is now being prepared for market, and sales will be reported next mail.

COLORADO BOY (Oct. 9).—Mine development : The machinery is erected on the old shaft, which has been repaired down to the tunnel level, and at that point a station cut out to facilitate the handling of the pump. You will remember that we connected the tunnel with the shaft when the first work was done on the property, so the water could be drained to the tunnel level. We have now completed the work by cutting out a station and timbering the shaft securely. We have also done some work on No. 2 ore shoot, as we found the water had fallen off considerably, a winze was started on the ore. It has now reached a depth of 8 ft. and shows a marked improvement, the ore streak, which, on the level, was 12 ins. wide, is now 30 ins. wide, with ore scattered all through it in thin stringers and bunches, as follows :—Grey copper, 1 in. to 2 ins. thick, assaying 400 ozs. ; galena, 1 in. thick, with spots of grey copper in it, assaying 100 ozs. to 200 ozs. ; pure galena (2 ins. to 3 ins.), 30 ozs. to 70 ozs. ; blende, 10 ozs. to 20 ozs. ; iron pyrites, 20 ozs. to 30 ozs. silver. It is impossible to say what the average will be, as so much depends on the sorting. I hope, however, to have a ton lot taken out before this reaches you that will run 60 ozs. silver per ton at the sampling works. The engine and boiler are now in place, and the mine will be unwatered by the 12th, and if the shaft is in decent order we will be sinking by the 15th.—P. ARGALL.

—The following cables have since been received, namely :—

—19th inst.—“Machinery complete in every way Oct. 13 ; commenced sinking 17th ; vein in winze looking first rate.”

—22nd inst.—“Sample shipment to smelters assayed—gold, 2 dwts. per ton ; silver, 70 ozs. to 75 ozs. per ton ; lead, 26 per cent. The developments of the mine fully justify the expectations which have been formed.”

CORTEZ (Oct. 3).—Report from superintendent.—Work at the mines for the week ending this date has been as follows :—South cross-cut, No. 1 east, advanced 4 ft. ; No. 3 tunnel west, stoped 2 tons of ore ; north-east raise, stoped 49 tons of ore ; north-west raise, stoped 164 tons of ore ; run into ore-house, 188 tons of ore ; trammed to mill, 252 tons of ore ; worked at mill, 140 tons of ore. Average assay for the week, 57 57-100 ozs. silver per ton. On Sept. 30 shipped 12 bars of bullion, lot No. 75, containing, as per our assay, 14,750 67-100 ozs. silver and 13 33-100 ozs. gold.

DON PEDRO (Sept. 30).—Monthly report.—Maquine Mine : General remarks : Operations in mine throughout the month have been principally confined to the sinking of Gordon's shaft and rising from the 50 towards same, which is now communicated. The rise has been 4 fms. 1 ft., and close timbered. Size of rise, 2 ft. wide by 5 ft. high. Since the communication, the bottom lift of pumps in Gordon's shaft, being of no more use, has been set idle. The water which the lift had to raise is now going down through rise to the 50 lift in old P. P. incline. The remaining part of Gordon's shaft, which has to be completed, will be sunk comparatively dry. Shaft sunk for the month and timbered 2 fms. Total distance sunk under the 40 horizon, 3 fms. 1 ft. The rise force is now put to open out the ground at the entrance of the old 50 cross-cut to make room for the tramcars, which will then go from the rich deposit direct to the reduction house. After this 50 fm. opening is made, the same force will be put to open a new tramroad drirage from the 50 cross-cut to the No. 4 stope on No. 8 shoot for the removal of mineral from stopes. New adit : Good progress is being made, the ground being of a soft nature throughout the month. We expect here soon to reach the flookan, and if the ground continues dry no trouble will be experienced ; driven for the month 15 fms. 2 ft. ; total driven, 21 fms. 4 ft. New Lobby : This has been advanced for the month 54 ft. ; total distance, 229 ft. We expect to complete this drirage through the mountain next month. The ground still remains hard, and we have to blast the greater part. Old adit : This has had its usual attention by two natives repairing where most required. Gordon's shaft repairs : Some repairs have been done above and under adit. Sets of timber have been put in where required ; also several sets of back laths been placed in place of old. Watercourses : A great deal of work has been done on surface to prevent storm water going to the new reduction department. Paved watercourses have been built to the extent of 296 ft. New gearwork : Preparation for new gearwork is being well advanced. The excavation has been taken out, and the building with concrete commenced. Running work : All work in connection with the mine and at surface has been attended to, and the machinery throughout working satisfactorily.

EMMA (Oct. 8).—My last report was under date of 1st inst., since which time a steady improvement is noticeable on the Bay City tunnel level, in the drifts on No. 3 fissure, both to the north-west and south-east, as well as the face of level No. 3 south-east. The fissure is still widening, is now 6 to 10 ins. wide, filled with iron pyrites, oxidised iron, and decomposed matter, showing occasional small particles of ore ; the rock is much stratified and very much impregnated with iron pyrites. The change now taking place as we advance in this drift certainly indicates ore at no great distance. In the drift on this No. 3 fissure south-east we worked one man ; advanced, 5 ft. ; total, 52 ft. ; this drift, until the past few days, has been in very hard rock, and the fissure tight. The rock is now changing for the better, is getting softer, and the fissure shows evidence of widening, is now about 2 ins. wide, carrying oxidised iron. In the level No. 3 south-east we worked one man ; advanced, 6 ft. ; total, 31 ft. We, this past week, cut through a hard bar of blue limestone, and are now in white lime again, showing considerable iron in seams and small vugs as also some talc. On the Illinois tunnel level we

worked four men, drifting, raising, and prospecting generally the ledge of iron. The work here is irregular as we follow the iron. The vein is still strong, small nodules of galena ore occurring in the mass of iron quite frequently ; this vein of iron, in my opinion, will lead us to paying ore in quantity. On the Emma tunnel we worked nine men stoping and timbering, besides three carmen. We stoped about 60 tons low-grade ore, which has been put through the mill, producing about 6 tons concentrates, worth from \$89 to \$93 per ton. Since 1st inst. have sold lot No. 12 concentrates ; assay value, 49.50 per cent. lead, 71.60 ozs. silver per ton. 10 tons 30 lbs. ore sold at \$32.95 per ton, equal to \$329.74 ; ore sold for month Sept., equal to 36 tons 1,941 lbs., realised \$3,411 ; ore now on hand, 6 tons concentrates, worth from \$80 to \$85 per ton.—H. C. WALLACE.

ESMERALDA.—The superintendent, under date Oct. 23, cables that the north drift on the Esmeralda ledge is now out 37 ft. 6 ins., and the formation of the vein is good. The work on the shaft is being proceeded with, but the east cross-cut to the ledge is not yet started.

FLAGSTAFF (Oct. 3).—I have the pleasure of again reporting the progress made during the past week. Main 6th is now in 325 ft. A few days ago we cut a seam, but there was nothing that would pay to save. We have struck good ore in the new cross-cut on 6th at a distance of 57 ft. ; it is going both upwards and downwards ; it is the same shoot of ore that we have been working on above 6th. I have stopped work on the ore above 6th, as it is too far to handle it. I will put up a rise from breast of cross-cut. I do not think it is more than 25 or 30 ft. to raise to make the connection between those two points. Seventh level : This is now in 182 ft. The raise is up 126 ft. ; there are 3 ft. of good ore in the breast. I have not made connection with 6th yet. I had to send to St. Louis for two check valves for the compressors, and they have not arrived yet. We are ready to start the machinery when they come. Number of tons of ore mined the past week is 11—7 first-class, and 4 second-class.—A. L. SWOPE.

FLAGSTAFF (Oct. 10).—I have the pleasure of again reporting the progress made in the mine as well as the outside during the past week. As regards the machinery, when we came to put the large air pipes together, the expansion joints were too small, so we have got to have two made, and that will delay us another week or more in starting the machinery. Everything else is completed and ready. Main sixth : Since my last we have driven this level 8 ft., making it now 333 ft. in all. There is not much change in the rock, but it is very good in and about both levels. I spoke in my last about a cross-cut I had been driving northward from the main sixth. This I have now named cross-cut No. 2. There is plenty of good ore going both upwards and downwards at this point, and next week I shall begin to extract it, as we now have better ventilation. 7th level : This level has been extended 11 ft. ; we have not worked in the rise this week, as I thought that we were getting too high for connection with the winze that was sunk down from main sixth. I sank 16 ft. and made the connection last night. I have been greatly hoping to make this connection for the last week or more, as it is of so much importance not only in furnishing good air, but for extracting ore. I can now promise you considerably better weekly output in future. I have had nearly all the miners assisting in making the connection which is so necessary.—A. L. SWOPE.

GARFIELD (Oct. 3).—The following work has been done at the mine :—Western Mine, 180-ft. level : Winze No. 15 has been sunk 14 ft., giving a depth of 98 ft. The ground, I am sorry to say, is not looking favourable. Towards the end of last week it got more firm, but did not continue so, and is broken up again.

GYMPIE GOLDEN CROWN.—Report for the fortnight ending Aug. 27 :—At lease 777, Two mile, I have to report that during the past fortnight the work has been confined to the eastern shaft, on the Peter and Paul reef at the 100-ft. level ; the south drive has been carried in 50 ft. on the slate break ; the reef is fully 2 ft. in thickness, and the slate break and reef are all that could be desired for gold, but only a few coarse colours of gold have been seen during the fortnight. The north drive has been carried in 15 ft. ; the reef is about 20 ins. in width, and is showing a little gold, and the slate break is improving as we drive north. The trial crushing from the mullock heap that I mentioned in my last report only yielded 1 dw. per ton. At present we are crushing with 15 head of stamps, 12 hours per day, for Great New Zealand and Crown and Phoenix Cos.—T. RAMAGE.

GYMPIE GREAT EASTERN (Sept. 3).—Fortnightly report :—During the past fortnight the water has been lowered 100 ft. ; it is now 65 ft. from the 730-ft. level. We will have all the water out in another fortnight if all goes right. We were disconnected from 1 North Glamire on Aug. 26. There are two men breaking a small portion of quartz that remained under the flat sheet at the 500-ft. level. The shaft is keeping in good order. There are nine men employed—eight on the mine and one at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Sept. 26).—Phoenix section : No. 1 level : The drive at this point has been extended 5 ft. through hard blue rock. There is no quartz now visible. Tramway level has been driven 16 ft., the face being still quartz and decomposed stuff mixed. Stoping : The stone at G, H and J got so poor that I have been obliged to stop breaking from these points. The other stopes have not changed, are yielding fairly well. The make of quartz I mentioned as being below what we had hitherto considered the footwall does not, I regret to say, show below the footwall at back of tramway. I sank a few feet to test this point, but no quartz being visible I stopped the work. We are still rather short of water for turbine and battery, but heavy showers have helped us, and I hope a good north-east monsoon will enable us to continue crushing by water power for another six weeks. The fuel tramroad is about half cut, and will be ready for laying down rails by next week. By this means we can run the fuel straight into the mill instead of carrying it on coolies' heads, and will effect a considerable saving on this very important item.—C. A. PATERSON.

—(Sept. 30).—Colar section : No. 1 new shaft has been sunk 6 ft. 6 ins., making a total depth from surface of 253 ft. 9 ins. We shall have to suspend the sinking here for a few days, as the ground higher up the shaft is loose and dangerous to work under. The men will put in timber required to make it secure, and resume sinking again as soon as possible. No. 2 new shaft has been sunk 13 ft. ; total depth on the underlie, 140 ft. 9 ins. We are still sinking through the dyke. The 240 main shaft, west cross-cut : This drive has been put out 19 ft. ; total distance from shaft, 543 ft. 6 ins. No. 5 shaft : The 425 cross-cut has been driven 26 ft. 3 ins., making a total of 101 ft. 9 ins. We have cut lode here at this point about 12 ins. wide, but very poor. We

shall take the rock-drill back and drive north on another portion of the lode.—M. STEPHENS.

LA LUZ.—Extracts from the manager's last reports:—San Miguel: There is a full breast of ore at present, and we are still cutting in the vein. There is a streak of high grade ore which varies in width from 6 ins. to 2 ft.; I brought down two samples of this ore, one weighing about 15 lbs., the other over 100 lbs.; the smaller sample I assayed which gave as a result 184 ozs. per ton silver and over 3 ozs. gold. I have just returned from the mine, and as I left they had shot into a crevice, ore from which showed free gold. The San Miguel has a record of being a great gold producing mine. All timbers stand well and the tunnel is in good shape for work. I am excavating to make dump room for ore—a small item of expense, by the way. I am still cross-cutting the San Miguel vein, and am in on the floor about 15 ft., with no indications of passing through the vein; the ore holds the same; I have taken out some very pretty specimens of native and wire silver. The distance from the mouth of tunnel to present breast is 135.33 metres. Have been hard at work building a water-wheel, and erecting the same at the San Miguel to use as power to force air into the mine. The blower has arrived at the mine, and I hope to have it in operation during the week. I have repaired the water-wheel at the Hacienda, so it works comparatively well, but for want of water little can be done. The season has been most remarkably dry, no rain for over a week. I enclose blue print, which will show progress.

LA PLATA (Oct. 10).—White Cloud (Red Mountain district): I have determined to begin drifting from the shaft on Nov. 1 at whatever depth the shaft may have reached by that date (possibly 280 ft.) Two months drifting will tell the story, so that by Christmas we fully expect to have results from White Cloud. The tunnel at depth of 130 ft. has intersected some very nice bunches and stringers of quartz, showing an abundance of iron pyrites. We are now drifting on the best-looking of these bunches. Gnesen (Leadville): I am very pleased to say that Nisi Prius Co. have commenced drifting from their first level at the point I advised them to do, to explore, and prove the value of their recent strike. The mine development has also been resumed by driving on their bottom level towards our Gnesen claim; this will be the work that will be of immediate benefit to us.—P. ARGALL.

LEEDS COPPER (Oct. 7).—As a whole there is little or no change in the mine since my last. No. 1 stope in the bottom of the 20-fm. west level is looking better, as also the 20-fm. west level. As a whole I have not seen it look so promising before; this is very encouraging, and will open out good stoping ground. Other points without change.—T. R. DAVEY.

MAID OF ERIN (Oct. 2).—We are opening up some new ground in the Adams, both in the sulphide bodies and in the carbonates, that promises good returns and have every right to expect a long continuous out-put of equal value to the past. I could, if necessary, increase the output, but do not think it advisable for the best interests of the property. I am building an addition to our machine shop, our present room not being sufficient for the increasing demands of our business. I have made new contracts for the mill concentrates for six months from the 1st inst. on better and more satisfactory terms than the old one. Our sulphide contract expires Dec. 1, but I have no doubt but that I can renew it on even better terms than the present. We are now making up the statements for the month of September, and will forward them to you as soon as complete.—EBEN SMITH.

MONTE DELORO (Oct. 13).—Fortnightly report:—Taylor's engine shaft: During the past fortnight the 316-ft. level north of this shaft was extended 27½ ft., making its total length, 152½ ft.; the lode averages from 4 ins. to 6 ins. of slate and flookan, and both the samples taken yielded no gold on assay. South of the shaft this level is 155½ ft. long, showing an advance of 17 ft. in the fortnight; composed of slate and flookan, with some fine quartz intermixed; the lode is about 6 ins. wide. Two samples were obtained, yielding respectively 15 grs., and no gold. Good speed is made in driving the 316-ft. level south of winze No. 12, as since the last report 30 ft. have been driven, and its total length is now 64 ft.; the lode of quartz is 2 ft. wide, and the result of the assay of the two samples is no gold and traces. North of this winze another level has been commenced, the amount driven up to the present being 23 ft. From 2½ ft. of lode matter a sample was taken, which yielded 15 grs. of gold per ton, but as just now the lode contains no quartz, being composed of 2½ ft. of hard grey slate, no further sample has been assayed. Shaft No. 6: The intermediate level north of winze No. 11 continues to be driven at a good rate, seeing during the last two weeks it was extended 30½ ft., making a total of 83½ ft.; the lode is composed of 2 ft. of quartz, both samples from which gave traces of gold on assay.—J. ROBERTS.

MOUNT MORGAN EXTENDED.—The directors have received the following from their local committee (per Mr. R. Ballard, M.L.C.E.) dated Rockhampton, Queensland, Aug. 31:—During the fortnight we have been principally occupied in getting ready to resume sinking in No. 3 shaft Immanuel, which will be done on Sept. 2. By the 25th inst., we had nearly completed the lowering of the bottom of the drive for the reservoir at the 86-ft. level, and we got the second pump down the shaft, and started building the dam. We have been exploring this fortnight on a vein, having driven upon it 16 ft. from tunnel No. 2 towards tunnel No. 1, and 6 ft. from tunnel No. 1 towards tunnel No. 2. The vein is about a foot thick and shows a little gold. We have completed the furnace, and are just starting to build sulphur chamber in connection with it for the purpose of trying to save the sulphur from the Phoenix ore. If we can manage to do this, it will help to pay for the wasting, as we can find a market for sulphur next door. Mr. Paton estimates the cost of the sulphur chambers at 36%. We carted about a ton of the rough concentrates or tailings which are lying at the Phoenix claim to the mill, leaving a couple of cwt. for Mr. Wesley Hall to kindly experiment on. These concentrates by assay contain more than 5 ozs. of gold to the ton. I am negotiating for the purchase of the Farangaba chlorination vats and barrels, which I believe we can get for a very small sum. If so, and if our furnace proves a success, we shall be completely set up for treating the Phoenix stone.

MOUNT ZEEHAN.—The manager writes for week ending Sept. 4.—Argent section—No. 1 shaft, 72-ft. level, No. 4 lode: Contractors have driven north drive 17 ft. further, making total from cross-cut 74 ft. Remarks: Lode formation 3 ft. wide and very much broken up, composed of iron pyrites, siderite and graphite slate, and small quantity of galena. 2 tons 10 cwt. first-class ore raised and bagged;

8 tons second-class ore raised. I may here state that what we want is another 100 ft. below the present level, and the sooner the better, for the most part of the solid ore is under foot all the way in both drives. We could be raising all the time from both ends, and get the shaft down another 100 ft., and in my opinion we should be able to send away 25 tons per week, instead of 25 tons per month as at present, from this place alone. South drive: Contractors have driven 13 ft. further; total distance from cross-cut, 44 ft. Remarks: Lode formation, 4 ft. wide, composed of graphite slate and second-class ore. In this end, as in the north end, the lode is very much broken up, and the shoots of ore dip under foot, and what we require everywhere in the company's property is depth. 2 tons first-class ore raised and bagged, and 7 tons second-class ore raised. Queen Extended section, No. 5: During the past week the contractors have sunk the main engine shaft 5 ft. more; total depth from plat, 19 ft. 6 ins.; total from surface brace, 129 ft. 6 ins. One length of pump, 9 ft., put on; no timber put in, but started to put in some to-day. Remarks: The contractors have done a little better this week, but they are not going down as fast as I should like them to go. No change in the country rock since last report; still in hard graphite slate. Montana section, No. 9: Level north on course of No. 2 lode, further extended 12 ft.; total distance from cross-cut, 247 ft. Remarks: Lode formation 5 ft. wide, composed of siderite, light slate, and graphite slate, with a little galena, first and second-class ores, but the lode is very much broken up, and I can see we are only on the top part of large shoots of ore. 3 tons 8 cwt. of first-class ore raised and bagged, and 3 tons second-class raised. We have splendid properties, but must go down. Ore raised for week, 7 tons. 18 cwt. first-class, raised and bagged for shipment; 18 tons second class.

MYSORE HARNHALLI (Sept. 30).—No. 2 shaft: In the 85-ft. level a new drive, 40 ft. from shaft, has been commenced north, and has been taken in 30 ft. in the fortnight; the ground is easy to work and there is very little water; so far no quartz has been met with. This drive, which will be extended 20 ft. further, is in consequence of Mr. Evans's observation that the 85 ft. cross-cut west might be a little to the south. In the 125-ft. level the west drive has been extended 8 ft. 6 ins., making 29 ft. from shaft. Here the country has changed completely, and we are in hard blue rock. This morning some quartz has been met with, but it is not yet possible to say what it is; it looks poor; there are seams of quartz in the rock. At the extreme north end of old working, No. 4, a trench 4 ft. wide has been taken across the surface, and to-day is down 22 ft. still in old working. The rods of the pump have broken three times in the last fortnight, and the water rose to its natural level in the shaft; but there is not so much water as formerly, and the engine seems to control it with nine strokes a minute instead of 11, 12, and sometimes 13. Middle Field: Very little progress here in the last fortnight in consequence of leaky tubes, necessitating stoppage of the engine. The cross-cut west in 70-ft. level is in 20 ft. with the object referred to in last progress report, but so far there is nothing to report.—W. LONSDALE, Resident Director.

NEW CALIFORNIA.—Mine report for the month of Sept.:—The 3,100-ft. level—Cutting plats: The work of excavating for plats has been rendered somewhat difficult from the condition of the mica-schist overlying the porphyry in this place, which has been loosened by the late influx of water in these workings, and necessitating great care in making openings so near the main shaft, and then the work has been delayed by the increase of water in the mine. The vein is small and of little value. The 2,000-ft. level—Drift west of shaft in 938 ft.: After further work on the vein discovered by the cross-cut mentioned in last report, it was deemed advisable to resume drifting on that part of the lode which has been followed along the main level. This vein is larger and better defined, but yet somewhat disordered; and whilst it carries from 2 to 3 ft. width of characteristic vein matter, it proves of little value in the mill. The 2,000-ft. level—Intermediate drift west of winze No. 2 on hanging-wall branch, stope drift, west of winze 2 on footwall vein, and 1,900—2,000 west—stope on bottoms west of No. 3 winze: These various workings have been opened in the block of ground west of the new winze, with the object of searching for the continuation of the ore ground of the stopes lying immediately overhead in the 1,900 level; the result has so far been very disappointing, the ore found being of low grade. The 1,900-ft. level—Stope west of No. 1 winze: The ore ground in this vicinity is exhausted. The 1,100-ft. level—Drift east of shaft: The lode here is of a promising nature, yielding some fair-grade ore in small quantities.—A. RICKARD.

NEW DEVALA MOYAR.—Mine manager's report for week ending Sept. 24:—The 186-ft. level, drive west: Driven 5½ ft.; total, 76 ft. The 186-ft. level, drive east: Driven 2 ft.; total, 25 ft. The 116-ft. level, No. 4 winze: Sunk 4½ ft.; total 42½ ft. Ground particularly hard in 186 ft. drive west and in No. 4 winze. There is no improvement to report. Machinery running well.

NEW GOLD HILL (Oct. 10).—The mine is looking well, and I must say that I have never seen such strong veins and so well mineralised continue in such low-grade ore. We surely must have a change for the better in one end or the other, and I am very favourably impressed with the drive north-east of Miller shaft on the 160-ft. level. The ore is 5 ft. in width, and a strong, healthy deposit, full of sulphurets of iron and copper, but low grade in gold.—R. EAMES, jun.

NEW HOOVER HILL.—Report to Oct. 10.—Briol's shaft: Driving south at the 130, the ground continues very hard, and plenty of quartz showing in the end. Sinking south of Provost shaft, the vein continues about the same as when last reported, very small, but fair ore.

(Continued on page 603.)

RAILWAY CHAIRMEN.—The *Financial Times* has published an admirably prepared sketch containing the portraits of the various chairmen of English railways, with the arms of their respective companies. The work has been well done. This we say, because the features of many of these worthies are well known to us, and their expression has, as a rule, been well caught. It is with mingled feelings the shareholders and the investing public will gaze upon these portraits. It would pay the shareholders to pension off some of the chairmen here portrayed:—particularly those of the southern lines, which have the unenviable reputation of being the worst managed in the kingdom.

West Flanders Railway...	4s. per share.

BRATSBERG COPPER CO., LIMITED.

IN anticipation of the general meeting of this company, to be held on Oct. 29th, the directors have issued their report for the twelve months ended June 30 last. This document, which is of a very encouraging nature, informs the shareholders that the difficulty in the Bessemerising department of the smelting works has now been overcome, and that consignments of Electrolytic copper are now coming forward weekly. The inadequate supply of miners is dealt with in the report which states: The supply of miners is a matter which has had the continuous attention of the directors during the year, and was the subject of special attention by the chairman on the occasion of his visit to the mines in July last. This gentleman's visit to the mines will, no doubt, be of great benefit to the company. He was pleased to note the great improvement in the Howard lode in the Johannes Mine. Particular attention was given during his visit there, not only to the question of increasing the number of miners, but also of employing labour-saving machinery. An improvement has been decided upon at the sorting-house, and will be carried out in January, when the dressing machinery is not at work, which will do away with much of the hand labour there, and so enable the sorting to be done with fewer men, who will be available for use in the mine. The report of the manager, Mr. Holman, goes fully into the position and prospects of the different levels. With regard to the Hoffnung Mine, he says: The exploration of this mine has been kept constantly going, and the ground laid open by the stopers' excavations compares very well with former years; but the small number of miners available rendered it impossible for us to extend our working to such a degree as we had hoped to have done, or as the nature or capacity of the mine will admit and warrant. In the Johannes Mine the Howard lode appears in a highly satisfactory condition, being the richest piece of ground at present being worked in the whole mine. This gentleman concludes his report by saying: "The mine still looks well, and with a plentiful supply of miners I have no hesitation in saying that the output can be doubled and maintained. My opinion as to the stability of the property remains unchanged, and an increase in the number of miners is only necessary to increase the returns."

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from general manager's advices, dated Sept. 21:—Mill: Everything about the battery and pans was working smoothly; several trial runs were made with the new dry-crushing mill, and some alterations to the driving arrangements will be necessary before regular work is started. Bullion: Four bars melted gold, weighing 352 ozs. 10 dwts., part of Aug. produce, value 1,320 1/2, were forwarded on Sept. 15.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

H.—Letter sent to Bristol.
Indian (M. M.).—We think you should hold your shares. The mine is gradually improving, and by patiently waiting we expect you will see a good result.
Cutter.—First-class investments in each case.
Schoolhouse.—Sell.
T. Eastman (Outwood).—Sound concern and likely to pay you by holding.
L. L. L.—Not dealt in at the price named; in fact, are unsaleable.
Cecil (Market Harboro').—You could invest your money to better advantage.
Cross Keys.—No reason for a further fall, and advise you to hold.
Timid Investor.—Buy to average.
Reader (A. W.).—Secure same at this low figure.
Seller.—Afraid there is little chance.
Dragon.—No market for them at present. Only nominally quoted.
Kensington (B. R. R.).—Will go better ultimately, we think, although they look weak just now.
Spindle.—Do nothing until we write.
Davidson (Aldershot).—Very undesirable.
Bellman.—Are not worth their present price. Sell.
Torpedo (W. W.).—Take profit on all named. Purely speculative.
G. Brooker (Smallfield).—Very unlikely. Sell.
Stockholder (Middlesboro').—On the whole, advise you to hold.
Cosmopolitan.—Yes. Sell No. 3, but keep others.
Butt.—Could not realise anything.
Johnson (Wimbledon).—Write to them again, and if this fails employ a solicitor.
Crack Shot.—Do not sacrifice your shares. It will probably only be a trifling amount.
Weymouth.—A very good look up indeed.
Evador (Cambridge).—They are likely to react, but no doubt in the near future will command higher prices.

TRANSVAAL LANDS.

TO GOLD MINING AND LAND COMPANIES, CAPITALISTS
AND OTHERS.

FOR SALE, by order of the Liquidator of the Cape
Commercial Bank and Executors, TWENTY-ONE FARMS,

The Company undertakes the following business:—
The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNICATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the Company.

The Mining World.

LONDON: SATURDAY, OCT. 24, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

ST. JOHN DEL REY.

THE battle of Morro Velho, as it may be called, took place on Thursday, and ended in a victory for the board, and, as a necessary consequence, in a defeat for their solitary antagonist, Mr. F. Timewell Rogers. That gentleman is to be congratulated rather on the plucky character of the fight he maintained than on the excellence of the cause he championed. The whole question, as far as the outsider can see it, resolved itself into certain share transactions, in which it is not denied Mr. Timewell Rogers engaged. The reply of that gentleman was that he did so for the benefit of the company, and we invite our readers to peruse his explanations, as given in the full report of his speech, which this week occupies several columns of our space. In the same way they should read the rejoinders of Mr. Tendron, who presided on the occasion, on behalf of the board, as well as those of his colleagues. It will be remembered that at the June meeting a committee of three shareholders was appointed to inquire into the matter, two of whom met and practically exonerated Mr. Rogers from the allegations made, but the question was submitted to a full meeting of shareholders on Thursday, at which the voting was almost unanimously against Mr. Rogers, and ultimately his resignation was accepted by all those in the room. Now, in giving their decision the committee, in the opinion of the directors, did not sufficiently consider the point that Mr. Rogers—he being at that time a director—was dealing in St. John del Rey shares, in conjunction with a partner who is a stock-broker at Stroud, and on these points they mainly based their case as presented to Thursday's meeting. Looking at the matter from the purely business-point of view, the crucial question was that put by Mr. May to Mr. Rogers: "Did you enter into this arrangement (that is the partnership arrangement with the Stroud stock-broker) for the benefit of the company, or did you not?" The question was not answered, but in our judgment it involved the pith of the subject matter before the meeting. No shareholder, certainly no man of business, will find it difficult to answer such a question as this. It may be true, as Mr. Rogers stated, that some of the other directors have, at a former time, sold shares, but their explanation of that was perfectly clear. The whole position of the com-

pany was known to the shareholders before the sales took place, and the directors who at the time were (as they are to-day) very large holders of shares, sold a portion of the old ones, in order to meet the calls that would be made on the new ones—the financial burden of carrying the full number being greater than they could conveniently bear. This was the doctrine laid down by the late Mr. Bladon, who was the father of the re-construction system, and who always said that a shareholder, when from the circumstance of his capital being required for his own business or elsewhere, might avoid a total loss by selling some of his old shares, and with the proceeds pay the calls upon the new ones. Had the sales of Mr. Rogers been on all fours with those of his colleagues, the unfortunate dispute, which was settled on Thursday, would never have arisen, but it was not; they were made in conjunction with a stock-broking partner, and took place at dates the significance of which was a part of the board's case. Again, there comes in what we have called Mr. May's crucial question—was this partnership arrangement made for the benefit of the company, or was it for the profit of the partners? If Mr. Rogers can prove the former, his position is unassailable, but, after all, the appeal must be to every man's experience of business, not to say to his common sense. Thursday's meeting, at all events, had no difficulty in coming to a verdict.

The battle of Morro Velho has now been fully fought, and the practically unanimous decision of the shareholders, who were the last court of appeal in this case, must be, and ought to be, final. A great portion of the board's time, not to speak of that of the officials in London, must have been taken up with these unfortunate disputes. For some time past the directors have, like Desdemona, "perceived a divided duty." They have had to conduct the mine abroad, and to fight Mr. Timewell Rogers at home. It was sad to see, in the midst of all the discussion that took place on Thursday, the mine itself—the pivot upon which everything must turn—almost wholly forgotten. One shareholder, it is true (Mr. Wilde), remembered it, and said, "The first thing we have to consider is the mine," but this was the last that really had a place in the thoughts of the meeting. One remark by the chairman will strike every reader—that the shareholders, having spent 160,000*l.* on the new works, will not suffer St. John del Rey to go down for the want of the capital that will yet be required. Most assuredly they will not, and we believe this money will be all the easier to raise now it is known that the directors are once more in unison. We cannot leave the subject of this company's affairs without expressing our great sympathy with Mr. Hockin in the double family bereavement that has befallen him. Under the circumstances he could not have been expected to take the position in which it has been the pleasure of the shareholders for so many years to see him; but we are delighted to know that, as a member of the board, the St. John del Rey Co. will still have the advantage of his matured experience and his ripened judgment.

THE FALL IN COPPER.

THE price of bar copper fell yesterday to a lower point than had been reached for just about a couple of years, and with the decline in the market value of the metal, copper shares also gave way, to a marked extent in Rio Tintos, which at one time exhibited a drop of fully two points as compared with the closing quotation a week ago. It will be remembered that when the great speculation in copper, headed by the Société des Métaux, collapsed in Mar., 1889, the price of bars dropped in a short time from 78*l.* to 37*l.* a ton, the stocks of the metal in England and France having grown to the enormous figure of nearly 125,000 tons. But, under the influence of low prices, stocks were steadily absorbed, until at the end of June last they amounted to 57,325 tons, and the market value of bars, which in the summer of last year had run up to over 60*l.* stood at what appeared to be a very moderate figure, 55*l.* 5*s.* per ton. Since then, however, larger supplies have come forward from the United States and from Chili, and at the end of last month Messrs. Henry Merton and Son estimated the stocks in England and France and afloat thereto at 59,450 tons, an increase of over 2,000 tons, as compared with the close of June. During the first half of the current month, according to the report of Messrs. Lewis, Lazarus and Sons, of Liverpool, the stocks exhibited an increase of 1,283 tons, and the visible supply an increase of 1,597 tons, the arrivals in England and France for the fortnight having been 5,226 tons, and the deliveries 3,943 tons. The same report states that the total imports to Oct. 13 were 1,653 tons greater than for the corresponding period of last year, while the deliveries were 18,650 tons less, making a difference in favour of consumers of over 20,000 tons.

This is, of course, a very unsatisfactory change to have been brought about in the position of the copper market; but it is questionable whether it really warrants a fall of about 5*l.* a ton, or over 10 per cent. in the price of the metal in about three weeks. In our view, the decline owes nearly as much to merely speculative influences as to the actual increase in the visible supplies. The fall has been simultaneous with the industrious circulation of rumours that the great Montana Mine, the Anaconda, is about to be re-opened. These rumours may, or may not, be well-founded, but it is doubtful whether the property would yield large profits with copper at

the present price. On the other hand, there is every reason to believe that the stimulus to American trade which has been given by the bountiful harvest will lead to a largely increased consumption of copper in the United States, and that, therefore, smaller amounts of the metal will be shipped to Europe. There is one other point to which reference should be made, namely, that a group of French operators, who wish to buy up the assets of the Société des Métaux, including about 15,000 tons of copper, are employing every means in their power to reduce the present value of the assets, in the hope of making a larger profit on their realization. To this influence, we believe, a good deal of the decline in the price of the metal is to be attributed. While, therefore, the statistical position of copper is less satisfactory than it was three months ago, it is by no means improbable that the change is due to speculative influences, the effect of which may prove to be quite temporary. The "bears" of copper shares have had a very good innings, and if they are wise they will not defer taking their profits for too long a period.

MYSORE GOLD MINES.

BY ARGUS.

SINCE I last addressed you on the subject of the Mysore Gold Mines, development there has progressed beyond the most sanguine expectations. The operations in Tennant's shaft have unfolded an immense supply of rich ore, and this shaft promises ere long to rival that of Rowse's, from which it is distant rather more than $\frac{1}{2}$ mile. The sales of gold last year realised the handsome sum of 229,966*l.*, and nearly the whole of this was extracted from Rowse's shaft.

The last report states that the winze sunk from the bottom of the 780-ft. level north of Rowse's shaft has reached a depth of 70 ft., and has gone down all the way in a lode averaging 3 ft. 6 ins. wide, and assaying 5 ozs. per ton. Should the geological formation there be similar to that proved in the levels above, this fact means an addition to the reserves of ore of about 30,000 tons, and should it prove to be worth 5 ozs. per ton, it represents an asset of about 600,000*l.*

The most important feature, however, regarding Rowse's shaft is that the lode has increased in value as depth has been attained, the lode being richest in the deepest levels. This shaft has now been sunk 930 ft., which is the lowest depth as yet reached in India in search of gold, while in Australia, mines of similar formation are profitably wrought to a depth of 2,400 ft.

It became apparent last year that the milling machinery was inadequate to deal with the large amount of ore opening up, and the board decided to erect 30 additional head of stamps and further plant for the treatment of tailings. It is expected that this new machinery will be in operation next month, and an increase of the monthly output by 2,500 ozs. may be confidently expected.

The average monthly output for next year will in all probability not be less than 8,000 ozs. per month, representing 30,000*l.* in cash, which will enable the company to pay a dividend of 100 per cent., and place something like 40,000*l.* to a reserve fund.

For the last two years the shareholders have received dividends of 75 per cent., and that rate at the present price of the shares would yield an investor 14 per cent. for his money, with every probability of receiving 20 per cent. next year.

It must not be overlooked that scientific gold mining in India is in its infancy, having only become a paying industry within the last three years; but that gold mining must have been a source of great wealth to the ancients is apparent from the remains of their workings in nearly every mine in the Mysore district.

THE DE BEERS CO.'S ANNUAL MEETING.

[From our Kimberley Correspondent.]

THE annual meeting of the directors and shareholders of the De Beers Consolidated Mines was lately held at the company's offices, under the presidency of Mr. B. J. Barnato, there being a large attendance. The following is a summary of the directors' report for the year ending Mar. 31, 1891:—The directors call attention to the satisfactory position of the company, notwithstanding the very serious crisis which has paralysed the money markets of the world. The balance-sheet and profit and loss statement now submitted show a balance (after the payment of the usual half-yearly dividends of 10 per cent. each, amounting together to 789,791*l.* of 717,829*l.* 0*s.* 3*d.* During the year 1,978,153 loads of blue ground have been hauled, and 2,105,182 loads washed (as well as 1,144,183 loads of Dutoitspan and Bultfontein), yielding 2,195,112 carats of diamonds, which realised (including the proceeds of diamonds from *débris* washing) 3,287,728*l.* 3*s.* 5*d.* The total expenditure amounts to 2,267,974*l.* 18*s.* 3*d.*, including the payment of interest on the company's debentures and obligations, and making provision for their redemption, leaving a profit of 1,019,753*l.* 5*s.* 2*d.* The profit and loss account stands thus:—Balance, as above, 1,019,753*l.* 5*s.* 2*d.* Dividends on investments, 22,450*l.* 13*s.* 10*d.*; balance from last year, 465,416*l.* 1*s.* 3*d.* Dividends have been paid amounting to 789,791*l.*, and a balance carried forward for the year of 717,829*l.* 0*s.* 3*d.* The average yield per load for De Beers and Kimberley is .96 carats; the average value per carat, 1*l.* 9*s.* 6*d.*, and the average value per load, 1*l.* 8*s.* 4*d.* The shareholders will observe, under the head of investments, an item of 6,755 of the company's shares. These shares result from the purchase of one of the Dutoitspan companies, and are still in the possession of the company.

The speech of the chairman, which was an elaboration of two

reports from the manager, occupies some six or seven columns in the local Press, but I shall content myself with a couple of extracts, which are of general interest. With reference to the British South Africa Co., he said:—"But, gentlemen, in addition to writing off these various amounts, there are certain investments which must be taken into consideration. And I should like to be clearly understood with reference to one of these items. I refer to our Chartered Co.'s investment, with regard to which some people are under a false impression. Under this head you will find an item of 210,000*l.* for fully paid-up shares in the British South Africa Co. These shares, gentlemen, were given to us at par when the company was formed, and when they stood at about 7*l.* in the London market. They have been paid for out of profits, and we have absolutely no liability in reference to the Chartered Co.'s shares. Why I mention this is because it has been periodically circulated, not only throughout the colony, but in the London and other European markets, that we are connected with the Chartered Co., and have unknown liabilities, which, gentlemen, is not the case, and I say this emphatically. As I have said, the whole of this amount of 210,000*l.* has been paid out of profits made during the last 18 months. I may further say that if anything happened to the Chartered Co. it would not make one sixpence difference to the De Beers Consolidated Mines, because I say again we have already paid for these shares out of profits made during the last 18 months. And besides, gentlemen, I feel confident, as do your directors and many of the general public, both in South Africa and Europe, that in course of time this investment will prove to be a most substantial asset in our company."

The other extract I shall make refers to the Wesselton Mine. On this subject the chairman said: "Gentlemen, there is one item which does not appear in the report, but which I must briefly mention, and that is with regard to the Wesselton Mine. As I have already pointed out, our sole object in purchasing the various properties now in our possession, has been to have control of the diamond market. We have been called monopolists, but I have always understood that monopoly meant absolute control and possession, which we do not enjoy. However, we entertained certain proposals with regard to the Wesselton Mine. There have been constant rumours for the last 21 years that another mine was about to be discovered, but Wesselton is the first discovery that has given the directors any serious consideration. We do not close our eyes to anything which we think is likely to prove payable, and in securing the option of purchasing a half interest in the Wesselton Mine, your directors have done so by a unanimous vote of the board. Our chairman, when he came up from Cape Town, gave the matter his closest study and attention, the result being that, as I have said, we have obtained the right to buy a half interest in that mine, the official returns of which show that there are diamonds in appreciable quantity. It may pay to work at the top and to a certain depth; and I may point out that our past experience has been that the value of top ground is, generally speaking, a fair indication of the value of deep ground as well. Should we take up our right to purchase half of the mine, and if we can dispose of the *débris* difficulty (which we do not think yields satisfactory results), and if we can only realise the interest on this investment, it is our intention to work this mine in conjunction with Mr. Ward. All that we shall require is a percentage on the money we expend in the purchase, and the control of the diamonds; and by working it we shall give more certain and regular employment to many men who are at present earning an extremely precarious livelihood by *débris* washing."

The report was adopted, and after voting the usual liberal donations to several local charitable and other institutions, and bonuses to the staff, the proceedings terminated.

IMPROVED POSITION OF KANGARILLA.

WHEN the present board of directors, with Mr. S. S. Hasluck at its head, came into office the position of this company was almost hopeless. The dry bones which Ezekiel found in the valley had more life in them than Kangarilla. The mines were positively closed down; the cash in the company's coffers was practically *nil*; and, generally, the position was one of which the new directors might have been excused had they despaired. When these gentlemen took office it was with the belief that all they had to do was to continue development, and wait for better times under the direction of Mr. Rosewarne, the new manager whom they had secured. The faint-hearted among them were appalled at the nature of the work, and promptly retired; but those with backbone remained, and to their labours, coupled with those of Mr. Rosewarne, is due the satisfactory position as revealed at the meeting a few days ago. The directors first of all found that the most pressing matter was that of finance, and they set themselves to raise 25,000*l.*, without which it was absolutely impossible to carry on the company's affairs. They appealed to the shareholders, but without result, save from those in the colony, and then they set to work to do for the company that which the company might naturally have been expected to do for itself. They raised this money at par without a farthing of commission directly or indirectly. The Kangarilla Mine they abandoned, and devoted all their energies and resources to the Aclare, which, under the direction of Mr. Rosewarne, is turning out in a most satisfactory manner. The machinery was started on

Aug. 1, and returns have already commenced, the latest showing 2,200 ozs. of silver from 44 tons of ore, with 40 per cent. of lead. Of course, past returns are as nothing compared with those which will be forthcoming when Mr. Rosewarne has completed his arrangements. We commend to the careful perusal of every shareholder our full report of the meeting, which contains much matter of interest upon which we have not dwelt. It is their duty to do so for their own sakes, as well as in justice to the hard working and admirable board they have been so fortunate as to secure. They will note with pleasure that 13,000*l.* of capital remains intact; that there has been a valuable discovery of antimonial ore, and that Mr. Rosewarne is fully alive to the importance of finding the best means of extracting from it its fullest market value. The position of Kangarilla at the present time, as compared with what it was twelve months ago, presents a contrast, sharp but pleasing.

PROGRESS OF ROBURITE CO.

AT the formal meeting of the re-constructed Roburite Explosives Co., Limited, Sir John Stokes, the chairman, gave some information which must have proved very satisfactory to the shareholders. The business continues steadily, not to say rapidly, to progress, and he mentioned that the total sales for the quarter ending Sept. 30 exceeded those for the corresponding period of last year by nearly 40 per cent. The home trade also continues its upward course—the Sept. sales exceeding those of any previous month, whilst Oct. bids fair to show a better record than Sept. The business of the company has been established on a solid basis, and the best proof of this is to be found in the steadily increasing sales of the company's product.

PLAIN FACTS ABOUT OTTOS KOPJE.

OTTOS KOPJE shares would not long remain at their present absurdly low price if the public understood and digested the facts which we shall now endeavour to set forth. It may be remembered that a meeting of this company was held less than two months ago, at which it was announced that Mr. Lisle had been appointed manager under circumstances of a somewhat exceptional character. This gentleman occupied a responsible position in connection with the management of the Kimberley Mine, belonging to the De Beers Consolidated Co. This post he was not content to leave until he had thoroughly satisfied himself that Ottos Kopje was in every sense of the word a diamond mine, and he also became a considerable shareholder. The examination of Mr. Lisle showed him that his predecessors had spent a considerable sum in sinking a shaft to a depth of 800 ft., and in making a series of drives. A second shaft was necessary alike for the proper working of the mine and the safety of the miners. This second shaft was commenced on the initiative of Mr. Lisle at the south end of the mine, under the temporary direction of Mr. O'Leary, but the work seems to partake very much of the character of a large open quarry, from which, as depth is attained, tunnels will be driven right across the mine and into the existing shaft, and so open up the whole of the property. Shortly after his appointment as Ottos Kopje's manager, Mr. Lisle came to this country for the purpose of presenting himself to the shareholders at the recent meeting, and now, on his return, is approaching the scene of his labours when, what may be termed the more active part—perhaps we should have said the more practical part, from the shareholders point of view—of the work will commence, by which we mean regular returns. These, it is confidently believed, will commence before the close of the present year. Of one thing the shareholders and the public may be assured, that the people in Kimberley believe in the mine. There are other diamond mines in which they profess not to believe, but they have backed their faith in Ottos Kopje in the most tangible way men can, and that is by their cash subscriptions. Foremost amongst them is Mr. O'Leary, with whom the esteemed chairman of the company (Mr. Francis Stobbs) was in constant communication during the time of his useful visit to the mine. At the recent meeting this gentleman (Mr. O'Leary) was stated to be the possessor of 30,000 Ottos Kopje's shares, and when asked by people in this country whether he wished to dispose of any, he replied, "I am not a seller." Mr. O'Leary is evidently like the majority of the shareholders, content to wait for the results of the mine rather than snatch a small market profit, and all the available testimony points to this, that they will not have to wait long. It is a feature in this mine, rarely met with in others, that the yellow ground, that is the ground above the blue, is also valuable for diamonds, and Mr. Lisle, when in this country, said that the diamondiferous produce therefrom would pay all expenses until the blue ground was reached, which would be done after 80 ft. of yellow ground had been worked through. The property embraces 827 claims, and 500 acres additional for use as deposit floors. Diamonds to a considerable amount have already been sold from it at 30*s.* per carat. An American contemporary has been at pains to point out that the value per carat has risen from \$4.51 in 1888 to \$7.32 in 1889. The company, moreover, has absolutely no debts, and is free from all preference and debenture charges, with a good round sum of about 30,000*l.* in hand as working capital. These are some of the salient features connected with Ottos Kopje Co., which entitle its stock to be considered one of the best speculations

now offered by the mining market. The price is now quoted at 3s. 3d. to 3s. 9d. It can scarcely be lower, with a company which has an available working capital of 30,000£, so that the probabilities and the possibilities seem all the other way.

NEWS FROM SOUTH AFRICA.

[From our Kimberley Correspondent.]
THE ORANGE RIVER ASBESTOS CO.

Kimberley, Sept. 28, 1891.

The adjourned meeting of this company was held on Tuesday last, when revelations were made which quite equalled those of the meeting which I alluded to formerly. As the meeting was again adjourned for a month for the purpose of enabling a committee appointed to call in professional assistance, if desirable, to consult counsel, and to bring up a report, I shall only lay before your readers two letters which were read at this meeting, and which were addressed by the late secretary to a Mr. F. Oats on the same day, namely, Aug. 8, 1889. The first letter reads as follows:—

"Dear Sir,—I am instructed to inform you that my board hereby offers you the right of purchasing 10,000 of our reserve shares at par, *i.e.*, 10,000£, for the period of 14 days from to-morrow, in consideration of which you bind yourself to furnish us with a full and complete report on our farm Zoetvlei, for which report we agree to pay you the sum of 1,000£, in the event of your purchasing the above 10,000 shares at 10,000£, it being understood that no fee is to be claimed by you or paid by us should you not purchase the above-mentioned 10,000 for 10,000£."

This is the second letter:—

"Dear Sir,—I am instructed to inform you that hereby 10,000 of our reserve shares are offered you at par, *i.e.*, 10,000£, against which you bind yourself to furnish us with a full and complete report on our farm Zoetvlei, for which report we agree to pay you the sum of 1,000£, in the event of your taking the above shares, it being, however, understood that nothing is to be paid by us for such report should the offer not lead to business."

Mr. Beveridge remarked that 15 days after these shares were sold for 42s. 6d.

This report of Mr. Oats has been published, but it is by no means of a roseate hue; whereas another report is in existence, which certifies to the valuable nature of the asbestos on this property. It is expected that the report of the committee, above alluded to, will be a very interesting document.

ANOTHER DISCOVERY.

Just as I am closing my letter I hear that another diamond mine has been found about 3 miles out of town on the western side. Some men working at road repairs came upon some yellow ground, and the indications being so favourable a lot of people went to work, with the result that 25 carats have been found to-day, and 400 applications for claims have been registered at the Civil Commissioner's office.

VENEZUELAN AUSTIN GOLD MINING CO.

A MEETING of this company is called for Monday next, when resolutions for the reconstruction of the company will be submitted. The scheme proposed by the directors is that shareholders in the present company shall be entitled to apply for ten shares of 1£ each fully paid in the new company for every preference share of 10£ now held by him, and one share of 1£ credited with 18s. paid for every three ordinary shares. We need hardly point out to those of our readers who may be shareholders in this company that it will be decidedly to their advantage to join the re-construction seeing the liability is so small.

THE MONEY MARKET.

[CITY, FRIDAY EVENING.]

THE Discount Market has continued to fall away under the influence of the superabundance of money seeking employment for short dates so much so as to preclude the possibility of an advance in the Bank rate at present, although the export of gold goes on more or less seriously to different quarters—America, Germany, Egypt, Russia, with the expectation of shipments also to the River Plate. Against all this, small arrivals certainly come to hand, but nothing of importance is looked for, except a million from Brazil in connection with the service of the debt. These movements, however, between this country and South America are due to the dislocation of credit and trade in the Republics, necessitating the remission of cash, which moves to and fro, irrespective of the state of the exchange. The shipment to the River Plate is to be made by bankers to buy produce which otherwise would find difficulty in being moved, especially since political disturbance is again threatening. Over 300,000£ was taken for export on the *Gazette* week, and the Bank return consequently shows a reduction of 365,000£ in the reserve to 13,394,000£, against 11,518,000£ last year, but the proportion is only a fraction worse at 37½ per cent. owing to the liabilities under deposits having run off on balance about 400,000£, there being an increase in the public deposits of 1,900,000£, and a decrease in private deposits of 2,338,000£ in connection with Treasury Bills and the revenue.

On the Stock Exchange business has been almost stagnant until

within the past day or two. Investments seem to have ceased for the present in spite of the dividend money, and speculation is quite spasmodic in its movements. This is partly due to the deadlock in money, and the miserable meteorological conditions, and, in consequence, the fluctuations have been irregular with no decided tendency. Considering all things, however, prices have been wonderfully well sustained. The Funds, after rising to 95½ and falling to 94½, 95, show no change on the week; Indians were good, but are under their best. Foreign Stocks have been depressed on Paris account, where, since the Russian loan has been secured, the Bourse is allowed to fall and there has been no recovery. Spanish have suffered most, falling 1½, and other internationals are all lower, particularly Egyptian. Argentine have been dull on the news to hand, and Uruguay are ¾ to 1¼ lower. Home Railways fell away, but have partially rallied, some stocks, notably Midland, North-Eastern, and the Scotch lines, being 1 to 2 higher, on favourable reports of the iron trade and the signing of a "treaty of peace" between the North British and Caledonian companies. The American Market was dull and heavy, nevertheless quotations are generally better, led by a rise of between 6 and 7 per cent. in New York Central on the very favourable report. Grand Trunks are a fraction higher on the company's report, but Mexican issues, after a rise, have fallen heavily on the dividend at the rate of 1½ per cent., and show a fall of ½ in the Ordinary but a rise of ½ to 1 per cent. in the Preferences.

Monetary rates are a shade firmer this evening, although three months' Bank bills were variously quoted from 2¼ to 2½ per cent., but fewer transactions have taken place under 2½. Call money was in fair demand at ¾, 1, and loans over the next Stock Exchange settlement were worth about 1¼ per cent. At the Bank of England 15,000£ in sovereigns arrived from Lisbon, but 12,000£ was withdrawn mainly for America. Bar silver has fallen over ¼d. to 44½, and Rupee loans closed flatter at 74.

The markets have been quiet, but apart from renewed depression in foreign securities, prices generally have tended better, although not without disclosing some irregularity. The funds presented firmness, Consols remaining at 95, ½, for both money and account, but the 2½ per cent. were easier at 93½. India 3½ per cent. further relapsed ½ to 106½, 107½, while the 3 per cent. again improved ½ to 95½, 96 on exchange of investments, and Colonial Government Stocks were stronger than for some time past. New South Wales Scrip, now that the 25 per cent. instalment due has been paid, recovering ½ to ¼ dis, ¼ p.m. Foreign Securities have further fallen on the continued flatness at Paris, particularly of Spanish stock and copper shares, due, it is believed, to a strong "bear" movement. Spanish has fallen another 1 per cent. to 65½, ¾, but Portuguese and Mexican were ½ to ¼ firmer. Italian, Russian, Turkish, and Egyptian all receded ¼ to ½, and Greek ½ to 1 per cent. Argentine Sterling Bonds fell 1, and the Cédulas all ¼ to ½; Uruguay also fell 1 per cent. Home Rails were neglected, but steadier on the brighter weather, the Scotch Stocks and Southern Deferred being ½ to ¼ better, but the heavy stocks that much weaker. American Stocks opened heavily, but rallied in the course of the day, closing with a firm undertone, although some descriptions were ½ to ¼ lower, and others ¼ to ½ higher. Trunk stocks were dull, but closed firmer, and Mexican issues rallied ¼ to ½ on "bear" closing. There was no feature in other departments.

Annexed are the final quotations to-day:—Consols Account, 95, 95½; Egyptian Preference, 87½, 87¾; Egyptian Unified, 96½, 96¾; French Three per Cents., 94¼, 94¾; Hungarian, 89½, 89¾; Italian, 88½, 88¾; Mexican Six per Cent., 85½, 86; Peru Corporation, 10, 10¼; Peru Corporation, Preference, 27½, 28¼; Russian 1873, 95, 95½; Portuguese, 36½, 36¾; Spanish, 65½, 65¾; Turkish 1871, 91¾, 92¼; Turkish Defence, 87¾, 88¼; Caledonian Railway, 118½, 119; Great Eastern, 87¾, 87¾; Great Western, 156½, 157½; Brighton "A," 146½, 146¾; North Western, 169½, 168½; Metropolitan, 84½, 85; Metropolitan District, 30, 30½; Midland, 160½, 161; North British, 43½, 43¾; North Eastern, 155½, 155¾; South Eastern "A," 84½, 84¾; Mexican Railway, 31½, 32½; Grand Trunk, 10½, 10¾; Grand Trunk First Preference, 70, 70¼; Grand Trunk Second, 49½, 49¾; Grand Trunk Third, 26½, 27½; Canadian Pacific, 91½, 91¾; Denver, 18½, 19½; Erie, 31½, 32½; Milwaukee, 77½, 78½; Lake Shore, 128½, 129¼; Louisville, 81½, 82; Atlantic First, 39½, 39¾; Ontario, 20¾, 21; Ohio, 23½, 24½; Norfolk and Western, 54½, 55½; Reading, 21½, 21¾; Reading Five per cent. Bonds, 71½, 72½; Union Pacific, 42¾, 42¾; Wabash Preference, 30¾, 31¼; Ottoman Bank, 11¾, 11½; Anglo-Telegraph, 48½, 49; National Telephone, 4¾, 4¾; Hudson's Bay, 16½, 17; Suez Canal, 108½, 109; Guinness Ordinary, 31¼, 316; Allsopp's, 22, 24; Bryant and May, 13¾, 14; Electric Construction, 6¾, 7.

FOREIGN MINING INTELLIGENCE.

(Continued from page 597.)

NEW EBERHARDT (Oct. 4).—The mine manager reports as follows:—Eberhardt: North drift, No. 2 upraise, advanced for the week 10 ft., total length, 49 ft. The ground has become considerably softer in this drift. We have a seam of about 18 ins. in width of decomposed ledge matter lying along the footwall in this drift, the face also shows considerable quartz, but as yet it is of low grade. South drift, No. 2 upraise, advanced for the two weeks 7 ft.; total length, 53 ft. The face of this drift has not materially changed since my last letter to you, being in a heavy body of spar, with occasional bunches of quartz. Cross-cut east, No. 3 upraise, advanced 13 ft.; total length, 78 ft. We have still considerable low-grade quartz in this drift, the large fissure still continues with us. No. 3 cross-cut west: Advanced 18 ft.; total length, 69 ft. This drift has not materially changed since my last letter to you. We have some good ledge matter, but not so much as we have had; the seam we are following seems to be getting smaller. No. 4 cross-cut west: Advanced for the two weeks, 8 ft.; total length, 22 ft. As the face of this drift is still in hard lime and not so promising, I have suspended work at this point, and have put the men at work in the John Wild north, as I think our prospects there are much better, but later on, when the weather becomes cold, I shall commence sinking in our No. 1 south, and likewise in our No. 2 north drifts, for in cold weather we have a better circulation of air. Beecher cross-cut advanced for the two weeks 13 ft.; total length, 66 ft.; the rock in this drift is quite hard, and not as favourable for ore, and if a change is not met with very soon I shall move the

men to another point in our workings. Monitor: Number of tons of ore extracted and assorted during the two weeks, 28 tons; assay value of the same, as per mine samples, \$33 per ton. I am very pleased to say that even though our output is not large, the mine prospects are quite favourable. We have some seams of good ore that we are following, and I feel quite hopeful that they will yet open out. The quartz team has again commenced hauling, and has delivered to the mill during the two weeks 106 tons of ore. The mill is running steadily and well, and has crushed 185 tons of ore; the assay value of same, as per battery samples, being \$33 per ton. I have shipped five bars of bullion as follows:—Total, 7,093 ozs.; standard value, \$7,324.

NEW RUSSELL (Oct. 7).—The manager writes:—With regard to the 39½ oz. of bullion spoken of in my last report, the mint has informed me the bar had to be refined. I am, therefore, unable to say what it will yield in money. Since the last mentioned bar was obtained, we have retorted fluxed 31 ozs. of amalgam, which has produced 9½ ozs. of gold, and up to the time of writing I have 15½ ozs. of amalgam, which, together with what we obtain from this afternoon's clear up, should put me in possession of about 15 ozs. of fluxed gold. The mill is working better, and I am thinking of increasing the output of ore when we receive the new cars which are now at Thomasville. The mill is now taking about 500 tons per week, but I think that 700 to 800 tons could be done with very little extra expense.

NEW VISO (Oct. 16).—Manager's report:—We have just completed the fixing of a new tramway at Mi Amor, to convey the alluvion to the washing floor, which will enable us to carry on this work in the most economical manner. The stuff fully maintains its quality for tin, and having recently been favoured with a good deal of rain, there has been no further falling off in our water supply. In the past fortnight we have broken some good tinstuff from the winze below the Californian adit, and although the yield has not been so continuous as we could desire, on the whole the lode has been more productive, and shown a better character generally than at any previous period during the sinking, and I am pleased to note that this improvement continues in the present bottom of the winze. The adit driving north on the lode has struck another stiff run of ground, which, as far as yet seen, is unproductive. The rise in the roof of this level is going up fast, and the lode at present is of a very kindly character, and yielding saving work for tin.

OOREGUM.—Mine report for the fortnight ending Sept. 29:—Wallroth's shaft has been sunk 5 ft. 6 ins.; total depth from surface, 428 ft.; the lode is 2 ft. wide, and worth, by assay, 3 ozs. 6 dwts. 10 grs. per ton. The 360-ft. level south has been advanced 10 ft. 3 ins.; total, 103 ft. 9 ins.; lode 2 ft. wide, assaying 6 ozs. 12 dwts. 10 grs. per ton. The 360-ft. level north has been driven 5 ft. 6 ins.; total length, 39 ft. 3 ins.; lode 1 ft. 9 ins.; worth 3 ozs. 7 dwts. 12 grs. per ton. Winze 360-ft. level south has been sunk 3 ft.; lode 3 ft. wide; assay value, 5 ozs. 8 dwts. 21 grs. per ton. The 280-ft. level south has been advanced 35 ft. 3 ins.; total length, 816 ft. 9 ins.; the lode is 8 ft. wide, assaying 7 ozs. 3 dwts. 2 grs. per ton. The 215-ft. level north has been driven 1 ft. 6 ins.; total length, 99 ft. 6 ins.; lode 2 ft. wide; worth 1 oz. 12 dwts. 16 grs. per ton. The 215-ft. level south has been driven 3 ft.; total, 278 ft. 11 ins.; the lode in bottom of the shaft is pinching smaller. We have every reason to believe, from the appearance of the lode in the 280-ft. level south, that we shall have to sink a considerable depth in a small lode before it again opens to the magnificent dimensions indicated in the 280-ft. south. This inference may be wrong, but as the shoot dips north we naturally conclude to experience in sinking what we meet with in higher levels to the south of shaft. Low's shaft: The 350-ft. level north has been advanced 1 ft. 6 ins.; total, 94 ft. The 350-ft. level south has been driven 2 ft. 2 ins.; total length, 192 ft. 2 ins.; lode 6 ins. wide; value 1 oz. 1 dwt. 19 grs. per ton. We have engaged native contractors and machine coolies to drive these levels with machines during Oct., and hope to report better progress. Winze 350 level north sunk 3 ft. 10 ins.; total, 23 ft. 6 ins.; lode, 3 ft. wide, assaying 6 ozs. 10 dwts. 6 grs. per ton. Winze 350-ft. level south sunk 6 ins.; the lode is 1 ft. wide, worth 1 oz. 10 dwts. 12 grs. per ton. Winze 270-ft. level north has been sunk 5 ft. 2 ins.; total, 62 ft. Probyn's shaft has been sunk 11 ft.; total from surface, 582 ft. 1 in.; the lode is 7 ft. wide, assaying 4 ozs. 7 dwts. 2 grs. per ton. The 550-ft. level south has been advanced 33 ft.; total length, 93 ft.; lode, 5 ft. 6 ins. wide, assaying 2 ozs. 2 dwts. 11 grs. per ton. The 450 level south has been driven 6 ins.; total, 330 ft. 1 in.; lode, 1 ft. wide, worth by assay 1 oz. 10 dwts. 21 grs. per ton. No. 2 winze, 450 ft. level south, sunk 5 ft.; total depth, 32 ft. 6 ins.; lode, 3 ft. 9 ins. wide, assaying 3 ozs. 3 dwts. 3 grs. per ton. No. 3 winze in same level has been sunk 4 ft.; total depth, 7 ft.; lode, 4 ft. wide, value, 3 ozs. 4 dwts. 5 grs. per ton. Winze 450-ft. level north sunk 11 ft. 9 ins.; total depth, 18 ft. 9 ins.; lode, 2 ft. 6 ins. wide, worth 5 ozs. 3 dwts. 10 grs. per ton. No. 3 winze, 366-ft. level south, sunk 12 ft.; total depth, 35 ft.; lode, 2 ft. wide, assaying 1 oz. 13 dwts. 2 grs. per ton. No. 2 winze, 300-ft. level south, sunk 3 ft. 2 ins.; total, 19 ft.; lode, 1 ft. wide, worth 15 dwts. 6 grs. per ton. The 300-ft. level south has been driven 12 ft. 9 ins.; total length, 320 ft.; lode, 1 ft. 9 ins. wide, worth, by assay, 3 ozs. 7 dwts. 12 grs. per ton. It will be observed that the lode in bottom of shaft maintains its strength, and that the other points are also looking well. Our machine labour is returning slowly after the late panic, and we hope to run 13 rock-drills during Oct., four of which will be run exclusively by native contractors and coolies. We shall clean up to-morrow, and anticipate a return of over 3,000 ozs. as the quartz has been of high grade. Health of Europeans good. One man only being off duty.

OSCAR (Oct. 16).—Hodgkinson's shaft is being sunk with all speed, and as the general character of the lode has changed, better progress is being made. About 10 days ago we struck on some quartz again on the footwall (having been sinking nearly 50 ft. in dead rock). At first it was thought it was only a bunch, inasmuch as its width varied almost with each shot. At one time it measured in the north wall nearly 2 ft., and contained a good deal of copper and iron pyrites. In the south end it has been much smaller. At the present time the lode is nearly 5 ft. between the walls, whereof about 7 ins. is quartz, and adjoining this quartz is 10 ins. of semi-decomposed rock, which, we think, will soon be replaced by quartz. The assays have in several samples shown a very high value. To-day a sample—a fair average of the quartz broken for the last three days—assayed for free gold 12 dwts. Should this quartz increase in width, which there is no reason to doubt, we shall open two new levels without delay, so as in as short a time as

possible be in a position to send quartz from the bottom of the mine to the mill. The winze in the 200 level north following the depression is in a lode about 5 ft. wide, whereof 2 ft. is quartz, rich in galena, copper and iron pyrites. It assays 2½ ozs. to the ton. The cross-cut driving towards Bluett's lode is in a very hard rock, hence progress is somewhat slow. There is no alteration to note elsewhere. We intend to crush a few tons of the quartz from the shaft and winze this month, so as to be able to report its actual mill value for free gold. Judging from present appearances of the lode in the shaft, which is 360 ft. deep on the underlie—about 270 perpendicular—we consider our prospects to-day are more encouraging than they have been for the last 18 months.—DAW.

PESTARENA UNITED (Oct. 15).—Mid-monthly report:—In the 150-fm. cross-cut, since passing the vein spoken of in the last report, nothing of importance has been met with; the ground is more jointy, and shows particles of pyrites. The 130-fm. end north is going forth on a good footwall, with about 40 centimetres of lodey matter, but it does not produce any ore. The 90-fm. end south is now being driven obliquely to intersect a vein known to exist there. About 1 metre more will prove it. The 70-fm. end north carries about 20 centimetres of ore, and produces 3 tons of ore per fm., worth 10 dwts. per ton. In the south ends the lode is 30 centimetres wide in the roof, and widening to 60 centimetres in the bottom of the level. It is of a mixed nature, with pyrites thinly scattered throughout, and produces about 5 tons of ore per fm.; worth 8 dwts. per ton. Caunter lode: The 55-fm. end east carries about 40 centimetres of lode, and produces 3 tons of ore per fm.; worth 10 dwts. per ton. The lode in the end driving west has opened out to 1.20 metres wide; it has a great underly to the north, and is composed of mixed quartz and schist, with pyrites thinly disseminated throughout, and is estimated to produce 8 tons of ore per fm.; worth 8 dwts. per ton. The stopes, on the whole, continue to produce much the same both in quantity and quality, as last reported, and the daily output of amalgam is keeping up fairly well. Val Toppa: There is nothing new to report here.—W. ROBERTS, W. H. TRELEASE.

PORT PHILLIP.—Advices from resident director, Sept. 7.—Mine: North shaft: Sinking is being continued; the veins of quartz in the shaft are increasing in thickness and spreading over the greater part of the ground. No. 17 level: We decided to suspend for a time driving the cross-cut and put a drill in the end for a few feet which struck a vein of quartz, giving out a considerable quantity of water; boring will be continued for a short time.

RUBY.—Report for the week ending Oct. 3.—Dunderberg: We have two tributaries at work here. In cleaning out the above, the 800-ft. level, we struck an old chamber, about 70 ft. long, and as it is rather difficult to clean it out, I have started the main drift ahead in the expectation that the ore may lead to the 800-ft. level, thereby prospecting the ground, and giving better facilities for cleaning out the waste and low-grade ore from the chamber. This chamber is nearly flat, and running west about 50 ft. ahead of the main drift in the 800-ft. level. Part of the ore went up about 30 ft., and is within about 30 ft. of the bottom of Bismark's raise, and as there is favourable-looking ground around in the vicinity of the raise, we will probably run a drift soon. Below the 800 we have a little ore, with about a foot of iron all around it. This is in the middle pipe, and I hope by following it down it may connect with the other two, and make ore. On the 400 I have put two men to work. Lord Byron: We have eight tributaries at work. The ore in the back of the chamber has made into a pipe about 3 ft. in diameter, and we are now following it up.

SAMBAS EXPLORATION (Sept. 12).—Extract from the mine manager's report:—The 6 miles of road from here to the River Backuan is completed; we have now a fair road on which to transport the machinery to the mines. There are 14 bridges on this 6 miles of road, some of them over awkward and deep creeks. In one place, where a swamp extends for more than a mile, the road had to be built by driving piles and covering them with timber all the way.

TASMANIAN LAND AND EXPLORATION.—Extract from a letter from Mr. Provis, dated Aug. 26:—"I am now driving on the lode at Lamb's section, and opening up some good stoping ground. Where first cut, the lode was disordered and poor; but the tunnel is now in a good lode, carrying 15 ins. solid first-class galena."

— Extract from a letter from Mr. Provis, dated Aug. 28:—"Lamb's section: I shall be able to commence shipping ore in a small way in a week or two. The tunnel is turning out quite to my expectations, and the present operations are laying open a nice body of payable ore. The lode is small, but its high assay value for silver compensates for this. I am sure you will be pleased with the quality of the ore I shall send home from Lamb's section. I think it will be as good as (if not better than) any galena which has ever been shipped in quantities to London."

— Extract from a letter from Mr. Moore, dated Lake Dora, Aug. 22:—"On my way out from Zeehan, I met Mr. Muir, surveyor, who was not able to survey sections at once. Arrangements were made for assistants to help to move his camp to Dora, on Aug. 26; they leave here on Monday for Zeehan, and on return help in removal of camp. Stores, tools and wheelbarrow fixings have been packed out. Railings and slabs split and carried ½ mile for chimney and floor. Hut erected; wheelbarrow made; tunnel extended 7 ft. The driving has not been good. Rock formation not tearing well and heads not favourable for shooting. For the first 2 ft. the stone did not look as well as in approach, but for the rest of the distance has gradually improved, and now contains a fair percentage of copper pyrites and galena. I have put a trench across the solid body of copper pyrites to the east of tunnel, which a few feet below surface is fully 18 ins. wide, the adjoining formation carries galena: so there is no doubt that this is part of the same formation on which we are driving, and can be tested by a drive. Levels of country I will submit to your approval."

— Telegram dated Sept. 29:—"Lamb's section: Output was 7 tons last week; expect to ship 25 tons Saturday; Dora sections surveyed."

— Telegram dated Oct. 7:—"Lamb's section: have shipped 30 tons of ore to Hobart for London; output was 6 tons last week."

— Telegram dated Oct. 13:—"Lamb's section: Output was 6 tons last week."

— The following telegram from the company's engineer at Zeehan, Tasmania, dated Oct. 19, has just been received:—"Lamb's section: Have shipped 20 tons of ore to Hobart for London. The ore contains 72 per cent. lead, and 105 ozs. of silver per ton. Output was 6 tons last week."

REPORTS OF MEETINGS.

ST. JOHN DEL REY MINING CO., LIMITED.

SHAREHOLDERS ALL BUT UNANIMOUS IN SUPPORTING THE BOARD—A LONG MEETING, AT WHICH, AFTER BOTH SIDES ARE FULLY HEARD, MR. ROGERS VOLUNTARILY RESIGNS—SYMPATHY WITH MR. HOCKIN.

A SPECIAL MEETING of the company was held on Thursday, at the City Terminus Hotel, for the purposes mentioned in the notice dated Oct. 12.

Mr. Frederick Tendron
(chairman of the company) presided.

SYMPATHY WITH MR. HOCKIN.

The CHAIRMAN: Before commencing the business of the meeting I wish to address a few words to you on the subject of Mr. Hockin's absence. Many of you have for a long period known and placed the greatest confidence in him, and you will be sorry to hear that during the short holiday he took after the last general meeting, driving out one day in Gloucestershire, one of his sons-in-law, who was in the carriage with him died, suddenly. This was a great shock to Mr. Hockin, and particularly so to Mrs. Hockin, who was taken ill and died within a few days. You can imagine the grief this was to Mr. Hockin, who is a man now over 80 years of age. He had been connected with this company for nearly 40 years, first as secretary, afterwards as general manager, and then as chairman. This is not the time for me to dwell upon the great services rendered to this company by Mr. Hockin, but I am sure you will feel for him. (Hear, hear.) Of course, we could not press upon him to retain the managing directorship of the company, particularly when his relatives pressed him to cease entirely from attending to any business. This was the only company in which Mr. Hockin took any interest, or with which he was officially connected, and it was with the greatest difficulty we persuaded him to retain his seat at the board. We pressed him to continue the chairmanship of the company to share in its future success. He had seen the company in disaster before, and seen it also come triumphantly through it, and we wanted him to see this again. I offered to give him every assistance I could, and should have been delighted if he had remained chairman, but no effort we could make would induce him to do so, but, still, on our urgent representation he has consented to retain his seat on the board, and I trust you may have the pleasure of seeing him at the next half-yearly meeting. (Cheers.) I now call upon the secretary to read the circular convening the meeting.

Mr. CHARLES F. POOLE (secretary) read the circular which the shareholders had received.

BATTLE OPENS.

Mr. TIMEWELL ROGERS: Ought you not to read the minutes of the last meeting?

The CHAIRMAN: No; this is a special meeting. The question is whether you wish the correspondence that passed between Lord Frederick Fitzroy and Mr. Wethered and the directors and their solicitor, and between Mr. Godfrey, Mr. Rogers' solicitor, to be read, or whether you will take them as read. (Taken as read.) Then, as you have the facts before you, I content myself with at present simply moving the resolution, "That this meeting approves of the course adopted by the directors with reference to the omission of Mr. Rogers' name as a trustee of the deed of trust to the debenture-holders."

Sir JOHN SWINBURNE: I second the motion.

The CHAIRMAN: I wait now for discussion, after which I shall reply, and immediately put the resolution.

Mr. FORD: Might I ask if the following words from your circular are absolutely correct?—"Lord Fitzroy and Mr. Wethered have expressed their desire that their opinion, communicated to the board on July 20, 1891, should be submitted to a general meeting of shareholders." I understand that Mr. Rogers wished positively at the last board meeting, and other meetings, that this meeting should be called.

The CHAIRMAN: I will answer all questions together.

Mr. RAWSON: I have been waiting for some gentleman to speak, but no one has risen to do so. I feel sure that this *exposé* must be very painful to all of us. This company has been going on for years, and I have been a shareholder in it for 10 or 15, and have always looked upon it as possessing one of the

MOST UPRIGHT AND HONOURABLE BODY OF DIRECTORS

that could be found. It must have been painful to other shareholders as it was to me to observe what had been done by some persons connected with the company, in whom we have placed such implicit confidence. I do believe still that in connection with this company we have had as honourable and straightforward men as are to be found in the City of London. Now, I think it very hard, on all the shareholders, and board particularly, that these accusations should have been made, and I suppose not without warrant. If it is a truthful statement (as would appear from the papers received), then I say this director has no right to have a seat at this board. (Loud cheers.) Now that I see Mr. Rogers here, I remember him time after time getting up at this table and recommending the shareholders in the strongest terms to take up their shares—

RECOMMENDING THEM TO STICK BY ST. JOHN DEL REY;

and now what do we find? It is a terrible infliction both for him and for us and for the board, and I think myself that the upright conduct which has been shown by his other colleagues throughout has been manifestly to our advantage, and that now at the crisis of our venture we should manfully stand by the honourable body of men we have served us. (Cheers.)

MR. ROGERS DEFENDS HIMSELF.

Mr. F. TIMEWELL ROGERS: I am exceedingly sorry to hear the remarks Mr. Rawson has made, because I am prepared to prove that I have done nothing which is dishonourable. I will prove it before I sit down, and you will then see that you have judged me in a most

unfair, ungenerous and—well, I will not use another word. Do not interrupt me, if you please; I only ask for fairplay, and I have plenty of letters to prove the correctness of what I have to say.

MR. ROGERS STATES HIS CASE.

Gentlemen, all those who were present at the last general meeting know perfectly well that I proposed, as an amendment to the chairman's proposal, that the report be adopted, a resolution appointing certain gentlemen a committee, with full powers as to inspection and examination of the company's books, papers, &c, to hear statements, receive evidence from both sides, "to decide and report their decision to an adjourned meeting of the shareholders" on certain questions. That was seconded, on behalf of the board, by the present chairman (Mr. Tendron), and after some discussion Mr. Tendron made a proposal to me in the following words (I am now quoting from the *Daily Oracle*, and let me tell you that, at my request, the shorthand notes are preserved for production at any time they might be required as evidence of the truth and correctness of this report): "After all, he thought Mr. Rogers' amendment had better come on as a separate resolution. If he allowed the report and accounts to be passed first, he would promise, on his own responsibility, that Mr. Rogers' resolution should be put to the meeting." The chairman, you will remember, raised an objection, to which Mr. Tendron replied, "I have pledged myself to Mr. Rogers." I consented, and the report and accounts were passed, as, of course, I believed that Mr. Tendron would keep his pledged word as an honourable man. He then said, "As the shareholders had heard both sides of the question raised by Mr. Rogers they would no doubt assent to the appointment of the committee to investigate the subject in dispute." Observe, gentlemen, the committee! What one? There was only one, and that one was proposed by me and seconded by him. After a few remarks from one or two shareholders, in reply to a question from Lord Fitzroy, I again announced that I would be bound by the decision of the committee. The company's solicitor then came forward and said if any committee of investigation took the matter in hand it would be privileged, adding that, "It was, however, special business, and if any shareholder objected to the resolution it could not be put; and his objection would be fatal to the proposition of Mr. Rogers." Was there any objection made? No; and Lord Fitzroy, and Mr. Wethered, who were present, consented to act. Mr. Tendron then remarked that "If the shareholders did not hear anything further of the matter they would understand the committee had decided against Mr. Rogers." The report continues: "The resolution was then carried." The *Financial Times*' report confirms the truth of this report. I also

QUOTE FROM THE "MINING WORLD,"

a copy of which paper was sent, at the company's expense, by the directors to each shareholder, and what do we find there? "Mr. Rogers (director) here introduced a subject in regard to which he considers he has a grievance against his colleagues, and with the acquiescence of all concerned, a committee was appointed to investigate into it and decide, and the matter, by mutual consent, was allowed to drop." Are the recorded minutes correct? No, as they do not give that resolution; therefore the directors have not done what is required of them by clause 113, and as each director has been, I believe, held to be responsible for any action done by his co-directors, I emphatically protest against the minutes, and shall ask you to adjourn this meeting in order that they might be corrected, and will give you more reasons for doing so, as I should suppose that you would scarcely find in the annals of any company such an omission from their minutes as is shown here. The question arises, is the omission accidental or intentional? Let us hope the former; if so, by all means let them be altered—let them be put right, and in order that that might be done, let us adjourn this meeting until the second Thursday in Nov., that is the next board day. I fear, however, that it is intentional, and let me tell you why I fear so.

THE COMMITTEE'S REPORT

gives in full the resolution which was passed at the general meeting in June, and you will find a marginal note by the directors: "This is a misapprehension, no resolution having been put to or passed by the shareholders. See letter, Sept. 24, 1891." Let us now turn to that letter and what do we find? "You are of course aware that no resolution was passed by the shareholders at the general meeting appointing the three gentlemen named by Mr. Rogers to be a committee or entrusting to them any powers. Can it be possible that that could be written with the sanction of a board of which Mr. Tendron is the chairman, the same man who was present at the meeting in June? Can it be possible that he who seconded my proposal, he who to obtain the adoption of the report and accounts, by publicly pledging himself to me that the resolution should be put, and who, as the late chairman, could (I am using his own words) "neither hear or be heard," took upon himself to ask the shareholders to accept the committee, he who could tell the shareholders if they heard nothing more of the matter would know that the committee had decided against me—can it be possible that he has sanctioned the statement in that letter that no committee was appointed, that they have no power to do anything? Why did he not, if that statement be true, flatly decline to have anything to do with the committee? Did he? No. What occurred?

THE COMMITTEE MET.

I was summoned to attend; I did so, and until I was in that room ready to go into the matter I had not the slightest idea that either of the gentlemen named had declined to act; neither had I the slightest idea that the case of the directors would be conducted by your solicitors; not even the usual courtesy shown me that is always shown in law cases, where one side decides on appearing by counsel. Knowing that the resolution passed at the meeting could be the only authority for those gentlemen to act, and was really their only instructions as well, I produced a copy and asked if they had one, and was told "yes" by one of them—taking it in his hand and holding it up. Mr. Tendron at once volunteered the statement that he had pencilled his views upon it. Only fancy such a proceeding. Who else would have done it? The two members of the committee at once put it to both sides as to whether we would accept the decision of the two or not, and both sides assented. I even going so far as to offer to abide by the decision of either of the two, if the directors preferred it, thus to avoid the possibility of a difference of opinion. The

inquiry went on, and Mr. Blyth, who appeared for the directors, at last came to an end, saying that was their case and "I claim your verdict." Verdict, gentlemen; and now we are told that they had no power to give one. I then

REPLIED TO THEIR CHARGES SERIATIM,

and underwent no end of questioning and interruptions from him and the directors. After a sitting of about five hours, the committee stopped me, saying they had heard enough, and that Mr. Tendron expressed the views which the committee in their report say he did, but which it apparently now suits his convenience to deny having used. The reply I made to him was that he could have known all, if he had liked to have inquired. He had before expressed himself satisfied on the charge relative to Mr. Chalmers' telegram. No. 1 was never alleged against me as a reason until Mr. Blyth did so before the committee. The very night that re-construction was adopted by the shareholders I was taken very ill, and was unable to attend any board meeting until the second in Oct. (23), and, as I was extremely anxious on the subject, many letters passed between me and Mr. Hockin (the chairman and managing director.) When the first agreement was about to be registered, he asked me to send in an application for my shares. I replied to his letter, but sent no application. He then wrote, suggesting that

I SHOULD APPLY FOR AT LEAST MY QUALIFICATION.

This course I adopted as I did not care to apply for all without knowing more how things were progressing. I certainly had received from him what he himself called "doleful letters." I feared that Mr. Tendron was only half-hearted in the matter, as, when we were discussing the annual report in May, he would not pledge himself to support re-construction, and I wrote Mr. Hockin that I could not agree to his re-election at the general meeting unless it was understood that he would do so. I also knew that (when the company was first re-constructed Feb., 1887, it was announced in the report at the meeting Dec. 30, 1886, that the directors were maturing a plan for it) Mr. Tendron sold 500 $\frac{1}{2}$., reducing his holding to 700. The transfer was dated and registered Jan. 23, 1887, dated Jan. 27. I also knew that three other members of the board (when they knew that new capital was required, and the battle was being fought as to the mode by which it should be raised, the six favouring the sale of Morro Velho to a new company, through a friend of Mr. Illingworth's—I believe his broker, and continuing to work Cuiaba. On the other hand, I was advocating re-construction, and again winning the old Morro Velho lode) sold a large number of their shares, as Mr. Tendron had done at the first re-construction. Sir John Swinburn sold 600 shares, reducing his holding to 600 shares; the transfer was dated May 7, and registered May 7. Mr. Driver sold 750 shares; a transfer of 550 shares, dated May 22, was registered May 22, and another for 200 shares, dated June 13, was registered June 15. Sir George D. Harris sold 2,050 shares, one transfer for 1,500 shares, dated May 5, being registered May 7, and the other for 550, dated May 26, being registered on May 28. I also knew that Mr. Hockin held his qualification and no more, and it is to be wondered at that I adopted his suggestion and applied for that number? I attended the board meeting Aug. 23, and learnt from Mr. Hockin that he had received from shareholders, who declined to re-construct, renunciation letters, signed in blank, for some 5,000 or 6,000 shares, besides one for 1,250 shares renounced in his favour. We both thought it very serious, in fact, very bad for the company—so many shares in so short a time being renounced.

I MET A GENTLEMAN,

I believe we travelled from London together, and talked about the new company; this resulted in an agreement being suggested between him and me for obtaining a lot of these renounced shares, and on Saturday the 25th I wrote the following letter to Mr. Hockin, telling him so:—

"Since I was with you on Thursday I have been thinking what a drawback it will be to the company if people renounce their shares instead of selling them, and I gather you have now about 5,000 renounced, which means 2,500 $\frac{1}{2}$ less capital for us; this we must try to prevent if possible, and I am ready to do my part. Please forward me a list of those who have renounced, and the number of shares against each name.

"I have been chatting with a friend, and we do not consider it would be right or quite safe to take the renunciation of any shares without a consideration, but we cannot give a large one; but still we are ready to help the company by taking 6,000 or 7,000 shares.

"Are you quite positive that you will not apply for the 1,250 renounced in your favour? If you are, I will make you an offer that you can submit to the owner of them, and one also to the owner of the 3,000, as well as to the owners of the smaller lots. You will agree, I fancy, with me in thinking it would be hardly fair to let anyone else offer for the smaller lots, and leave the bigger ones to me. If you do, give me a wire early on Monday morning, as I am engaged after 12 o'clock.

"I think you will say I am a good friend to the company, and when I have managed 5,000 or 6,000, or perhaps 7,000 shares for you, let the other directors do as many more, each of them, and the work will be done.

"F. TIMEWELL ROGERS."

To this Mr. Hockin replied on the 27th. I give his reply to the above letter in order that you might see for yourself that I was perfectly straightforward, and told him at once, and he not only approved of the course I had taken but assisted me in it, and then I will ask you to read reason No. 2 in the circular, Oct. 12, 1891.

"London, Aug. 27, 1888.

"Dear Mr. Rogers,—I send you a list of persons who have sent me letters of renunciation, with remarks as regards each. I have included the name of another shareholder, who told me that he did not care to put more money in the concern, and to whom I would write at the same time that I write the other parties whose letters of renunciation are not quite complete.

"I have decided nothing further as regards the 1,250 renounced in my favour, but if, I think, I can do so properly I think I should like to give Poole a turn, who tells me he and his relatives would like to have them. I did not wire this morning as I thought there is no hurry, and that when you receive this it will be quite time for you to decide.

"JOHN HOCKIN."

The list Mr. Hockin sent me amounted to 5,975 shares (besides the 1,250 mentioned in our letters), and included two large lots, the one of 3,000 shares and the other 2,300 shares. In reply, besides telling him how much I would give (40 guineas) for the 1,250, if he did not take them, I made an offer of 1s. per share for the 5,300, but then the sellers wanted more for them, and as we could not come to terms, they decided to withdraw the renunciation letters and apply for them, as I believe all the holders of the little lots he mentioned also did, the

COMPANY BEING THUS BENEFITTED TO THE EXTENT OF 3,000 $\frac{1}{2}$.

through my offering to buy, and I believe the owners of the 1,250 did the same (625 $\frac{1}{2}$ more). We, however, bought—I take Mr. Blyth's figures—2,525 renounced shares, which were applied for and taken up in my friend's name (nearly 1,300 $\frac{1}{2}$ more capital), those three sums amounting to nearly 5,000 $\frac{1}{2}$., for remember all these shares were renounced until I wrote offering a price for them. Not getting any more, we bought a few as they were offered, as I continually urged my friend to get the full number; it was also arranged that I should hand him, which I did for the joint account, my 1,800 shares at 1s. 3d. a share, and I was paid for them, as I proved to the committee. Although the directors write that "during the last three years he has been interested in Stock Exchange dealings in the company's shares," and also in his letter Mr. Blyth writes: "The directors deemed it inadvisable that any director should speculate in the company's shares in the manner which Mr. Rogers explained he had been doing, the only shares sold with my consent or knowledge from Aug., 1888, to Dec. 1, 1890, were 300, sold to Sir G. Harris for Mr. Donovan, through Mr. Hockin, through whom the cash was received for them, and through whom the cash was paid for any renunciation letters that were obtained. As to reason 3: "Between Nov. 20, 1890, and Jan. 8, when the purport of Mr. Chalmers' telegram was made known to the public, 4,570 shares were sold, with Mr. Rogers' sanction." Late in the day of Nov. 21 I received copy of Mr. Chalmers' telegram, which I certainly could not understand, and wrote both to Mr. Hockin and Mr. Poole, asking how they read it, and they both appeared to understand it differently, and its contents were certainly never divulged by me to anyone. (Cheers.)

PROPOSAL TO SELL.

The next day I received a letter from the gentleman in whose name the shares were, in which he said:—"Looking at the dearness of money, and the fact there is a call now only partially paid-up, and another call will be made the early part of the new year, and having in view Mr. Hockin's circular that a further large issue of capital will be required in the near future to develop the mine, I think the time has come that, in our interest, the shares which I hold on our joint account should be sold, or some part of them," and proposing that I should consent to his doing so. I went to London by first train on the 24th, returning on the 27th, and took no notice of his letter until the 28th, when I wrote that I would consent to the sale on certain terms, and at 5s. per share nett, the quotation being 4s. 6d. to 5s. 6d. To the price he assented, but not to the terms, and it was not until the afternoon of Dec. 1 that I consented to his selling. Would anyone, except he was a born idiot, if he had wanted to sell, in consequence of his knowing the contents of Mr. Chalmers' telegram, have allowed that letter to have remained unanswered till the 28th, and then have stipulated for such terms and price as I did, and allowed three more days to elapse before he gave his consent to the shares being sold? Would he not have at once replied—"Sell at the best price you can?" Of course he would. According to the

SALE NOTES WHICH MR. BLYTH HAS QUOTED,

on Dec. 3, 4, 5, 2,400 shares were sold at my limit, but it would appear from the transfers registered at the office, and produced to the committee by the secretary at their sitting, that my friend was so anxious to sell, that without waiting for my sanction he had sold those shares before Dec. 1. Had I known it, I could not, if I would, have stopped the transfers. The shares being in his name the directors had no right to refuse to register any transfer that was presented. Now, what does all this amount to and show? Why, that

I HAVE REALLY BEEN A GREAT BENEFactor TO THE COMPANY.

I communicated to the chairman and managing director that I and a friend were ready to aid the company by taking renunciation letters at a price evidently above what he valued them in. He helped me to get them, and the money they cost was paid through him. We took all we could buy at our price. Our bidding for many more caused them to be applied for, although they had been renounced, thus increasing the capital subscribed by some 5,000 $\frac{1}{2}$., and if, against that, you say my friend has failed as yet to apply for the 1,800 shares, say 900 $\frac{1}{2}$., that still shows that my making that agreement with him benefitted the company to the tune of 4,000 $\frac{1}{2}$.. The being interested in Stock Exchange dealings turns out to be a sale, to a director for his friend, of 300 shares, and that negotiated through the chairman. I certainly assented to the sale of the shares 10 days after receiving Mr. Chalmers' telegram at, according to the quotations, a very full and distinctly defined price, 5s. nett, but, as I said before, all sold at that price were transferred before my consent was given, and none of the remainder were sold until after the meeting of shareholders held on the 18th, when everyone knew the position of the company. Before the committee Mr. Blyth and the directors (if no committee was appointed how came they to be all there) urged all they possibly could against me, and when he had said all he could, he concluded by telling the committee "that is our case, and I claim your verdict." Mark the word—"Your verdict!" How, if they had no power to give one? To every charge he made I replied *seriatim*, and underwent no end of interruption and questioning from him and the directors, and produced proofs for what I said, and with what effect? The report of the committee, of which a copy has been sent you, answers that question. Those gentlemen were appointed a committee to inquire and hear all sides, to decide and report their decision to a shareholders' meeting, and, more, the resolution appointing the committee was proposed by me and seconded by Mr. Tendron. For full reports of that meeting see *Daily Oracle* and *Financial Times*, of June 26. The MINING WORLD of June 27, sent you by the directors, tells you that the committee was appointed to investigate and decide. When the committee met, before they would proceed, they distinctly put it to both parties, if, as there were only two, instead of three members of the committee present, it was distinctly understood that

their decision should be accepted as that of the three, both sides agreed, and I asked if the committee had the resolution appointing them, and one of them, holding it up, said yes, and Mr. Tendron also volunteered the statement that he had made some notes on it. After both sides had finished the directors thanked, in a most effusive manner, the committee for their great attention to the case and their kindness in consenting to act. The report was sent, as an act of courtesy to the board—and what was the report the most complete,

THE MOST THOROUGH EXONERATION OF ME.

"No ground exists for imputing to Mr. Rogers that he was guilty of dishonourable or discreditable conduct in disposing of shares in the company, and that there is no foundation for the charges made against him at the meeting on June 25." This, to any honourable men, would have been binding, not so on these directors, who, when re-construction was becoming inevitable, sold nearly 4,000 shares of their own; they instruct their solicitor to write that no committee was appointed, and that it was never agreed that their report should be adopted as final. Do you, or can you believe, that had the award been against me instead of in my favour, that they would not have insisted it was final? I still assert that it was so, and, believing that all honourable men would think so too, I made no reply to this circular to the shareholders of Sept. 28, as I did not think that their letter of the 24th could remain unanswered by the committee, and I should scarcely fancy it did, although if there was a reply to it, the directors have not, as in common fairness they should have done, made it public. Until I received their circular, Oct. 12, I had no idea that there was to be a meeting; at four successive board meetings I proposed that one should be called, but unsuccessfully, and the articles of association say: "The directors may at any time call an extraordinary meeting of the shareholders," but there has been no resolution proposed at any board meeting. I have attended regularly, and do know, for the calling of an extraordinary meeting of the shareholders except by me, and on neither of those occasions has it ever been seconded, even. That will render all the proxies sent to the directors of no avail, and as soon as I know when a meeting will be called, that is legal, I shall send round proxies, asking you to support me. I have pointed out to you that the arrangement I made was really for the benefit of the company, that it was done with the knowledge, approval, and help of the chairman, who was also the managing director, and that it was actually communicated to him in my letter of Aug. 25 before I concluded the arrangements, and if he did not make it known to the other directors, I cannot help that, I did my best that they should know, by writing to him; and that by entering into the arrangement I did I benefited the company to the tune of 5,000*l.*, and I have also given you the truth as to the Stock Exchange dealings in the company's shares, as well as the explanation as to selling the shares, and I claim at your hands, after you have carefully read the above, as full, as complete, as honourable, an acquittal, as I have received from the committee, and shall with confidence calculate on receiving your support, as I am perfectly satisfied that I have done nothing, that the most honourable man could say I was wrong in.

THE DIRECTORS.

And now who are the gentlemen who have asked you for your votes to turn me off the board? Four of them are men who actually sold (let me use Mr. Blyth's words) a large number (nearly 4,000) of shares at a time when they, as directors, had private information of an unsatisfactory character which had not been communicated to the shareholders, and the other two men, who from their raising no objection, approved of their doing so, and here I may say that one of them wrote me the following letter, advising me to do the same, I did not follow his advice, but you will see it was given. Sir George Harris wrote me on May 7, 1888, as follows:—

"I received your note before leaving for the City this morning, and have had an afternoon of it with Mr. Gordon and Mr. Hockin—I broached both the scheme of a new company and also of re-construction. To me he seemed to favour re-construction. Mr. Gordon is a very gentlemanly fellow, and I have no doubt a highly respectable broker, and I dare say his friend, the promoter or promoters, are ditto. I have the very strongest doubt that they will be able to get any responsible person or persons, such as we could accept, to guarantee to underwrite 175,000*l.* or anything like it. There is not a shadow of doubt in my mind that there is, or will be literally, no alternative but re-construction, and strictly, *entre nous*, I strongly advise you to sell so many of your shares as will leave you with such a balance that you will be able to say to the meeting that you will pay upon all your own holding. I shall certainly do so, and yet I am certain we have a good thing. There is money in it, if we can only get the coin to sink the shafts; it ought to have been done before. We are to see Gordon again, when he has thrashed the matter out with his promoters, as I said before it will come to nothing, the other members of the board would never believe it unless we tried. Mr. Gordon wanted to know what his remuneration would be in the event of success, I said the preliminary inquiry must be gratis. He is to give us definite information later. I think his notion on this head will be an eye-opener, but wait. Given the money can be found, for sake of argument, and say it will cost 26,000*l.* to sink the shaft, 26,000*l.* commission, &c., the Stock Exchange to get the money. Do not the figures look pretty. No time for more. Hockin is not nearly so keen on the selling scheme. He says, nothing short of an absolute guarantee of the entire 175,000 will satisfy him, and the parties must be responsible. I wonder if Rothschild or Baring will come forward. I wonder, and I am likely to go on wondering.

"(Signed) G. D. HARRIS."

I prevented an attempted new company being formed to buy Morro Velho that Cuiaba might be worked. I prevented the proposal of an absurd issue of preference shares, and as you well know, had it not been for my strenuous efforts in favour of the debenture scheme, the company must have been re-constructed in Jan. last, and without very great care it will have to be next spring, as from whence do you think those five gentlemen will receive the money, which will be required. Mr. Chalmers' estimate showed 125,000*l.* beyond the 15,000*l.* uncalled; to that must be added interest, &c., 10,000*l.*, or 12,000*l.*, making a total of 152,000*l.*, out of which we have raised 62,000*l.* by debentures, and there will be 15,000*l.* calls, so that they will have to raise another 75,000*l.* to 80,000*l.* Now, I hope I have said enough to show that everything I have done has been straightforward and honest. (Cheers.) I do say the suggestion I made just now is only a fair one.

I do not wish to move the adjournment, but rather to do it later on. If I am told I cannot move it later on I will move it now. (Cheers.)

The CHAIRMAN: I think you had better move it later on.

Mr. ROGERS: Very well—that is distinctly understood.

MR. ILLINGWORTH DEFENDS HIS COLLEAGUES.

Mr. ILLINGWORTH: I cannot let this meeting go any further, leaving my colleagues under the imputation that they have sold their shares under the same sort of circumstances that Mr. Rogers sold his. When a company is in liquidation, when we do not know whether we are going on or not, it is perfectly competent for any shareholder, be he a director or anyone else, to part with shares he cannot conveniently pay the calls upon, owing to the nature of his circumstances. It is totally different from the case of a director acting in conjunction with a partner, buying and selling shares, and Mr. Rogers did not only deal in the shares he has mentioned, but bought 2,000 on the Stock Exchange in order to gamble with them. To say he is in the same category with *bona-fide* shareholders, who have more shares than they can conveniently hold, is an insult to this meeting, and especially so to those of my colleagues who have been named. (Cheers.)

A PERTINENT QUESTION.

Mr. MAY: Would you let me ask Mr. Rogers a question? We understand that you (Mr. Rogers) entered into this arrangement with Mr. Sims for the benefit of the company. Is that so or not?

The CHAIRMAN: I cannot allow the question to be put.

VIEWS OF THE COMMITTEE.

Mr. WETHERED: I am sorry Lord Fitzroy is not here to-day. We both met as a committee, and the directors received us in the kindest and most gentlemanly way. The directors were represented by their solicitor, and though Mr. Rogers has somewhat complained of that, I think it was the wisest course that could have been adopted. We listened to all Mr. Blyth's remarks, who represented the directors, and the latter appeared to be satisfied with what he said. After he had gone through his case he said "That is my case, and I claim your verdict." With the full concurrence of the board we also had a solicitor, and when Mr. Blyth had finished his address, the matter appeared to be closed. I tried to prevent Mr. Rogers from going so far back as he has done to-day, but at last we said we would listen to him. Mr. Tendron handed across the table the copy of the resolution, which was in his possession at the last meeting, setting forth the whole of the case as Mr. Rogers has given it to you, and at the back of this paper Mr. Tendron had made his remark—"That is what you have to consider to-day." I handed it to Lord Fitzroy who initialled it "F F," July 15, 1891.

The CHAIRMAN: I am sure you do not wish to be incorrect, but that was the paper Mr. Rogers laid on the table, and as I went down in the train I put a memorandum of what the gist of the whole thing was that passed at the meeting.

Mr. WETHERED: I want to show you that we were consistent, and to have a clear case for Lord Fitzroy and myself. I had to look at this matter with no feeling, but must confess I was slightly prejudiced against Mr. Rogers when I entered the room, and I pinned him to this, that he would abide by our verdict. He made statements and produced letters in support of them, and Mr. Tendron turned to Mr. Rogers and said: "Why did not you tell us this before? If we had known this there would have been an end of the whole matter."

The CHAIRMAN: I shall flatly contradict that.

Mr. WETHERED: I profess to have a clear head, and I say distinctly that was so, and Lord Fitzroy turned round and said: "We do not want to hear any more."

WE SHUT MR. ROGERS UP,

but he never said anything about other persons selling their shares as he has done to-day. After that question was closed I do not think it was a fair thing to Lord Fitzroy and myself to write misrepresentations and try and open up the question again when Mr. Rogers was not present. It reflects upon us that our verdict was not a right one but I never knew a case of arbitration where you had to give the grounds of your verdict. We covered the ground with a decision which we thought would be satisfactory to the directors, and we sent it to the board—in fact our idea was that they would settle their differences with Mr. Rogers amongst themselves. If there is doubt about the veracity of Mr. Rogers, let his papers be impounded. I should say the directors are as upright a lot of gentlemen as I could ever wish to meet. We left, and all shook hands, and I did hope that you would have been spared the pains of listening to what you have heard to-day. We kept nothing back. We did what we thought was in the best interest of the shareholders, and what we thought to be our duty to the directors. (Cheers.)

THE REAL POINT.

Mr. SAMUEL J. WILDE: The first thing we have to consider is the company itself. No matter who is right or wrong, it is utterly impossible that, with Mr. Rogers as a colleague, the other directors can go on. I would therefore suggest that that gentleman should be requested to resign. I think it in the interests of the company this discussion should be stopped as soon as possible.

CHAIRMAN'S REPLY.

The CHAIRMAN: It is my intention to move the second resolution, and I shall put it on the ground that you have mentioned. I am sorry to differ from Mr. Wethered. I can begin to understand how he was carried away and misapprehended what passed. I am not now going into ancient history of how the committee was created and the part that I took in the matter. Those are secondary points altogether. (Hear, hear.) The main points before you are as to correctness of the second charge made against Mr. Rogers, and as to the charge made against myself and colleague. I will refer briefly to myself. It was after the first re-construction, when I had done my duty to the shareholders in putting the matter, not over confidently, before them as to the chances of success in the new company, that, at all events, we were bound to save the honour of the old one, and that if death were to be the result, the old Del Rey should be buried decently, with all its engagements met, leaving none of the bills un-

paid, which the manager had drawn and negotiated at 90 days, on which a large amount was outstanding. When the meeting was over I said to Mr. Hockin:—"I have done my duty—I am going to withdraw from the company and to sell 500 shares," and he said, "My dear friend, do not desert me," and I remained. Now that was my transaction, of which I told Mr. Hockin. But just bear this point in mind, and this is what I mentioned to Mr. Wethered; but how it was possible for him to have misunderstood me when I spoke so plainly I cannot understand. I tell you as I told him, that if I had to go through the whole thing again, with the facts before me then as they are now, I would do exactly as I then did, and I would not be associated with Mr. Rogers as a trustee for the debenture-holders. I am not going to take up your time, but I will read to you a letter I wrote next morning to the solicitor of the company and Mr. Hockin, to let them know the position of things. What I wish you to remember is that such a thing as a director selling shares on information withheld from the general body of proprietors was totally unknown in the history of the Del Rey Co. (Cheers.) I have had to meet you on more than 30 occasions, and have spoken at almost every meeting. You must therefore have formed some opinion of my character, and of the character of Mr. Hockin.

REMINISCENCES.

I was going up to town with Mr. Hockin many years ago. I had a good many shares of my own then, and had induced many friends to join the company. I was new to mining then, and viewed it from a somewhat different standpoint from that which a later experience teaches me to view it to-day. I was then interested in another mine, where we had an overflow of water that nearly blew out the furnaces, and said to Mr. Hockin, "What is the news like." I got hardly any answer from him, and at London Bridge he got out of the carriage somewhat quickly, said, "Good morning," and off he went. I thought what on earth is he grumpy about? That was on the Monday, and on the Wednesday at 10 o'clock I got a circular that the walls of the mine, in which we were then earning from 3,000l. to 4,000l. a month, the northern wall, had shown signs of danger, and that the mine had had to be abandoned. I went to the office, and the first man I met there was

MY OLD FRIEND AND ANTAGONIST, JOHN SCHOFIELD.

I said: "What are you going to call Del Rey shares to-day?"—they had been 25l. to 26l. on the Monday—and he said, "14l. to 16l." Mr. Hockin came in, and then I knew that he was aware of this catastrophe on the Monday, but he said "I was the trustee of a secret." I was not at that time connected with the company except as a shareholder, and that is the way that secret was kept, and the Stock Exchange had not the slightest idea of it. When the next accident happened to Del Rey, the stock was at 85 or 90. Mr. Schofield bought 500l. worth of stock at 85 on Tuesday, and on the Sunday I had been walking with a friend who asked me about the company, and I said "I think we are coming upon a time of prosperity." Still if the mine gets poor, or if we have another accident it will be the end of us." On the Monday I was dining with that gentleman, when a telegram arrived from Mr. Hockin to say: "Dear Tendron, the following sad telegram just received":—

"A shaft gone away; fall of rock."

The outside public knew not a word, but on the Wednesday everyone knew it, and the shares went down to 40l., but no directors sold. Fancy if I had telegraphed to sell 1,000l. worth of stock what the effect would have been. Do you think I could have stood before you and faced you now? (Cheers.) Not a director sold, and not a person in the office knew the secret. When a telegram comes it is sent to the Stock Exchange, and 10 minutes after it is put up in the office. That is the tone that distinguishes St. John del Rey. Here is my letter to Mr. Hockin, and let me say now that I have

NO PERSONAL FEELING AGAINST MR. ROGERS.

Even at this moment I have not, but I am not going to move from what I consider to be the interests of the company, and my duty as a director. I shall oppose every attempt at adjournment, and am determined to have done with this matter at this meeting, so that henceforth the whole of our attention may be devoted to your real interests, which are the working of the mine. (Cheers.) Here in my letter to the chairman:—

"The Grand Hotel, Eastbourne,
July 16, 1891.

"Dear Mr. Blyth,—Was it not clearly proved yesterday by Mr. Rogers himself—

"1. That he consented to Sims selling their joint shares to pay for Rogers' Stock Exchange losses.

"2. That his consent was at the time of Chalmers' telegram, and that the sales he authorised all took place after the telegram, those before being unauthorised, and by Sims, in breach of contract.

"3. That Mr. Hockin knew nothing of this contract till after the sale of the shares, and Mr. Rogers was called to account.

"4. That not only pressure was applied to get payment of calls on the joint shares, but on his own qualification shares.

"5. That the contract with Sims was outrageous on the part of a director.

"6. That this contract was secret from all the directors.

"7. That when he pressed re-construction he was on friendly terms with Sims, and that Sims was under agreement to buy back the shares.

"Now, in the eye of the law, would this (apart from any other charges) justify the other directors in stigmatising such conduct on the part of one director as 'dishonourable.'"

"F. TENDRON."

Again on the 21st I wrote to Mr. Hockin:—

"The Grand Hotel, Eastbourne, Limited.
July 21, 1891.

"Dear Mr. Hockin,—As I shall have left for the Tyrol before you return, I think it well to let you know what I consider proved at the meeting of 15th with Lord Fitzroy and Mr. Wethered, and for this purpose I will take Mr. Rogers' own evidence.

"1. Brokers' notes for sale of 4,570 shares from Dec. 3 to Jan. 2.

"2. 700 shares previously sold, the transfers for which are registered from Oct. 22 to Nov. 25, he declared sold without his authority, and to be a violation of the contract he and Sims entered into.

"3. This contract required Sims to find the money and pay calls on

6,000 shares, he and Rogers sharing profit or loss, and not to sell without Rogers' consent.

"4. He, Rogers, consented about Nov. 29 (not certain as to date) to Sims selling, to find money to pay Rogers' losses on time bargains, or Stock Exchange differences.

"5. That the letter of Nov. 20, advising him Chalmers' telegram, was not received by him, but he was at our board of Nov. 27, when we decided to wait for written estimates.

"6. Rogers thus sold, or sanctioned selling at the very time we, in the company's interests, withheld the telegram from the shareholders.

"So, if he did not consent to sell *because of the telegram*, he did consent to sell to pay Stock Exchange differences.

"In either case I consider the course we took not to make him a trustee was the right and proper course.

"Now, for how Mr. Rogers justifies the purchase on a profit and loss basis, not one of investment—he declares that it was for the benefit of the company, and that you aided him to acquire the shares; this is, of course, true so far as the purchase of shares in the old company is concerned, but I am certain you would never have sanctioned or aided the purchase, if you had seen the contract.

"The essence of the contract was, Sims to find all the money, only charging 5 per cent. interest. What was the equivalent Rogers provided?

"Lastly, Sims was to buy back at Rogers' call. Were they partners and friends when Rogers tried to force you into threatening re-construction?"

"(Signed) F. TENDRON."

Mr. Wethered used the loftiest language as to the duty of directors, and described his position as "A solemn trust imparted to him." The moment he spoke in that magnificent tone I felt perfectly relieved, and judge my astonishment when, after Mr. Rogers had read his contract with Mr. Sims, I found his (Mr. Wethered's) decision. I never was more indignant in my life than when I read the committee's report, and found

WORDS PUT INTO MY MOUTH THAT I NEVER USED.

In regard to Sir Frederick Haines, I felt it quite a blow that he would not serve, but he has given us his proxy. When Mr. Rogers appealed to the committee and wished to carry things his own way and dragged in Mr. Hockin's name and Mr. Poole's name I thought it was well to be armed with a positive declaration from Mr. Hockin whether he knew anything of these alleged transactions. Are you going to put the 33 years of service of Mr. Hockin in the same scale with the statements and assertions of Mr. Rogers? (Cries of "No.")

MR. HOCKIN'S VIEWS.

"Amersham House, Beckenham.
Oct. 9, 1891.

"Dear Mr. Tendron,—In reply to your enquiry, I beg to say most positively that, up to the date referred to below, Mr. Rogers had never, by word of mouth, nor in writing, informed me that a partnership existed between him and Mr. Sims in regard to the St. John del Rey shares standing in Mr. Sims' name.

"He always spoke and wrote of them as his shares, and as forming his large holding in the company.

"A little previously to my interview with him on the day preceding the board day at which the trustees under the mortgage bond were appointed, I heard a rumour from outside that such was the case. I mentioned this to him, and he then admitted it.

"JOHN HOCKIN.

"F. Tendron, Esq.,

"Grand Hotel, Eastbourne."

You have had two of Mr. Rogers' addresses, and if I, as a shareholder, simply had attended the last meeting, when Mr. Rogers addressed you so pathetically, I too should have been carried away, and thought he had been treated with harshness or want of proper feeling. We were hurt when we heard of his conduct, and hurt still more when we heard the explanation he had to give of it. He thinks we are discourteous to him, but he little knows how discourteous he has been at times to us. Now can you believe that the letter I am going to read to you was written by Mr. Rogers? Here is Sir George Harris chafing under what Mr. Rogers has said about him, but let me tell you that a more honest man than Sir George Harris does not breathe in this city. That letter was written in confidence from one director to another. There we were trying to invent schemes to carry us over our difficulty. Here was Mr. Illingworth against whom that man (Mr. Rogers) would like to have insinuated, and here were we all trying to get somebody to buy a part of the property, so as to give us the money we wanted for the rest. We would not have been directors of the new company. Others would have had to take it up for whose statements we would not have been responsible, and you can understand the life we have led when confidential communications were passing between us whilst one of our colleagues was taking notes and memos to be used as they have been used to-day. What did Mr. Rogers write on Nov. 26?

"St. John del Rey Mining Co., Limited,

"28, Tower Chambers, Finsbury Pavement,

"London, E.C., Nov. 26, 1890.

"Dear Sir,—I was too unwell yesterday morning to write to you, and began a letter in the afternoon when people came in and prevented my finishing it, and I thought I should see you at the station this morning. I have been here for the last three hours, going into things with Poole (Hockin not well enough to be up). I see our shares were up again yesterday 5s. 6d. to 6s. 6d.; as Flower calls them, 5s. 6d., 6s. I shall be home to-morrow night 5.35. How would it be to write to-morrow, asking him if he is open to do business in a couple of thousand, and your friend, who is from home, will be back on Saturday; so will he make you a close quotation, or is it better to wait till I see you?"

"F. T. ROGERS.

"R. Sims, Esq.

"I am inclined to think we should get 6s. for them in a few days."

DATES.

The telegram was received on Nov. 20. This letter from Mr. Rogers was not in my possession at the time we had the pleasure of seeing Mr. Wethered.

MR. WETHERED: You were good enough to say, speaking of the

honourable way in which I said a director should act, that I was the man who put this paragraph in the report.

The CHAIRMAN: I said you took a leading part, and one reason was that Lord Fitzroy is slightly deaf.

Mr. WETHERED: That paragraph emanated from Lord Fitzroy.

The CHAIRMAN: If he is slightly deaf, I am not to be held responsible for that, or to have words put into my mouth which I did not use. (Cheers.) The letter is dated the 26th, on Nov. 20 comes the telegram, and Mr. Rogers gave me to understand that by some unaccountable means he had not received it. On July 16, I had a letter from Mr. Poole with a copy of his letter, saying that not a word should be breathed to one's dearest friends about it. He says "I am inclined to think we shall get 6s. for them in a few days." What is the date of the first contract? Dec. 2—1,950 shares. Those things are pretty clear, and he who runs may read. The first resolution I do not think you can hesitate for a moment to pass, and I shall now put it to the meeting. All the meeting votes in its favour with the exception of four gentlemen, and one of them is Mr. Rogers. (Loud applause.)

RESOLUTION TO REMOVE MR. ROGERS.

The CHAIRMAN: It is utterly impossible, as Mr. Wilde has said, that we can go on with Mr. Rogers on the board, and I move the second resolution, "That Mr. Timewell Rogers be removed from his office as director."

Mr. R. WALKER: I second that. I am only a young man, but have lived long enough to know that if directors are to do any good they must work in harmony. Mr. Rogers' argument is simply of the *tu quoque* style, and are we to decide in his favour, or are we to give our confidence to the old directors of St. John del Rey who have served us through thick and thin. I think there can be only one answer to that question.

Mr. MAY: The question I asked was crucial—whether Mr. Rogers entered into his partnership with Mr. Sims for the benefit of the company or his own benefit. It seems obvious to me that he entered into it for the purpose of profiting by it himself just as his partner did. (Cheers.)

A SUGGESTION.

Mr. HOWARD KENNARD suggested that Mr. Rogers should simply tender his resignation, and that no formal resolution on the subject should be submitted. It would be better for Mr. Rogers himself that this should be done, and better also for the company. He thought he would carry the meeting with him when he said that it was the duty of the gentleman who found himself in the minority of one to retire. (Cheers.)

Mr. MAY suggested a resolution in these words: "This meeting upholds the action of the directors, but is willing to accept the assurances of good faith which have been offered by and on behalf of Mr. Rogers on his resignation."

Mr. WILDE: I think that is going much further than is necessary. This resolution was not pressed.

Mr. WETHERED urged Mr. Rogers to take the course suggested by Mr. Kennard.

Mr. ROGERS: If it is distinctly understood that these charges of dishonourable conduct are withdrawn.

Mr. WILDE: We want an answer if you retire (yes or no).

Mr. ROGERS: On that understanding I will put my resignation in your hands, but if I am to be branded with dishonour, then I will not.

Mr. KENNARD: I think all imputations should be withdrawn.

The CHAIRMAN: It is very kind of Mr. Kennard, but Mr. Rogers has spoken of bringing an action for libel against us.

Mr. ROGERS: I said I might do it.

ULTIMATUM.

The CHAIRMAN: I have a responsible duty, and I know the views of my colleagues. If Mr. Rogers will give an unreserved resignation—I do not wish to trample upon a man when he is down—I will accept it, but if not I shall simply put the resolution. We cannot have any conditions. I am responsible now for the consequences to the company that may follow, and consider it absolutely necessary that there should be an unreserved resignation, after which I will see what can be done to soothe his feelings. I ask you, Mr. Rogers, will you resign?

Mr. ROGERS: I do not wish to remain on the board.

The CHAIRMAN: Unless Mr. Rogers resigns I am going to put the resolution.

MR. ROGERS RESIGNS.

Mr. ROGERS: Then I will resign. (Cheers.)

The CHAIRMAN: Then give me that in writing.

Mr. Rogers handed his resignation up in writing.

The CHAIRMAN (to the meeting): Is it your pleasure "that Mr. Rogers' resignation should be accepted?" It is carried unanimously. (Cheers.)

Mr. MAY: I do not wish to put my resolution, as it is unnecessary.

EXPLANATIONS.

Sir GEORGE HARRIS (director): My name has been mentioned several times, and an explanation is due from me. Three or four years ago, at the time of the re-construction, I held 3,250 shares in this company. It was a question whether the company would be re-constructed or not. I also held a considerable amount in debenture bonds, and my wife held also 1,000*l.* of bonds, for which I considered myself responsible. I spoke to Mr. Hockin and my colleagues, and told them that in case of re-construction it would not be convenient at the time to raise 1,600*l.*, and that unless they could pay me 1,000*l.* for the bonds of my wife, I should be compelled to sell some of my shares. I was requested by my colleagues to do so, and did, but retained as many as I could, contributing to the new company about 600*l.*, and since then another 500*l.* and my wife 100*l.* I think I have been a good friend to this company from beginning to end. With regard to the shares I purchased some short time ago, there were two or three unfortunate people who owned them, and who had not paid up the instalments upon them. The shares were quite unsaleable, and they went to the chairman to ask him if he could do something for him. He appealed to Mr. Driver (one of my colleagues) and myself whether we would take these shares. We demurred at first, but afterwards consented to do so, to relieve these poor people. (Cheers.)

Mr. DRIVER: At the time the company was re-constructed, when it was in liquidation, I held 2,200 shares, and had to face a call of 10s. This meant 1,100*l.*, which was more than I could easily meet at the time. I sold 700 shares in order to carry out the contract I should have to enter into with the new company, which left me 1,500, and these I hold now. Sir George Harris has explained how, to relieve the necessities of some poor people, I obtained some more, and 50 I bought from the mate of a vessel—altogether I hold 1,735 shares. (Cheers.)

Sir JOHN SWINBURNE: When I found on the second re-construction the shares I bought (I am sorry to say at 340*l.*) it was not convenient to pay all the calls, after consulting with Mr. Hockin he said I should sell some in order to pay the calls upon the rest. I also hold about 3,000*l.* in bonds. (Cheers.)

The CHAIRMAN: We have the resignation of Mr. Rogers, and are content to let bygone be bygone. He is a man of

INDOMITABLE PLUCK AND COURAGE,

and when most of us doubted whether we should be able to get the company through, he never lost faith in it. We hold proxies for 135,600 shares, and others have come in that are too late. When we meet you in Dec., a scheme will be laid before you which, whilst safeguarding the interests of the existing shareholders, will make it worth every man's while who can to find the money to do so. You are not going, after spending 160,000*l.*, to let the property drop for 60,000*l.* (Loud cheers.)

A cordial vote of thanks to the chairman, on the motion of Mr. KENNARD, closed the meeting.

THE ROBURITE EXPLOSIVES CO., LIMITED.

RE-CONSTRUCTION SUCCESSFUL — PRACTICALLY ALL THE SHAREHOLDERS COME IN — SALE OF ROBURITE STEADILY PROGRESSES.

THE first ordinary general meeting was held at the Cannon Street Hotel, on Tuesday.

Genl. Sir John Stokes, K.C.B.

(chairman of the company), presided.

Mr. H. A. KROHN (secretary) read the notice of meeting.

SALES FOR NINE MONTHS INCREASE 36 PER CENT.

The CHAIRMAN: Gentlemen, this is purely a formal meeting, held in accordance with the terms of the Companies Acts, which require that a general meeting should be held within four months of the registration of the company. But, although the meeting is purely formal, it may be interesting to you to know the position of affairs. (Hear, hear.) At our last general meeting, on June 30, you confirmed the resolution authorising the re-construction, in accordance with the scheme recommended by the board in consultation with the committee appointed by yourselves. A new company was registered on the same day, and all the arrangements for re-construction were carried through within 24 hours, so that there was no break in the continuity of the company's transactions. We, therefore, started fresh on July 1 with a clean balance-sheet, all old debts as to capital being wiped off, and the accrued cumulative dividends also provided for. Owing to the issue of new shares for this latter purpose, our paid-up capital now stands at a higher figure than before, but the cumulative dividend payable upon it is actually less, in consequence of the reduction of the rate from 7 per cent. to 5 per cent. As regards the progress of the business since we last met, I am glad to say that the total sales for the quarter ending Sept. 30 exceeded those for the corresponding period of last year by nearly 40 per cent. (Loud cheers.) During the past three months there was a slight check to the progress of our export trade, which we attribute to increased competition, combined with the heavy fall in the price of other high explosives sold in the Colonies. We trust, however, to see an improvement in the current quarter. I may say in passing that, for instance, the price of dynamite is not much more than one half what it was when we began business two years ago. Of course, that makes the competition severer for us. Our home trade continues its steady upward course, and nothing so far has occurred to retard its development. The

SEPT. SALES EXCEED THOSE FOR ANY PREVIOUS MONTH,

and Oct. bids fair to show a better record than Sept. Looking at our prospects as a whole, I think we have good reason to hope that the result of the half-year will be satisfactory, provided always that no unforeseen complications occur during the next few months. So far, I have dealt only with the progress made during the existence of this new company, but I think it will be satisfactory to you to know that the sales for the nine months ending Sept. 30, that is to say, the last six months of the old company and the first three months of the present one, are

36 PER CENT. MORE THAN THE FIRST NINE MONTHS OF LAST YEAR,

and as in the same period last year the sales were 40 per cent. more than in the year before, you see that the progress and increase are steadfast and continuous. I have nothing to add to that, and there is no other business before the meeting. If any gentleman wishes to ask any questions I shall be happy to answer them.

QUESTIONS.

Mr. JOHN NEWTON: Could you tell us if the whole of the shareholders have come into the re-constructed company?

The CHAIRMAN: I think I may say that practically the whole of them have.

Mr. NEWTON: Is there likely to be any litigation in connection with the re-construction?

The CHAIRMAN: Not the least. We know of no litigation.

Mr. NEWTON: Will you mind telling me when the certificates will be ready?

Mr. KROHN (secretary): Notice that they were ready went out some weeks ago.

The CHAIRMAN: The certificates are all ready.

A SUGGESTION.

Genl. SIM: Having been on the committee of shareholders, and taken a great interest in the affairs of the company, there is one point that has struck me—that when any of these casualties and fatalities happen with dynamite, it would be well that opportunity should be taken to advertise and push our explosive in every possible way. One sees so many casualties with other explosives that it occurs to me it would be a good opportunity to call attention to your explosive on such occasions. I take up one paper after another, and see a dynamite explosion here and a gunpowder explosion there, and half the people think our explosive is quite as likely to do the same thing. It seems to me it would be a capital idea to advertise roborite when these catastrophes happen. I never missed the opportunity with my friends of explaining that we have the safest and best explosive in the market, but they do not believe me until these things happen.

WHAT THE BOARD ACTUALLY DO.

The CHAIRMAN: What we do is this. As soon as an accident occurs we at once send down pamphlets exposing the excellence of our explosive to the place where the fatality has occurred, and I think that that course meets with very much what you propose. We began by advertising and spending a lot of money, but did not find we got much from it, and therefore we have of late adopted the system I have mentioned, and also the still more practical one of trials.

Genl. SIM: I quite agree with what you do, but when these explosions happen it has always seemed to me a capital idea to push our own as much as possible.

Mr. KROHN: We never miss an opportunity of doing so.

A SHAREHOLDER: Is ammonite likely to make much headway?

The CHAIRMAN: Certain private trials of it are being made. Others were published some time ago, and I do not think I can say more than that.

SERVICES OF DIRECTORS.

Genl. SIM: I beg to propose a vote of thanks to the directors. Having been behind the scene as a member of the committee, I know the work they do, and how well the company is served by them. We are indebted to them very much for the successful way in which the re-construction has been carried through. I do not think you can leave your property in better hands, and have no doubt the meeting will be of the same opinion.

Carried by acclamation.

The CHAIRMAN, in returning thanks, said: We shall continue in the same course we have begun, and do all that is within our power to make the company a success. I think we have turned the corner, and are going ahead very well. (Cheers.)

LAS BRUJAS (COLOMBIA) HYDRAULIC GOLD MINES, LIMITED.

POSITION OF THE COMPANY SHOWS DISTINCT IMPROVEMENT—A NEW PROPERTY ACQUIRED.

THE ordinary general meeting was held at Dashwood House, New Broad Street, on Thursday, to receive the directors' report and statement of accounts, to elect an auditor, and to transact the general business of the company.

Mr. E. D. Oppert

(chairman of the company) presided.

Mr. W. J. LAVINGTON (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I am sorry to see such a small attendance to-day, especially as I think the affairs of the company are in a little more hopeful condition than they have been for some time past. I must apologise for the absence of Mr. Fellowes, my sole remaining colleague, through illness, and, therefore, at a moment's notice, it has fallen to my lot to take the chair. When the new board took over the affairs of the company there were practically no books, and it was impossible for us to call you together, but, with the assistance of Mr. Lavington, our secretary, a set of books from the beginning of the company's transactions was prepared, and these were audited by the Messrs. Daniels. You remember that, when the old directors met you at the last meeting,

YOU REFUSED TO PASS THEIR ACCOUNTS,

they being then in a very unsatisfactory condition. You have now before you the accounts in two sections—the first section being that under the direction of the old board, and I do not think I can say much about it, except that we have as far as possible given details as to the expense incurred, and over which we have had no control. So far as the new statement of accounts is concerned, you will find that the expenditure during the first six months of our directorate is 378*l.* 0*s.* 10*d.*, but of that expenditure really less than 100*l.* has been incurred by us—the legal expenses (265*l.* 12*s.* 11*d.*) having been incurred prior to our joining the board. We have kept the expenses down as much as possible, and you know

THE NEW BOARD HAS TAKEN NO FEES

whatever, and do not intend to take any, and we have acted in the management as we would have done if the property were wholly our own. The statement of accounts does not deal very clearly with the matter of the overdue calls. When we assumed the direction of affairs, there was really about 1,800*l.* of overdue calls, more than half of which we have collected, but there is still 700*l.* due, which we expect to obtain soon, and while overdue the company is entitled to interest. Since the new board has been elected, I am sorry to say

FOUR OF THE NEW DIRECTORS HAVE RESIGNED.

Two of them, Messrs. Offer and Macmillan resigned very shortly after we took office. They belong to the old board, as you are aware. Messrs. Killerby and Duprez also resigned because they had not sufficient time to attend to this company's business. While Mr. Killerby was a director he gave us the very greatest assistance, and did everything in his power to forward the interests of the company. The main object of our meeting to-day

will be to consider the present position of the company, particularly as regards the acquisition of La Sirena Mine. The first thing the new board did in view of the contradictory statements made as to the value of the Las Brujas property was to see whether they could not get the services of a thoroughly reliable expert in hydraulic mining to report upon it. We found Mr. H. A. Brigham, for whose services we have had to pay a good deal, but as he came to us with the highest credentials, we decided, notwithstanding the large sum we had to pay to him, to send him to report on the property in Colombia. We acquainted you six or eight months ago with the purport of his report, which amounted to this—That though there was gold on the property, the difficulty of obtaining the necessary water for making gold washing remunerative was very great, and we did not feel justified in coming to you for more capital for that purpose. The question was—

WHAT WERE WE TO DO?

Mr. Offer, the director who has retired, pressed us to wind up the company, in which case the probability is that the lawyers would have got all the money, and the shareholders even under the most favourable circumstances, could not have expected more than 4*d.* or 5*d.* per share. Shortly after we were offered La Sirena property on conditions we did not consider unsatisfactory. We had, as you know, certain machinery on Las Brujas and the Sirena property is not far from it; the offer was to this effect—that if we provided the machinery and supplied 1,500*l.* for working capital we should have three-fifths of the property, or whatever proceeds came from it.

Mr. GOODWIN: Of course, the net proceeds?

The CHAIRMAN: The gross or the net, whichever way you take it, because the expenses would have to be deducted in any case. We could not make up our minds at once, because we considered we should have first the report of an expert of high standing on the property. Some delay occurred in obtaining Mr. Brigham's report, who made it free of charge, and who has shown himself very desirous of doing the best he can for the company. This report has been sent to you. We have (with the unpaid calls) about 1,600*l.* or 1,700*l.* capital left, and thought, rather than return 4*d.* or 5*d.* to the shareholders, it would be better, in the face of this report, to acquire these properties, because the result from the

400,000 CUBIC YDS. OF GRAVEL ACTUALLY UNCOVERED

would give us alone, for our three-fifths' share, a dividend of something like 4*s.* per share. The total extent of La Sirena is very much larger than that of Las Brujas. There are four properties, three of which are 3½ square miles each, and the fourth 5 square miles, together about 16 square miles, of which 400,000 cubic yds. only represent a very small portion. From what Mr. Brigham stated with regard to Las Brujas property, it became quite evident to us that if we spent any more money on it that money would be simply wasted, because according to his report there was the absence of the water. Besides, the surroundings of Las Brujas have not always been very desirable. (Hear, hear.) We have not been in very good hands either here or there, and in leaving the management of the new property practically in Mr. Brigham's charge we think we had done a good thing for the company. Of course, a return of 5*d.* per share would have been considerable to us who are large shareholders, but to the small shareholders it would have been infinitesimal. We thought that under all the circumstances it would be better to give the company a fresh start by acquiring this property rather than wind it up or waste money on Las Brujas where we knew there was practically no chance of getting a return. (Hear, hear.)

Mr. GOODWIN: Do I understand that of the overdue calls in the way of bills receivable for 1,500*l.*, 800*l.* has been liquidated since Dec. 31. (The CHAIRMAN: Yes.) What is the nature of the agreement for working the other property, and over what period does it extend?

The CHAIRMAN: The agreement can be read *in extenso*, or the secretary will give an abstract.

Mr. GOODWIN: I prefer the latter. Will you give us some explanation of what Mr. Linklater's action against the company was for—the expenditure has been very moderate under the present board, and as to the former board there is nothing more to be said.

THE AGREEMENT.

Mr. LAVINGTON: The agreement is that this company is to find a certain amount of money to be expended in bringing on the water so as to work the property within 18 months, after which time there is to be a regular agreement entered into by which the property will be vested in the present company.

Mr. GOODWIN: Is the owner bound to enter into that agreement?

Mr. LAVINGTON: Yes; that is, if this company thinks it worth while going on. In other words, it is at the company's option. (Hear, hear.)

Mr. GOODWIN: That quite settles the point I raised.

The CHAIRMAN: We refused to part with the company's money until we had Mr. Brigham's report. We have parted with no money yet, and have not signed the agreement, but as a matter of good faith that ought now to be done. It has been signed by the other side, but not by us, on account of the absence of a quorum of the board. The business has been practically managed by Mr. Lavington and myself, as Mr. Fellowes has often been absent through illness. As regards the claim of Mr. Linklater, it arose under the old board, and has been settled by arbitration, which awarded him 251*l.* out of the 300*l.*, and the balance went in costs. The new property was originally introduced by Mr. Linklater, but we did not in any way rely upon his statements—only upon those of Mr. Brigham. I should be glad if one of the large shareholders would join the board, as at present nearly the whole of the responsibility is thrown upon me. I now propose the adoption of the report and accounts.

A NEW DIRECTOR.

Mr. GOODWIN seconded the motion, which was carried.

Mr. HORSWELL proposed the re-election of the auditors, Messrs. B. P. Daniels and Co., which the CHAIRMAN seconded, and it was carried.

On the proposal of the CHAIRMAN, Mr. Chibnall was invited to join the board, and consented to do so; and on the motion of the CHAIRMAN, seconded by Mr. GOODWIN, formal effect was given to that invitation.

Mr. GOODWIN: I propose a cordial vote of thanks to Mr. Oppert for presiding. I am sure we have had an able statement of the com-

pany's affairs from him, for the first time, I believe, in its history. (Hear, hear.)

The motion was seconded and carried unanimously.

The CHAIRMAN: I am very much obliged to you for this vote of thanks, and hope we have now entered upon a more prosperous career than we have experienced before.

THE NEW QUEEN GOLD MINING CO., LIMITED.

POSITION DESCRIBED—EXPENSES CRITICISED.

THE second annual general meeting was held at Winchester House, on Wednesday, for the purpose of transacting the ordinary business of the company.

Mr. Robert Milburn

(chairman of the company) presided.

Mr. J. DURIE PATTULLO (secretary) read the notice of meeting. The CHAIRMAN: Gentlemen, I hope the directors' report, taken in conjunction with the statement of accounts and the very clear and able report of our managers at the mine, will enable you to form an accurate estimate as to what has been done in the way of work during the past year, and also as to the position and prospects of the company on June 30 last. I, therefore, need not detain you with lengthy observations, but would particularly direct your attention to the more important matters of interest to our company, after which I shall be happy to answer questions. In the first place, you will have observed by the accounts that we have had

VERY REGULAR CRUSHINGS THROUGHOUT THE YEAR.

We have never had less than two crushings in the month, and during June we had three. The total amount crushed during the first half of the year was 2,997 tons, and in the second half 3,870 tons. If you notice the difference of the monthly periods you will see we cleaned up in Jan., 435 tons; Feb., 535; Mar., 570; Apr., 560; May, 700; and June, 1,070 tons. Therefore, you see with that one exception every month has shown a progress over the previous month. (Hear, hear.) I think, therefore, that we, as far as the quantity is concerned, may consider ourselves to be doing steady and practical work. You will notice in the report of Messrs. E. D. Miles and Co. that the yield of gold per ton has not been equal in the former half of the year to the latter. The yield of gold per ton has fluctuated considerably, and the difference is considerable. Instead of being 1½ ozs., it had fallen to an average of 1 oz. 1 dwt. 8 grs. This, of course, is not altogether satisfactory, but I think we must recollect the Messrs. Miles proceed to say that they expect both the quality and quantity per ton will improve this half-year. I am glad to be able to say that that is so. Our average since June to the present date has gone up from 1 oz. 1 dwt. 8 grs. to 1 oz. 4 dwts. 5 grs., and I think it will be further satisfactory to tell you that our last two crushings have been very much better still. The crushing before the last yielded 1 oz. 13 dwts. 12 grs., and produced the largest quantity of gold we have had yet from a crushing, namely, 620 ozs. The day before yesterday our last crushing was announced, from which we have 630 ozs. of gold from 300 tons of quartz, showing that the yield was

2 OZS. 2 DWTS. TO THE TON.

We have also initiated a method of

SENDING STORES FROM THIS COUNTRY TO AUSTRALIA.

I have now to move the adoption of the report and accounts. (Cheers.)

Mr. WALLACE (director): I second it.

Mr. STEPHENS: I shall be glad if Mr. Ross Robinson will give us his personal views, as he knows the New Queen district.

VIEWS OF MR. ROSS ROBINSON.

Mr. ROSS ROBINSON (director): It is true I am conversant with the property, but it is three years since I made a personal inspection of it. I am not, therefore, in the same position to speak as I was three years ago. We are kept so fully informed by our managers of what is going on that I think we know the position here almost as well as it can be known on the ground. I think, at the present time, you have a very excellent property in New Queen, and that there are immense probabilities and possibilities in store for us. We are already working to a profit, and surrounding us almost on every side there are properties dipping into ours, which are doing even better than we are. We have Kelly's Block, Band of Hope, and Victory all dipping towards us, and getting much better stone than we are. Then we have the two formations spoken of by the chairman yet undeveloped, either of which may turn out to be very valuable; but, in addition to all this, we have the celebrated Brilliant reef, as to which I have not a doubt that it is in our ground. It is only a question of time and expense to get at it. I think we are justified in taking a very hopeful view of our prospects.

EXPENSES CRITICISED.

Mr. HOLLOWAY: Your managers say a great deal as to the profits which are made from mines in the district. But is it not possible at the same time to let you know what it costs those mines for mining and milling, so that we may have some idea as to whether we are paying too much or not. I say this in view of the fact that

IT COSTS 21,769L. TO RAISE 29,881L. WORTH OF GOLD.

Further, I see, taking the number of ounces produced, it costs nearly 37.2s. 6d. per ton. I am perfectly certain, from information I have, that none of the other mines in the district are costing anything like that sum for production and milling. You say you will give us a dividend in Dec., but I find from our accounts that you might pay one now, and I am rather surprised at your not declaring it. (Cries of "No.") There are so many "noes" in the room, that perhaps someone will show where I am wrong after I sit down. (Laughter.) Your balance-sheet shows that you have 3,915L. undeclared profits, so that you certainly have sufficient to pay a dividend of 6d. on the shares at present issued, which are presumably 158,915.

Mr. SIMMONDS: Will you give us information as to the tailings?

MR. HOLLOWAY FORGETS.

The CHAIRMAN: Mr. Holloway has forgotten that out of the

money, 3,915L., we have already paid 6d. per share. (Cheers.) He is also not quite correct as to what it costs per ton, for he has omitted to deduct the amount of public crushings. We have received 31,000L., and expended 23,000L.

Mr. HOLLOWAY: What you received from public crushings is not raising and milling of ore.

The CHAIRMAN: It is in the expense of the mill, and the total expense is not 37.2s. 6d., but 27.13s. We have done all we could in the interests of economy, and our managers assure us they have done the same. They have good men, and to get them must pay the current rate of wages at Charters Towers. Our tailings only showed by assay 22 grs., or 3s. 10d. per ton, so that it would not be worth while to treat them, even if they managed to obtain all the assay shows. It proves that our mill is a good one, and that we can produce a fair return for our ore.

Mr. CHATER: Does not the 27.13s. include some developments?

The CHAIRMAN: It includes all that we have done—mining, milling and development.

Mr. CHATER: I believe Edison has lately invented a more economical and efficient mode of working rock-drills by electricity than compressed air. Have you considered that?

The CHAIRMAN: We have already provided fresh air drills, and given the manager authority to buy one or two more. We shall use electricity if it be found cheaper and better than compressed air, but we shall first let other people experiment, and profit by their experience.

The report was unanimously adopted.

The CHAIRMAN, in complimentary terms, proposed the re-election of his retiring colleagues, Mr. Thomas E. Sykes and Mr. Wallace.

Mr. CHATER seconded the motion, which was carried.

Mr. SYKES, in returning thanks, said: I have a very large interest—in fact, I am one of the largest shareholders in the company, and have for many years done my best in its interest, and shall continue to do so.

Mr. WALLACE replied in similar terms.

Mr. BUTCHER proposed, and Mr. KEITH seconded, the re-election of the auditors, Messrs. Monkhouse, Goddard and Co.

Mr. HANCOCK proposed a cordial vote of thanks to the chairman and directors.

The motion was carried unanimously.

WHEAL BASSET.

CALL OF 2s. PER SHARE.

A TWELVE-WEEKLY MEETING of the adventurers in Wheal Basset, was held on the mine on Thursday.

Mr. William McKeand

presided.

The accounts showed:—Debits—Labour costs, 4,320L.; 1,850 tons of coal, freight and charges, 1,387L.; timber from stock, 76L.; other merchants' bills, 889L.; Illogan rates, &c., 61L.; total debits, 6,733L. Credits—Tin sold, 106 tons 19 cwt. 2 qrs. 3 lbs., realising 5,873L.; extra carriage, 2L.; discounts, 40L.; spare materials, 119L.; burnt leavings, 40L.; total credits, 6,076L., showing a loss on the quarter's working of 661L.

The committee presented the following report:—Your committee had hoped to have met the cost for this meeting, instead of which we have to show a loss of 661L. 17s. 4d. It was expected the tinstone would have shown an increase of at least 1,000 tons stamped, having added 16 heads to the stamps, but owing to the engine requiring renovation the increase has only been 150 tons, giving us about 5 tons 16 cwt. of tin, which has sold at an average price of 54L. 18s., as compared with 55L. at our last meeting. The labour cost has been increased by 493L. in underground development and additional tributaries. The coal bill shows a decrease of about 72L., owing to a further reduction in price.

The CHAIRMAN moved that the accounts and reports be adopted.

Mr. HENRY OLDS seconded, and the motion was carried.

Mr. JAMES proposed that a call of 2s. per share be made.

Mr. TREMBATH seconded the proposition, which was agreed to.

It was decided to hold the next meeting on Jan. 21, 1892, at 1 p.m.

The CHAIRMAN, in moving a vote of thanks to the managers and purser, said he had just received a telegram from their London solicitors stating that they could not forward their lease at once, but would do so shortly. He had seen the lease, and felt that they were being dealt with very liberally.

Dr. PERMEVAN seconded, and the motion was carried.

Mr. RENDLE, the purser, and Capt. THOMAS returned thanks.

A discussion took place on the quantity of coal consumed, and the condition of the boilers and engines.

BRATSBERG SMELTING AND REFINING WORKS, LIMITED.

THE directors' report of this company states:—"The directors have much pleasure in congratulating the shareholders on the improvement in the position of the company, which has recently taken place in consequence of the long-standing difficulty in the Bessemerising department having been at last surmounted, as has already been announced by the postcard and circular sent out in August." The chairman visited the works early in July, and was much pleased with the appearance of the machinery and the excellent disposition of it for the purpose of economic working. Since the re-starting of the works three parcels of electrolytic copper have been shipped, and further consignments are expected weekly.—C. E. RIDDELL, Secretary.

SATURDAY, OCTOBER 24, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

THE KANGARILLA PROPRIETARY SILVER MINES (SOUTH AUSTRALIA), LIMITED.

ATTENTION DEVOTED TO ACLARE MINE, WHICH IS OPENING
OUT IN THE MOST PROMISING WAY—ENERGETIC MANAGEMENT
AT HOME AND ABROAD — PROPERTY IN FULL WORK—
KANGARILLA ABANDONED.

The third ordinary general meeting was held at Winchester House, on Monday, "to receive and consider the annual statement of accounts and balance-sheet, and the reports of the directors and auditors thereon, and to transact the ordinary business of the company."

Mr. S. S. Hasluck

(chairman of the company) presided.

Mr. J. ROBERTSON (secretary) read the notice convening the meeting.

An extraordinary general meeting was next held, for the purpose of considering, and, if deemed expedient, passing resolutions to the effect of the proposed resolutions set forth hereunder, with such variations (if any) in detail as the meeting may approve.

PROPOSED SPECIAL RESOLUTIONS.

"That the articles of association of the company be and the same are hereby altered in manner following:—'1. That article No. 76 shall be cancelled.' '2. That article 77 shall be expunged, and the following article substituted therefor, viz.:—'The remuneration of the directors shall be a sum of £. per annum, to be paid out of the funds of the company, and divided among them as they shall determine.' '3. That article No. 84 shall be cancelled.' '4. That in article No. 116 the following words:—'Subject to article 84 hereof' be cancelled.' '5. That article No. 129 shall be expunged, and the following article substituted therefor, viz.:—'No member of the company residing out of the United Kingdom shall be entitled to have notices served upon him unless he shall give to the company an address within the United Kingdom to which such notices shall be sent.'"

EXHAUSTIVE SPEECH—RETROSPECTIVE AND PROSPECTIVE.

The CHAIRMAN: Gentlemen, in presenting the report of the directors and balance-sheet, it is necessary I should say a few words as to details of work, which do not appear in the former document. I will first give a short retrospective *résumé* of the company's history, prior to the present directors taking office. At the last annual meeting I moved an amendment to the adoption of the report of the directors. This amendment was to appoint a committee of investigation, and that committee was so appointed by you, and on its report your present board was elected, and two members of the committee are members of that board—Mr. Masey and myself. But little had we any idea of the immense amount of work that would fall upon us in bringing the affairs of this company into order; had we done so we should have shrunk from the task, and still more should we have shrunk from the other one of attempting to raise 25,000%, which was an absolute necessity if the company's affairs were to be carried on. We felt, however, that you had placed a certain amount of trust in us, and that what we had to do was for the good of the company, at any cost of time and trouble. The other gentleman elected by you at the same time was a member of the late board, who, however, did not attend a single meeting, and sent in his resignation. The other three elected by you had not been members of the committee, or connected with the former working of the company, and they, too, accepted office without the slightest idea of

THE AMOUNT OF WORK AND RESPONSIBILITY

it would entail upon them. When they attended the first meeting, and began to see what was before them, they were astonished, not to say appalled, at the prospect of work that was opened up. They talked of resigning, but subsequently determined that if work and energy could bring the company into order, that work and that energy should not be withheld. (Cheers.) Since then we have all laboured in perfect harmony, and have considered only what was best in the interests of the company. (Cheers.) I will now go through the different paragraphs of the report, and the first refers to the accounts. It is never a pleasant task for a chairman to speak of accounts that do not show a profit, but I must remind you that we were not elected to earn profits for the first year, but to develop the property, erect the necessary machinery, all of which takes time, and you must also remember that our hands were tied until Mr. Rosewarne's report was received. We wished first to have the benefit of his experience and his advice, not only as to the value of the

property, but as to the right sort of machinery to put up to treat its produce. Until Mar. 1st nothing could be done in the way of putting up machinery, or putting up the mine—all we could do was simply to continue the absolutely necessary work. We have not sold any ore. The committee recommended that proper machinery should first be put up for treating it, because to sell crude ore as it comes out of the mine is a very expensive process. When I tell you that 100 tons of our ore will concentrate down to 25 tons you will see that the difference of cost is very great, and there is also (what does not appear at first sight) the saving in bags. You, naturally, require more bags to send down 100 tons than 25 tons, and the wear and tear in the case of crude ore is much greater than in that of concentrating ore. We have delayed the calling of the meeting, because we have judged that a new era would begin in the mine from the date the machinery was started.

THE WHOLE ISSUE OF SHARES HAS BEEN ARRANGED AT PAR.

This has been without the payment of any commission, either directly or indirectly. (Cheers.) There is a note in the balance-sheet which it would appear is thought by some of the papers to be a dead loss made by the company during the past 12 months. That is not so. No dead loss has been made at all. There is a reduction of 1,417. 13s. 3d. for over estimation of the value of ore in the previous balance-sheet. This difference is explained by the circumstance that in the balance-sheet of last year a value was taken greatly in excess of the sum actually realised for the ore when sold. The value put upon it was more imaginary than real, and, in fact, I consider it was on that point the committee of investigation was appointed. I daresay the shareholders will agree with the opinion of the directors that it is better to understate than overstate the value of undressed ore. I come now to profit and loss account. You will notice that the Adelaide establishment is put down at 365. The present board was unable altogether to put a stop to this expense until Mr. Rosewarne took possession. It was not until Feb. 23 that these expenses ceased, and they will not appear again, for a local committee is no longer necessary now that you have

SO EFFICIENT A MANAGER AS MR. ROSEWARNE.

He has engaged an experienced clerk who will attend to the accounts and do all the transfer work, which is beginning to be considerable in the colony. Colonists have begun to recognise that we have a mine. You, gentlemen, who are 14,000 miles from it have not the same opportunity as they have of knowing the facts, but they are finding out that there is something in the Aclare Mine. Returning to the directors' report, the starting of the machinery has already been notified to you in the extract from the colonial newspaper sent to you, and I hope you were gratified with what you read. I am rather going to astonish you now. On assuming the management

THE PRESENT BOARD FOUND BOTH MINES CLOSED DOWN.

(Shame.) Why were they closed down? Because there was not enough money to pay the men to do work on those two mines. The reason why there was no money will astonish you still more. Arrears of calls which should have been collected were not, and consequently your mines were shut down for want of funds, which they ought to have possessed, and which they would have possessed if those calls had been collected, and there would have been no occasion to stop working. A telegram from Adelaide in Aug. was received stating that unless certain funds were remitted the Aclare would be closed down, and a letter, dated Sept., was received by the new board within a few days of their appointment saying that the mine was so closed down. We took steps immediately to obtain money, which was done in a very few days, and a remittance was cabled to Adelaide, the mine was opened, and work was proceeded with. (Cheers.) I must now refer to the

SMALL SUPPORT THE SHAREHOLDERS ON THIS SIDE GAVE

to the appeal of the directors for 25,000% new capital. Only 775 shares were applied for in this country, out of rather more than 1,000 shareholders—that was all the help we received from them. You must have known that when the present directors took office they were almost leading a forlorn hope, and that they wanted not only the moral but the material support of the shareholders. They may have got the first, but they certainly did not get the second. Fortunately, the directors were able to do without, but your lack of support did not seem to reveal much confidence in the future of the company. The shareholders in Adelaide, however, knew what the mine was, and though they only held a matter of about 8,000 shares, they applied for 2,000 shares. The thanks of the London shareholders are due to those in Adelaide. The directors had to devise means for placing the remaining shares, which they succeeded in doing, and 12,598% has been received on account of them. (Cheers.) With this money the directors have been able to erect all the necessary concentrating machinery and buildings. The machinery is of the newest possible type, and I must specially mention the Castlenau concentrator, which Mr. Rosewarne saw in Paris, with which he was there very much struck, and which was ordered by us on his recommendation. We bought it without royalty, and are the only people in Australia who will be so fortunate. Mr. Rosewarne tells us it is doing its work admirably, and that he is very pleased with it. He has provided for

the duplication of the machinery in the way of the foundations so that extra power may be obtained without much greater expense. (Cheers.) The machinery was formally started on Aug. 1, but, of course, a certain amount of time had to be allowed for adjustment, for no machinery ever works with absolute smoothness at the first go off. Hence it did not do its right amount of work until Sept. 19, since which date it has been working well. I now come to a paragraph of the utmost importance which is one telling you that "the Aclare Mine contains a large percentage of zinc which the machinery separates by itself, and in order to make it of a higher commercial value a new system of calcining furnace is being tried, whereby at the small cost of 4s. a ton the sulphide blende ore will be converted into oxide of zinc, worth about 10% per ton." Prof. Molesworth, who is a great mining chemist, has discovered a new means of treating zinc of which Mr. Rosewarne has a high opinion, and he is now on the spot superintending the treatment of some of our ore, using a small shaft as a chimney, which we have placed at his disposal. Long before this I have no doubt his experiment has been thoroughly tried. The reason he is trying it in our mine is this, that the Aclare has the very class of ore he requires, and he expects treating it on a commercial scale to make of it as great a success as he has done in the laboratory. Mr. Rosewarne has made a good arrangement on behalf of the company, and should these experiments have the result predicted, another asset of considerable value will be added to those of the company. (Cheers.) We have acquired the freehold of the Aclare Mine, and thus done away with the dual ownership, which is always objectionable. We originally had the mining rights only, but now we have the surface rights as well, and have thus obviated the complaints that are usually made in these cases. In 1889 the former directors were asked to buy this freehold, and the price asked was 10% an acre, but the board out there gradually got it down to 7%, on which basis they asked to be allowed to negotiate, but we have bought it for something under 4% 9s. an acre. (Cheers.) As the mine develops the miners will come and reside on the estate, instead of having to walk several miles as they do now, and the land will become more valuable. Not only the mine, but the concentrating works will require a large number of men, and there is no doubt that it will form a centre of population. What I have next to say is something in the immediate future. We have acquired 269 acres—a very large property—and, possibly,

WE MAY BE ABLE TO SELL OR LET ON LEASE,

or by some other arrangement, a portion of it, and I may say that I look upon this as a very important point. To me it seems to open up (quite apart from our own operations) a great future for the company. The next paragraph deals with the present output of ore, which must not be taken as a maximum, because, instead of the machinery running 24 hours, as it will do, it is now only running eight, and the ore being treated is also taken from a part not nearly so rich in silver as what we shall meet with when we go lower down. In all the reports we have issued you will have seen Mr. Rosewarne says that the lower down he gets to the water level the richer the ore becomes. When I say we are 65 ft. lower down than when we took possession of it you will be able to gather that the ore is richer. It would not be miner-like to attempt to raise what he has in the lowest part of the mine, as he must take that which is ready for working. He will then be able to clear the way for opening up the lower parts, which assay 50 ozs. of silver to the ton, and when the ore is concentrated it will show a very high figure for that metal. Mr. Rosewarne only tells us the amount of his first concentrates—the number of tons for "firsts," and says nothing about his "seconds," his "thirds," or his slimes. I will read you something about this from his letters:—

"With regard to 'firsts,' they contain 50 ozs. of silver; the 'seconds' 20 ozs., associated with zinc ore; the 'thirds' concentrate 12 ozs., and the slimes 10, and when all the mineral is extracted by the different processes the result ought to be very satisfactory." You must not imagine that the small amount which Mr. Rosewarne returns as the weekly output is the maximum, for it simply represents the "firsts." Mr. Rosewarne is of opinion that in depth the zinc ore will disappear, the lead increase, and become considerably richer for silver and more easily treated. Mr. Rosewarne does not wish to make a flash in the pan, and declines to have anything to do with what is known as

"RIGGING THE MARKET."

He says, "If you want a manager to conduct your mines for Stock Exchange purposes, I am not your man—you should employ somebody else." These are also the sentiments of your board, and the suggestions referred to by Mr. Rosewarne did not emanate from them. (Cheers.) He wants gradually to increase the output, and also the capacity of the machinery to deal with it. The latest telegram received this morning gives the return for the past fortnight as 44 tons of first, containing 2,200 ozs. of silver and 40 per cent. of lead. (Cheers.) In paragraph 11, we say a few words about Mr. Rosewarne, to which I need add nothing; except this, that during our seven months experience of him he has shown himself to be a man of great energy and resource. Every work to be done must be done at once. He does not wait until the time comes when he wants a thing—he anticipates his wants, and shareholders and directors alike are to be congratulated on having such a manager. We leave in his hands the proper development of the mine with very great confidence indeed, and look, with him, to a greatly increased output. In one of his letters he mentions finding a lot of antimonial silver ore. Antimony always carries a large quantity of silver, and so does this ore. As bearing on that, he has told you about the richness of the mine in going down, and this antimony is found in the lower levels. He tells us it is about the best indication that any mine can have, so that he looks forward with great confidence to everything being better the lower he gets in consequence of this antimony. I now have to come to perhaps the most unfortunate part of my story, namely, that

WE HAVE ABANDONED THE KANGARILLA MINE.

We have not money to work that and the Aclare too, and we think the latter offers the better prospect. The former appears to be more of an uncertainty than the latter, and we are resolved to devote our attention to it.

AN INTERRUPTION.

The SOLICITOR here advised that the notice of the extraordinary

meeting which was fixed for the hour that was now reached (2.45) should be read in order to keep within the requirements of the Companies' Acts.

The notice was read by Mr. ROBERTSON, and the extraordinary meeting adjourned until the business of the ordinary one was finished.

The CHAIRMAN (resuming): We have from time to time issued circulars to you giving information of all that has been going on, and shall continue to do so in the future as occasion requires. I do not think it is worth while taking you through Mr. Rosewarne's report, but you will notice that a large amount of work has been done—much larger than usual, in the absence of rock-drills, which will be put to work one of these days. No quantity of ore could have been got out without completing Rosewarne's tunnel, because all the ore raised had hitherto been done by a horse whim, but now we are bringing the stuff out through the adit level. The plan on the walls shows clearly the large amount of work that has been done, and effective steps have been taken to secure and preserve our water supply for ore dressing purposes, without which mines cannot work. But, although much has been done, much still remains to be done, so as to pave the way for the great future that seems to be before this company. The capital not expended will have to be used in duplicating the machinery, fixing the air-compressors of engines, constructing the tram line, and providing a siding to the railway. When the tramroad and siding are completed, the costs of transport will fall considerably, and the board will feel justified in considering the question of erecting smelting works. These, too, will affect a large saving in carriage, and we may be able to send our products to this market or to Germany for sale, and save the smelters' profits. (Cheers.) Dwellings for the men will, most likely, have to be erected, as before explained, and certainly this time last year I did not expect to be able to tell you all I have done to-day. (Cheers.) Troubles of all kinds seemed to be before the company, but we felt we were in possession of a very good property, and that the only problem before us was how to utilise it. I claim for the board that

THAT PROBLEM HAS BEEN SATISFACTORILY SOLVED.

(Cheers.) We have succeeded in placing the company on a sound financial basis, with a freehold mine properly developed and ready for working; with valuable assets in the shape of ore laid open, and a good balance at the bank, and not one farthing of debt. (Cheers.) Nothing remains but to get the ore out of the mine. I close by formally moving: "That the report of the directors and balance-sheet, with the abstract of the company's accounts for the year ending Mar., 1891, as now submitted and duly audited, be received and adopted." (Loud cheers.)

Mr. ADAMS (director): I second the motion.

CRITICISM.

Mr. THOMAS BEARD: I find from the balance-sheet that \$1,800L. has gone somewhere, and I want to know where. We are now limited to a capital of 4,000L. (No.) During last year we made a loss of over 3,000L., and what prospects have we of making anything out of the 4,000L. we have left. I bought shares at a premium of 6% or 7% upon the faith of the Kangarilla Mine, which now seems to have slipped from us. I have no faith in the Aclare.

A VOICE: You are selling a "bear."

Mr. BEARD: I am selling nothing. The directors have done their best, but at the end of another year you will see how much of your 4,000L. you have left.

Mr. ADAMS: We have over 12,000L. Your figures are all wrong. (Laughter.)

Mr. BEARD: There may be "bulls" or "bears" in the room, but I am not one of them.

A VOICE: Then do not depreciate your property.

Mr. BEARD: I cannot depreciate it more than it is. The expenses of carrying on the company during the last 12 months have been over 2,000L., without any results, and I should like to see some of this ore sold for the benefit of the shareholders. Mr. Rosewarne seems very good at making voluminous reports, but I want results.

A SHAREHOLDER: You must wait.

Mr. BEARD: It is all very well to say "wait," but I have waited. I should like the chairman to give an explanation of the bills receivable and arrears of call. Why are they not got in? I hope the directors will tell us the prospects of dividend.

A SHAREHOLDER: When will the water level be reached?

KANGARILLA IN 1889 AND NOW.

Mr. WINKLEY: How is it that Mr. Rosewarne, who now writes so unfavourably of Kangarilla, spoke thus of it in a letter in 1889: "The walls are not well defined, but the strata of the enclosing country is running obliquely to the vein, thus proving it to be a strong fissure vein. The mine possesses a great many advantages for economical working, and the lead lode will improve in depth." It seems to throw doubt upon the judgment of Mr. Rosewarne that he should write in this contradictory manner about Kangarilla. I have in my recollection another company that started a little while ago, which wanted to lease a part of the Aclare Mine. Could not the directors try and get them to take up Kangarilla instead? (Loud laughter.)

VIEWS OF ONE WHO KNOWS THE MINES.

Capt. PROUT: I happened to know not only Aclare, but Kangarilla mines. I have read carefully Mr. Rosewarne's reports, and his reasons were justifiable in parting with Kangarilla—not but what it may yet turn out well. When I wrote my report upon Kangarilla we were not down to the water level. We found it a very wet country, and so with our limited capital I think we have done wisely to devote our attention to the Aclare. Kangarilla may turn out a valuable property, but the company is not in the position to undertake it. Aclare is a property second to none. That gentleman says, why do we not give dividends? Do we expect a child to have a man's ability before it has had time to grow? Do we expect profits before we have done work? It is folly to think of such a thing. (Cheers.) Mr. Rosewarne is working faithfully and well, and is the right man in the right place. (A VOICE: "Advance Australia.") I quite endorse what he is doing. I have watched his career as inspector of mines, and as a miner in the Barrier Range, and know he is one in whom you can put your trust. I believe Aclare Mine will astonish the most sanguine amongst us. When we get below the water level I believe we shall have a quantity of antimonial ore, which alone will make

this property valuable. You must not work this mine so as to have a big return for a little while and no return afterwards. Mr. Rosewarne is not the man to do that sort of work. I am surprised to hear people speaking about dividends, and making a bluster about nothing. (Cheers.)

Mr. BRITAIN: What was originally paid for Kangarilla, and did the purchase include Aclare?

A SHAREHOLDER: To what depth will you have to go to get to the water level?

MR. HASLUCK REPLIES.

The CHAIRMAN: I will now reply. As to dividends, you are in the same position of waiting that we are. The machinery only went to work Sept. 19, and I thought I had rubbed that into the comprehension of everyone in the room, but it seems not. (Laughter.) It is not 30 days since we got to work, and Mr. Beard expects a dividend. (Laughter.) He says we have 4,000*l.* left, but

WE HAVE OVER 13,000*l.* LEFT.

(Cheers.) It is a pity he did not study his balance-sheet before making his speech. As to the price at which he bought his shares—they have never been at that price under the present management. As to the bills receivable—the explanation is that a gentleman made an offer to the late board in the early part of 1890 to take up the balance of the first issue of shares at 5*l.* each, and also to purchase part of the Aclare property. The purchase of the property was not carried out, but the shares were taken and paid for—3,000*l.* in cash and 2,290*l.* in bills at four months, which were not paid at maturity, but it was agreed they should be renewed. The renewal never actually took place, and the matter was allowed to slide. The present board found this out by rigid investigation, and without any communication having been made to them by their predecessors on the subject. In the balance-sheet to Mar. 31, 1890, no mention was made of these bills, which had only just been accepted and given to the board in part payment of the shares. I shall make no comment now upon the action which led to this concealment of bills—not inserting them in the balance-sheet. That is more or less a legal question; nor as to the action of our predecessors in allowing the shares to be sold before the bills became due, and not taking security for the payment. But I have to report that the present board have taken proceedings against the acceptor to compel payment.

Mr. BEARD: Will they be paid?

The CHAIRMAN: I do not think there is much chance of it. I believe the water level will be reached in about four or five months, but we shall have to put up pumps. Capt. Prout has explained the reason that Mr. Rosewarne wrote as he did in 1889 in comparison with what he wrote a few months ago. I can, however, get Kangarilla back for you in seven weeks if you like to have it, and if the gentleman who spoke is a customer he can be a purchaser for a small sum. (Cheers.) The original price for Kangarilla was 58,000*l.* in shares and 2,000*l.* in cash, and for Aclare 11,000*l.*, but the original promoter paid 21,000*l.* for the latter. The total payments for the two properties were, therefore, 71,000*l.*, out of which 58,000*l.* were in shares.

The report was unanimously adopted.

THE CHAIRMAN RE-ELECTED.

Mr. MASEY (director), in proposing the election of the chairman, said: I knew very little of Mr. Hasluck until I worked with him on the committee of investigation. I soon found he was an admirable man of business and with great urbanity of manner, and when elected a director of this company I considered him to be the best man who could have been chosen to pull it through its difficulties and place it on the satisfactory footing it now occupies.

Mr. LASKER seconded the motion, which was carried by acclamation.

The CHAIRMAN: If human forethought and ordinary business capacity, combined with hard work, can produce a future for this mine, it shall not be wanting. (Cheers.)

On the motion of Mr. TAYLOR, seconded by Capt. PROUT, the auditors, Messrs. Westcott and Co., were re-elected at a remuneration of 25 guineas.

THE ADJOURNED MEETING.

The notice of this meeting had previously been read, and the chairman proceeded to explain that when he came into office he found the articles not of a very workable description. At one time they thought of altering them all, but subsequently decided to confine themselves to those mentioned in the notice. The first one referred to the officials as to whom the board considered they should have the right of appointing or dismissing them as they thought best in the interest of the company. They therefore proposed the cancellation of the first article 76, which Mr. Robertson read for the information of the meeting.

Mr. SMALE seconded the motion, which was carried.

HARD WORKING DIRECTORS.

The CHAIRMAN: As to alteration No. 2, we have proceeded on the principle that the labourer is worthy of his hire. The board have held 78 meetings, each one lasting from two and a half to three hours, and occasionally five hours. The average attendance had been four and a half out of five directors, and there have been many individual attendances, of which no account has been taken. The board, in addition to their labours, have not been without the receipt of abuse from certain of the shareholders; one, for example, wrote to us:—

"Dear Sir,—I have dropped enough money in your blooming company. I am stuck at 6*l.*, and am not such a fool as to subscribe for more at par when I can buy them at $\frac{1}{4}$ to $\frac{3}{4}$ in the market. Neither would I stand in even to save my present blasted lot. (It is supposed to be a gentleman who is writing this.) You must look to pastures new, &c."

Mr. SMALE asked the directors to name the remuneration they would require, and after a while that gentleman seconded (Mr. Taylor having proposed) that the remuneration of directors be 500 guineas a year, and this was agreed to. An effort to reward the directors for their services in the past was not proceeded with.

The CHAIRMAN then proposed the cancellation of article 84, stating there was no wish on the part of the board to act arbitrarily towards the servants of the company, but simply to leave the usual powers in the hands of the directors.

Mr. LEAN seconded the motion, which was carried.

The CHAIRMAN proposed *seriatim* the alterations as above, Nos. 4 and 5, which, on being seconded, was carried unanimously, and a cordial vote of thanks to him for presiding closed a long meeting. This motion was proposed by Mr. Beard, the board's severest critic.

THE READ'S DRIFT LAND CO., LIMITED.

STRANGE STORY OF A FERRY-BOAT—THE POSITION AND PROSPECTS OF THE COMPANY—HOPES FOR THE FUTURE—MR. POSNO SANGUINE OF ULTIMATE SUCCESS.

THE annual general meeting of the shareholders of the Read's Drift Land Co., Limited, was held on Wednesday, Oct. 21, at Winchester House, Old Broad Street, E.C., to receive the report of the directors, the accounts and balance-sheet, and for other business.

Mr. C. J. Posno

presided.

Mr. GEO. BROWN (the secretary) read the notice calling the meeting.

The CHAIRMAN: Gentlemen, I beg to declare the meeting duly constituted, and with your leave we will take the report as read. If anyone wants it read I will ask the secretary to read it. Shall we take it as read? (Yes.) Well, then, gentlemen, in rising to move the habitual resolution, I would ask you particularly to-day to favour me with your indulgence, for not only do we meet late in the year, but, owing to the insufficient explanations we have received from Read's Drift, in reply to requirements sent out by our London accountants, we are unable to establish for the moment an accurate profit and loss account, and thus we have only before us an account of the monies expended and received. The great event of the year I will come to at once; it is the loss and recovery of our ferry-boat. It sank under too heavy a load, and we were cut off from civilisation—a veritable calamity! for a rising trade which we had just succeeded in establishing was thus suddenly

NIPPED IN THE BUD.

We were advised that the boat having entirely disappeared in deep water the whole cost of it—100*l.*—was to be written off as a total loss. A new ferry-boat was built; this took a considerable time—I believe four months—but I am happy to inform you that it was ultimately safely launched, and it will be joyful news to you, as it was to the local traders, that it answers admirably, and carries with ease and safety a loaded waggon and 18 oxen of an aggregate weight of 16 tons, without any need of unyoking the oxen. Lately we have all heard of storms and floods of unexampled severity, but an African storm such as visited that part of Griqualand West where Read's drift is situate baffles all description, and puts European storms quite in the shade. There was no ferry boat for hundreds of miles up river that was not dashed to pieces or carried away.

SAVED FROM THE WATERS.

Our old ferry boat reposing peacefully at the bottom of the river—a silent witness to this havoc—awoke from its slumbers. What exactly happened is not reported, but I gather that some fine morning, after the storm had finally abated, our old ferry boat, no longer dormant, reported itself ready for service again. Its place on the Vaal River being in the occupation of its rival of the 16 tons capacity it could not be reinstated, and having undergone some thorough repair, I find it now restricted to such light work as transporting across the Orange River heavy carthorses, carts, sheep, and droves of goats and ostriches, and it is described as being most useful in saving the labour and wear and tear, loss of time, and danger of constantly moving the large boat from the Vaal to the Orange River and back again. Yet, although this old boat in its renovated state seems quite as useful to us as ever—if not more so—I can find no proposal to take it in stock again, except at the cost of the repairs—some 50*l.* or less. If you will now refer to the accounts in your hands to the figures under the heading "South African balance-sheet, Dec. 31, 1890," you will find expenditure, 1,516*l.* 15*s.* 1*d.*, and receipts, 1,297*l.* 9*s.* 4*d.*, showing an apparent trading loss of 219*l.* 5*s.* 9*d.* for the year, but on examining the items composing the expenditure of 1,516*l.* 15*s.* 1*d.*, you will see that it includes the 400*l.* written off for the total loss of the old ferry-boat, which had entirely disappeared, but which at this moment is rendering us such excellent service. Take this 400*l.* out of the expenditure, and the apparent loss of 200*l.* is turned at once into a profit of 200*l.*, but there is more than that. Mr. Currey, in one of his letters, puts this profit at 797*l.* 5*s.*, but in the absence of the details for which we have asked we are unable to verify that statement. Writing on Jan. 26 of this year Mr. Currey says:—

MANAGER'S VIEWS AS TO THE FUTURE.

"I am sure a good business will be done, and that the establishment of a few useful trades will prove the nucleus of a township. Taking the year's operations I find the following results, which I think are fairly satisfactory, viz.:—Profit on trading (eight months), 357*l.*; grazing, 538*l.* 19*s.* 9*d.*; wood, 409*l.* 18*s.* 6*d.*; less charges, 16*l.*—393*l.* 18*s.* 6*d.*; pout, 467*l.* 11*s.* 6*d.*; less charges, 222*l.* 15*s.*—244*l.* 16*s.* 6*d.*; smith, 170*l.* 19*s.* 3*d.*; less charges, 108*l.* 9*s.*—62*l.* 10*s.* 3*d.*; total, 1,597*l.* 5*s.*; less salaries, 800*l.*; balance, 797*l.* 5*s.*"

The African figures continued from the end of December last to end of June of the present year confirm that there is a real trading profit, for they denote that for that period of six months the trading receipts are 453*l.* 11*s.* 8*d.* in excess of the expenditure. Looking at our balance-sheet to Dec. 31, 1890, our receipts are:—For sale of shop goods, 129*l.* 13*s.* 1*d.*; ferry, 233*l.* 13*s.* 9*d.*; making for eight months 363*l.* 6*s.* 10*d.*. But during the last half-year, that is to June 30, 1891, we find:—Sale of shop goods, 358*l.* 5*s.* 7*d.*; ferry, 225*l.* 17*s.*—584*l.* 2*s.* 7*d.*; being at the rate for eight months of 778*l.* 16*s.* 9*d.*, or more than double the receipts for 1890. Wood sales, we may say, have scarcely commenced. There would seem now every reason to expect that we shall succeed in inducing our representatives to separate revenue from capital, and in order to enable them to do so with the greater facility, I have enlisted the goodwill of Mr. Ronald Jones, of the London and South African Exploration Co., who, you will be happy to hear, has promised that, on his return to

South Africa, he will at once frame a proper but simple system of colonial accounts. Therefore, we may now not only look forward to further development of local trade, but to getting such statements of account as we shall be able to understand. Progress is in operation. Approaches to the river have been dug out, and reduced to easy gradients. Wood-cutting will, no doubt, increase in importance. Grazing is also likely to yield a larger revenue, and about a mile above the house springs have been found which are being utilised. Altogether our property is capable of supporting a considerable population. The climate is excellent. It is about 190,000 acres in extent, with a river frontage of 50 miles, and our capital is small, only 50,000*l.*, whereof 6,000*l.* is cash in hand, so that even without any discovery of minerals, this company, if patiently developed, its timber utilised, its other resources cultivated, may, indeed is likely to, become

AN IMPORTANT FACTOR IN THE OPENING UP OF SOUTH AFRICA, and grow into a big property, for the benefit of the shareholders, as well as the inhabitants of that part of Griqualand West, where the property is situated. I beg to move the first resolution, "That the report and accounts as presented be received and adopted."

Sir GEORGE R. PRESCOTT, Bart., seconded the motion.

The CHAIRMAN (after a pause): Well, gentlemen, I have told you all I can as to the affairs of the company, and the prosperity which it is likely to attain, and I now beg to move the resolution, which has been duly seconded, and I will ask you to hold up your hands.

Major COOPER said that before the motion was put to the vote he wished to be allowed to ask a question of the following certificate of the auditors:—"We have examined the above balance-sheet with the London books, and find it to be correct. The accounts from South Africa set out below are not yet sufficiently vouched and complete to enable us to certify to their accuracy.—JOHN G. GRIFFITHS, GEO. CLOUTTE." He wished to ask when it was likely that those accounts would be sufficiently vouched for. Those for the period ended Dec. 31, 1890, had not yet been received by the auditors, nor those for the period ended June 30, and he wished to know when it was likely that they would be received.

The CHAIRMAN: Well, gentlemen, all I can say is that Mr. Jones (who usually performs what he promises) will carry out a simple system to aid the Read's drift people in forming such accounts as London accountants require, and we shall find that they will be properly vouched for.

The SECRETARY (Mr. Brown) said that Mr. Jones was returning to South Africa this week.

ACCOUNTS.

Major COOPER said he wished to be allowed to ask another question. The chairman in his speech had taken a very hopeful view as to their receipts for the future. When, however, he (the speaker) compared the figures of the accounts for Dec., 1890, with those for June, 1891, he saw a fall in the receipts, which he did not understand. He supposed that this would yet be recouped.

Sir GEORGE PRESCOTT: That is for a half-year only.

The CHAIRMAN: You will understand that that one is for a whole year, and the other for only a half-year. The balance-sheet to Dec. 31, 1890, is for a full year, and to June, 30, 1891, for a half-year.

Major COOPER: The grazing receipts in the balance-sheet to Dec. 31 are 528*l.*, and to June 30 only 259*l.*

Mr. SYDNEY: That is about half.

Sir GEO. PRESCOTT: Because it is only a half-year's balance-sheet.

Major COOPER: The same applies to wood, I suppose?

The CHAIRMAN: Yes, that is so.

The resolution was carried.

FORMAL BUSINESS.

Sir GEO. PRESCOTT said that he rose to propose the re-election of Mr. C. J. Posno, their chairman, as a director of the company. They all knew the energy that he put into everything and his large experience in South African matters, and he (the speaker) could sincerely recommend him, from a very intimate knowledge, as being the man whom they might hope would carry these matters to an ultimate successful issue for all of them.

Mr. SYDNEY seconded the motion, which was carried.

The CHAIRMAN said that it was in the hands of the shareholders to propose the re-election of the auditors.

Mr. HENRIQUES said that he had much pleasure in proposing the re-election of the auditors, Messrs. John G. Griffiths and George Cloutte. He had to express the hope that when they met next year they would be able to have something more satisfactory, as shadowed forth by the chairman, laid before them. He regarded it as an extremely hopeful omen that their ferry-boat had come up like

JONAH OUT OF THE WHALE,

and he hoped that dividends would follow in the same way. (Hear, hear.)

Mr. CROFTON seconded the motion, which was carried.

The CHAIRMAN: This terminates the business for which we have called you together to-day, and it only remains for me to thank you for your kind vote of confidence in me, which I shall continue to endeavour to deserve.

A vote of thanks to the chairman closed the meeting.

THE MANICA OPHIR MINING CO., LIMITED.

DR. ALEXANDER EXPLAINS THE POSITION, AND GIVES REASONS FOR DEFERRING ANOTHER MEETING FOR THE PRESENT.

Oct. 19.—As you are aware, the general meeting held on the 24th ult. was adjourned for a month. A number of considerations, intimately affecting the future of the company, determined us not to convene the adjourned meeting, especially as the shareholders will probably be soon invited to a special general meeting for the transaction of some very important business. The ordinary business left unfinished consisted of the adoption, or otherwise, of the report and accounts, and the election of an auditor. The amendment, asking for the appointment of a committee (which, however, the meeting omitted to name) and calling on the directors—other than myself—and officials to resign, was certainly informal. But, lest it be thought that the decision not to call the adjourned meeting is due to the hostile feeling expressed towards my colleagues, or to evade the wish to investigate any matters connected with the company, I

suggested to Messrs. Filer and Jenkins—the two remaining members of the old board—to place themselves in my hands as to their continuance, or otherwise, on the board. Both gentlemen at once unreservedly did so; and, as to investigation, I beg you to consider me pledged to give every facility and loyal co-operation in my power. The real reasons are very different, and they relate not merely to the re-constitution of the board, but also to the re-construction of the company. Although supported by my colleagues, I am prepared to assume the full responsibility for not calling the adjourned meeting. I have been, and am, working in your interests, and I am confident that you will hold me justified in the course which I have felt it my duty to pursue. Since the meeting I have been, and am still, in communication with some of the largest shareholders, and I had hoped that matters might be sufficiently matured to have enabled us to convene a special general meeting on the day, and at the same place, as the adjourned meeting; but there has been good cause for further delay. Not only would it have been a waste of time and money to hold the adjourned meeting, with the certainty of yet further adjournments, but it would have been extremely inconvenient and prejudicial to be forced into premature announcements on the one hand, or, on the other, to be compelled, from motives of prudence, to exercise a perhaps misunderstood reticence. My aim is to make the best possible arrangements with creditors, to provide capital for the operations of the company, and to induce shareholders of weight and influence to come on the board. It is not impossible that this necessary programme may be amplified in a manner which, should my efforts succeed, may place this company not only upon a sound, but also upon a very favoured, footing. Meantime, I ask you to continue the confidence which the meeting so conspicuously accorded to me, and to accept by assurance that, at the earliest useful moment, you shall be summoned to a special general meeting.—L. C. ALEXANDER, Chairman.

HOLLOWAY'S OINTMENT AND PILLS.—Rheumatism and Neuralgia. —Though the former disease remorselessly attacks persons of all ages, and the latter ruthlessly selects its victims from the weak and delicate, the persevering use of these remedies will infallibly cure both complaints. After the affected parts have been diligently fomented with hot brine, and the skin thoroughly dried, Holloway's Ointment must be rubbed in firmly and evenly for 10 minutes twice a day, and his Pills taken according to the printed directions wrapped round each box of his medicine. Both Ointment and Pills are accompanied by instructions designed for the public at large, and no invalid, who attentively reads them, can now be at any loss how to doctor himself successfully.

WELLINGTON & CO.,
MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only effective and durable hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

LEEDS, HULL, FOLKESTONE: Where we are shortly opening up.

OCTOBER 28, 1891.

DEAR SIR,—We are again in the midst of a Stock Exchange settlement, and here offer our usual fortnightly remarks on the current and probable future course of the markets.

Our last issue, dated 13th inst., is still in print, and will be furnished post free, on application, to any readers not already possessed of it, and desirous of entering into comparison of circumstances and prospects at the two periods.

We have, on several previous occasions, described the unusually favourable facilities afforded to clients in dealing at our Head Office, and all branches as above, but may here repeat, for the information of intending new correspondents, that bargains opened at any one of these establishments may, in their option, be closed and settled at any of the others, they being in direct communication with each other, as well as with the Head Office.

While on the subject we take the opportunity to mention that on NOVEMBER 3 we are OPENING UP AT

263, REGENT STREET, OXFORD CIRCUS, W.

OPPOSITE PETER ROBINSON'S,

On and after which date equal facilities will be there afforded as at our other establishments.

THE MONEY MARKET.

The reserve has in the fortnight been further reduced to the extent of about £500,000; but its proportion to liabilities is fully up to the average at the corresponding period of three previous years, while the amount of coin and bullion held is greater by £2,000,000 than at these dates.

The course of general business and early prospects are also deemed sufficiently favourable not to have hitherto necessitated an advance of the minimum above 3 per cent., while at previous dates, with which we make comparison, it was 5 per cent.

Should, however, an advance be decided upon to-morrow, it will be viewed with satisfaction as serving to prevent any excessive drain of the Bank's resources, and thus to impart additional confidence to new operations.

THE STOCK MARKETS.

The fortnightly account now in course of arrangement shows considerable reduction in extent, and thus, with money relatively more valuable, the charges for continuation of bargains exhibit little, if any, increase.

Anticipations still favour an important upward movement in the leading departments, but the recent weakness of the Paris Bourse, Spanish, Portuguese, and South American finance, and the new Russian loan not an absolutely unmixed success, there has been a succession of up-and-down vibratory movements almost daily, although in no instance of more than fractional importance.

The recently incessant hammering of Foreign Stocks by bears should at an early date serve as a lever to the Paris Bourse, and markets generally of the sounder description. At the present moment, however, it possesses little more than an indirect and nominal interest for operators in this market.

HOME RAILWAYS

Have suffered undue neglect, consequent upon the all-absorbing American boom. During the past month we have pointed that they must again shortly assert their just claim to support as safe dividend-paying securities.

We particularly directed attention to the Scotch stocks, Sheffield "A," and Midland, all of which register an important advance on the fortnight, as shown by our usual comparative table.

We do not occupy present space with figures in support of the result of our recommendations upon even a small amount of cover. That can readily be computed by the reader, and it may serve to confirm confidence in following such recommendations which almost unfailingly prove to have been well founded and correct.

	Oct. 13.	Oct. 27.		Oct. 13.	Oct. 27.
CALEDONIAN	118	119	GREAT WESTERN	157	157
DO. DEFERRED	42	41	GREAT NORTHERN	63	73
NORTH BRITISH PREFERRED	68	70	DEF. CONV.	72	74
NORTH BRITISH ORDINARY	41	44	GREAT NORTHERN CONSOLIDATED "A"	34	35
CHATHAM ORDINARY	19	19	SHEFFIELD "A"	87	87
CHATHAM PREFERRED	107	107	GREAT EASTERN	154	155
MIDLAND	159	161	NORTH-EASTERN		

The important traffic increases on our selections, except North-Eastern and North British, entitle them to the confidence of present operators for the rise.

The two exceptions pointed out will also improve upon the greater activity exhibited in the iron trade, and they should therefore be bought.

AMERICAN RAILROADS.—As foreshadowed in our last circular, the chief interest has again centred in these securities; but after the great and rapid advance in the entire list, it was only natural that the exercise of discrimination should be brought into play before following a further general upward movement. Thus we have now to record a slight relapse in some, a measure of steadiness in others, and a further augmentation in value of the more deservedly favourite stocks:—

	Oct. 13.	Oct. 27.		Oct. 13.	Oct. 27.
ATLANTIC FIRST	39	39	NEW YORK CENTRAL	114	117
DO. SECOND	6	6	DENVER AND RIO GRANDE	19	19

PREF.	76	78	NORFOLK & WESTERN	57	54
MILWAUKEE	81	81	PREF.	31	31
LOUISVILLE	81	81	ERIE ORDINARY	65	67
ATCHISON INCOME	66	67	PENNSYLVANIA		
BONDS					

GEORGE GREGORY & CO.,

STOCK AND SHARE DEALERS,

4, TOKENHOUSE BUILDINGS, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

During the account, concluding to-morrow, the leading support has, as we predicted, been accorded by American buyers whether as regards bonds or shares. As, however, there is known to be a considerable short interest still to be covered on this side, the London market is more likely to take the initiative in the further advance movement now being organised, and friends should not be slow to get in at the outset.

CANADIAN PACIFICS,

Like many of the better-classed American shares, are enjoying a brief breathing time, but as they also enjoy unusual firmness, we are equally sanguine as ever of the price soon touching par—now 9½.

GRAND TRUNK STOCKS.

A fortnight ago we held out strong hope of improvement in these, pointing to the excellent traffic outlook, comparing, as it will for many weeks to come, with very small returns. True to our prognostication, last week's traffic shows a net increase of about £3,500, which should revive the drooping hopes of hitherto disappointed bulls. The good news has not yet, however, been reflected by market movements to more than a fractional extent, although it will doubtless gain strength hourly. Making-up prices at the two dates compare as follows, viz.:—

	Oct. 13.	Oct. 27.
ORDINARY	103	103
FIRST PREF.	70	70
SECOND DO.	50	49
THIRD DO.	27	27

which, upon the better traffic prospect, will serve as guide to intending operators.

MEXICAN RAILWAY (VERA CRUZ).

These stocks have afforded almost daily opportunity of securing profits on the rise and fall alternately. We, a fortnight ago, advised purchase of them, and from the First Preference being continued at a "back," and the other issues about even, we, with still greater confidence, repeat that advice.

There can be little doubt that the stocks are largely over-sold.

The making-up prices compare thus:—

	Oct. 13.	Oct. 27.
ORDINARY	53	51
FIRST PREF.	31	31
SECOND DO.	105	105

MINING AND LAND SHARES.

The weakness in Paris, where such stocks are largely dealt in, exercises an unfavourable effect upon Rio Tinto, De Beers, Oceana, and the general Kaffir market, but on each relapse these stocks should be bought for early improvement.

CALLAO BIS, LIMITED.

On 13th inst. we reported proceeds of the August product as £4,081 16s. 7d. Subsequent advices are of the most satisfactory character, and as so many clients are interested in the shares of this very promising Company, we here afford them perusal of the report, dated September 26, from the manager at the mines:—

"INDEPENDIENTE.—Since the 13th inst. the shaft has been continued a further distance of 4 ft., or 8 ft. below the No. 4 cross-cut; total depth from surface, 198 ft.; ground still very hard. The No. 4 cross-cut has been advanced south 6 ft. 6 ins., or 11 ft. 6 ins. from shaft; ground very hard. The No. 3 level west has been advanced 12 ft., or 94 ft. from cross-cut; lode 2 ft. wide, of fair value. The level driven from the bottom of the No. 2 winze has been advanced 30 ft.; lode 2 ft. wide, of good value. Raise in the back of this level has been advanced 22 ft.; lode 5 ft. wide, of good value. This will be pushed as fast as possible to communicate to the level above. The No. 2 level west has been advanced 5 ft., or 189 ft. from shaft; lode 6 ft. wide, of fair value. The No. 2 north-east on new discovery:—At this point I have followed the footwall met with in the bottom of the winze to prove the continuance of this lode. The lode shows 5 ft. wide, of rich value. Still, I am not able to form a correct opinion as to its course. Mill results:—488 tons yielded 645 ozs. bar gold, as already cabled, which results are from sudden turn which has taken place west, where a splendid piece of stoping ground is opening out in reserve for our 20 stamps."

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium. Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (250 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 12 years. Issued gratis and post free.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

INDIAN SHARES RISE THIS AFTERNOON—THE MINING *versus* THE STOCK EXCHANGE—SPECIAL REMARKS ABOUT YANKEE GIRL, EMMA, KAPANGA, SILVER KING, &c.

THE settlement in the early part of the week passed off satisfactorily, but had the usual effect of interrupting business. The alteration in the Bank rate seems to have had a beneficial effect on Mining shares. To-night operations on the Mining and Stock Exchanges were practically suspended until Tuesday next. There may be a few attendances to-morrow, but for the most part brokers will be on holiday intent.

Talking of the Mining and Stock Exchanges, it may not generally be known that when the former commenced its useful career the Stock Exchange could not find it in its heart to extend to it the courtesy it has shown to numerous private offices by letting it have the use of the "tape," of which it has the monopoly. Happily better counsels have prevailed, and this week the wires are all down, and as a broker put it, "we are only waiting for the tick arrangement." This expression must be taken in the ordinary and not in the Pickwickian sense. Speaking seriously the approach of these two bodies is greatly to be desired. The one can materially help the other, and both can assist the public in their share dealings. Perhaps the day is not far distant when the Stock Exchange may be prepared, for a reasonable consideration, to let off part of its now too extensive premises to the Mining Exchange, which is in want of superior accommodation, and, possibly, even to have a door of communication which will render it unnecessary to do so much mining business after the *al fresco* fashion, as is at present the case.

The week has been chiefly eventful from its Indian side. Shares for the most part have risen considerably. Nundydroogs this afternoon just touched 3, and Ooregum ordinary were at nearly the same point and the preference 1½ higher. An interesting statement will be found in our leader columns by "A Large Shareholder," as to the relative position of Ooregum Ordinary and Preference shares, respecting which we have, during the last few days, been requested by several correspondents to give the details. A telegram received to-night states that the Ooregum tailings

machinery has started. This will favourably influence the returns. Mysore shares rose fractionally this afternoon, and the dealings in Champion Reefs have been up to 27s. 6d., closing with a firm market at quoted prices. Generally, firmness has characterised the Indian section, with the exception of Balaghat and Mysore Wynaad, which both fell a point. Mysore Harnhallis also fell, but this is not seriously regarded as a mine—simply a gamble, and a bad gamble too.

In the Colonial section the movements have been sharp, and, as a rule, upward. The principal sport has been in Kapangas, which advanced 1s. 3d. on the week on the announcement of a monthly profit of 1,100%. Kapanga is a bunchy, patchy mine, but it has this characteristic, that when its friends are most in despair about it, it does something to restore their lost confidence. We have known Kapanga over and over again submerged in the waters of financial affliction and mining poverty until hardly a hair of its head could be seen above stream, and then there has been a sudden turn in its fortunes, which has astonished everybody. Witness, about eighteen months ago, when the shares rose in a week to 22s. 6d. from almost nothing. They have changed hands this week by the thousand. Scottish-Australian rose on the meeting, and Australian Broken Hills are also up. Not so are Broken Hill Proprietary shares, which have declined. The prices telegraphed from the colony a month or two ago were between 10½ and 11½, but now they have dropped to 7½. 13s. British Broken Hill is coming into favour again, and though the shares show a fall this week they have for some time past been rising. Kangarillas have been dealt in freely, but do not close at the best.

When we scrutinise the Kaffir section we find that the week has been uneventful for Diamonds, and that land descriptions are once more fairly on the inclined plane. On the other hand, Gold shares have moved unevenly, and if the falls and rises were put in opposite scales the balance would be about maintained on comparison with last week.

Copper shares have been weak, and all those that were at all dealt in have fractionally declined.

The reports from the Colombian mines received this week read very satisfactorily, and all this class of shares seem worth attention. Tolima A shares close at 9½ to 10½ ex the dividend of 10s. just paid, and therefore are practically unchanged. Colombian Hydraulic and Orita are dividing their water between them and running on alternate weeks, the season—wet as it has been here—being for Colombia about the driest on record. Considering all things, the Colombian Hydraulic return announced last week is very satisfactory. Gravel Gold is somewhat disappointing, a further "breakage" to the ditch having come to postpone the receipt of returns. No doubt exists as to the eventual success of this mine, but the weak points of the "ditch" will probably only be found in usage, so that the returns may possibly not be very regular until the whole has been more or less strengthened. Lomas are now dealt in, call paid, at 1s. 9d. to 2s. Tesoros have been largely dealt in, at slightly better prices than last week, and, we hear, are to go much higher. As they are very cheap, not much harm may be done in buying some upon the "off chance" of the looked for rise. Colon, it is said, will advise its first return, after the recent stoppage, some time next month.

The dealings in the foreign section have been largely in Yankee Girls, which have continued steadily to drop from the time of the last meeting. They have this week been as low as 7/6, but close at 9/6, showing a fall of about 1/6 on the week. The market shakes its head over those shares, and as a broker said, "directly you open your mouth, Yankee Girl shares are ready to be put down your throat." There is a big seller about who is setting at naught the very fair, business-like and reasonable statements made by Mr. Crowther at the recent meeting. That big seller is declared to be incarnate in the person of vendor Crawford, and his selling is said to be due, not to his want of faith in the mine, but to his engagements in respect of another property, which have compelled him to realise what securities he could. Then, it has been argued, he is a fickle lover who prefers his new love to Yankee Girl, to whom he formerly paid his attentions. The answer to this is that he expected to hand over his new love to a public company to be floated here, but in the state

of the market was not able to do so. Meanwhile he had a bond of the new property, and had to sacrifice the large payments already made or meet his later engagements with regard to it, of which the new company, had it been floated, would have relieved him. This is the explanation that finds currency on the market. "I kissed thee ere I killed thee," said Othello to Desdemona, but that lady did not derive any more consolation from the kiss than will the shareholders from this roundabout explanation of the direct fact that their stock has miserably fallen.

Golden Gates and Feathers have been well dealt in, but without much change of price. The De Lamar dividend (9d.) helped to revive the American Market, which had much need of a stimulant, and Golden Leafs rose upon the meeting to-day. Elmore Shares have risen to an extent that quite justifies the action of the shareholders at the recent meeting.

There have been some dealings in the shares of Silver King Co., which was floated on this market last June. The capital is 400,000*l.* in 1*l.* shares. At present dealings are limited to one or two of the brokers. The property is in San Bernardino, California.

The transactions in Emma Shares have been numerous. We understand that the directors have received and will shortly issue to the shareholders a report from Prof. Keyes. This document is of a most exhaustive description, and if a report can solace the shareholders in the present state of the market, comfort will not be withheld from them in perusing this one. A report has also been received from Mr. Obed A. Palmer of a reassuring character, but meanwhile the winter is coming, and with it the impossibility of sending down ore to market, if even it should be discovered. We further understand that it is the intention of the directors at an early date to call a meeting, and give an explanation to the shareholders. In regard to the call—the rumour that it would be only 3d. per share, to which we helped to give currency, was due to the original proposal of the board to make it in two instalments. They have decided to make it in one, with a view to ease and cheapness of collection, and also to furnish some necessary machinery to sink the mine deeper as recommended in the reports to which we have referred. We have further made inquiries as to the holdings of the shareholders round about Salt Lake, and have been assured that they are to-day larger than they have been at any time in the history of the company. These are grains of comfort in respect to a property which we must own has so far grievously disappointed us, but as regards which we have not yet abandoned hope. In the limestone formation it is the unexpected that is always happening, and we must never forget that it was upon the discovery of a bonanza that Emma was originally sold on this market for a million sterling.

The week for Cornish mines has been somewhat more favourable. Wheal Grenvilles are up 15s.; Dolcoath, 2*l.*; Killifreths, 10s.; and West Frances, 10s. The most notable falls have been in Carn Brea, 2*l.*, and Tincroft and Cook's Kitchen 1*l.* each. Lead shares are also weaker—notably, Leadhills.

The outlook for next week (which will not be interrupted by the settlement) is decidedly good for Indian shares particularly, the merits of which the public are coming thoroughly to understand.

KAFFIRS.

Remarks.—Business has been almost at a standstill, and only very few alterations have taken place. There can be no doubt whatever that the monthly returns of gold from the Randt are on the increase. Henry Nourse and Robinsons have both improved, but Pigg's Peak "Pref." and Spes Bona are easier.

Business.—A rise is shown in City and Suburban of $\frac{1}{8}$; Geldenhuis, $\frac{1}{8}$; Glencairn, 6d.; Henry Nourse, $\frac{1}{4}$; Jubilee, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; Langlaagte Block B, 6d.; Main Reef, 1s. 6d.; Robinsons, $\frac{1}{8}$; and Stanhope, $\frac{1}{8}$. The falls are in the following:—Piggs Peak "Pref.," $\frac{1}{8}$; Sheba, 6d.; Bantjes, 6d.; Crown Reef, $\frac{1}{4}$; Forbes Reef, 1s.; Great Gold Zone, 6d.; Nabob, 1s.; Spes Bona, 2s.; and Wemmer, $\frac{1}{4}$.

AFRICAN LANDS.

Remarks.—The market is dull, and prices are for the most part lower than last week, the only exception being in Transvaal Gold shares, which have been purchased to a great extent, and show a rise. Amongst the falls, Explorings lead the way, and are $\frac{1}{2}$ down; Goldfields of South Australia and Sutherland Reef are quoted below last week, and also Oceana and Silati. Other changes are of minor importance.

Business.—A rise is shown in Transvaal Estates, 6d.; and Transvaal Gold, 1s., whilst a fall has taken place in Bechuanaland, $\frac{1}{8}$; British South Africa Chartered, $\frac{1}{8}$; Exploring, $\frac{1}{2}$; Exploration, $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{4}$; Goldfields of South Africa, New, $\frac{1}{8}$; Horo Concessions, $\frac{1}{8}$; New Grahamstown, 1s.; Oceana, $\frac{1}{8}$; Ophir, 3d.; Read's Drift, $\frac{1}{8}$; Silati River, 6d.; and Sutherland Reef, $\frac{1}{4}$.

DIAMONDS.

Remarks.—In these shares there has been very little going, but the market seems fairly firm. De Beers close stronger, and also Burma Ruby.

Business.—A rise is shown in Bultfontein of 6d.; De Beers, $\frac{1}{8}$; Gordon, 6d.; and Burma Ruby, $\frac{1}{8}$; whilst the only fall is North Eastern Bultfontein of $\frac{1}{8}$.

Making-up Prices, Oct. 27.	DIAMOND SHARES.	To-night's Prices.

AUSTRALIANS.

Remarks.—Business has been fairly good in this class. The account showed a shortness in Gympies, New Queens, Day Dawns (Block and P.C.) and Mosmans. The usual telegram from Broken Hill Proprietary, giving the output for the week, also quotes the prices of shares at Melbourne lower, which looks as though someone either here or on the other side is trying to dispose of them. Australian Broken Hill Consols, on receipt of a telegram announcing 3,000 ozs. from 12 cwt. of ore, and also $\frac{1}{4}$ cwt. of native silver, went to 14s. 6d. strong buyers, but this afternoon were offered at 12s. 6d., without finding many purchasers.

Kapanga has come upon some really first-class ore, and shows a profit of 1,100l. on the month's working. The shares have changed at 4s. 3d., but do not close so firm, owing to many holders taking a speedy profit.

Business.—A rise is shown in Australian Broken Hill of 1s. 6d.; Kapanga, 1s. 6d.; Mosman, 3d.; and Scottish Australian, $\frac{1}{8}$; whilst a fall is recorded in British Broken Hill of $\frac{1}{4}$; Day Dawn Block, 3d.; and Kangarilla, $\frac{1}{8}$.

INDIANS.

Remarks.—There has been a considerable amount of business doing in these shares, and the canny Scot has been an eager buyer. Those mostly sought after have been Mysore, Ooregums, and Nundydroogs. Champion Reefs have also been in request, and 500 shares changed hands at 27s. 6d., though that price was not maintained.

The upward movement was greatly helped by the dealers being found short of stock on the account, and it being very difficult to borrow shares.

The lower priced descriptions are sure to follow the rise, and at present prices look a good investment for a speedy profit.

Business.—A rise is shown in Champion Reefs of 2s.; Gold Fields of Mysore, 6d.; Mysore Gold, $\frac{1}{8}$; Nundydroog, $\frac{3}{8}$; and Ooregum and Pref., $\frac{3}{8}$ each. The only falls being in Balaghat of 6d.; Mysore Harnhalli, 9d.; and Mysore Wynaad, 6d.

COPPER.

Remarks.—Shares have declined in this market, and as usual Rio Tintos lead the way with a fall of $\frac{3}{8}$. Others are quoted lower in sympathy, although very little business has been done in them.

Business.—There is no rise to record, but a fall is shown in Capes of $\frac{1}{8}$; Copiapo, $\frac{1}{8}$; Libiola, $\frac{1}{8}$; Quebrada, $\frac{1}{8}$; and Rio Tinto, $\frac{3}{8}$.

GENERAL.

Remarks.—Flagstaffs have been somewhat neglected, and prices do not close so firm. Emmas are quoted firmer now that the call is known. Elmore's are better, Golden Leaf shares have been dealt in largely, and close better after the meeting. They should be held. De Lamar's are quoted now *ex div.* Yankee Girl shares have been very much depressed, and at one time on certain vendors' shares being pressed for sale they did not find buyers at 7s. 6d. They have since recovered, and certainly appear to have touched bottom.

Business.—A rise is shown in Balkis of 3d.; El Callao, $\frac{1}{8}$; Elmore, 9d.; Emma, 3d.; and Golden Leaf, 6d.; Whilst the falls are as follows:—Amador, 3d.; American Belle, 6d.; Bratsberg, 6d.; Callao Bis, 3d.; Colombian, $\frac{1}{8}$; Colon, 3d.; De Lamar, 1s. (now *ex div.*); Dickens Custer, 3d.; Don Pedro, 1s.; Elkhorn, 1s.; Flagstaff, 3d.; Fortuna, $\frac{1}{4}$; Frontino, 1s. 6d.; Gravel Gold, 6d.; New Russell, 3d.; Oscar, 3d.; Palmarejo, 6d.; Pinos Altos, 6d.; Sierra Buttes, $\frac{1}{8}$; Tolima "A," $\frac{1}{2}$; Tolima "B," $\frac{1}{4}$; and Yankee Girl, 1s. 6d.

The following list shows the principal changes which have taken place:—

	Last Week.	This Week.
Amador ...	4/ 4/6	3/9 4/3
American Belle ...	6/6 7/	6/ 6/6

LATEST FROM THE MINES.

INDIAN MINES.

OOREGUM.—A telegram from the mine to-day states:—"Tailings machinery started."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director resident at Broken Hill, dated Oct. 27:—"Raised 12 cwt. rich ore, containing 3,000 ozs. of silver, including $\frac{1}{4}$ cwt. native silver."

BLUE SPUR AND GABRIEL'S GULLY.—The manager telegraphs return of gold obtained for the four weeks ending Saturday, Oct. 24, at 507 ozs.

BRITISH BROKEN HILL PROPRIETARY.—For the week ending Oct. 22, 244 tons of ore were treated (including 48 tons of iron ore), yielding 39 tons of lead, containing 1,952 ozs. silver. Cable also states that the furnace was shut down for repairs four days.

BROKEN HILL PROPRIETARY.—For the week ending Oct. 22, 4,195 tons of ore were treated, yielding 545 tons of lead, containing 180,385 ozs. silver. The company report that during the week ending Thursday, the 29th inst., there were 4,217 tons of ore treated, yielding 506 tons of lead, containing 177,114 ozs. silver, and that the surplus silver on hand is 247,067 ozs., also that the usual monthly dividend of 2s. per share, amounting to 96,000l., for the month of Nov., has been declared on the 960,000 shares, and will be paid in London and Melbourne on Nov. 18. The books close for dividend on Nov. 7.

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending the 24th inst.:—"Tons crushed, 670; yield of gold, 974 ozs.; approximate value, 3,350l.; fortnight's expenses, 1,200l."

DAY DAWN P.C.—The manager at Charters Towers gives the result of this company's crushing for the fortnight ending Oct. 24, viz.:—1,000 tons, 1,123 ozs. (Estimated value, 3,930l.). The directors have sold, through Messrs. Johnson, Matthey and Co., the gold ex s.s. Jelimga, which realised 3,678l. 19s. 9d.

HARRIETVILLE.—A telegram from the superintendent, dated Oct. 23, is as follows:—"Cleaned up Oct. 21. Mons Meg Mine, 730 tons; Guerdon, 324 tons; together 215 ozs.; Tiddledice Mine, 110 tons, 20 ozs.; amalgamating pans, 35 tons, 56 ozs."

KAPANGA.—The directors have received the following telegram from the manager :—"Have crushed for the month 35 tons ; yield 540 ozs. of gold ; profit, 1,100L."

MIDAS.—Cable from the mine :—"Yield for week ending Oct. 24, 31 ozs."

MOUNT LEYSHON.—A cablegram dated 30th inst. from their manager at Charters Tower gives the fortnightly crushing :—"1,330 tons crushed ; 395 ozs. gold ; 40-stamp mill ran 288 hours."

MOUNT ZEEHAN.—Cablegram, dated Hobart, Oct. 26 :—"20 tons of first-class ore have been shipped from Hobart to London per the s.s. Bungaree."

FOREIGN MINES.

CALLAO BIS.—The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained during the month of Sept., viz. : 645 ozs. The amount realised for same is 2,530L 0s. 10d.

COLORADO BOY.—Report from Mr. P. Argall, namely :—"The main shaft has reached a depth of 110 ft., sinking at the rate of 2 to 3 ft. per day ; shoot of ore discovered ; there is every prospect that a moderate depth will place at our command a valuable body of high grade ore."

DE LAMAR.—Dividend warrants for the second interim dividend of 9d. per share for the period ending Sept. 30, have been posted.

ELKHORN.—Information from the mine :—"Bullion produced for week ending Oct. 24, \$8,120." Important information from the mine :—"The 1,250-ft. level south is now in ore, assaying 35 ozs. to the ton."

GRAVEL GOLD.—A cablegram states that the alteration of the syphon has been completed, but that, owing to storms, some breakages on the ditch have occurred which will take three weeks to repair.

JAY HAWK AND LONE PINE CONSOLIDATED.—Telegram from the manager :—"Mine is looking well ; 800 tons ore extracted ; mill very nearly ready."

LA PLATA.—Report from Mr. P. Argall :—"Whitecloud (Red Mountain district) : The shaft has attained a depth of 266 ft. ; it contains native copper ; very good indications."

MAMMOTH.—The manager cables as follows :—"Shipped bullion amounting to \$6,650. Partial clean up Oct. 19. Winze from fourth level down 96 ft. Assays average \$13 gold per ton, \$3.50 silver. Cross-cut from level No. 5 is driven 21 ft. Assays average \$15.30 gold per ton, \$2 silver."

OSCAR.—The manager cables :—"A trial crushing of 6 tons from the bottom of the shaft produced 5 ozs. of gold. The concentrates assay 6 ozs. per ton. This crushing proves the mine is getting richer in depth."

RED MOUNTAIN.—Report from Mr. P. Argall :—"Rock in the tunnel has become soft, showing signs of ore."

RIO TINTO.—An interim dividend at the rate of 12s. per share is payable on Nov. 17. The transfer books will be closed from Nov. 6 to Nov. 16, both inclusive. Holders of share warrants to bearer are invited to present coupon No. 26.

ZARUMA.—Telegram from the agent at Guayaquil :—"The number of tons crushed for Sept. should be 400, not 550 as previously advised."

HOME MINES.

EAST BLUE HILLS.—A meeting is called next Friday for the purpose of confirming the arrangement between the Blue Hills Mine and this company regarding the extension of boundary westward.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

NEW CHIMES.—The return for last month is 551½ ozs. of gold.

ORIENTAL AND SHEBA VALLEY.—The allotment letters for the preference shares in the above named company were posted on Thursday.

NORTH EASTERN BULTFONTEIN.—Advice for last week announces :—"7,000 loads blueground, yielding 1,400 carats of diamonds. Best blueground not yet ready."

WYLDSDALE.—Telegram dated Oct. 23 :—"Everything is going on satisfactorily with the erection of 10-stamp mill, and we hope to commence crushing on Dec. 1. Ore improving in quality as developed ; stopes looking splendid."

WENTWORTH PROPRIETARY.—Cablegram from Mr. W. H. Irwin, the permanent manager :—"We are now starting the cross-cut from the 400-ft. level of the Reform shaft towards the Chapel Hill quartz reef ; have also commenced sinking a winze from this 400-ft. level. The cross-cut from the 240-ft. level, Shamrock shaft, continues in hard rock. The south drift is showing rich ore, and there are indications of improvement in the rise on the Happy-Go-Lucky vein. We are laying pipes to make the rock-drills available in the Phoenix Mine."

PIGGS PEAK ESTATE.—Mine Report for week ending Sept. 26.—Devils Reef : One white man and four boys ballasting tram line. One white man and five boys sinking winze and getting timber for same for delivering ore in cars for battery. One white man and 12 boys getting wood for battery. Prospecting Drives : Drove for the week 20 ft. Dwinin's New Reef, Low Level Drive : Drive for the week 20 ft., total 210 ft. Suspended work for the present. Battery : Guide blocks have been fitted and are in place. Framework now completed.

Dam : We have now got to bed rock and have everything ready for starting building, the creek has been cleared of boulders, some 300 tons of which have been removed.

TRANSVAAL GOLD EXPLORATION.—General manager's advices, Sept. 28 :—"Mining : Ophir Hill, Theta vein : Ore extracted, 40 tons ; assay value, 6 ozs. 15 dwts. per ton ; and 100 tons, assay value, 4 ozs. 19 dwts. per ton. Brown's Hill, Nu reef : Ore extracted at Nos. 1,211 and 1,220, 27 tons ; assay value, 2 ozs. 16 dwts. per ton ; and at No. 1,209, 15 tons ; assay value, 10 ozs. 14 dwts. per ton ; and 15 tons ; assay value, 30 ozs. 7 dwts. per ton. Edin Hill, Rho reef : Ore extracted, 16 tons ; assay value, 15 dwts. per ton. Brown's Hill, Sigma reef : Ore extracted, 25 tons ; assay value, 1 oz. 16 dwts. per ton. Prospecting : Work had been recommenced on Columbian Hill, and a party had also been dispatched to the outlying farm of Driekop. Mill : The battery and pans worked as usual. A contract had been concluded for transport of ore to the battery throughout the ensuing season."

CERRO DE PASCO.—Advices dated Barberton, Sept. 23 :—"Block F extension : Drive south on 10 ft. reef has been driven 14 ft., making total distance 128 ft. ; ore extracted, 28 tons ; the lode is about the same as last reported. Drive north on 10 ft. reef has been driven 10 ft., making total distance 42 ft. ; ore extracted 20 tons ; there is no change to report in this drive. Drive south on 4 ft. reef : This drive was commenced on Sept. 21, which has been driven 10 ft. ; ore extracted, 14 tons ; the reef continues about the same as when first cut. Air shaft, No. 1 south, has been sunk 11 ft., making total distance 43 ft. ; this shaft is still in sandstone. South-east cross-cut : In accordance with your request I discontinued this work for the present. Block 12 : North-east cross-cut has been driven 10 ft., making total distance 240 ft. At 234 ft. we cut a quartz reef 6 ins. wide, which carries traces of gold. This cross-cut continues in mica schist."

Re TOLIMA MINES AND THEIR MANAGEMENT.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—In my letter under the above heading in your issue of Oct. 24 I see there is a printer's error :—"loberias del Senor Green" should be "boberias del Senor Green."—I am, &c.,

ERNEST R. WOAKES.

78, Harley Street, London, W.
Oct. 25.

YURUARI.

SIR,—The Yuruari Co. has come to a speedy end, and no wonder ! Mr. Hugh Watt, M.P., may possibly be able to carry his resolutions. Judging by the past, it will be folly to place him in the position of liquidator and a possible director of the proposed new company ; it is, therefore, much to be desired that the shareholders will look out for and appoint one more competent than he has proved himself to be. It would be satisfactory to some of the shareholders to know whether he was responsible for the non-acceptance of the position of managers by Messrs. John Taylor and Sons ; also if it be a fact that he has been in the receipt of a salary of 1,000L. per annum.

My friends and I are retaining our proxies in the hope that some more reliable men may be found to fill the positions of liquidator and directors of the new company, if it can be formed. It is also, we believe, most desirable to have a board who can secure Messrs. Taylors' services for the new undertaking.—I am, &c.,

A SHAREHOLDER.

NEW COOK'S KITCHEN.

CALL OF 3s. PER SHARE.

THE sixteen-weekly meeting of the adventurers in New Cook's Kitchen was held on the mine on Thursday.

Mr. Walter Pike, J.P.

(purser) presided.

The accounts showed :—Labour costs, 755L. ; bank charges, six months, 10L. ; merchants' bills, 212L. ; total costs, 986L. On the credit side the sales of tinstone have realised 417L., leaving a loss of 539L., making the total balance against the mine 546L.

On the motion of Mr. F. HARVEY, seconded by Mr. J. JEFFERY, a call of 3s. per share was agreed to.

MIDDLESBOROUGH TOWN CO.—We are authorised to state that letters of allotment in the above company have been posted. Mr. Powers will leave for Middlesborough on Saturday next, to complete the scheme of re-organisation.

SALT UNION, LIMITED.—The tonnage of salt delivered by the Union in Sept., 1891, was approximately 117,000 tons, and in Sept., 1890 and 1889, 130,000 and 112,000 respectively.

On the invitation of the Kennedy Dry Press Brick Machine Co., Limited, a number of the leading brick manufacturers attended at Southall on Thursday last to witness a series of experiments with the Kennedy machine, which is about to be introduced into this country. The machine is stated to have been worked with great success in the United States, where some hundreds are now in operation, and the bricks have been used in the erection of many public buildings in America. The machine, which is automatic in operation, produces superior bricks at the rate of 44 per minute, or 26,400 in a 10 hours' day, and will work successfully with any dry or semi-dry clay, with fire clay or slate refuse. Mr. T. Quinn, M.P., speaking with the experience of 30 years' brickmaking, expressed the opinion that the machine had a great future before it. It was absolutely the best in the market. A company is being formed to acquire the English and other patents.

THE GUIANA GOLDFIELDS, LIMITED.

SOMETHING LIKE A COLLAPSE.

THE shareholders have received the following circular, dated Oct. 15:—The company having been compelled by circumstances that were beyond control to comply with an unexpected claim for 90,000 shares recently made by the International Agency and Industrial Trust, Limited (in liq.), and others (nominees and successors of the Development and Investment Co., Limited, the original promoters of this company), the agreements and arrangement between the company and the vendors had to be broken, and the various mining properties that formed the company have been lost in consequence. The directors, therefore, find it completely out of their power to continue the business of the company. The vendors have resumed control and possession of their mines, and are still carrying on operations on a small scale with satisfactory results. The directors regret exceedingly that such valuable mines should have passed out of the hands of the company, as whatever may be said of the company's organisation, &c., the intrinsic merits of the mines are beyond question. A meeting will shortly be called in order to afford more detailed explanations of the above matters.—E. BLINKHORN, Secretary.

BRITISH MINING INTELLIGENCE.

DRAKEWALLS (Oct. 28).—Since the last monthly report very little has been done in the bottom part of the mine, in consequence of the breakage of two main pumping rods in the shaft and the balance box at surface. As soon as the breakage was repaired, we had the very heavy floods, so that the engine had as much as it could do to keep the coming water from rising. The engine is kept going about 7½ strokes per minute, and we find this as fast as we can work safely. Having some good weather, we are beginning to fork again now, and during the last 16 hours have got out 2 ft. of water. The shaftmen are attending to the forking of the water, and are cutting ground for bob plat at the 80-fm. level, where we shall fix a balance box to take up a great deal of the weight of the rods in the shaft, and to assist the engine. I am very hopeful now, if the dry weather continues to soon get the water in fork, and all the men in full work again.—H. RODDA.

EAST GRASSINGTON (Oct. 28).—Report from the mine manager:—Hammond shaft: In the 47 west the ground is easier for progress; a small leader of clay, well mixed with lead ore, came in the ore-bearing part of the lode. No. 1 stope behind the end in a vein 18 ins. wide, and producing 12 cwt. of lead ore per fm. No. 2 stope in a vein 18 ins. wide, and producing 15 cwt. of lead ore per fm. No. 3 sump: In the western end the lode is 18 ins. wide, carrying limespar, sulphate of barytes, and lead ore; worth 12 cwt. per fm. In the eastern end the lode is 2 ft. wide, chiefly composed of limespar and barytes, intermixed with branches of lead ore; worth 20 cwt. per fm. We have staked out at surface the position of the new perpendicular engine shaft to command the western ground, where our prospects of meeting with payable ore bodies beneath the shales in the ore-bearing measures are highly encouraging. Stope at intermediate level in a vein 2 ft. wide, yields 10 cwt. of lead ore per fm. Harris main engine shaft: Excellent progress is being made in cross-cutting north to reach the main lode; the stratum, though hard and spare for progress both in character and appearance, is highly congenial for the production of mineral. No. 1 shaft in back of 47 east, in a vein 2 ft. wide, yields 12 cwt. of lead ore per fm. We have holed through from 37 to 27 levels, and excellent progress is being made at both points towards reaching the cavity. Surface and dressing operations in full swing. Machinery throughout the mine in good order and working smoothly. The produce for month of Sept. has been smelted, and partly sold at a good price, according to the market quotations of the day, and the remainder in pig lead held in stock at our smelting works.

LEADHILLS (Oct. 26).—Brown's vein: The stope above the 145 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's is worth 35 cwt. of ore per fm. No. 5 winze below the 130 north of Jeffrey's shaft is in a pretty vein, 4 ft. wide, showing a fine rib of spar, mixed with ore; worth 25 cwt. per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 25 and 35 cwt. of ore per fm. respectively. The rise above the 130 south of Jeffrey's shaft shows a vein 6 ft. wide, mostly quartz, with spots of ore. The 115-fm. level north of Jeffrey's shaft is in a splendid looking vein, above 4 ft. wide, mainly charged with quartz and ore; worth 10 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, charged with quartz, but only a small spot of ore. The drift below the 100 south of Wilson's shaft is worth 20 cwt. of ore per fm. The stope above the 85 north of Jeffrey's shaft is worth 5 cwt. of ore per fm. The 70-fm. level south of Wilson's shaft is only about 1 ft. wide, in vein stuff, well mixed with quartz but keeping too dried for producing ore. The two stopes above the 35 south of Flat Rod shaft are worth 50 and 40 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in quite a kindly vein 3 ft. wide, charged with spar, but no ore.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Oct. 23.—The 275-yd. level: Only one stope working from this level; worth 3 tons lead ore and 1 ton blende per fm. The 295-yd. level—Driving west: Stopped. Driving east: Stopped for a time, and a stope commenced above; lode 20 ft. wide; worth 6 tons blende and 1 ton lead ore per fm. Driving north: This portion of the lode has not yet been intersected. The 315-yd. level: In 56 yds. from the winze. Over 100-yds. have now been driven on the ore course; lode not so good, 2 ft. wide; worth 1½ tons blende per fm. This will probably open out again. The stopes east and west of the winze are worth 3 tons and 4 tons blende per fm. respectively. Dressing: 811 tons blende and 233 tons lead ore have been dressed and sold since the commencement. The new mill and engine are erected, and will soon be in regular work. The weather has been much against outdoor operations.

PRINCE OF WALES (Oct. 28).—In the 180-fm. level west we are driving in the country rock by the side of the lode, which, as far as can be seen, looks well indeed, and in every way maintaining its size and value as when last taken down, where it was worth, for 4 ft. wide, 35½ per fm. There is no change whatever in this level east since last reported. In the 166 west the men are also driving by the lode, in which there are indications of improvement; at present it is 3 ft. wide, in hard tinny capel, worth 10½ per fm. We have four men stoping the back of this level a few fathoms behind the end, where

there is a very good lode. We have also four men stoping in the back of this level east of the shaft on a good lode, but neither of these stopes have yet sent any stuff to surface. There is no material change in the south cross-cut since last week. Owing to the late heavy floods, which is seriously affecting the weak ground about the Goodluck shaft and crushing the old timber, we have a pair of men repairing to prevent its running together.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Oct. 29).—The 155 north on main lode is driven 28 fms. 4 ft.; lode in present forebreast 2 ft. wide, producing a nice mixture of lead ore. This drive is being inclined to the east, in order to intersect the divisions of the vein which have gone off in that direction. A similar thing is taking place, we believe at this depth as that experienced at the 110-fm. level north, and we expect a very great improvement when the junction of the divisions referred to are reached. The 155 on caunter lode is driven 25 fms. 4 ft.; vein in present forebreast in three parts, which are together 7 ft. wide, producing to-day about 1 ton to the fm. The 140 on this lode is driven 28 fms. 3½ ft.; lode in present end 8 ft. wide; worth quite 1½ tons per fm., and improving. The two stopes in back of this level are each worth quite 2½ tons per fm., and are better in the highest point in back of the level than elsewhere, which speaks well for the ground, which will be opened up by the new winze from the level above. This winze is now 5 ft. deep. The 125 south on main lode is in a vein about 4 ft. wide, producing 1 ton per fm. The new winze below this level is 6 fms. deep, and the part of the vein being carried is improving, and producing good stones of lead ore. It was the footwall of the vein in the driving of the 125-fm. level which was productive, but the winze is being sunk in the hanging-wall part at present. The three stopes in back of the 80 are still producing together about 4½ tons per fm. The three stopes in back of the 110 are together worth 5 tons per fm. Other points throughout are just as last report. We are preparing a parcel of blende for sampling next week.—A. WATERS and SONS.

SOUTH DARREN (Oct. 29). The shaftmen have finished cutting the lode at the 154, and are to-day commenced to fix bearers for skip road. In cutting the lode the north branch has produced very good ore. In the bottom it is worth from 15 to 17 cwt. of silver-lead ore per fm. with a mixture of copper; in the roof there is a good branch of solid copper but not so much lead. This branch will, no doubt, join the south branch in depth, when it is probable there will be a very good lode, as both branches are improving in depth. The ends at the 154 have been extended 1 fm. each way; the east end is in a strong lode 6 ft. wide, worth 17 cwt. of silver-lead ore with a mixture of copper. In the west end the two branches are more distinct, there being 6 ft. between the north and south branches, the latter being worth 15 cwt. of silver-lead ore per fm. The former contains a solid branch of copper 6 ins. wide. The stope in the 142 west continues to produce 1 ton of silver-lead ore per fm. In the winze in the 130 west there is a good branch of copper with a mixture of lead.—J. MITCHELL.

VAN (Oct. 29).—The cross-cut at the 150-fm. level is still going towards the south lode at fair speed considering the nature of the stiff ground being driven through. The stopes throughout the mine (five) are without change since last report, and continue to yield, on an average, about 20 cwt. of lead ore per fm. The lode in the drift west from end of No. 1 stope in the back of the 135-fm. level on the south vein is worth to-day 25 cwt. of lead ore per fm. In the driving east from the end of No. 2 stope over the same level the lode contains some lead, but not to value at the present moment. At the 150-fm. level east of Seaham's winze we have been cross-cutting south through the lode, and have just met with the hanging-wall. We shall now, therefore, resume the driving east on the middle part of the lode, as previously, which contains a strong mixture of blende, and likely to become productive for lead as well any day. We are pushing on with the washing of lead ore, and have 25 tons in the bin towards the next sampling.—J. PAULL.

FOREIGN MINING INTELLIGENCE.

ANTIOQUIA.—The directors have received advices from Mr. J. H. White, dated Sept. 2 and 16, and from Messrs. Restrepo, dated Sept. 12. The statement for the month of Aug. is as follows:—283 tons produced 81 ozs., average 6 dwts.; also 16 ozs. from the New Discovery, and 8 ozs. from Attle; total, 105 ozs. Estimated value of the gold, 297½; cost at the mines, Medellin, and in London, 458½. 5s. 10d.; estimated loss, 161½. 5s. 10d. During the month sums amounting to 116½. 9s. 3d., included in the above statement of cost, were expended in Colombia on capital account.

ARGENTELLA (Oct. 22).—Weekly report from manager:—No. 2 Marine—Driving east: The ground has changed for an improvement; the hard rock we had last week was cut out by a well defined joint, going off at an angle of about 30 degs. to the present drive. After cutting through this wall, we find on the heading or south wall very kindly carbonate of lime with strong spots of mineral. The flookan is wider and killas more promising. The general aspect is very encouraging. Quartz reef—Cross-cutting south: We are pushing forward; the past few days brought us into a band of ground not as free for breaking. We find the general rule of these are not wide. I think we shall have to drive about 26 metres more if the underlay is what we suppose. No. 3 Rowe's workings—Driving east: This end has just reached a very strong vein, going off at about 40 degs. east of north. What it really is I cannot yet say, as it is not broken through. The ground has been breaking better for some days past. We cut through every metre driven, veins of quartz, lead and blende. The general health is good. Supplementing my report, I am glad to inform you that appearances at No. 2 Marine are more promising. The south wall is bearing hard towards the Africana lode. The change we have in the nature of the ground is better for producing mineral than any we have had before in this level. What we now have is a perfect heading wall dipping north-east, strike about 60 degs. east of south, with a joint of flookan, carbonate of lime, and strong spots of mineral, such as iron pyrites, copper pyrites, and spots of lead.

ASIA MINOR.—Ara Dere: In the end east from winze where we are cutting in for a ledge there has been some very nice lead during the past fortnight. As soon as practicable we shall try a few stopes here. Chief mine: Intermediate Hamburg winze: The cross-cut is now through the lode, which is 3½ metres wide, and well impregnated with lead throughout. This point at present is encouraging for some valuable stoping ground being laid open in a virgin part of the mine. Intermediate air shaft: The lode in the rise has improved to 20 cwt.,

and in the winze to 30 cwt. We look for some good permanent stoping ground here. Other points in the mine are without change. The stopes east from Savalan Pass are now nearly entirely worked out. Production at dressing floors to Oct. 16: Tons crushed, 10,882, yielding, 795½ tons rich silver-lead.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Sept. 17:—Engine shaft, 280 level west: Driven 24 ft.; total, 532 ft. from shaft; no change in formation. Contract for driving 100 ft. having been completed, have let fresh contract for driving a further 50 ft. Rise from 280 level east: Risen 18 ft.; total, 18 ft. This rise being put up 100 ft. east of engine shaft to prospect large formation passed through in level; lode consists of carbonate of iron, containing a little galena. Intermediate level, No. 1 west from rise: Driven 13 ft.; total, 119 ft.; driving discontinued. Rise started from this level to prospect block of ground between this and the 180 level. Rise from intermediate level, No. 1 west: Risen 4 ft.; total, 4 ft.; small seam of ironstone showing in formation. Intermediate level, No. 2 west: Driven 14 ft.; total, 26 ft. Passed through a detached body of chloride and iodide of silver, which produced some very rich ore of this class, containing 11,143 ozs. of silver to the ton. The 180 stopes: Have broken a further small quantity of good grade galena. Incline: Sunk 15; total, 165 ft. 6 ins. below the 280 level. Lode continues promising, showing fahlerz and native silver in small quantities; water rather strong. Intermediate level, No. 2 east from Incline: Driven, 25 ft. 6 ins.; total, 71 ft. Parcel of 33 tons of rich and medium quality ore dispatched, containing 14,500 ozs. of silver.

CASTILLON (Oct. 26).—Capt. J. Edwards reports:—We shall sample 53 tons of silver-lead ore on 29th inst., and hope to forward 250 tons blende to Bordeaux for shipment by steamer leaving on 7th proximo. I have nothing new to report at the mines. The average quality and quantity of crude ore is being got.

COLOMBIAN HYDRAULIC (Sept. 18).—The following are the details of the operations during the month of Aug.: Run No. 175: After a run of 735 hours we cleaned up from Clarke's Banks on Sept. 9, \$3,345.50 10/10; from the main sluice, \$1,358.45; which, with purchased gold \$526.00, has produced a total of \$5,229.95, which was as much as I expected from a short run on these banks. Present work: The Medina is still so low that I arranged after our clean-up to let Mr. Prender have the whole of the water for eight days, and in return take it for Malpaso on the following eight days, after which time I hope there will be sufficient water in the river to allow of a division again. The first eight days expired yesterday, when we began another run at the head of the mine on the north side of the channel. In spite of our having the whole Medina, there is hardly enough water to fill our pipes. During our eight days' stoppage we took advantage of the water being off to repair all sluices, flumes, bridges, ditches, &c. The north side of the mine is softer, though not so rich as the south and centre.—A. E. OAKES.

COLORADO.—The manager's report for the fortnight ending 15th inst. is just to hand. There are 17 points being actively worked:—Terrible Mine—8th level west: The ore now being encountered is of very good quality, and the indications point to a permanent vein. The last sale gave 271½ ozs. silver per ton and 23 per cent. lead, and 174½ ozs. silver; in two classes. The 1st level: Mineral vein 1 to 3 ins. wide. Last sale gave 677 ozs. silver per ton, 18 per cent. lead, and 136 ozs. silver; in two classes. The 2nd level: Mineral vein 1 to 3 ins. wide. Last sale gave 100 ozs. silver per ton, 10 per cent. lead. Brown lode—Roekwell adit level: Mineral vein 2 to 3 ins. wide. Last sale gave 95½ ozs. silver per ton and 80 ozs. silver per ton; two classes. Brown adit level: Last sale 48 ozs. silver per ton, 12 per cent. lead. Brown tunnel level: Last sale 97 ozs. silver per ton. Mammoth tunnel level: Mineral vein 1 to 3 ins. wide. Last sale 79 ozs. silver per ton, 11 per cent. lead. Silver ore tunnel: The raise is now completed, and connection made with the drift, which gives the place good ventilation. The men are now working two shifts on a fair vein of ore. Coin lode—Brown adit level: Mineral vein 3 ins. wide; lode 4 ft. wide. West Terrible: Lode 4 to 5 ft. wide; mineral vein 1 to 2 ins. wide, and continues to show steady improvement. Several important stopes have been put in good order for working, and a large number of men have been drifting in new ground, preparing for stoping. Since last report the various drifts have been extended 40 ft. 16 tons of clean ore have been sold since last return.

CORTEZ.—Report from the manager, Oct. 10.—South cross-cut, No. 1 east, advanced 3 ft.; middle tunnel west, stoped 3 tons of ore; north-east raise, stoped 30 tons of ore; north-west raise, stoped 160 tons of ore; ore run into ore-house, 186 tons; trammed to mill, 60 tons of ore; worked at mill, 105 tons of ore; average assay for week, 60 76-100 ozs. silver per ton.

CUMBERLAND (Sept. 7).—I beg to submit my progress report for the month of Aug. No. 2 shaft: We have sunk the shaft a further depth of 38 ft. since my last report. The reef there mentioned holds good, but is still small, showing good mineral, besides more free gold visible to the naked eye than has ever been my good fortune to see in this mine. I regret that, owing to the width between the hanging and footwalls of the lode, I probably shall not be able to prove this reef further till such time as we open out for No. 8 level. No. 1 winze—No. 7 level north: This was sunk 43 ft. during the month, but the men have had to be knocked off on account of an influx of water, which, when the shaft is down a few feet further, I calculate will be drained. We can then continue sinking without hindrance. I can only say that there is quartz at the bottom of this winze of fair quality. Of quantity I can say nothing, for it was when this reef was disturbed that the water came in and drove the men out.—A. GALLAGHER.

DAY DAWN P.C.—Report for fortnight ending Sept. 12:—The output of quartz is 769 trucks; sent to the Excelsior mill 738 tons. No. 13 level: The work done in this level for the fortnight has been squaring up the drive and timbering up same, the reef on the footwall is somewhat split up; we have about 1 ft. on the footwall, and 1 ft. about 4 ft. from the footwall, of fair quality stone. The formation has widened out to 20 ft., and is a very hard diorite and bad for tearing. The stone on the hanging-wall is about 3 ft. thick, of good quality. The leading stope is carrying 4 ft. of stone, of good quality. No. 12 level has been extended a further distance of 15 ft., making a total distance of 439 ft. from the shaft; the formation is 12 ft. wide, carrying 4 ft. of solid stone on the hanging-wall, of good quality, the remainder being a horse of mullock. The leading stope over this level is carrying 5 ft. of stone, of good quality. In the No. 3 stope we

have 6 ft. of stone, and in the No. 2 stope we have 4 ft. of stone, all of which is good quality. In the No. 1 stope going west from the No. 2 winze we have 6 ft. of stone, of good quality. In the leading stope over the hanging-wall drive we have 2 ft. of stone, of medium quality. I have started a winze at a point 100 ft. from the shaft, which has been sunk 30 ft., but carrying no stone as yet. No. 11 level: The leading stope over this level is carrying 2 ft. of stone of medium quality. In the No. 6 stope there are 6 ft. of stone, and in the No. 4 and 5 stopes the reef will average 3 ft. In the No. 3 stope the stone on the hanging-wall has cut out; the reef on the footwall is about 3 ft. thick. In the No. 2 stope we have 4 ft. of stone; the stone throughout all these stopes is of good quality, but somewhat smaller than usual. I have started the No. 1 stope again to-day, which is carrying 4 ft. of stone, of fair quality. The leading stope over the hanging-wall drive is carrying 2 ft. of stone, of good quality. In the No. 1 stope we have 1 ft. 6 ins. of good stone. No. 10 level in the No. 1 stope going west from the No. 1 winze hanging-wall drive, the reef varies in thickness from a few inches to 1 ft. 6 ins. thick, of fair quality. The 240-ft. level: I have driven the cross-cut at the end of this level a further distance of 5 ft., making a total distance of 19 ft., and cut the footwall, which is a very hard gray granite, but carrying no stone. I have now turned round, and started a cross-cut into the hanging-wall. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 109 trucks; No. 12 level, 283 trucks; Nos. 10 and 11 levels, 308 trucks; No. 2 shaft, stope under No. 5 west level, 49 trucks; No. 3 winze, 20 trucks; total, 769 trucks. No. 2 underlie shaft—No. 5 level west: The stope under this level is carrying 2 ft. of stone, of fair quality. No. 4 level west: The No. 3 winze on this level has been sunk a further depth of 14 ft., making a total depth of 44 ft.; the formation is about 5 ft. wide, carrying 1 ft. 6 ins. of stone on the footwall, of medium quality. The cross-cut in the footwall on the east side on this level has been extended a further distance of 20 ft., making a total distance of 46 ft.; no further change has taken place. No. 3 straight shaft: The well-hole has been sunk a further depth of 10 ft., making a total depth of 84 ft. from the surface. We have also shot up to bottom of the drive for a distance of 12 ft. This, I consider, will give us ample room for one week's water in the wet season. I have also baled the water out of the main shaft, and started to cut the hitches for the frame set, which I expect to get in position about Monday morning. Lease 1,280: The eastern drive has been extended 7 ft., making the total distance from shaft 25 ft. The formation here is of a hard and very unpromising nature, with no stone in sight at present. The western drive has been extended an additional 5 ft., making the total distance from the underlie 30 ft., with no change to report. The formation here is, however, of a more promising description than that in the eastern drive. The men have been removed from this drive for a few days, for the purpose of making a dam in the No. 2 level; I will, however, put the other two men in this drive while the dam is in process of construction. This job ought to be finished some time during the coming fortnight. I discontinued work below on Saturday, 5th, at the main shaft, and got the cylinders bored out and the engine overhauled. I also cleaned out the flues and overhauled the stone-breaker. The machinery and everything connected therewith is now in good working order.—T. LESTER.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Sept. 17:—Main engine shaft (block 98): Sunk 26 ft.; total, 119 ft.; lode rather better defined, and containing little galena. Air-receiver received and foundations nearly completed. Engine and boiler houses nearly finished. South engine shaft (block 98): Sunk 17 ft.; total, 170 ft. 6 ins. No. 3 shaft (block 99): Driven 13 ft.; total, 13 ft.; driving on course lode, which is about 2 ft. wide, containing small seam of ironstone and galena.

EMMA (Oct. 15).—My last report was under date of 8th inst., and I now hand you report of work at the mine for the week ending to-day:—On the Bay City tunnel level, while we have not encountered ore, the improvement the last two weeks in the drifts on this level is certainly hopeful. In the drift north-westerly on No. 3 fissure we worked two men; advanced 15 ft.; total, 39 ft. This drift improves steadily as we advance; the fissure is still widened, is now some 18 to 20 ins., filled with both oxidised iron and iron pyrites and decomposed vein matter, besides much iron in the vein rock. In the drift south-east on the No. 3 fissure we worked one man; advanced 7 ft.; total, 59 ft.; the rock here is also improving, the fissure not so tight; besides, is beginning to show mineral stains, and the seam carrying iron. In the level No. 3 south-east we worked one man; advanced 7 ft.; total, 38 ft.; not any material change since last report; the rock continues very much impregnated with iron; small vugs, or caves, filled with oxidised iron, appear quite often, and the rock much stratified. On the Illinois tunnel level we worked four men, drifting and raising on the vein of iron; the vein continues south-east, and is from 3 to 4 ft. wide, filled with vein matter, the mass being oxidised iron, carrying from 3 to 5 ozs. silver, 4 per cent. lead, and 40 per cent. iron; small nodules of galena ore occur quite frequently in the iron, so that we have every reason for expecting to strike ore in paying quantity in this vicinity. On the Emma tunnel level we worked nine men, stoping, timbering, and prospecting, besides three carmen running waste rock and low-grade ore. Mined about 50 tons low-grade ore, which has been put through concentrating mill, producing about 5 tons concentrates, worth from \$80 to \$85 per ton. We also worked two men sinking on the fissure in the footwall drift: sunk, 8 ft.; total, 45 ft.; the ground here is a little harder and the fissure narrower. However, I think it will open again within a few days. Ore now on hand, about 11 tons concentrates, worth about \$85 per ton.—H. C. WALLACE.

FLAGSTAFF (Oct. 17).—I have again the pleasure of reporting to you the progress made in the mine during the past week. I am expecting the expansion joints up to-day; if they come we shall be ready to start the machinery in a few days. The mine is looking a great deal better than it has for a long time. The rock in the different places where the ore comes from is getting more favourable all the time, and the ore more plentiful. In the raise between 6 and 7 the ore is 6 ft. wide, and 18 ins. of it is first-class, and rest good second class. We have now gone up 20 ft., and past where the connection was made. I will in future measure from point of connection. The ore in No. 2 cross-cut is still continuing on up and is 20 ins. wide, and most of it first-class. The ore in the raise above 6th is still turning out a fair quantity of good ore. I have not done much in the face of either of the levels, as I wanted the men to work on the different points of ore, and also sack-

ing ore for shipment. We commence to-day to ship 100 tons of ore down to Sandy. Number of cars (tons) of ore mined the past week: First-class, 17, and second class, 14.—A. L. SWOPE.

GARFIELD (Oct. 10).—Report from the mine.—Western mine, 180-ft. level: No. 15 winze was sunk 4 ft., making in depth, 102 ft. At this depth we ceased sinking, and have since been cross-cutting into the footwall. We have driven the cross-cut 16 ft. The formation of the ground in the cross-cut has been broken up; but a change of ground was coming in, composed of clay, with seams of porphyry across the face.

GRAVEL (Sept. 20).—Works: The number of men employed during Aug. has been about 200, part at Rica, but the greater portion have been employed making extension of ditch at Reposo, and moving and re-fixing syphon. From the appearance of the work we expect to be able to turn the water on to Rica in about 20 days time. At the new place the head of water on the syphon is less by more than 170 ft. than at the old place, and the line is straight and easy to secure. Under these circumstances, we hope to have made a permanent job of the Reposo syphon.—W. S. WELTON.

—Prospects of the company: With regard to the prospects of the company, as far as the mine is concerned, I consider them excellent. I have of late been washing a good many bateas of gravel in different parts of the mine, and I have found very good results, and have not once failed to get a colour.—W. S. D. GRIFFITH, Superintendent.

HARRIETVILLE (Sept. 18).—Fortnightly report.—Mons Meg Mine: Shaft on main shoot below tunnel J advanced 2 ft.; total, 60 ft. Most of the fortnight has been occupied in timbering, and now that all is secure sinking operations will be pushed on as rapidly as possible. The lode is becoming more defined, and is auriferous over a width of 4 ft. The north drive 100 ft. above tunnel J has been extended 13 ft.; total, 231 ft.; the lode is 3 ft. wide, and of payable quality. Rise at back of the above level advanced 18 ft.; the lode up to this point has been 3 ft. wide and payable, but is now small and poor. North drive 170 ft. above tunnel J advanced 17 ft.; total, 162 ft.; the lode is 4 ft. wide, and payable throughout. Drive north of tunnel K extended 30 ft.; total, 450 ft.; the lode is small and poor. Guerdon Mine: Drive north of tunnel J on Guerdon lode advanced 8 ft.; total, 220 ft.; the lode is 2 ft. wide, and payable. Drive south on same lode extended 6 ft.; total, 136 ft.; the lode is 8 ft. wide, and carries a little gold. The north rise on Guerdon lode has advanced 12 ft.; total, 45 ft.; the lode is 5 ft. wide, and payable throughout, the eastern portion producing some very good specimens. The south rise has been extended 1 ft.; total, 58 ft.; the lode here has become small and poor, but we look for an improvement as rising progresses. We have commenced to stope on this shoot at the back of the lower level. Tunnel K has been extended 12 ft. towards Guerdon lode; total, 109 ft.; the ground is favourable for driving. At 37 ft. from the Mons Meg No. 2 lode we traversed in tunnel K an auriferous vein. We have driven 6 ft. north and 6 ft. south on this vein, and it has in each case widened to 2 ft., the stone being of payable quality. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has advanced 27 ft.; total, 1,305 ft. We have passed through the continuation of the Mons Meg No. 1 north shoot, which proved to be 79 ft. long. The lode continues to be well defined, but is now poor. There is less water here. The rise at back of tunnel B on new shoot has advanced 1 ft.; total, 48 ft. The men have been engaged in stoping from this rise, the lode in stopes being 4 ft. wide and of fair quality.—T. G. DAVEY.

KANGARILLA PROPRIETARY.—Aclare Mine: The manager reports 318 tons crushed for fortnight ending Sept. 21—concentrating to 24 tons firsts, assaying 48 ozs. silver, 44 per cent. lead, 12 per cent. zinc; and 23 tons seconds, assaying 36 ozs. silver, 32 per cent. lead, and 14 per cent. zinc; and 14 tons thirds, assaying 21 ozs. silver, 9 per cent. lead, and 19 per cent. zinc.

LEEDS COPPER (Oct. 15).—Kent's shaft: The 20-fm. level driving west of shaft has not in any way fallen off since my last; the vein is 4 ft. wide, containing purple and yellow copper ore, producing $3\frac{1}{2}$ tons 15 per cent. ore per fm. No. 1 stope in bottom of this level continues in bed vein $3\frac{1}{2}$ ft. wide, producing $3\frac{1}{2}$ tons 12 per cent. ore per fm. No. 1 stope in the back of this level is in bed vein 4 ft. wide, producing 4 tons 12 per cent. ore per fm. No. 2 stope in the back of this level is in bed vein ore 3 ft. wide, producing $3\frac{1}{2}$ tons 20 per cent. ore per fm. The 15-fm. level producing west of shaft is not as good as last reported. We are passing through a poor channel of ground, and hope soon to get through it, producing $1\frac{1}{2}$ tons 12 per cent. ore per fm. No. 1 stope in the back of this level has also fallen off in value since my last; vein large, but more mixed with gangue, producing $2\frac{1}{2}$ to 3 tons per fm. No. 3 stope in back of this level is in vein 2 ft. wide, producing $3\frac{1}{2}$ tons 20 per cent. ore per fm. No. 4 stope in the back of this level has improved; bed vein 6 ft. wide, and vein quartz 2 ft. wide, and producing 5 tons 12 per cent. ore per fm. I anticipate sending you regular shipments of ore from this date.—T. R. DAVEY.

LOMA (Sept. 12).—Mine superintendent reports as follows:—Mine: Since my last we have had no rain, and have been without water to run the monitor. When I mention that Orita and Malpaso cannot run constantly for want of water, all who know Tablazo will at once recognise that it must be very dry. I am improving old ditches, tunnels, and flumes, so that when we have rain we may conduct it to the mine. It is a well-known fact that during the dry season there is no chance of running a monitor here with our present water sources. I cannot see why returns are expected from here during a dry season like that we are now suffering from. In wet or rainy season I hope to get as good returns again from the mine as it gave me at any time. New ditch: This work up to now has gone ahead fast. I have been right over all, and if continued as stated we will have a first-class ditch. The ground could not be better.

MOUNT ZEEHAN.—The manager writes as follows for week ending Sept. 11.—Argent section, No. 2—North drive, 72-ft. level: Further extended 14 ft.; total from cross-cut, 88 ft. Remarks: Lode formation, 6 ft. wide, but still very much broken up; composed of iron pyrites, siderite, graphite slate, and a very light slate. A large quantity of water is coming in at the face, and this I think indicates a change for the better. 2 tons of second-class ore has been raised. South drive: Further extended 14 ft., making total distance from cross-cut, 58 ft.; lode formation, 4 ft. wide, composed of graphite slate, siderite, caulk, and a little galena. This end, strange to say, much resembles north end, broken up. I anticipate a change here shortly for the better. 2 tons of second-class ore raised. Air shaft: Work resumed here Wednesday; 2 ft. sunk; total depth from surface brace, 41 ft. Timbered with log sets for 36 ft. Lode

formation, 2 ft. wide, and mostly very good second-class ore. 2 tons second-class ore raised, and on the bottom it looks as if it were going to improve. Queen Extended section, No. 5: Main engine shaft sunk 5 ft. 6 ins., further total from plat, 25 ft.; from surface brace, 135 ft. Remarks: Ground still hard graphite slate; pump lowered again to-day; machinery working pretty well. Montana section, No. 9: Level north on course of No. 2 lode extended 3 ft.; total from cross-cut, 250 ft. Remarks: Lode formation gone underfoot; work here discontinued; all the shoots have gone down. A winze has been started 15 ft. north of main cross-cut to get some ore, and has been sunk 4 ft. from bottom of level. Remarks: Lode formation, 4 ft. wide, composed of first and second-class ore. Four men put on since Tuesday, and two more started last night, and already we have 2 tons of first-class ore, and 2 tons second-class ore. I think we shall have a good output of ore from here next week. Total ore raised for week, 2 tons first-class, and 8 tons second-class.
